Title: Bilateral Autoamputation of The Feet Following Traditional Herbal Therapy in a Five-Year-Old Child: A Case Report
International Journal of Surgery Case Reports

Dear Dr. irianto,

Reviewers have now commented on your paper. You will see that they are advising that you revise your manuscript. If you are prepared to undertake the work required, we would be pleased to reconsider our decision.

For your guidance, reviewers' comments are appended below.

If you decide to revise the work, please submit a list of changes or a rebuttal against each point which is being raised when you submit the revised manuscript.

To submit a revision, please go to <https://ees.elsevier.com/ijscasereports/> and login as an Author.

Your username is: komang168@yahoo.com

If you need to retrieve password details please go to: http://ees.elsevier.com/ijsc/automail_query.asp

Yours sincerely,

The Editors

International Journal of Surgery Case Reports

Have you considered publishing a protocol for your next study? You can now publish your study protocol with IJS Protocols, our pioneering new journal for surgical protocols, visit <http://www.ijprotocols.com> for more details.

Reviewers' comments:

This is an unusual but very impressive and illustrative case of bilateral ergot-induced amputation of the feet in a child.

Overall, it is well written and clear. However, in order to be publishable, there are a few issues that should be changed:

- There are far too many highlight bullet points. Please limit to the 3-4 most important ones

- Since this is not "autoamputation" but rather "Ergot-poison induced amputation", the title should be changed accordingly.

- In the introduction, the first sentence is trivial. The point here is that bilateral foot necrosis is extremely debilitating, so I would suggest "Bilateral gangrene of both legs in a child is a severely debilitating condition."

- Also, the presentation should include whether there were any co-morbidities. If not, please write "An otherwise healthy five-year-old girl fell from a bicycle..."

- Do the authors know whether there were any fractures after the fall? That would be important to understand if the vascularization was compromised by the fracture rather than by the herbs.

- What does "discharged by force" mean (in the case presentation). I hope that does not mean that they were kicked out of the hospital. Perhaps can be reworded.

- Overall, the text is too long. Introduction, case presentation and discussion should be shortened by 1/3.

- The laboratory values do not have to be presented in whole. Please delete the tables and state pertinent values in the text.

- **Manuscript Decision: Accepted**
