

ABSTRACT**The Profile of Drug's Planning and Procurement in Community Health Center in Eastern Surabaya**

Community Health Center is one of the government institutions to provide health care services in community. Drug is an important aspect in Community Health Center. The Availability of drugs in Community Health Center depends on its planning and procurement. The aim of this research is to describe Drug's planning and procurement in Community Health Center at Eastern Surabaya. The samples were 12 Community Health Center in Eastern Surabaya. The questionnaire and check list is used to collect the data. This research is non experimental with quantitative method. The data was analyzed by descriptive statistics using microsoft excel 2007. The result indicates that Community Health Center at Eastern Surabaya supply not only the generic drugs but also non generic drugs. There were two methods used to identify drug need in Community Health Center, firstly consumption method and secondly is mixed methods (consumption and epidemiologic methods). About 58,3% Community Health Center is using mixed methods and 41,7% Community Health Center is using consumption methods. The procurement process in Community Health Center in Eastern Surabaya was done once in every two months. The checking process for number of drugs and its name was always done when received drugs from pharmaceutical storage of Surabaya (GFK). The redesign of LPLPO form is needed based on agreement between Ministry of Health, GFK and Community Health Center so that planning and procurement process in Community Health Center will be more effective and efficient.
