THE EFFECT OF SKIM MILK - GOOSE EGG YOLK EXTENDER ON MOTILITY AND VIABILITY OF LIMOUSIN BULL SPERM POST THAWING

GAYOH MAHARDIKA WAN MAHSURI

ABSTRACT

This research was aimed to know the motility and viability of Limousin bull sperm in post thawing examination in skim milk- goose egg yolk extender. This research used fresh samples of Limousin bull semen collected by using artificial vagina, then divided into 4 treatments. The control treatment (P0), Limousin bull semen with skim milk- chicken egg yolk extender, The treatment groups (P1, P2, and P3), Limousin bull semen with skim milk extender + goose egg yolk 0.25%, 1% and 1.75% respectively. Data analyses using Analysis of Variant (ANOVA) One Way followed with Duncan to determine significant differences between treatments. Result showed that skim milk extender + goose egg yolk 1.75% is the best concentration to increase motility and viability Limousin bull semen post thawing in this research.

Keywords: Limousin bull sperm, goose egg yolk skim milk extender, motility, viability.
