Deals with Forensic Medicine,
Forensic Science, Toxicology,
DNA Fingerprinting, Sexual Medicine, and
Environmental Medicine

ABOUT JOURNAL

Journal is now open access and online issues can be seen at ---> [Click on this link-
medicopublication.com/index.php/ijfmt](http://www.medicopublication.com/index.php/ijfmt)

where HTML and Pdf copies are uplaoded

“**Indian Journal of Forensic Medicine & Toxicology** ” is a double-blind peer reviewed international journal. The frequency is quarterly. It deals with Forensic Medicine, Forensic Science, Toxicology, DNA fingerprinting, sexual medicine, environmental medicine, Forensic Pathology, legal medicine and public health laws. It has been assigned International standard serial No. p-0973-9122 and e-0973-9130. The Journal has been assigned RNI No. DELENG/2008/21789. The journal is also indexed with Google Scholar, Scilit, CINAHL, EBSCOhost (USA), Embase and many other international databases.

This is an open access journal which means that all content is freely available without charge to the user or his/her institution. Users are allowed to read, download, copy, distribute, print, search, or link to the full texts of the articles, or use them for any other lawful purpose, without asking prior permission from the publisher or the author. This is in accordance with the BOAI definition of open access.

Aim and scope of Journal 1.The journal intend to publish articles related to research in specialties of Forensic Medicine, Forensic Science, DNA fingerprinting, Toxicology, Environmental hazards, Sexual Medicine, Forensic Anatomy, Forensic Anthropology, Forensic Odontology, public laws, articles of immense medico-legal importance etc

2.Case reports, original articles and review articles are welcome.

3.The research regarding new concepts is encouraged.

4.We encourage research from developing countries.

5.The journal is open access.

Important Information

Manuscript Submission fee - There is no fee for manuscript submission. Manuscript can be submitted any time. Submission is always open

Manuscript Processing Charges- We charge for manuscript processing from authors. Authors must pay charges only if the article is accepted for publication. The charges are per article. If some author does not want to pay, he can withdraw his article.

The charges are as follows

1. India and SAARC countries- Indian Rupees 5000/
2. Rest of world - US \$ 200

Rebate / waiver policy - Editor can give rebate/ wave off charges depending on author's status like student, no funding from any source, research from developing countries or research of exceptional status. Please write to Editor giving justification for rebate. Editor's decision is final and binding.

Digital archiving Policy- the issues of the journal are archived into PKP PN (Public Knowledge Project), LOCKSS and CLOCKSS

Review Policy for articles- The journal follows double blind peer review policy for all articles. Once the article is received, it is forwarded to our two reviewers after removing names of authors and their affiliations. Authors are also not informed names of reviewers. Reviewers send their comments in due course of time and these comments/ queries are forwarded to authors to make corrections or offer explanations. Once the reviewers are satisfied with corrections in manuscripts or explanations given by authors, authors are conveyed the decision of acceptance of article. If author/s refuses to make corrections as suggested by reviewers, manuscript is rejected for publication.

Plagiarism checking policy- The journal has zero tolerance policy for plagiarism. We regularly use software Dupli checker for detection of plagiarism.

Licensing Policy Articles in Indian Journal of Forensic Medicine & Toxicology journal are Open Access articles which permits use, distribution and reproduction in any medium, provided the original work and source is properly cited.

5. Copyright Policy Authors who publish with this journal agree to the following terms:- -

- Authors retain copyright and grant the journal right of first publication
- Authors continue to retain publishing rights to the article without restrictions.

950-955

**Estimation of the Serum Concentration Levels of Ferritin and Vitamin D for Hypothyroid Patients.**

Amerah Kamal Mohammed1, Thanaa Abdulmahdi2, Zainab Nasser Nabat2

956-961

**Impact of Nutritional Milk for Lactating Mothers upon Efficiency of Breast Feeding for Iraqi Mothers at Maternity Hospital in Baghdad City**

Hawraa Hussein Ghafel1, Bahaulddin Hassan Abbood2

962-967

**Risk of Osteoporosis in Patients with Crohn's Disease Not Respond to Infliximab Therapy Undergoing Surgical Intervention**

Fatima A.Mohammad1, Fatin Fadhel ALkazazz2, Sura A.Abdusattar3

968-973

**Bioactivity of Gutta flow II versus Modified Gutta Percha based Silicon Endodontic Sealers by Nanobioactive Fillers**

Saad A. Ramadhan1, Raghad A. Al hashimi2

974-979

**Assessment Self-Care of Patients' Undergoing Hemodialysis with end Stage Renal Disease**

Haider Mohammed Haloob AL-Abedi1, Zahraa Abdull Abbass Al- Khafajy2, Ali J. Eidan3, Dhafer Ameen J. Al-Mossawy4, Athraa Abbas Al-Zeyadi 5

980-987

**Hypertension in Relation with Smoking in Azadi Teaching Hospital at Kirkuk City**

Saad S. Mustafa1, Taghlab H. Ryhan2, Ali A. Ismail3

988-993

**Determination of Some Volatile Organic Compounds in the water produced at Al-Ahdab oilfield in the Governorate of Wasit, Iraq using Headspace SPE-GC-FID.**

Najla Mohson Hammod1, Khalid Waleed S. Al-Janabi2, Salam Abbas Hasan1

994-999

**Histological Changes in Mice (Balb/c) Induced by Newcastle Virus in Digestive System**

Abbas Abed Sharhan1, Ahmed Obaid Hussain2, Ameer Jawad Hadi3, Ruqya jaafer baqer3

1000-1003

**The Effects of Newcastle virus Histologically Suspension on Some Organs of White Mice (Balb /c)**

Alaa Abd Alzahraa1, Ahmed Obaid Hossain1, Abbas Abd Sherhan1

1004-1007

**Molecular identification of Ascaridia columbae in the Local Healthy Pigeon (Columba livia domestica, Gmelin, 1780) in Karbala Province**

1 Dhiaa J.Hamzah, 2Ihsan k. A. Al kardhi, 3 Haider A. H. Al saegh, 4 Hayder A. Muhammed, 4 Firas ALAli

1008-1012

**Effect of Addition of Composite Polyamide Micro Particles and Silicone Dioxide NanoParticle on Some Mechanical Properties of Room Temperature Vulcanized Maxillofacial Silicone Elastomer Before and after Artificial Aging**

Bahaa F. Alanssari1, Bayan S. Khalaf2

1013-1019

**The Elements of the Crime of Copyright Infringement on the Internet**

Ammar Ghali Abdulkadhim

1020-1023

**Effect of Iron Oxide Nanoparticle on The FSH, LH and Testosterone Hormones in The offspring of Albino Rats**

Reyim Hameid Kamel 1, Amel Ali AL-Tae2

1024-1028

**Genetic variability of the Mite Varroa destructor Isolated from Honey Bees in Iraq and Some Middle Eastern Countries**

Muntasser S. Mahdi1, Mahmood B. Ali 1, Aqeel N. AL-abedy2

1029-1035

**Effect of Preoperative Breathing Exercise on Postoperative Patients' Lung Functions**

Dhiaa A. Al-Reda1, Rajha A. H1

1036-1042

**Glomerular Diseases: Systemic Lupus Erythematosus is Most Common Finding: A Cross-Sectional Study**

Fadhil Handhal Khleif 1, Haider Jebur Kehiosh 2, Salman Azeed Aljubori3, Sabah Nemah Alfatlawi 4

1043-1047

**Synthesis of Diimidazole Has Pyrazole, Isoxazole and Pyrimidine Derivatives and Evaluation as Antibacterial**

Sahar Abdullah Kadham.1, Abdul Jabbar Kh. Atia2

1048-1052

**Novel Approach and Cloud Point Extraction Method for Determination of Acetazolamide Drug**

Muna Iskandar Mahdi1, Kassim Hassan Kadhim1

1053-1059

**The Effect of Pilates Exercises in the Repair of the Aberration and Balance of the Muscles of Shoulder Girdle as a Beginning for the Fitness**

Hussein Ali Kadhim1, Haidar Shmkhi Jabar1

1060-1064

**Effect of Specific Tactical Exercises in Some Biochemical Indicators and Psychological Endurance and Achievement of 400 M Hurdles for Young Players**

Mahmoud Nasser Radi1, Ali Bukheet Hassan1, Muntadher Mohammed Ali1

1065-1070

**Comparative Molecular Study between Some Plant Extract and Tinidazole of Hydatid cysts in Basrah, Southern Iraq**

Jalal Y. Mustafa1, Ghazi Y. Azzal1, Suzan A. Al-Azizz1, Fatin A. Muatafa2, Arwa R. Lazim2

1071-1076

**Histological, Histochemical And Immune Histochemical Study of Effect Aging on the Parotid Salivary Glands in Buffalo**

Dhuha Adel Kareem1, Hiba M. Abd Alrahman1, Fawzi-Alasadi1

1077-1082

**Study the Protective Role of Vitamin (B6 and B12) on the Some of the Blood Physiological, Biochemical Parameters and Histological Induced by Treatment of Sodium Fluoride Male White Rat**

Alyaa Neamah Al-Saidi 1 , Zainab Shnewer Al-Turfi 1

1083-1088

**Outcome Following Medical and or Surgical Intervention (ESPAL) for the Treatment of Epistaxis in ENT Unit in Al-Diwaniyah Teaching Hospital: Cohort Study**

¹Faculty of Public Health, Universitas Airlangga, Campus C Mulyorejo Surabaya 60115

Abstract

Adolescence is a transition period between childhood and adulthood, adolescent tends to have high curiosity and seek identity. Adolescent is a vulnerable group as a target for drug dealer. The objective of this study was to determine the perception of students in carrying out their duties as peer educators. This study used qualitative study approach with a case study design which intended to define the perceptions of the research subjects through in-depth interviews, observations, and also document studies. The students' perception of their roles as peer educators such as a keeper of confidential informations, motivators, sources of information, and discussion partners. The conclusion was that the students who were selected as peer educators in their school environment had a positive perception of the application of the method to prevent drug abuse among their peers. Therefore, the application of peer educator method in high schools in North Surabaya can be used as a reference for other schools to implement peer educator method to their students.

Keywords: Student, Peer Education, Drug Abuse Prevention, School

Introduction

Adolescence is a transition period between childhood and adulthood which is characterized by changes in physical, psychological and psychosocial aspects⁽¹⁾ The process of independent for these adolescents are easily affected by their environment and it can lead to drug abuse⁽²⁾.

Drug abuse that occurs in adolescents is caused by many factors that lead to addiction. Several factors causing drug abuse include personality, family, environment, education, and social and community, and vulnerable population factors⁽³⁾.

A report from the United Nation Office on Drugs and Crime (UNODC, 2015) stated that drug abuse at 15-64 years old was as much as 3.4-6.6% of the total world population. The increase number of drug abuse also occurred in several ASEAN countries, especially

Indonesia. Of the 100% narcotics transactions in the ASEAN region, 40% were in Indonesia⁽⁵⁾.

East Java Narcotics Agency explained that in 2010 there were 2,986 cases, and then in 2011 there was an increase of 3,008 cases. The highest drug abuse occurred in adolescents between 15-19 years old with a percentage of 37.88% in 2015. Social reinforcement among students must be carried out as the basis of national development.

A research explained how to fund youth-based school programs. The article presents the rationale and content of PASS, a Danish school-based prevention program targeting cannabis-culture-related beliefs among high school students (i.e. typically 15-19 years old). The objective of the program was to prevent or delay initiation of cannabis use and limit use among students who already initiated⁽⁷⁾.

The implementation of the peer educator was developed based on the assumption that teens will feel more open in expressing their problems to their peers. Therefore, the establishment of peer educators in the school environment is a strategy that can minimize the occurrence of drug abuse in adolescents.

The senior high schools in North Surabaya that formed peer educator method empowered their students as peer educators with the aim that students can play an active role in activities in the school environment as well as outside school activities. In carrying out the peer educator strategy, the students were required to be able to play an active and sensitive role in the social environment in their schools especially as facilitators for their friends in providing solutions and bridging the problems experienced by them. The aim of this study was to understand the students' perception of their role as peer educators.

Material and Method

This study used qualitative study approach with a case study design which intended to define the perceptions of the research subjects⁽⁸⁾. A Case Study Research was conducted to gain in depth/detail/complete information to obtain a complete picture of an event, in the sense that the data collected in the research was studied as a whole, complete and integrated.

The key informants of this study were students who appointed as peer educators. The informants were chosen to explore information according to the purpose of the study. The number of informant in this study was 10 student identified as peer-educator by the teachers.

In a qualitative case study approach, the researcher becomes the main instrument in the data collection because the aim of the research was to explore the students' perceptions to obtain comprehensive information. Other data collection tools used to support this research were interview guidance, observations and tape recorders.

The interview guidance was prepared based on the objectives of the study, which was also guidance in the form of questions to explore the students' perception in carrying out their roles as peer educators. The observation was done by observing the students' access to health promotion media in the school environment such as the presence of drug abuse prevention posters. The researcher conducted an interview by using open questions. The researcher tried to create a comfortable atmosphere, so that the informants could freely convey information that the researcher wanted to obtain.

The data analysis in this study was done through some procedures, namely data reduction, data presentation

and conclusion drawing.⁽⁹⁾ After collecting the data, the recording of the interview with each informant was transcribed and the key words related to this study was identified.

There are four forms of data analysis along with the interpretation in the case study research, namely collection of categories, direct interpretation, researcher formed pattern and found comparability between two or more categories, and later the researcher developed the result of the data obtained to infer the result of the research⁽¹⁰⁾.

Regarding the explanation of peer educator about the program that has been running at each school, the program has varied activities. The informants explained that the existing program was considered to be less effective because of the lack of activities, so the school have to make a lot of programs that could build the students' enthusiasm in avoiding drug abuse.

Findings

Role as a Keeper of Confidential Information

In carrying out the role as peer educators, the informants explained that their interaction with their peers was spontaneous and informal. This means that the interaction can occur anytime and anywhere (inside or outside school area). However, the principle of confidentiality should be upheld.

Seven students revealed their reason for being peer educators was because they wanted to help their peers to solve their problem. According to informants, the students tend to feel reluctant or afraid if they had to consult their problems with teachers. For example, as SK (Student 1) explained:

I want to help my friends. When they get into problems and go to the guidance counselor, they certainly will not feel comfortable. They will be less open. If they have friends to share what they feel, they will be more opened.

Although not all of the problems can be solved properly, peer educators are committed to help their peers. Peer educators also sometimes ask for help or input from the Teachers regarding problems experienced by their peers to find solutions for the problems. SK (Student 1) explained:

The problem is that there are students who tell us about their problems with their significant others, but then I cannot give them solution because I have no experience in that field. But, they said, what kind of counselor you are. That is what I experienced.

Role as Motivators

Based on the result of the interview, the peer educators also revealed that they have a role as motivator. They have ability to help their peers solve the problems become a motivation for them.

The peer educators encouraged their peers to solve problems without having to do negative things like drug abuse. By motivating their peers, it is hoped that this program will be able to help students to solve their problems, and motivate them to be more productive at school activities. As DH (Student 2) pointed out:

When my friends seemed not in a good mood, I must be sensitive. I would ask them why. Maybe they are having problems or feared of something, like fear of falling into negative things. So I should motivate them.

The role of peer educators as motivators is an attitude that can be an example for other young people that as the next generation of the nation they must stay away from drug abuse by participating in positive activities at school and outside of school.

Role as a Sources of Information

The lack of knowledge of adolescents about the consequences of drug abuse is caused by the limited access to obtain information regarding the impact that will happen. Peer educators are students who become resources or counselors for their peer groups (11).

Peer education is a program that is implemented as a useful source of information for adolescents regarding the dangers of drug abuse so that they can avoid all kinds of drug abuse forms.

In conveying information on the dangers of drug abuse, peer educators must have good knowledge. At present, trainings are provided for the peer educators, but are still not as intensive as they once were, so the peer educators need support from the schools and the government in providing guidance and trainings for them so that they can give information to their peers optimally. The following comment was from RH (Student 3):

[...] (The training) from the school is still minimal. Although the school gives us support but it is not maximal. There is also a funding problem.

Role as Discussion Partners

To achieve the goal to make students understand the danger of drug abuse, peer educators can provide peer counseling through formal and non-formal situations. Formal situation counseling can be carried out in counseling events and non-formal counseling can be done by holding a discussion (11).

The role of the peer educators as friends of discussion can also be seen from how often their friends at the school use the peer educators as facilities to exchange thoughts about information in preventing drug abuse. The following comments were from DH and KN:

Almost every day I get questions from my friends (DH, Student 2).

Yes, (I) often (experience the same thing), it is just not as often as every day. The problem is that we are now in different classes, XII class. We often had discussion when we were still classmates. (KN, Student 5).

Students who become peer educators have the ability to understand the main tasks and roles as peer educators. However, sometimes, some cases were not well understood because the peer educators have never experienced the same things.

Actually, this can be anticipated by conducting regular joint discussion that is accompanied by teachers. The discussion can be a media to exchange views on the possibility of cases that occur in adolescents and discussion of actions to be taken so that the peer educators can carry out their role to the fullest.

Discussion

Perception is a process of how stimulus that influences responses is selected and interpreted the perceptions of each person towards an object is different⁽¹³⁾. Therefore, perceptions have a subjective nature. Stimulus is any physical form or verbal communication that can affect individual responses.

The previous research explained that peers are friends who can influence each other towards goodness or toward risky behavior⁽¹⁴⁾. In a study regarding

strategies for prevention and intervention of drug abuse among students in secondary schools in Kenya, it was showed that drug abuse was widespread among students, regardless of gender, and that there was a strong relationship between drug abuse and family members abusing drugs ⁽¹⁵⁾.

According to the psychological abilities, adolescents, including students, have mental characteristics that are still unstable. This condition makes them vulnerable to the effects of negative interactions such as drug abuse. Students must have strong and independent attitudes and characters with the spirit to build the nation by staying away from drug abuse.

One program that has been running in several high schools in North Surabaya, is peer educator as a facility to share stories, experiences, and problems faced by students. Peer educators thought peer education to be an effective method to prevent drug abuse ⁽¹⁶⁾. To be effective, the program is recommended to be started during middle school instead of high school, that families and local institutions should be involved in the program, and the students should be directed to participate in arts, sports, and social activities.

Goodlad (1998) explained that there are seven regulations as criteria for implementing peer educator strategy, one of which is giving trainings to students who are peer educators with assignments and explaining techniques in teaching the possibility to solve problems that are often experienced among adolescents. The Goodlad Theory provides an explanation that the school should be represented by accompanying teachers or Teachers to hold trainings so that the peer educators can carry out their duties in a good way ⁽¹⁷⁾.

The facilities provided by the school are in the form of support to the peer educators. If there is an event outside the school that asks the peer educators to contribute, the peer educators should get a dispensation to leave the class. In addition, the guidance counselor's room can be used as a discussion room, unless this discussion activity has not been conducted regularly.

Based on the data obtained from the peer educators and also from the teachers, there was no funding assistance from the school. The funding was intended to be developed by the peer educators in making an activity in the school environment involving the students at the school with the aim of getting to know the danger of

drugs and preventing drug abuse.

From the results obtained by the informants regarding the perception of the peer educators in carrying their duties, the researcher reviewed the need to improve the support for the peer educators to be more maximal in carrying out their roles.

Peer educator program needs to be organized, starting from appointing a chairman of the management. The point is that it will ease the peer educators to hold meetings or discussions with other peer educators and teachers.

In addition, the guidance counselor, as a companion to the peer educators, must routinely control the development and notice obstacles faced by the peer educators. If there are problems that are difficult to solve by the peer educators, the accompanying teachers can provide input or solution.

In addition to the assistance that can be provided by the guidance counselor, the person in charge for the health unit must also routinely provide information to the peer educators. The information provided is specifically related to health impacts that will occur if adolescents commit drug abuse. Thus, in conveying the danger of drug abuse to the students, the peer educators can link it to the health problem that might occur.

The school must also involve the peer educators with activities outside the school that are collaborated with stakeholders to provide trainings for the peer educators. The activities can be in the form of counseling from the National Narcotics Agency or from the police related to the prevention of drug abuse. In addition, the school must also provide facilities to the peer educators to hold regular discussions.

Conclusion

The conclusions of this study are about the perceptions that arise in students who are motivated to become peer educators because they want to contribute to prevent their peers from committing drug abuse. Most students who are peer educators felt changes in themselves such as getting new friends from various classes, understanding life problems and gaining new knowledge when they were invited to the counseling. Only a few students who just felt neutral or stated that they did not feel any change in their individual self.

The constraint that was still felt by the peer educators was the lack of guidance, so that when they faced new problems that they had never experienced before, their role as peer educators could not function optimally.
