## **ABSTRACT**

This research is intended to analyze the influence of age, education, job, reference, knowledge, perception and attitude toward the self medication practice. The research was conducted in the area of Manukan Kulon village administration, Tandes subdistrict in Surabaya Regency on August 2004. The samples taken in this research are 105 women who have been married from Kelurahan Manukan Kulon population, that were selected randomly.

The research has found that the percentage of proper self medication using non prescription drug is still low (39%). The research also proves that knowledge influeces both simultaneously and partially toward the self medication practice. However there is no influence from age, education, job, reference, perception and attitude both simultaneously and partially toward the self medication practice.

**Keywords :** Self medication, Non Prescription drug, Age, Education, Job, Reference, Knowledge, Perception and Attitude
