ABSTRACT
THE EFFECT OF LOGOTERAPY IMPLEMENTATION TO CHANGE MEANING OF LIFE IN DIABETES MELLITUS CLIENT

Quasy-Eksperiment (pre-posttest control group design) in RSUD dr Sayidiman Magetan

By: Leni Anitasari

Diabetes mellitus is a chronic disease that caused disturbance meaning of life. The client with diabetes mellitus who experienced meaning of life problems can be treated by logotherapy. The purpose of this study was to analyze the effect of logoteraphy implementation to change the meaning of life in diabetes mellitus client in RSUD dr Sayidiman Magetan.

This study was using quasy-experimental pretest-posttest with control group. The dependent variable were meaning of life, and the independent variable was the implementation of logoteraphy. Sample in this study was 30 respondents, consist of 15 respondents control group and 15 respondents treatment group. Samples were taken by using consecutive sampling in the 21 – 59 age range diabetes mellitus clients were doing a treatment in RSUD dr Sayidiman Magetan in 19 – 24 December 2016. The meaning of life were taken by using Purpose in Life Test (PIL Test) then analyzed by using Wilcoxon Sign Rank Test and Mann Witney U statistic test, \( \alpha = \leq 0.05 \).

The result showed logoteraphy effected on meaning of life in the treatment group (\( p=0.001 \)). Statistical test Mann Whitney U Test showed that there was an difference meaning of life in control group and the treatment group after implementation of logoteraphy.

It could be concluded that the implementation of logoteraphy has an effect to increasing the meaning of life in diabetes mellitus client. The further study was recomended to developing deeper study that related to logoteraphy in diabetes mellitus client.

Keywords : Logoteraphy, Meaning of Life, Diabetes Mellitus.
