Heny HENY ARWATI:

We have reached a decision regarding your submission to Qanun Medika - Medical Journal Faculty of Medicine Muhammadiyah Surabaya, "CORRELATION BETWEEN PARASITEMIA AND LUNG SIZE IN MALARIA-ASSOCIATED ACUTE RESPIRATORY DISTRESS SYNDROME IN Plasmodium berghei-INFECTION".

Our decision is to:Revision Required

Please upload your revision on the website within 4 weeks

Editor in Chief
Journal Qanun Medika

Reviewer A:

2. Suggestions or improvements the author should make to the TITLE?:
4. Suggestion/ improvements the author should make to the ABSTRACT?:
6. Suggestion/ improvement the author should make to the INTRODUCTION?:
8. Suggestion/ improvement the author should make to the METHOD:
10. Suggestion/ improvement the author should make to the RESULT:
12. Suggestion/ improvement the author should make to the DISCUSSION & CONCLUSION:
14. Suggestion/ improvement the author should make to the REFERENCE:
15. OVERALL: ● Was the study design appropriate to answer the aim? ● What did this study add to what was already known on this topic? ● What were the major flaws of this article? ● Is the article consistent within itself?:

Reviewer B:

2. Suggestions or improvements the author should make to the TITLE?:
Pertimbangkan kembali penggunaan kata korelasi, karena analisis statistik yang digunakan tidak hanya analisis korelasi
4. Suggestion/ improvements the author should make to the ABSTRACT?:
Porsi penulisan metode sebaiknya dikurangi. Justru bagian yang sebaiknya dicantumkan secara detil adalah results, karena itu merupakan nilai jual sebuah manuskrip. keluarkan angka2 signifikansi pada bagian results dari abstrak
6. Suggestion/ improvement the author should make to the INTRODUCTION?:
Latar belakang belum menggambarkan alasan mengapa memilih variabel ukuran paru

Sebaiknya penulisan latar belakang diawali dari informasi yang umum dahulu, lalu sedikit demi sedikit mengerucut ke masalah penelitian (deduksi)
8. Suggestion/ improvement the author should make to the METHOD:
jumlah2 tikus, berat tikus dan sebagainya sebaiknya justru diletakkan di sesi results terutama sub-seksi baseline

10. Suggestion/ improvement the author should make to the RESULT:

Sesi ini nilai jual utama sebuah manuskrip, penulisan results harus detail dan tidak perlu dikomentari terlebih dahulu (komentar terhadap results dapat dilakukan pada sesi discussion). Rule of thumbs panjang results adalah 3 halaman dengan spasi 2. keluarkan signifikansi sebanyak2nya.

Laporan hasil penelitian mohon lebih banyak melaporkan informasi, sebagai usulan, peneliti dapat menjabarkan dahulu bagaimana kondisi baseline dari hewan coba sebelum mendapat perlakuan

Variabel dalam grafik memiliki satuan yang berbeda, lebih baik grafik terpisah atau dilaporkan berupa tabel

12. Suggestion/ improvement the author should make to the DISCUSSION & CONCLUSION:

Porsi penulisan referensi lebih mendominasi seksi discussion. Ada baiknya lebih banyak membicarakan hasil penelitian ini.

14. Suggestion/ improvement the author should make to the REFERENCE:

Sudah baik

15. OVERALL: • Was the study design appropriate to answer the aim? • What did this study add to what was already known on this topic? • What were the major flaws of this article? • Is the article consistent within itself?:

Diperlukan perbaikan penulisan untuk mempertajam dan memperkuat temuan penelitian yang sudah susah payah dilakukan

Dear Editor,

We are sending the revised article with some changes and corrections.

Below is the answer to the reviewer A and B.

The answers to both reviewers are in one answer because the comments of reviewers A and B are the same.

Hopefully, this revision can make the manuscript better and worth being published in Qanun Medika.

Your kind attention is highly appreciated.

Best regards,

On behalf of all authors

Henry
