Terimakasih

Pada prinsipnya kadar vit D yg banyak diteleti di referensi dalam bentuk calcidiol, sdh ada nilai rujukan utk rendah, normal, tinggi Pd penelitian ini, kami meniliti calcitriol, terkait efek biomol yg langsung terikat dg kompleks Vit D-VDR yg belum ada nilai rujukan utk kadar normal, sehingga peneliti mencari nilai cut off value nya,

Lebih lengkapnya kami kirimkan file revisi, yg kami tambahkan kami Blok merah

Terimakasih, Hormat saya

Dear dr. Very Great Ekaputra

Terima kasih atas emailnya sudah kami terima.

1. Dalam introduksi dijelaskan bahwa banyak yang menelitin tentang vit D dan VDR nya pada kasus kanker selain ginekologi, sehingga peneliti ingin melihat pada ca cerviks. Kenapa peneliti tidak menggunakan rujukan cut of vit D dan VDR yang sudah ada dari penelitian sebelumnya? Namun, bila ingin menggunakan nilai cut of vit D dan VDR yang baru pada penelitian ini, mohon dijelaskan secara rinci dalam bentuk kalimat dibagian metodologi, karena hasil ini yang nantinya akan digunakan sebagai dasar pada saat analisis. Mohon juga dijelaskan bagaimana sensitivitas dan spesifisitas dari cut of point tersebut.
2. Statistical analysis belum tersebut di bagian metodologi. Bagaimana cara peneliti melakukan analisis statistic dalam penelitian ini. Bagaimana memperlakukan data penelitian yang diperoleh. Hal ini perlu ditambahkan kembali dalam metodologi.

Demikian masukan dari kami. Mohon bila ada perubahan ditandai dengan highlight.

Terima kasih

Terimakasih Bayu Brahma, MD

Telah kami lakukan revisi poin2 di bawah:

1. Dalam metodologi perlu dijelaskan bagaimana mendapatkan cut of point untuk VDR dan Vit D.
2. Kriteria inklusi dan eksklusi pada study ini juga perlu ditambahkan
3. Analisis perlu dilakukan sampai multivariat, besar asosiasi yang didapatkan sesuai dengan analisis yang dilakukan (OR atau RR).
4. Perbaiki tabel sesuai dengan hasil yang diperoleh, **bukan mencantumkan tabel hasil analisis dengan software.**
