## ABSTRAK

Pada penelitian ini dilakukan sintesis, karakterisasi, dan uji aktivitas senyawa kompleks Cu(II)-kurkumin sebagai inhibitor enzim lipase pankreas. Sintesis senyawa kompleks Cu(II)-kurkumin dari logam tembaga(II)-asetat hidrat dan ligan kurkumin hidrat dilakukan dengan perbandingan mol sebesar 1 : 2. Uji aktivitas senyawa kompleks Cu(II)-kurkumin dilakukan terhadap enzim lipase dari ekstrak lipase pankreas dengan substrat *p*-NPP (*para*-nitrofenolpalmitat). Karakteristik senyawa kompleks Cu(II)-kurkumin memiliki titik leleh sebesar 276 °C, panjang gelombang maksimum ( $\lambda_{maks}$ ) sebesar 428 nm, ikatan logam dengan ligan ditunjukkan pada vibrasi ikatan Cu-O pada  $479\text{ cm}^{-1}$ , dan momen magnet efektif ( $\mu_{eff}$ ) sebesar 2,613 BM. Uji inhibisi senyawa kompleks Cu(II)-kurkumin terhadap aktivitas ekstrak lipase pankreas dapat diperoleh presentase inhibisi sebesar 49,11 % pada konsentrasi 50  $\mu\text{g/mL}$ . Tipe penghambatan senyawa kompleks Cu(II)-kurkumin terhadap aktivitas enzim lipase adalah tipe inhibisi campuran / nonkompetitif.

*Kata kunci : Cu(II)-kurkumin, lipase, inhibitor, nonkompetitif*

## ABSTRACT

This study done synthesis, characterization, and activity assay of Cu(II)-curcumin complexes compound as inhibitor of pancreatic lipase. Synthesis of Cu(II)-curcumin complexes compound that derived from cupro acetat hydrat as metal ion and curcumin hydrat as ligand with a mol ratio of 1 : 2. Activity assay of Cu(II)-curcumin complexes compound was conducted to against lipase enzyme from pancreatic lipase crude with p-NPP (para-nitrophenolpalmitate) substrate. Characteristic of this compounds include melting point at 276 °C, the maximum wavelength ( $\lambda_{max}$ ) at 428 nm, as well as the bonding metal complexes with ligand show in the Cu-O bond vibration at 479 cm<sup>-1</sup>, and effective magnetic moment ( $\mu_{eff}$ ) at 2,613 BM. The assay Cu(II)-curcumin complexes compound against activity of crude lipase pancreatic extract has 49,11 % inhibition at 50 µg/mL. The inhibition type of Cu(II)-curcumin complexes compound against lipase enzyme activity is mix or non-competitive inhibiton.

*Keyword:* *Cu(II)-curcumin, lipase, inhibitor, non-competitive*
