ABSTRACT

Nurzakiyah, Nafisah. 2013. The Dipo Alam's report about the Issue of state-own enterprises (BUMN) Bribery by members of Indonesian Parliament (DPR) in *Jawa Pos* and *Kompas*. A thesis submitted as partial fulfillment of the requirements for the Sarjana degree of English Department, Faculty of Humanities, Airlangga University, Surabaya.

This study examines Dipo Alam's report about state-own enterprises (BUMN) bribery by members of Indonesian Parliament in *Jawa Pos* and *Kompas*. The issue was made public by Dahlan Iskan, minister of BUMN. The study aims to find out the view of *Jawa Pos* and *Kompas* related Dipo Alam's report about state-own enterprises (BUMN) bribery by members of Indonesian Parliament by identifying the main theme, scheme/organization, and pattern of linguistic features. To achieve the aim, the study uses the socio-cognitive approach developed by van Dijk (1997), especially three dimensions of discourse, which are text, social cognition, and social context. There are three levels in analyzing the dimension of the text: macrostructure, superstructure, and microstructure. In conducting this study, the writer uses the qualitative method. Based on the analysis conducted, *Jawa Pos* in its news report tends to be not neutral by underrating a report to Corruption Eradication Commission (KPK) by Dipo Alam, the Indonesian cabinet secretary. On the other hand, *Kompas* tends to be neutral in presenting the news.

Keywords: *CDA, socio-cognitive approach, news report, media*
