

ABSTRACT

**CORRELATION BETWEEN EMPOWERMENT LEVEL AND
CONTRACEPTIVE CHOICE AMONG REPRODUCTIVE WOMEN**

Correlational Study at Puskesmas Gading, Surabaya

By: Ainil Fikroh Rahma Dheaning

Introduction: Most of women were choose short-acting contraception method than long acting contraception method. Injection and pills are the most methods that used by the women. Empowerment level is one of the factors that affect women's contraceptive choice. This study aimed to explain the correlation between empowerment level and contraceptive choice among reproductive women. **Methods:** This study used a correlational design with a cross sectional approach. Samples were 168 women 20-35 years old in Puskesmas Gading took by using cluster sampling. The variables were empowerment level and contraceptive choice among reproductive women. Data were collected using questionnaire and then analyzed using Spearman's Rho with $\alpha = \leq 0,05$. **Result:** Most of the respondent (85%) were 26-35 years old. Short acting contraception methods (3 months injection) was the most contraception used by the respondent (27%). The majority of women have high level of empowerment (43%). The result show there was correlation between empowerment level and contraceptive choice among reproductive women ($p=0,008$) with correlation coefficient $-0,203$ means the higher empowerment level, the lower short acting method used by respondent. **Conclusion:** Women with high empowerment level will prefer to choose long acting contraception method (IUD)

Keyword: Contrception, empowerment, women, long acting method, injection
