

ABSTRACT

ANALYSIS OF FACTORS OF COINING INELDERLY BASED ON TRANSCULTURAL NURSING IN POSYANDU LANSIA SUKMAJAYA KERTAJAYA SURABAYA

Correlational Research
By : Nevia Ratri Indriani

Introduction :Coining is a tradition of Javanese people in overcoming colds. Some elderly in Posyandu Sukmajaya still apply the coining so that there can be risk of handling of disease caused by self treatment. Until now there are no rules regarding coining so there are still those who consider it good or bad. **Method :**This was cross sectional design. The populations were 78 elderly who have an follow Posyandu Sukmajaya using purposive sampling technique. There were eight variables in this study, there are technological factors, beliefs and philosophical factors, social and family attachments factors, factors of cultural values and lifestyle, prevailing policy factors, economic factors, educational factors as independent variable and use of coining in the elderly as dependent variable. The instrument using questionnaires made by researchers and tested validity and reliability with validity results of 0.350-0.916 and reliability of 0,612-0,950. Data analyze using spearman rho correlation with significance level $\alpha \leq 0,05$.**Result :**Statistical test result $p= 0,00 r= 0,868$ for technological factors, $p= 0,00 r= 0,656$ for beliefs and philosophical factors, $p= 0,00 r= 0,700$ for social and family attachments factors, $p= 0,00 r= 0,788$ for factors of cultural values and lifestyle, $p= 0,00 r= 0,489$ for prevailing policy factors, $p= 0,191 r= -0,150$ for economic factors, $p= 0,00 r= 0,489$ for educational factor. **The result had showed that were correlation between six factors in the transcultural nursing theory except economic factor.** **Discussion:**Provision of health counseling and promotion by health workers on the importance of use traditional medicine.
