

ABSTRACT

DESCRIPTION OF SANTRI'S ADAPTABILITY IN AS-SA'IDIYAH 1

BAHRUL ULUM BOARDING SCHOOL TAMBAK BERAS

Descriptive correlation study in As-Sa'idiyah 1 Bahrul Ulum Tambak Beras,

Jombang

By : Umdatun Watsiqoh

Background: To be able to adapt well in a boarding school has many obstacles. Obstacles arise because of the difficulty to adaptate with the rules applied by boarding school for its santri. **Method:** This study is a preliminary study to describe the adaptability of santri in As-sa'idiyah 1 Bahrul Ulum boarding school, Tambak Beras. This study uses Rogers' innovation diffusion theory. The independent variable in this study was demographic data and diffusion stage of rogers innovation. Meanwhile the dependent variable was adaptability. Samples in this study was 143 santri in As-sa'idiyah 1 Bahrul Ulum boarding school. The data was analyzed using Spearman's rho. **Results:** The results of the data analysis showed p value of each variable at sex demographic data ($p = 0.38$), age ($p = 0.18$), education ($p = 0.76$), length of stay (0.533), city origin (0.861), (0.153), for the diffusion stage of rogers innovation for the knowledge stage (0.730), the persuasion stage (0.530), the decision stage (0.013), the implementation stage (0.179), the confirmation stage (0.664) **Discussion:** Age had a correlation with adaptation ability, while Gender, education, length of stay, origin of city, children and family member who also live in boarding school did not have any relation with adaptability. The diffusion stage of rogers innovation which has a correlation with adaptability were the decision stage, whereas knowledge, persuasion, implementation, and confirmation showed no relationship to adaptability.
