## ABSTRACT

The general objective of this research is to start the preventive action against the absent of drugs at Rumah Sakit Gatoel. Through problem identification, relevancy of problems and statement of the problems, this research is based on the comparison analysis of three versions of drug list. These versions are the Pharmacy and Therapy Committee selected drug version, the Formulary manual version and the Pharmacy Department version.

This research was done since June until September 2001 at Rumah Sakit Gatoel. The Pharmacy and Therapy Committee selected drug version consist of 697 kind of drugs, classified into 26 therapeutic categories. In Formulary manual version there are 390 kind of drugs, classified into 22 therapeutic categories. In the Pharmacy Department version there are 2218 trade names of drugs, which equal to 733 kind of drugs without therapeutic categories.

The first step analysis was done according to the kind of drugs which were available in the three versions of drug list, and the result is there are 7 group of drugs which show the differences of the three kind of drug list. Through Focus Group Discussion, all have agreed that the selection version are used to be the standard to identify the deviations on the other versions. By used the therapeutic categories at the second analysis, it was found that there were deviation at the Formulary manual version and the Pharmacy Department version.

The main recommendation is that the Pharmacy and Therapy Committee selected drugs can be used as standard of drug list, the Formulary Manual and the Pharmacy Department drug list and the doctor's prescription must be suitable with the Pharmacy and Therapy Committee selected drugs.

Keywords: The Pharmacy and Therapy Committee,  
Formulary manual, Therapeutic category.
