Minor Revision Requested

#### Message for Author

Thank you very much for submitting Manuscript ID 6761476 entitled “The Applicable Dental Age Estimation Methods for Children & Adolescents in Indonesia: A Review” to International Journal of Dentistry.

I have to inform you that our reviewer recommended minor revision to the manuscript.

#### Reviewer Report

The authors are to be congratulated for attempting to address a critical public health issue from a dental perspective in a review article.

I just disagree with the conclusion section (The result of the present study indicates that the ...). This study has no results as there was no intervention, it is not an experimental study. I think it is better to rephrase this paragraph at all.

Please remember that (The paragraph is the ideal unit of organization. Paragraphs typically start with an introductory sentence that is followed by sentences that describe additional detail or examples. The last sentence of the paragraph provides conclusions and forms a transition to the next paragraph). Some paragraphs were too long. Please rephrase them.

We appreciate the fact that you have considered International Journal of Dentistry for the publication of your manuscript.
