THE EFFECT OF HYPERBARIC OXYGEN THERAPY STARTING TIME ON LUNG HISTOPATHOLOGICAL CHANGES AFTER ISCHEMIA-REPERFUSION INJURY IN THE HIND LIMB OF RABBITS (Oryctolagus cuniculus) AS ANIMAL MODEL

Anisah Octaviany

ABSTRACT

The aim of this study is to prove the effectiveness of hyperbaric oxygen therapy (HBOT) starting time on lung histopathological changes in lung injury case after ischemia-reperfusion in the hindlimb of rabbit. This research used a complete randomized design with 4 groups and 6 repetitions each. After ligation in femoral artery for 6 hours, reperfusion was performed for 100 minutes (G1), HBOT for 90 minutes after 10 minutes of reperfusion (G2), 150 minutes of reperfusion (G3) and HBOT for 90 minutes after 60 minutes of reperfusion (G4). Then necropsy was performed and neutrophils in alveolar and interstitial space, hyaline membrane, proteinaceous debris and alveolar wall thickening were given scores. The statistical tests by Kruskal Wallis and Mann Whitney U result in significant differences ($p<0.05$) between G1 and G2, also G3 and G4, but no significant differences between G1 and G3, also G2 and G4. Based on these results, we conclude that HBOT can reduce neutrophils, hyaline membrane, proteinaceous debris and alveolar septal thickening of alveolar histopathological feature of lung injury after ischemia-reperfusion in hind limb of rabbits regardless of the starting time.

Keywords: lung injury, ischemia-reperfusion, multiorgan dysfunction syndrome, hyperbaric oxygen therapy, neutrophils
ACKNOWLEDGMENT

First and most of all, praise and thank to ALLAH SWT because of His mercy and guidance this thesis entitled The Effect of Hyperbaric Oxygen Therapy Starting Time on Lung Histopathological After Ischemia-Reperfusion Injury in The Hind Limb of Rabbits (Oryctolagus Cuniculus) as Animal Model, have finished.

On this occasion the author would like to give thanks to:

Prof. Hj. Romziah Sidik, drh., Ph.D, the dean of Faculty of Veterinary Medicine, Universitas Airlangga, for the occasion to study in Faculty of Veterinary Medicine, Universitas Airlangga.

The supervisor committee, Prof. Dr. Bambang Sektiar L., drh, DEA., and Dr. Dadik Rahardjo, drh. M.kes., for all the time, patience, advices and supports that are given to the author.

The examiner committee, Dr. Thomas V. Widiyatno, drh., M.Si., Dr. Wiwik Misaco Yuniarti, drh., M.Kes., and Dr. Ngakan Made Rai Widjaja, drh., MS., for all the advices, knowledges and guidance in the completion of my study.

Dr. Ngakan Made Rai Widjaja, drh., MS, as my trustee lecturer for his kindness, help, support and as my second parent during my study in Faculty of Veterinary Medicine, Universitas Airlangga.

All lecturers and staff Faculty of Veterinary Medicine, Universitas Airlangga for the knowledge during my study in Faculty of Veterinary Medicine, Universitas Airlangga.
The chief of Department of Hyperbaric and Underwater Medicine, Dr. Ramelan Hospital Surabaya.

My father Adri Siswanto and my mother Muslikah, for your endless affection, education, and motivation for the success of my study all this time.

My research partners, Yosis Yohanes Motulo, dr., and Ulvi Hudriyah, for all the helps and lessons during research.

All the member of IC 32, for being my second family for this 4 years, and all my partner in crimes in high school, university and in language course for the good and fun memories we created together. Thanks to all my friends and everyone that can’t be mentioned one by one that are helpful during my study and life.

The author acknowledges that this writing is still lacking and far from perfect. Therefore, the author expects critics and recommendations that will help in the improvement of this thesis. With a humble heart, the author wishes that this research will be useful for the advancement of science and may give a contribution to the veterinary medicine field and all the people who needs it.
