### Abstract

Bali Starling naturally found in the western part of Bali Island, is a critically endangered species. The research aim was to improve their reproductive performance of egg production and hatchability by feeding various levels of protein. Twelve pairs of Bali starling were divided into 4 treatment groups i.e C (control, commercial feed); T1 (protein 17%); T2 (protein 18%); T3 (protein 19%). Feed were made from combinations of *Gryllus mitratus*, *Oecophylla smaragdina*'s egg, *Musa acuminata* balbisiana, Zea maize, *Arachis Hypogaea*, *Glycine max*, *Vigna radiata* and fish powder. The result showed T3: 19% protein had better result for egg production and hatchability.

**Key words** : Bali starling, Fertility, Hatchability, Reproductive performance.

Bali Starling (*Leucopsar rothschildi*) is a bird that is very popular among the people because of the beauty of its physical form and brilliant blue eye frame. It was estimated that the population of around 300-900 birds in the wild in 1990 due to predators, the number decreased. Although as many as 126 birds have been released in the Bali Barat National Park on 2011, their survival was not monitored (Collar *et al.*, 2012). This species has been the focus of much conservation effort and protected under Indonesian law since 1970 (Jepson, 2016).

### Materials and Methods

Twelve pairs of Bali Starlings used in the experiment were divided into three treatment using on protein content of 17% (T1), 18% (T2) and 19% (T3), prepared by using different feed ingredients using a combined method of trial and error

and the Pearson square method to obtain protein content. In control treatment using commercial bird feed (C). The feed ingredients that were used as feed are analyzed for protein content at the Laboratory of Animal Food Sciences, Faculty of Veterinary Medicine, Airlangga University using the Kjeldhal method. All the treatment were fed 2 times a day, morning and evening in cages. It was observed the mating speed and eggs yield have increased (Hasib *et al.*, 2017). The eggs were incubated for 14 days. Data analysis was done for hatchability of egg.

### Results and Discussion

Nutrient contents of feed ingredients was summarized in Table I. The results of the proximate analysis conducted at the Laboratory of Animal Food Sciences, Faculty of Veterinary Medicine, Airlangga University, Surabaya.

From the results of the proximate analysis, the material was mixed using Pearson square method to obtain the expected protein levels as listed in Table II.

The results of research conducted from August to December 2014 at the Safari Bird farm in Kudu village, Kertosono Subdistrict, Nganjuk Regency, East Java, are presented in table III.

The treatment T3 has revealed better fertility in all the replicates, however the embryonic mortality was high in the two replicates of two each. The third replicate has yielded successful hatch all the three eggs set (100%). The hatchability in the other two replicates of T3 were only 33.3%. The all other treatment groups did not produce success in fertility or hatchability. The eggs from the other treatment groups had low fertility and higher embryonic

Description: Per kg of ration plus 0.06 grams Introvit 4+ ws as a source of vitamins, minerals and amino acids

mortality.

The results obtained in this study were not significantly different of Balen *et al.* (2000). In the process of preserving the Bali Starling, the number of eggs produced is not only important, but also they should be fertile to preserve the Bali Starlings. The third treatment replicate the one had the highest fertility percentage with all the eggs hatched. In the control treatment, the production was 0 due to the fact that their feed does not have enough protein to support the egg production and fertility like might be the reasons.

There are several factors unsuccess-

ful mating any immature sperm. Williams and Feistner (2006) states that egg fertility is influenced by sperm quality, parent age, their nutritional status, mating time, male-female ratio. Feed plays an important role in their production of eggs (Prasetyo and Safitri, 2016) and also for fertility and successful rearing of young ones. Dietary deficiencies (nutrition) can result in decreased sperm production, fertility and embryonic death (Safitri *et al.*, 2016).

In hatchability study, The third treatment had an average value of 55.5%. All eggs on third treatment were fertile but some failed to hatch due to environmental factors and the lack of parental care, like cracks in the shells

Tabel III. Production and Hatchability of Bali Starling Eggs

Treatment	Cage	Egg production	Fertility	Mortality	Hatch	Hatchability
C (Control)	52	0	-	-	-	-
	54	0	-	-	-	-
	63	0	-	-	-	-
T1	55	3	-	-	-	-
	60	2	-	-	-	-
	62	2	-	-	-	-
T2	53	2	-	-	-	-
	57	3	1	1	-	0%
	63	4	2	2	-	0%
T3	58	3	3	2	1	33.3 %
	59	3	3	2	1	33.3 %
	61	3	3	0	3	100 %

resulting poor hatchability

The egg quality increased with increasing protein level (Shell thickness, Haugh Unit and egg yolk weight percentage). Large eggs and thick shells will result in lower egg shrinkage during hatching so that they can increase hatchability. Thin shells with low Haugh Unit result in decreased hatchability. Similarly egg shells and egg yolks are a source of material for embryo development, so increasing egg shell thickness and percentage of egg yolk will have a bearing on the hatchability (North and Bell, 1990).

The second treatment had a hatchability of 0% even though there were sufficient number of eggs, there was high embryonic mortality due to nutritional deficiencies.

### Summary

Rations with 19% protein produced more the number of egg Bali Starling and have high fertility, all the eggs produced were fertile and hatched, besides feed the climate and the level of parental care can also affect hatchability.

## REVISED GUIDELINES TO AUTHORS

1. **THE INDIAN VETERINARY JOURNAL** (Official organ of the Indian Veterinary Association) publishes papers of original work as full papers, clinical articles and short communications on Veterinary, Animal Husbandry and Fishery Sciences. It also serves as a medium of news regarding the veterinary profession and deals with issues of professional importance from time to time through its editorial columns.
2. **Manuscripts are accepted for publication on the clear understanding that :**
  - a) They have neither been published nor been sent for publication elsewhere. All the authors should sign a certificate to this effect in respect of each manuscript sent for publication. Names, qualifications, full addresses and Email ID of all authors must be provided while submitting the manuscripts. Details of the corresponding author with contact phone and the address of the place with PIN code where the work has been carried out must be clearly mentioned.
  - b) The research work has been carried out with the approval of the Institutional Ethics Committee as per the laws in force in the country in which it has been conducted. A certificate to this effect should be signed by all authors. The authors should get written permission from concerned authorities for publishing manuscripts on emerging and exotic diseases.
  - c) All authors are jointly and severally responsible to the various authorities for the contents of the manuscripts. The Editorial Committee shall not be held responsible in any manner whatsoever to the contents of the manuscript and the views and interpretations expressed by the authors in the manuscripts. All disputes regarding any legal proceeding pertaining to the journal shall be within the jurisdiction of the High Court of Judicature at Chennai.
3. **A processing fee of each ₹. 200/- for Indian and US\$ 20 for foreign manuscript** must be sent along with the manuscript in the form of a DD or International Cheque drawn in favour of **The Editor, Indian Veterinary Journal, payable at Chennai. Payment of processing fee will not ensure publication of the manuscript.** On acceptance of the manuscript for publication, a Publication Charge (₹. 700/- for an Indian manuscript and US\$ 200 for a foreign manuscript) must be sent to The Editor.
4. It is mandatory that each Indian author should be a subscriber to the **print or online version** and a foreign author, to the online version of the Journal. The annual subscription fee is ₹. 700/- for the Indian subscriber and US\$ 200 for the foreign subscriber for the **print or online version** of the Journal.
5. Manuscript should be typed in A 4 size paper in double space with 12 pt size Times Roman font as per the Indian Veterinary Journal format. Only two hard copies must be sent to **the Editor, Indian Veterinary Journal, 11/7, Pasumpon Muthuramalinga Thevar Road (Chamlers Road), Nandanam, Chennai – 600035, India.** Clear prints of figures and photographs in duplicate if any must be sent in glossy print of maxi size. The full postal address with posted pin code of the actual place where the work was carried out, along with the contact phone number of the corresponding author should be provided below the names of author(s) in the articles submitted.
6. **The decision of the Editor is final in all matters pertaining to the publication of the manuscripts.** Editor has the right to do editorial revision of the accepted manuscripts, restriction of number of pages, tables and figures. No reason shall be given for the non-acceptance of the manuscript. Manuscript once received will not be returned to the author under any circumstances. The copy right shall rest with the Journal and no part of any manuscript shall be reproduced without specific permission of the Editor.
7. Each manuscript received will be allotted a **Registration Number**. The authors, while sending the revised version of the manuscript based on the comments of the referee, should submit the revised manuscripts in two forms, one hard copy and other one soft copy in CD. This should be as per IVJ format and return the original version along with original comments to the Editor for reference and records. The revised manuscripts should be submitted to the IVJ office within 90 days of receipt, failing which the article will not be considered for publication. A demand letter will be sent to the corresponding author for payments such as processing fee (if not already paid), publication charges and arrears of subscription fees. **Only on receipt of full clearance of all the payments and the soft copy in CD, the concerned article will be taken up for publication** and the author will be informed accordingly.
8. After publication of an article the original / revised copy of the article will be retained at the IVJ office only for a period of 12 months after which the article will be disposed off, since the published version will be available in print and digitized form.
9. Indian Veterinary Journal Format:
  - a) Title; Author(s); Place of work with full address and pin code.
  - b) **Full papers:** Abstract (not more than 100 words), Keywords (not more than 4 words), Introduction (with no subtitle), Materials and Methods, Results and Discussions, Summary, Acknowledgement (optional) and References (not exceeding 15). The full papers should not exceed 4 printed pages.
  - c) **Clinical articles :** Abstract (not more than 100 words), Keywords (not more than 4 words), Introduction (with no subtitle), Case History and Observations, Treatment and Discussion, Summary, Acknowledgement (optional) and References (not exceeding 15). The Clinical articles should not exceed 3 printed pages.
  - d) **Short Communications:** There is no specific format for Short Communication. Articles which do not comply to either Full Papers or Clinical Articles either on quality basis or on page-wise basis will be allotted under Short Communication.
  - e) The page limits are inclusive of figures, photographs and tables.
  - f) All tables should be numbered with upper case roman numerals (I, II...) and all figures should be numbered with arabic numerals (1, 2, 3...).
9. **Citing references:** In the text, references should be cited by names of the authors followed by the year of publication in parenthesis. In case of more than two authors, the name of the first author must be followed by *et al.* For the references repeated in the text, the year must be replaced by *loc cit.* in successive references. At the end of the text, the references must be furnished in alphabetical order. Each author's name must be followed by initials. Before the name of the last author, the word 'and' must be included. The year of publication must be in parenthesis. The title of the referred article must be given in full. The Journal's name must be in approved abbreviated form and must be in italics. The volume number of the journal must be given in bold letters. It should be followed by a colon and the starting and ending page numbers. While citing books, the Title of the book, Year, Publisher, Place of Publication, Number of the Edition and the relevant page number(s) must be provided. Website, 'in press' and 'personal communication' should be avoided as references.
10. All correspondence regarding the status of the articles must be made with The Editor, Indian Veterinary Journal at the Official Address of the Journal.
