Abstrak

Latar belakang: Sakit perut berulang adalah sakit perut yang terjadi pada rentangwaktu tiga bulan dan mengalami sedikitnya tiga kali episode sakit. Sekitar 10%-20% anak usia sekolah mengalami sakit perut berulang yang dibagi menjadi etiologi organic dan non organik. **Tujuan:** Mengetahui etiologi sakit perut berulang dan tanda gejala bahaya yang ditemui dari sakit perut berulang. **Metode:** Penelitian ini merupakan penelitian deskriptif menggunakan data sekunder rekam medis pasien anak dengan sakit perut berulang di RSUD Dr. Soetomo periode 2015-2019. Dengan jumlah sampel 56 sampel setelah melalui kriteria eksklusi. **Hasil:** Usia pasien sakit perut berulang pada anak didominasi rentang usia 7-9tahun. Jenis kelamin lebih banyak perempuan. Status gizi anak dengan sakit perut berulang cenderung mempunyai nilai gizi baik atau normal. Keluhan terbanyak berupa nyeri perut sebanyak 29 keluhan, diikuti oleh keluhan mual sebanyak 7 keluhan, dan muntah 4 keluhan. Hasil pemeriksaan fisik abdomen normal paling dominan, juga ditemukan hepatomegali. Pemeriksaan penunjang terbanyak menggunakan biopsi sebanyak 42 hasil pemeriksaan 36 diantaranya gastroduodenitis kronis, 3 positif H.pylori. **Kesimpulan:** Etiologi yang ditemukan adalah gastroduodenitis kronis khususnya infeksi Helicobacter pylori untuk etiologi organic non surgical, etiologi organic surgical didapatkan post operasi appendicitis kronis, serta tidak ditemukan adanya etiologi non organic. Tanda dan gejala bahaya terbanyak berupa nyeri perut yang tidak dijelaskan secara spesifik yang seharusnya dijelaskan sebagai nyeri perut yang tidak terlokalisir dan jauh dari umbilical serta mual.
