Introduction: the judicial process is able to create stress and anxiety for people who pass through it. Some conditions of prisoners who are just undergoing detention are vulnerable to stress, anxiety that leads to suicide. The purpose of this study was to analyze the relationship of religiosity with resilience in SI Ilarjo Class Correctional Institution. **Method:** The design of this study was cross-sectional. The population in this study was 1195, with a target population of 437, and an affordable population of 137 respondents was obtained by simple random sampling. The independent variable is religiosity. The dependent variable is resilience. The instrument in this study used the religiosity questionnaire, and Brief Resilience Scala (BRS), and data analysis with Spearman's Rho. Results and analysis: 118 (90,1%) respondents with moderate religiosity and resilience WBP, and 11 low religiosity and resilience. There is a relationship between religiosity and resilience in prisons ($p = 0,000$, $r = 0.845$). **Discussion:** there is a strong relationship between religiosity With resilience of adults who are assisted, clinical nurses can continue to help WBP to continue to motivate, and help reduce the anxiety, social, and physical conditions experienced by WBP when they first enter prison.

Keywords : Resilience, Religious, Correctional
