Dear Tania Saskianti:

Greetings from Acta Medica Philippina!

I believe that you would serve as an excellent reviewer of the manuscript, "Camouflage Treatment of Skeletal Class III Using Orthodontic Conventional Technique," which has been submitted to Acta Medica Philippina. The submission's abstract is inserted below, and I hope that you will consider undertaking this important task for us.

Attached is the Peer reviewer's conforme that you need to sign should you accept this undertaking.

In line with this, I would also like to respectfully request your short and updated Curriculum Vitae.

Please log into the journal web site by 2022-02-17 to indicate whether you will undertake the review or not, as well as to access the submission and to record your review and recommendation.

The review itself is due 2022-02-17.

Submission URL: <https://actamedicaphilippina.upm.edu.ph/index.php/acta/reviewer/submission?submissionId=4306&reviewId=4345&key=8jessqA6>

Thank you very much for considering this request.

Sincerely,
Dr. Abigail Pascual-Domingo
acpascualdomingo@up.edu.ph

"Camouflage Treatment of Skeletal Class III Using Orthodontic Conventional Technique"

Class III malocclusion can be defined as a skeletal facial deformity which characterized by a forward mandibular position with respect to the cranial base and or the maxilla. This case report describes the camouflage treatment of skeletal class III using orthodontic conventional technique. The case is that of a 15-years old male patient with skeletal Class III malocclusion that treated with non-extraction orthodontic camouflage treatment by using orthodontic conventional technique. Fixed appliance, Straight Wire Appliance (SWA) technique was used with non-extraction treatment plan. During treatment also accompanied with intermaxillary Class III elastics. Total active treatment time was 23 months. There were significant improvement of his occlusion, smile esthetics, and soft tissue profile. The orthodontic camouflage can be considered as an effective therapy for correcting of milder skeletal Class III malocclusion.

Keywords: Skeletal Class III malocclusion, SWA Technique, non-extraction, orthodontic camouflage

ACTA MEDICA PHILIPPINA
INSTRUCTIONS TO REVIEWERS

1. Kindly answer each item.
2. Sign your name as reviewer at the last page of the manuscript review form.
3. Your comments will be forwarded to the author for his or her due consideration after editorial review.
4. Please note that all papers given to peer-reviewers have not yet undergone copyediting or English language polishing/technical review. Please limit your comments on the quality and validity of the research work, as well as its strengths and weaknesses.
5. Deadline for your review is 14 days upon receipt.

**ACTA MEDICA PHILIPPINA
MANUSCRIPT REVIEW FORM**

Title of Manuscript: **Camouflage Treatment of Skeletal Class III Using Orthodontic Conventional Technique**

Manuscript No: 2022-4306

Type of Manuscript: Case Report

1. Describe the "key message" of the manuscript in not more than three sentences.

This case report presents the use of camouflage treatment accompanied by Class III elastics to correct a skeletal Class III malocclusion with anterior crossbite and mild crowding using conventional orthodontic technique and with non-extraction treatment plan.

2. Enumerate the good points of the manuscript.

It is a complex case. Authors described steps of the treatment in detailed and present good discussion.

3. Describe flaws that you have identified in the manuscript. Classify them into major and minor problems.

Major

- Presentation of novelty is somewhat faint.
- Writing style of case presentation section is rambling.

Minor

- Need grammatical check.
- References need to be updated.

4. Identify ethical issues in the manuscript, if there is any.

None.

5. Identify issues that need to be addressed by the author and the corresponding modifications needed:

A. Title

Use terms (modification, unusual case, etc) that attract the attention of readers and encourage them to read more.

B. Abstract

Explain the important of the case, why this case is being reported, and its novelty or clinical relevance.

C. Keywords

Should be written in alphabetical order.

D. Introduction

- Define the gap in knowledge (problem statement) that you want to address in this paper.
- Use standart and measurable term for this statement: "**somewhat** proclined and protrusive relative to the maxilla"
- Author should mention the aim of this case report, not the aim of the treatment.

E. ~~Materials & Methods~~/Case report and case management

- Do not abbreviate (RSGM FKG UNAIR), use the full term.
- Heading must be clearly defined, avoid the sub heading if possible.
 - Suggestion: Introduction, case presentation (including: diagnosis, etiology), case management (including: treatment objectives, plan, progress, result), discussion, conclusion.
- Mention the good points of the treatment phase instead of describing everything in detail.

F. Results

- For case report, I recommend to put result in the "case management" section.

G. Discussion

Best part of this case report.

H. Conclusion

- Avoid using long sentence.
- Provide the key conclusion, answering the aim of this case report. A new knowledge that readers might gain from this paper.

I. References

Should be updated since 21 of 28 references were >10 years.

J. Tables/Graphs

If possible, give explanation following title of table 1. What readers need to pay attention to the cephalometric measurement.

K. Figures, Illustrations, Photos

None.

6. Rate the manuscript based on the following criteria:

(5 – excellent, 4 – very good, 3 – good, 2 – fair, 1- poor)

A. Relevance of topic	5	4	3	2	1
B. Clarity of objectives	5	4	3	2	1
C. Abstract quality	5	4	3	2	1
D. Conclusions & recommendations	5	4	3	2	1
E. English and grammar	5	4	3	2	1

7. Recommendation to the editors:

A. Accept for publication

B. Accept for publication with minor revisions

C. Accept for publication with major revisions

D. Reject for publication

8. Comments to the author regarding this paper:

This is an engaging case report with explicit clinical step that purposefully questions our knowledge of the subject. However, the presentation of novelty is somewhat faint. The rambling writing of the case report section could be minimized. Addressing both these issues will make this interesting case report more impactful.

9. Comments to the editor regarding this manuscript (confidential):

None.

A handwritten signature in black ink, appearing to read 'Tania Saskianti', with a horizontal line underneath the name.

Tania Saskianti

Article Title

Non-extraction Camouflage Treatment of Skeletal Class III Malocclusion

Abstract

Class III malocclusion can be defined as a skeletal facial deformity that is characterized by a forward mandibular position with respect to the cranial base and or the maxilla. We present a case of a 15-year-old man with skeletal Class III malocclusion who was treated with non-extraction orthodontic camouflage treatment using an orthodontic conventional technique. A fixed appliance, straight wire appliance (SWA) technique was used with a non-extraction treatment plan. Treatment was accompanied by intermaxillary Class III elastics. The total duration of active treatment was 23 months. There was a significant improvement in his occlusion, smile esthetics, and soft tissue profile pattern. Orthodontic camouflage can be considered an effective therapy for correcting milder cases of skeletal Class III malocclusion.
