## Editorial Board

### Editorial Governing Body:

#### Chief Patron

Hon'ble Dr. Suresh J. Bhosale  
Chairman and Managing Trustee  
Chancellor,  
Krishna Institute of Medical Sciences "Deemed to be University",  
Karad-415 539, Maharashtra, India.

#### Patron

Hon'ble, Dr. Praveen Shingare  
Pro- Chancellor,  
Krishna Institute of Medical Sciences "Deemed To Be University",  
Karad-415539, (Maharashtra), India

Hon'ble, Dr. Vedprakash Mishra  
Chief Advisor to Chancellor  
Krishna Institute of Medical Sciences "Deemed to be University",  
Karad-415539, (Maharashtra), India

Hon'ble Dr. (Mrs.) Neelam Mishra  
Vice Chancellor  
Krishna Institute of Medical Sciences "Deemed to be University",  
Karad-415539, (Maharashtra), India

#### Publisher

Dr. M. V. Ghorpade, Registrar,  
Krishna Institute of Medical Sciences "Deemed to be University",  
Karad-415539, Maharashtra, India

#### Research Executive Members of JKIMSU, Karad

Dr. A. Y. Kshirsagar  
(Medical Director of Krishna Hospital and Medical Research Centre)

Dr. S. T. Mohite, Dean  
(Faculty of Medical Sciences)

Dr. Shashikiran N.D, Dean  
(Faculty of Dental Sciences)

Mrs. V. R. Mohite, Dean  
(Faculty of Nursing Sciences)

Dr. G. Varadharajulu, Dean  
( Faculty of Physiotherapy)

Dr. S. C. Kale, Dean  
(Faculty of Allied Sciences)

### Editor in Chief

Dr. Arun R. Risbud  
Director of Research,  
Krishna Institute of Medical Sciences "Deemed to be University",  
Karad-415539, Maharashtra, India.  
Email: [editorinchief@jkimsu.com](mailto:editorinchief@jkimsu.com)

### Executive Editor

Dr. Supriya S. Patil  
Dean (Academics), JKIMS,  
Assoc. Prof., Department of Community Medicine,  
Krishna Institute of Medical Sciences "Deemed to be University", Karad-415539, Maharashtra, India  
Email: [executiveeditor@jkimsu.com](mailto:executiveeditor@jkimsu.com)

### Assistant Editor

Dr. Rohan S. Phatak,  
Junior Research Officer, Directorate of Research,  
Krishna Institute of Medical Sciences "Deemed to be University", Karad-415539, Maharashtra, India

### Editorial Advisors

#### Prof. Kusal K. Das (Physiology)

BLDEU's Shri. B. M. Patil Medical College,  
Bijapur – 586108, Karnataka, India  
Email: [kusaldas@yahoo.com](mailto:kusaldas@yahoo.com)

#### Dr. Sharda G. Sabnis (Nephropathology)

Armed Forces Institute of Pathology, Washington, USA  
Email: [shardasabnis@yahoo.com](mailto:shardasabnis@yahoo.com)

#### Dr. Megha G. Joshi (Pathology)

Director of Laboratories, Lawrence General Hospital,  
Lawrence, MA USA  
Email: [meghascarff@yahoo.com](mailto:meghascarff@yahoo.com)

#### Dr. Prema Ramachandran,

Director, Nutrition Foundation of India, New Delhi  
Email: [premaramachandran@gmail.com](mailto:premaramachandran@gmail.com)

### Editorial Board Members

#### Dr. Siddhartha Chatterjee (Obstetrics & Gynecology)

Calcutta Fertility Mission, 102C Ballygunge Place,  
Kolkata-700019, West Bengal, India.  
Email: [sidchat54@gmail.com](mailto:sidchat54@gmail.com)

**Dr. Madhusudan Pal (Ergonomics/Biomedical Engineering)**

Defence Institute of Physiology and Allied Sciences,  
DRDO, Lucknow Road, Timarpur, Delhi – 110054, India  
Email: [madhusudanpal@rediffmail.com](mailto:madhusudanpal@rediffmail.com)

**Prof. Jaydeb Ray (Pediatrics)**

Institute of Child Health,  
West Bengal University of Health Sciences  
11, Dr. Biresh Guha Street,  
Kolkata-700017, West Bengal, India  
Email: [jaydeb\\_ray@hotmail.com](mailto:jaydeb_ray@hotmail.com)

**Dr. Vishal Bansal (Physiology)**

In charge-Cardio-Pulmonary Rehabilitation,  
V. P. Chest Institute, University of Delhi,  
Delhi -110007, India.  
Email: [drvishalbansal@hotmail.com](mailto:drvishalbansal@hotmail.com)

**Dr. (Mrs). Ranu Roy Biswas (Pathology)**

School of Tropical Medicine  
108, Chittaranjan Avenue,  
Kolkata-700073, West Bengal, India  
Email: [ranuroybiswas1968@gmail.com](mailto:ranuroybiswas1968@gmail.com)

**Dr. Ranabir Pal (Community and Family Medicine)**

All India Institute of Medical Sciences  
Jodhpur-342005, Rajasthan, India  
Email: [ranabirmon@gmail.com](mailto:ranabirmon@gmail.com)

**Prof. B. D. Banerjee (Medical Biochemistry)**

University College of Medical Sciences &  
Guru Tegh Bahadur Hospital, University of Delhi  
Delhi-110095, India  
Email: [banerjeebd@hotmail.com](mailto:banerjeebd@hotmail.com)

**Dr. (Mrs). Aparna Gomes (Biotechnology & Drug Development)**

Scientist – F, Indian Institute of Chemical Biology (CSIR)  
Raja S. C. Mullick Road, Jadavpur,  
Kolkata– 700 032, West Bengal, India  
Email: [gomes\\_aparna@yahoo.com](mailto:gomes_aparna@yahoo.com)

**Dr. Sandeep B. Bavdekar (Pediatrics)**

TN Medical College and BYL Nair Hospital,  
Mumbai Central, 400 008, Maharashtra, India  
Email: [sandeep.bavdekar@gmail.com](mailto:sandeep.bavdekar@gmail.com)

**Dr. Tony Cecil Badrick (Biochemistry/ Pathology)**

Bond University, Gold Coast, QLD, Australia – 4229  
Email: [tony.badrick@rcpaqap.com.au](mailto:tony.badrick@rcpaqap.com.au)

**Dr. Shivaprasad S Goudar (Physiology)**

Dept of Medical Education, Research Coordinator,  
JNMC-UMKC Women's and Children's Health Research Unit,  
J N Medical College, Belgaum- 590010, Karnataka, India  
Email: [sgoudar@jnmc.edu](mailto:sgoudar@jnmc.edu)

**Dr. Thuppil Venkatesh (Biochemistry)**

Principal Advisor, Quality Council of India (QCI) and  
National Referral Centre for Lead Poisoning in India (NRCLPI)  
St. John's Medical College, Bangalore -34, Karnataka, India  
Email: [venkatesh.thuppil@gmail.com](mailto:venkatesh.thuppil@gmail.com)

**Dr. Prakash V. Patil (Pathology)**

Jawahar Medical Foundation's Annasaheb Chudaman Patil Memorial Medical College,  
Dhule 42401 Maharashtra, India  
Email: [docpvpatil@gmail.com](mailto:docpvpatil@gmail.com) , [drprakash\\_patil@yahoo.co.in](mailto:drprakash_patil@yahoo.co.in)

**Dr. V. Balasubramanyam (Anatomy)**

Multimedia Educationist and Domain Consultant: Medical E- learning,  
President – Bangalore Chapter of the Indian Association of Medical Informatics,  
St. John's Medical College, Bangalore-34, Karnataka, India  
Email: [baluvbs@yahoo.com](mailto:baluvbs@yahoo.com) , [drbaluvbs@gmail.com](mailto:drbaluvbs@gmail.com)

**Dr. Pragna Rao (Biochemistry)**

Kasturba Medical College, Manipal,- 576104, Karnataka, India  
Email: [pragna.rao@manipal.edu](mailto:pragna.rao@manipal.edu) ; [drpragnarao@gmail.com](mailto:drpragnarao@gmail.com)

**Dr. Gaya Prasad Pal (Anatomy)**

Modern Dental College & Research Centre, Indore, (MP), India  
Email: [gp\\_pa50@rediffmail.com](mailto:gp_pa50@rediffmail.com)

**Dr. Tangirala Malati (Biochemistry)**

Scientific Advisor, Dept Genetics and Molecular Medicine,  
Vasavi Medical & Research Centre, Vasavi Hospital,  
Khairatabad, Hyderabad, Andhra Pradesh, India  
Email: [malatitgupta@gmail.com](mailto:malatitgupta@gmail.com)

**Dr. R. Selvakumar (Clinical Biochemistry)**

Christian Medical College, Vellore- 632004, Tamil Nadu, India  
Email: [Selva\\_cmc@hotmail.com](mailto:Selva_cmc@hotmail.com)

**Dr. M. L. Kulkarni (Pediatrics)**

J. J. M. Medical College, Davangere, Karnataka, India  
Email: [kulkarniml@yahoo.com](mailto:kulkarniml@yahoo.com)

**Dr. Vithal K. Dhulkhed (Anaesthesia)**

Krishna Institute of Medical Sciences "Deemed to be University", Karad, Maharashtra, India  
Email: [drvithalk@hotmail.com](mailto:drvithalk@hotmail.com)

**Dr. Prashant E. Natekar (Anatomy)**

Goa Medical College, Goa, India  
Email: [drpenatekar@hotmail.com](mailto:drpenatekar@hotmail.com)

**Dr. Lanjewar D. N (Pathology)**

Sir J.J. Hospital, Byculla,  
Mumbai-400008, Maharashtra, India  
Email: [dnlanjewar2011@gmail.com](mailto:dnlanjewar2011@gmail.com)

**Dr. Shripad A. Patil (Microbiology)**

National Institute of Mental Health and Neurosciences  
Bangalore, Karnataka, India  
Email: [spatil@nimhans.kar.nic.in](mailto:spatil@nimhans.kar.nic.in)

**Dr. Maiya Arun G (Physiotherapy)**

Manipal University, Manipal, Karnataka India  
Email: [arun.maiya@manipal.edu](mailto:arun.maiya@manipal.edu) , [ajmaiya@yahoo.com](mailto:ajmaiya@yahoo.com)

**Dr. Anilkumar I. Bhoweer (Oral Medicine & Dental Radiology)**

Mumbai, Maharashtra, India  
Email: [banil42@yahoo.co.in](mailto:banil42@yahoo.co.in)

**Dr. Nitin M. Gangane (Pathology)**

Mahatma Gandhi Institute of Medical Sciences,  
Sevagram. Dist. Wardha, Maharashtra, India  
Email: [nitingangane@rediffmail.com](mailto:nitingangane@rediffmail.com)

**Dr. Ashok Kumar Jaryal (Physiology)**

All India Institute of Medical Sciences, New Delhi, India  
Email: [ashok.jaryal@gmail.com](mailto:ashok.jaryal@gmail.com)

**Dr. Sanjay K. Agarwal (Nephrology)**

All India Institute of Medical Sciences, New Delhi, India  
Email: [Skagarwal58@yahoo.co.in](mailto:Skagarwal58@yahoo.co.in)

**Dr. Sarman Singh (Clinical Microbiology)**

All India Institute of Medical Sciences, New Delhi, India  
Email: [Sarman\\_singh@yahoo.com](mailto:Sarman_singh@yahoo.com), [ssingh56@hotmail.com](mailto:ssingh56@hotmail.com)

**Dr. Renu Saxena (Hematology)**

All India Institute of Medical Sciences, New Delhi, India  
Email: [renusax@hotmail.com](mailto:renusax@hotmail.com)

**Dr. Umesh Kapil (Nutrition)**

All India Institute of Medical Sciences, New Delhi, India  
Email: [umeshkapil@yahoo.com](mailto:umeshkapil@yahoo.com)

**Dr. Aparna Palit (Dermatology, Venereology & Leprosy)**

BLDEAU, Shri. B. M. Patil Medical College, Bijapur, Karnataka, India  
Email: [aparnapalit@rediffmail.com](mailto:aparnapalit@rediffmail.com)

**Dr. Om P. Kharbanda (Orthodontics and Dentofacial Deformities),**

Center for Dental Education and Research  
All India Institute of Medical Sciences, New Delhi, India  
Email: [opk15@hotmail.com](mailto:opk15@hotmail.com)

**Dr. T. D. Dogra (Forensic Medicine & Toxicology)**

All India Institute of Medical Sciences, New Delhi, India  
Email: [tdogra@hotmail.com](mailto:tdogra@hotmail.com)

**Dr. Veena Sargoor R. (Epidemiologist)**

Holdsworth Memorial Hospital, Mandi Mohalla, Mysore, Karnataka, India  
Email: [veenar@gmail.com](mailto:veenar@gmail.com)

**Dr. Samir Malhotra (Pharmacology)**

Postgraduate Institute of Medical Education and Research,  
Chandigarh, Haryana, India  
Email: [samirmalhotra345@yahoo.com](mailto:samirmalhotra345@yahoo.com)

**Dr. Rama Jayasundar (NMR)**

All India Institute of Medical Sciences, New Delhi, India  
Email: [ramajayasundar@hotmail.com](mailto:ramajayasundar@hotmail.com)

**Dr. Akshay Anand (Neurology)**

Postgraduate Institute of Medical Education and Research,  
Chandigarh, India  
Email: [akshay2anand@gmail.com](mailto:akshay2anand@gmail.com) , [akshay1anand@rediffmail.com](mailto:akshay1anand@rediffmail.com)

## Current Issue

JKIMSU, Vol. 7, No. 4, October-December, 2018

### Table of Contents

#### A ORIGINAL ARTICLE :

1. **Rat Cerebellar Microanatomy and Neural Oxidative Redox Differentially Affected by Black Mustard Seeds Extract.**  
*Bernard U. Enaibe, Tolulope T. Arogundade, Oluwaseun O. Adigun, Foyeke M. Adigun, Ismail T. Gbadamosi, Emmanuel O. Yawson (page no.1-11)* 
2. **Role of Melatonin in Down-regulation of Receptor Activator of Nuclear Factor kappa-B Ligand: Osteoprotegerin Ratio in Rat Bone-Marrow Mesenchymal Stem Cells.**  
*Adya Pramusita, Gondo Mastutik, Suhartono Taat Putra (page no.12-21)* 
3. **Correlation of Serum Nitric Oxide, High Sensitivity C-reactive Protein and Lipid Parameters in Diabetics with and without Coronary Artery Disease.**  
*Kavitha M.M, J.G Ambekar, S.V Kashinakunti, Nilima Dongre (page no. 22-31)* 
4. **Antibacterial Susceptibility Pattern of Uropathogenic Enterobacter Species from a Tertiary Care Hospital.**  
*Sujatha Bhat, Shobha K.L, Amita Shobha Rao, Gowrish S. Rao (page no. 32-37)* 
5. **Supratrochlear Foramen of Humerus-A Morphometric Study with Surgical and Radiological Relevance.**  
*Gyanaranjan Nayak, Biswa Bhusan Mohanty, Niranjan Sahoo, Saurjya Ranjan Das, Sitansu Kumar Panda, Prafulla K. Chinara (page no.38-44)* 
6. **Mucin Histochemistry Study of the Prostate in Normal and Malignant Lesions.**  
*Manoj P. Ambali, Megha A. Doshi, Pratibha P. Patil, Shweta H. Chavan (page no. 45-53)* 
7. **Association of Genetic Variants in XPC and XPG Genes with Cervical Cancer Risk in a Rural Population: A Hospital Based Case Control Study.**  
*Madhavi N. Patil, Kailas D. Datkhile, Pratik P. Durgawale, Nitin S. Kshirsagar, Sujata S. Kanitkar, Satish V. Kakade (page no. 54-64)* 
8. **Rouviere's Sulcus as an Anatomical Landmark for Safe Laparoscopic Cholecystectomy.**  
*Siddharth P. Dubhashi, Ratnesh Jenaw, Shireesh Gupta (page no. 65-69)* 
9. **High Resolution Melting Curve Analysis Method for Detection of Carbapenemases Producing Pseudomonas aeruginosa.**  
*Hamed Tahmasebi, Sanaz Dehbashi, Mohammad Reza Arabestani (page no. 70-77)* 
10. **Comparative Study of Single Dose Per-operative Metronidazole versus Multiple Doses Postoperative Metronidazole in Acute Non-Complicated Appendicitis: A View on Postoperative Complications.**  
*Ebtisam K. Salih, Sawzen A. Ibrahim, Ahmed F. Jarullah, Qays A. Hassan (page no. 78-84)* 
11. **Skin Manifestations of Neurocutaneous Syndromes, Among Sudanese Children Attending Outpatient Clinic of Soba University Hospital.**  
*Mohammed A. M. Oshi, Ahlam A. Alrhmman, Tariq G. Mardi (page no. 85-92)* 

#### B CASE REPORT :

1. **Anaesthesia Management in a Case of Large Ventricular Septal Defect with Eisenmengerisation Undergoing Caesarean Section.**  
*Kirti A. Kundalwal, Surekha Shinde, Prajakta M. Tayade (page no. 93-95)* 
2. **Recurrent Severe Hypochromic Microcytic Anaemia Multiple Blood Transfusions and Skin Lesions: Blue Rubber Bleb Nevus Syndrome.**

**Abstract:**

*Background:* Recent studies have reported that melatonin inhibits bone resorption through the regulation of Receptor Activator of Nuclear Factor Kappa-B Ligand (RANKL): Osteoprotegerin (OPG) ratio in osteoblast. However, the role of melatonin in osteoblast derived from MSCs is unclear. *Aim and Objectives:* To determine the down-regulation of RANKL:OPG ratio by melatonin supplementation in osteoblast culture in osteogenic medium derived from rat Bone-Marrow Mesenchymal Stem Cells (BM-MSCs). *Material and Methods:* This research was an experimental research conducted in a laboratory in vitro making use of rat BM-MSCs in osteogenic medium with or without melatonin for a duration of 21 days. Characteristics of MSCs were explored with the use of immunocytochemistry staining (CD45 and CD105). *Results:* After 15 days, mineralisation assay was carried out by means of Alizarin Red staining and at 21 days the RANKL and OPG levels were assessed with the use of sandwich ELISA. *Conclusion:* 150 nM or higher concentrations of melatonin could reduce RANKL levels; the supplementation of melatonin had no influence on OPG levels, and melatonin could reduce the RANKL:OPG ratio. The results of this study summarise that melatonin could reduce the RANKL:OPG ratio in the osteoblast culture originated from rat BM-MSCs.

**Keywords:** Melatonin, Osteoprotegerin, Receptor Activator of Nuclear Factor kappa-B Ligand, Bone Marrow Mesenchymal Stem Cells

**Introduction:**

Receptor Activator of Nuclear Factor Kappa-B Ligand (RANKL) and Osteoprotegerin (OPG) are both essential regulators in the formation and activation of osteoclasts [1]. The increase in RANKL:OPG ratio correlates with an increase in the pathological bone resorption such as osteoporosis [2]. Osteoporosis in the field of dentistry has consequences on the condition of the teeth and oral cavity, and such consequences could include: an increase in alveolar bone resorption, decrease in mandibular cortical thickness, increase in risk of periodontal diseases, and tooth mobility up to tooth loss [3]. Mesenchymal Stem Cells (MSCs) are identical cells which play a part in the maintenance, repairing and regeneration of some body tissues, as well as bones [4]. Preceding studies have suggested that melatonin inhibits the process of bone resorption by decreasing the ratio of RANKL:OPG in osteoblasts as adult cells [5, 6]. However, it has not been well established as to whether melatonin possesses the same potential for decreasing the ratio of RANKL:OPG in osteoblasts culture derived from MSCs.

Melatonin is a neuroendocrine hormone and serves to improve bone health through the mechanism of bone remodeling as a target. Insufficient melatonin levels discovered in post-

menopausal women is known to disrupt bone remodeling and to increase the occurrence of osteoporosis [1]. This condition has received a reasonable level of attention from the field of dentistry due to the rising number of women with osteoporosis in Indonesia, which is directly proportional to the increase in life expectancy. Osteoporosis occurs not only at the lumbar spine, femur, and radius but also at the jaw bone [7]. Several studies have indicated that a fall in mandibular bone density came about in women experiencing osteoporosis [8, 9]. Another study also revealed a positive correlation between an alveolar bone height in the edentulous area and osteoporosis [10, 11]. It therefore calls for special attention from the field of dentistry.

Ostrowska *et al.* [12] indicated that down-regulation of plasma melatonin levels in post menopause women resulted in disruptions of bone metabolism and amplified the risk of osteoporosis. Melatonin enhanced healthy bones through the inhibition of bone resorption by regulating the RANKL:OPG ratio [5, 6]. This signifies that the relationship between the RANKL:OPG ratio and melatonin can be applied as a basis to conduct a research on the use of melatonin as an alternative therapy for diseases which heightens bone resorption.

This study was conducted to ascertain the down-regulation of RANKL:OPG ratio in osteoblast cells culture obtained from rat BM-MSCs which have been exposed to melatonin with various doses of osteogenic medium.

#### **Material and Methods:**

This study was conducted with the approval of the ethical committee of Faculty of Dental Medicine, Universitas Airlangga with certificate number 25/KKEPK.FKG/II/2016.

#### **Isolation, Culture, and Expansion of Rat BM-MSCs**

Rat BM-MSCs were extracted from two femurs of a 6 weeks-old male Wistar rat of the Albino strain. The rat was put into an anesthesia chamber and was sacrificed using ketamine and diazepam. The femurs were collected under sterile conditions, and then all the femurs were cut at both ends. The bone marrow from each bone was collected by flushing the interior of the bone with 3 ml minimum essential Medium- $\alpha$  Modification ( $\alpha$ MEM). After filtering, the cells were centrifuged at 1600 rpm for 10 min and the cell pellets were resuspended in 6 ml  $\alpha$ -MEM. The purified cells were then plated in a 5 cm petridish and finally expanded in growth medium containing  $\alpha$ MEM, 10% fetal bovine serum, 100 units/ml of penicillin G, and 100  $\mu$ g/ml of streptomycin. The MSCs were incubated at a temperature of 37°C in a humidified atmosphere of 5% CO<sub>2</sub>. Non-adherent cells were removed by changing culture media after 24 h. The complete medium was replaced every 3 days. Cell viability was verified by a continuous cell division, and the cells were subcultured using 3 ml of 0.05% trypsin/EDTA when cells reached about 80% confluence [13]. Cells of fifth passage were utilised for the purpose of studies.

#### **Characterisation of Rat BM-MSCs**

For the identification of cell characteristics after the growth in culture, identical MSCs were subjected to immunocytochemistry staining. Two surface markers of BM-MSCs at passage 5 were assayed. Samples were trypsinised, embedded in -20°C acetone for duration of 10 mins, blocked using fetal calf serum 1%, and left to dry. After further Phosphate Buffer Solution (PBS) washes, cells were incubated for 45mins at 37°C with the primary antibodies (CD45). After washing the cells with PBS, cells were incubated with secondary

antibodies (CD105) for another 45 min at 37°C. Incubations were followed by washing with PBS and FITC treatment labeled with conjugate Fab IgG. The mounted cells were scrutinised under a fluorescence microscope with a green color filter [13].

### **Induction of Osteogenic Differentiation**

Cells collected from passage 5 were then seeded onto 24-well plates in Osteogenic (OS) medium, which contains growth medium supplemented with 0.17 mM ascorbate, 10 mM  $\beta$ -glycerophosphate, and 0.1 mM dexamethasone [14]. Cells were preserved with the addition of fresh osteogenic medium every 3 days for 21 successive days [15], with a final volume of 1ml in each well.

### **Treatment Groups**

Eight treatment groups [OS+ M-, OS+ M+ (25 nM, 50 nM, 100 nM, 150 nM, 500 nM, 1000 nM, and 5000 nM)] were put to use all through this study. The groups were exposed to OS+ in the absence (OS+ M-) or presence (OS+ M+) of melatonin to stimulate osteoblasts differentiation. These studies were conducted for a total of 21 days.

### **Alizarin Red Staining**

After osteogenic induction for 15 days, mineral deposition was evaluated by staining with Alizarin red. Briefly, excess medium on cells were shaken off with PBS, embedded in 10% (v/v) formaldehyde, and then left to dry completely. After 15 min, cells were stained with 2% alizarin red solution (pH 4.1-4.3), incubated for 20mins at room temperature, and then followed by rinsing with distilled water [15]. The plate was visualised with the use of a light microscope.

### **Determination of OPG and RANKL Expression**

On day 21, the concentration of OPG and RANKL were assayed using a commercial ELISA

(Elabscience) in accordance with the manufacturer's protocol. For the establishment of OPG expression, cell culture supernatant was harvested from cultured cells, centrifuged to remove debris, and stored at  $-20^{\circ}\text{C}$  pending the time of use. Moreover, for the establishment of RANKL expression, cell was harvested from each well on the 21<sup>st</sup> day, supplemented with RIPA buffer, and stored at  $-20^{\circ}\text{C}$  pending the time of use [16]. The OPG and RANKL concentrations were ascertained by comparison to a standard curve.

### **Statistical Analysis**

All experiments were repeatedly conducted for a minimum of six times. The results are recorded as the mean  $\pm$  SD. All statistical analyses were performed using SPSS 17.0. Shapiro-Wilk tests and Levene test were employed for analysing the distribution and homogeneity of data. Non-parametric statistical analyses were conducted by Kruskal-Wallis test due to the variables did not showing a regular distribution and/or homogeneity, and this was then followed by Mann-Whitney test.  $p < 0.05$  was considered to be significant.

### **Results:**

#### **Rat BM-MSCs Culture**

Bone marrow was extracted from the femurs of a rat and plated into a 5 cm culture dish. Non-adherent cells were cautiously removed after 24 hours and 1.5 ml fresh medium was replaced. The adherent cells were then washed with PBS, and fresh medium was added time after time with an interval of 3 days. On day 1 after isolation, majority of the cells were hematopoietic cells and MSCs were hardly seen. After 5 days of initiation culture, it was observed a dramatic decrease in hematopoietic stem cell lineages and some spindle-shaped/fibroblast-like cells appeared.

During the second week of culture, the number of spindle-shaped/fibroblast-like cells became more confluent, grew out from a dense cell nodule, and reached about 90% confluence (Fig. 1).

#### **Confirmation of Phenotype and Osteogenic Differentiation Assay of Rat BM-MSCs**

The fifth passage cells were analyzed for cell surface antigens. Figure 2 illustrated that the

established cells were strongly positive for CD105 and less positive for CD45. The osteogenic differentiation capacities of BM-MSCs were obtained with the use of Alizarin red staining. And as illustrated in Figure 3, the cells were stained positively after 15 days for extracellular mineralisation in all groups.

### Protein Expression Analysis

At 3 weeks, we examined the effects of melatonin has on RANKL and OPG expression in osteoblast obtained from rat BM-MSCs using ELISA. The result demonstrated that the expression of RANKL was relatively lesser when compared with controls ( $p < 0.05$ ). Melatonin decreased RANKL level in a dose-dependent manner and that significant reduction was observed in 150 nM or higher concentrations of melatonin. Melatonin

supplementation had no influence on OPG expression. There was no significant difference perceived between the groups ( $p > 0.05$ ).

### RANKL:OPG Ratio

RANKL:OPG ratios were significantly lower when compared to those with controls ( $p < 0.05$ ). Melatonin reduced RANKL:OPG ratios in a dose-dependent manner and its lowest doses (25 nM) or higher concentrations markedly reduced RANKL:OPG ratios.

**Fig. 4:** Effect of Melatonin in RANKL Levels, OPG Levels, and RANKL:OPG Ratio in Osteoblast Cell Culture Derived from Rat BM-MSCs Exposed to Osteogenic Medium. Experiments were Conducted Repeatedly at least 6 times, and Data were Presented as mean  $\pm$  SD. Rat BM-MSCs were Exposed to Various Concentrations of Melatonin for 21 Days and then RANKL and OPG levels were Quantified. **a** RANKL Inhibition by Melatonin. **Discussion:**

In this study, we have isolated and characterized a population of rat BM-MSCs. The isolation protocols made use of the Laboratory of Stem Cell, Institute of Tropical Disease, Airlangga University protocol. The morphology of the isolated cells was consistent with the characteristics of MSCs which have been stated by various studies in the literature. They were spindle-shaped/fibroblast-like cells adhered to the petridish. It was conducted a characterization process using immunocytochemistry. Cultured rat BM-MSCs are uniformly and solidly positive for CD105, CD90, and CD73, regardless of their passage or time spent in culture, and on the other hand, failed to express CD45, CD31, and CD 34 [17]. CD105 is MSCs marker, and potentially plays a role in TGF-beta signaling in the course of MSC chondrogenic differentiation; on the contrary, CD45 is hematopoietic markers [18]. The obtained result signified that CD105 was highly expressed. It was also considerably similar to those of previous studies which have demonstrated rat BM-MSC characterization. They found positive CD73, CD90 and CD105 expression on passage one [19]. Preceding studies also established that positive expression of CD73, CD105, and Stro-1 reached the highest expression on passages 3-6 [20]. Wang *et al.* [21] also derived at a similar result, depicting positive expression of CD29, CD105, CD166, and VLA-4 on the fourth passage. It also indicated positive expression of CD45, though it seemed as weak. One of the criteria put in consideration for the characterization of MSC is the negative expression of CD45 [22]. This condition may arise as a result of the immunocytochemistry technique is not being a quantitative test, which means it is not capable of accurately determining the amount of CD45 [23].

Passage also affects the expression of markers of MSCs. Study conducted by Harting *et al.* [20] discovered positive expressions of CD11b and CD45 on passage 3, which was decreasing with the number of passages [20]. Another explanation that may arise is the possibility of MSC colonies for not being completely separated from hematopoietic stem cells [23].

Alizarin Red staining was carried out to detect osteogenic differentiation in cultures of rat BM-MSCs. Osteogenic differentiation is characterized by extracellular mineralisation indicated by a red color on Alizarin Red inspection. Stained osteoblasts appear bright red in colour, whereas undifferentiated MSCs do not [24]. In the course of this study, all groups displayed a noticeable amount of red-stained cell clusters, indicating that the rat BM-MSCs collected were differentiated towards the osteoblast lineage.

In the current study, we tested the hypothesis that melatonin affects the RANKL:OPG ratio on osteoblast generated from rat BM-MSCs. Under regular physiologic conditions, there is a balance between bone resorption and bone formation. This balance enhances bone homeostasis. In certain inflammatory bone conditions, the balance is altered to enhance the occurrence of excessive bone resorption, as that observed in osteoporosis. Accordingly, a relative decrease in the concentrations of OPG or an increase in RANKL expression may result in a net increase in RANKL and pathologic bone resorption, which is also known as an increase in the RANKL:OPG ratio [2, 25]. RANKL is a type II transmembrane protein located on the surface of expressing cells as a proteolytically released soluble form. Its expression through osteoblasts coordinates bone

remodelling by means of stimulating bone resorption via local osteoclasts, which in turn stimulate bone synthesis by closely adjacent osteoblasts through a process known as 'coupling' [25, 26]. OPG therefore serves as a decoy receptor by blocking RANKL binding to its cellular receptor RANK. Expression of RANKL and OPG is therefore coordinated to regulate bone resorption and density both positively and negatively by controlling the activation state of RANK on osteoclasts [25].

In the current study, RANKL:OPG ratios were relatively lower when compared with controls. They were reduced by melatonin in a dose-dependent manner and this evident reduction was a result of either the lowest doses of melatonin at 25 nM or higher concentrations. It was also caused by melatonin supplementation reducing the RANKL level in a dose-dependent manner and that significant reduction was observed with 150 nM or higher concentrations of melatonin. Koyama *et al.* [6] stated that melatonin addition for 5 hours in MC3T3-E1 cells enhanced bone mineral density by inhibiting bone resorption through down-regulation of RANKL transcript level in a dose-dependent manner with significant reduction in 10  $\mu$ M or higher concentrations of melatonin. A previous study by Histing *et al.* [5] similarly indicated that the supplementation of melatonin 50 mg/kg body weight i.p. daily in the course of the entire 2 weeks in mice could impair fracture healing by suppressing bone resorption through down-regulation of RANKL-mediated osteoclast activation. Melatonin could downregulate RANKL levels in osteoblast derived rat BM-MSCs which have been exposed to osteogenic medium as a result of Wnt signaling activation. Wnt signaling has potential

roles to play in bone remodeling in both physiological and pathological conditions. It suppresses bone resorption by regulating RANKL levels through the  $\beta$ -catenin dependent canonical pathway [27]. In this research, the activation of Wnt signalling with 20mM LiCl exposure for 24 hours led to the downregulation of RANKL, mRNA and protein expressions, as well as the overexpression of full length  $\beta$ -catenin. Melatonin activated Wnt signalling [28]. Other studies showed that 50nM melatonin supplementation for 30-240 minutes activated Wnt 5a/b and  $\beta$ -catenin, while it attenuated phosphorylation of glycogen synthase kinase-3 $\beta$  (GSK-3 $\beta$ ) in MC3T3-E1 cells [29].

The addition of melatonin on MSCs cultured exposed to osteogenic medium, binds with MT2R to directly activate and phosphorylate MAPK (ERK 1/2) [1, 29-30]. Up-regulation of ERK 1/2 activity increased transcriptional activity of Runx2 and OSX, in order for it to induce MSCs differentiation into mature osteoblasts. Supplementation of melatonin has been found to activate Wnt pathway which leads to an increase in the transcriptional activity of Runx2 and OPG gene, as well as an inhibition of RANKL gene transcriptional activity [27]. An increased activity of osteoblastic specific gene through ERK 1/2 pathway and Wnt pathway would trigger the differentiation of MSCs into mature osteoblasts cells, which secrete OPG in higher quantities and RANKL in relatively lower quantities. The results indicated a fall in the ratio of RANKL:OPG obtained in all groups, with diminished levels of RANKL, but there were no differences in OPG levels in all groups due to very low melatonin doses.

**Conclusion:**

About 150 nM or higher concentrations of melatonin could reduce RANKL levels, its supplementation had no effect on OPG levels, and it is capable of reducing the RANKL:OPG ratio.

The results of this study summarise that melatonin is capable of reducing the RANKL:OPG ratio in osteoblast culture obtained from rat BM-MSCs.

I want to publish a research article,i just need a clarification whether the journal is scopus indexed for 2020?

reply

**Melanie Ortiz** 2 years ago

SCImago Team

Dear Ramya, thank you very much for your comment, unfortunately we cannot help you with your request. We suggest you to consult the Scopus database directly. Keep in mind that the SJR is a static image (the update is made one time per year) of a database (Scopus) which is changing every day.  
 Best Regards, SCImago Team
