**Introduction:** Child abuse is one of the worldwide problems that carries a mental, psychical, and psychological consequences to its victims. Parents hold a central role to educate children about sex and related matter to make them aware from the abuse. This study analyzed the influence of sex education for parents through buzz group to improve their roles in preventing child abuse. **Method:** The design used in this study was a one-group pre-experimental with pre-post test. This study involved 30 parents to students who went to Pos PAUD Kuncup Bunga, one of the preschool in Surabaya, as respondents. The data were collected using self-administered questionnaire by Chen & Chen (2005) and then analyzed using Wilcoxon signed rank test with significance level of  $\alpha=0,05$ . **Result:** The result shows that the buzz group method is effective to increase parent educator’s role in prevent child sex abuse in Surabaya ( $p= 0,014$ ). **Discussion:** The sex education stimulates parents’ awareness and roles in prevent their child from becoming the victim of sexual abuse. This result suggest that buzz group is effective as method to improve parents’ role to educate their children in preventing sexual abuse. Further studies are suggested to involve control group and observe the impact of the education.
