

**ABSTRACT**  
**THE EFFECT OF THE FAMILY'S WAY OF LIFE**  
**ON THE MORAL DEVELOPMENT OF THE TEENAGE**  
(A Study on the Family of Fishermen and Peasants)

The moral development of the teenage was not conducted by socioeconomic level of family but by way of life of the family's. The study aims at the effect the family's way of life among peasants and fishermen on the moral development of the teenage. The study was collected by quantitative-qualitative method with the cross sectional by design. Research conducted at district of Tuban, East Java. Study samples were 33 fishermen's families and 33 peasant's families, with kind of father, mother and teenage which fits the inclusion creation for quantitative method and 6 families for qualitative method. The result of the study found factor on moral development of the teenage in the fishermen's and the peasant's families are roles of the father with  $p$  value = 0,031 and  $\alpha = 0,05$ . The suggestions from the study is supposed to be the role of the father is also supported by the role of the mother in order to positively impact by teenage moral development's for the welfare of the family. Hence affection from a father who disciplined seemed to produce guilt in his teenage. The importance of father's dominance in promoting moral development in teenage by suggesting that is significant if accompanied by affection.

Keywords: the family's way of life, teenage moral development, role of the father, peasants and fishermen.
