GUIDANCE FOR AUTHORS

Aims and Scope *Biodiversitas*, *Journal of Biological Diversity* or abbreviated as *Biodiversitas* encourages submission of manuscripts dealing with all biodiversity aspects of plants, animals and microbes at the level of the gene, species, and ecosystem as well as ethnobiology.

Article types The journal seeks original full-length research papers, reviews, and short communication. Manuscript of original research should be written in no more than 8,000 words (including tables and picture), or proportional with articles in this publication number. Review articles will be accommodated, while, short communication should be written at least 2,000 words, except for pre-study.

Submission The journal only accepts online submission, through open journal system (<https://smujo.id/biodiv/about/submissions>) or email to the editors at unsjournals@gmail.com. Submitted manuscripts should be the original works of the author(s). The manuscript must be accompanied by a cover letter containing the article title, the first name and last name of all the authors, a paragraph describing the claimed novelty of the findings versus current knowledge. Submission of a manuscript implies that the submitted work has not been published before (except as part of a thesis or report, or abstract); and is not being considered for publication elsewhere. When a manuscript written by a group, all authors should read and approve the final version of the submitted manuscript and its revision; and agree the submission of manuscripts for this journal. All authors should have made substantial contributions to the concept and design of the research, acquisition of the data and its analysis; drafting of the manuscript and correcting of the revision. All authors must be responsible for the quality, accuracy, and ethics of the work.

Ethics Author(s) must obedient to the law and/or ethics in treating the object of research and pay attention to the legality of material sources and intellectual property rights.

Copyright If and when the manuscript is accepted for publication, the author(s) still hold the copyright and retain publishing rights without restrictions. Authors or others are allowed to multiply article as long as not for commercial purposes. For the new invention, authors are suggested to manage its patent before published.

Open access The journal is committed to free-open access that does not charge readers or their institutions for access. Readers are entitled to read, download, copy, distribute, print, search, or link to the full texts of articles, as long as not for commercial purposes. The license type is CC-BY-NC-SA.

Acceptance The only articles written in English (U.S. English) are accepted for publication. Manuscripts will be reviewed by editors and invited reviewers(double blind review) according to their disciplines. Authors will generally be notified of acceptance, rejection, or need for revision within 1 to 2 months of receipt. The manuscript is rejected if the content does not in line with the journal scope, does not meet the standard quality, inappropriate format, complicated grammar, dishonesty (i.e. plagiarism, duplicate publications, fabrication of data, citations manipulation, etc.), or ignoring correspondence in three months. The primary criteria for publication are scientific quality and biodiversity significance. **Uncorrected proofs** will be sent to the corresponding author by email as *.doc* or *.docx* files for checking and correcting of typographical errors. To avoid delay in publication, corrected proofs should be returned in 7 days. The accepted papers will be published online in a chronological order at any time, but printed in the early of each month (12 times).

A charge Starting on January 1, 2019, publishing costs waiver is granted to authors of graduate students from **Least Developed Countries**, who first publish the manuscript in this journal. However, other authors are charged USD 250 (IDR 3,500,000). Additional charges may be billed for language editing, USD 75-150 (IDR 1,000,000-2,000,000).

Reprints The sample journal reprint is only available by special request. Additional copies may be purchased when ordering by sending back the uncorrected proofs by email.

Manuscript preparation Manuscript is typed on A4 (210x297 mm²) paper size, in a single column, single space, 10-point (10 pt) Times New Roman font. The margin text is 3 cm from the top, 2 cm from the bottom, and 1.8 cm from the left and right. Smaller lettering size can be applied in presenting table and figure (9 pt). Word processing program or additional software can be used, however, it must be PC compatible and Microsoft Word based (*.doc* or *.rtf*; not *.docx*). **Scientific names** of species (incl. subspecies, variety, etc.) should be written in italic, except for italic sentence. Scientific name (genera, species, author), and cultivar or strain should be mentioned completely for the first time mentioning it in the body text, especially for taxonomic manuscripts. Name of genera can be shortened after first mentioning, except generating confusion. Name of the author can be eliminated after first mentioning. For example, *Rhizopus oryzae* L. UICC 524, hereinafter can be written as *R. oryzae* UICC 524. Using trivial name should be avoided, otherwise generating confusion. **Biochemical and chemical nomenclature** should follow the order of the IUPAC - IUB. For DNA sequence, it is better used Courier New font. Symbols of standard chemical and abbreviation of chemistry name can be applied for common and clear used, for example, completely written butilic hydroxyl toluene (BHT) to be BHT hereinafter. **Metric measurement** use IS denomination, usage other system should follow the value of equivalent with the denomination of IS first mentioning. Abbreviations set of, like g, mg, mL, etc. do not follow by dot. Minus index (m⁻², L⁻¹, h⁻¹) suggested to be used, except in things like "per-plant" or "per-plot". **Equation of mathematics** does not always can be written

down in one column with text, in that case can be written separately. **Number** one to ten are expressed with words, except if it relates to measurement, while values above them written in number, except in early sentence. The fraction should be expressed in decimal. In the text, it should be used "%" rather than "percent". Avoid expressing ideas with complicated sentence and verbiage, and used efficient and effective sentence.

Title of the article should be written in compact, clear, and informative sentence, preferably not more than 20 words. Name of author(s) should be completely written. **Name and institution** address should also be completely written with street name and number (location), postal code, telephone number, facsimile number, and email address. Manuscript written by a group, author for correspondence along with address is required. First page of the manuscript is used for writing above information.

Abstract should not be more than 200 words. **Keywords** is about five words, covering scientific and local name (if any), research theme, and special methods which used; and sorted from A to Z. All important **abbreviations** must be defined at their first mention. **Running title** is about five words. **Introduction** is about 400-600 words, covering the background and aims of the research. **Materials and Methods** should emphasize on the procedures and data analysis. **Results and Discussion** should be written as a series of connecting sentences, however, for manuscript with long discussion should be divided into subtitles. Thorough discussion represents the causal effect mainly explains for why and how the results of the research were taken place, and do not only re-express the mentioned results in the form of sentences. **Concluding** sentence should be given at the end of the discussion. **Acknowledgments** are expressed in a brief; all sources of institutional, private and corporate financial support for the work must be fully acknowledged, and any potential conflicts of interest are noted.

Figures and Tables of maximum of three pages should be clearly presented. Title of a picture is written down below the picture, while title of a table is written above the table. Colored figures can only be accepted if the information in the manuscript can lose without those images; chart is preferred to use black and white images. Author could consign any picture or photo for the front cover, although it does not print in the manuscript. All images property of others should be mentioned source. **There is no appendix**, all data or data analysis are incorporated into Results and Discussions. For broad data, it can be displayed on the website as a supplement.

References Author-year citations are required. In the text give the authors name followed by the year of publication and arrange from oldest to newest and from A to Z. In citing an article written by two authors, both of them should be mentioned, however, for three and more authors only the first author is mentioned followed by et al., for example: Saharjo and Nurhayati (2006) or (Boonkerd 2003a, b, c; Sugiyarto 2004; El-Bana and Nijs 2005; Balagadde et al. 2008; Webb et al. 2008). Extent citation as shown with word "*cit*" should be avoided. Reference to unpublished data and personal communication should not appear in the list but should be cited in the text only (e.g., Rifai MA 2007, pers. com. (personal communication); Setyawan AD 2007, unpublished data). In the reference list, the references should be listed in an alphabetical order (better, if only 20 for research papers). Names of journals should be abbreviated. Always use the standard abbreviation of a journal's name according to the **ISSN List of Title Word Abbreviations** (www.issn.org/2-22661-LTWA-online.php). The following examples are for guidance.

Journal:

BIODIVERSITAS

Journal of Biological Diversity
Volume 22 - Number 3 - March 2021

- Morphological, molecular and resistance responses to soft-rot disease variability among plantlets of *Phalaenopsis amabilis* regenerated from irradiated protocorms** 1077-1090
HALIDA ADISTYA PUTRI, AGUS PURWITO, SUDARSONO, DEWI SUKMA
- Agronomic characters, genetic and phenotypic diversity coefficients, and heritability of 12 genotypes of rice** 1091-1097
JAENUDIN KARTAHADIMAJA, SETYO DWI UTOMO, ERWIN YULIADI, ABDUL KADIR SALAM, WARSONO, ANUNG WAHYUDI
- A comparison of stand structure, species diversity and aboveground biomass between natural and planted mangroves in Sikka, East Nusa Tenggara, Indonesia** 1098-1103
JERIELS MATATULA, AHMAD YUSUF AFANDI, PANDU YUDHA ADI PUTRA WIRABUANA
- The potency of actinomycetes extracts isolated from Pramuka Island, Jakarta, Indonesia as antimicrobial agents** 1104-1111
SETIAWATI SETIAWATI, TITIK NURYASTUTI, ETI NURWENING SHOLIKHAH, PUSPITA LISDIYANTI, SYILVIA UTAMI TUNJUNG PRATIWI, TRI RATNA SULISTIYANI, SHANTI RATNAKOMALA, JUMINA, MUSTOFA
- Breed and age effects on concentration of adiponectin and reproductive performance in Anglo Nubian, Etawah grade and its crossbred bucks** 1112-1119
HAFIZUDDIN, NI WAYAN KURNIANI KARJA, LISA PRAHARANI, MOHAMAD AGUS SETIADI
- The genus *Dolichandrone* (Fenzl.) Seem. (Bignoniaceae) in Thailand** 1120-1128
WEEREESA BOONTHASAK, CHATCHAI NGERNSAENG SARUJAY
- Diversity of endophytic fungi in *Syzygium aqueum*** 1129-1137
UMMI H. HABISUKAN, ELFITA, HARY WIDJAJANTI, ARUM SETIAWAN, ALFIA R. KURNIAWATI
- Genetic diversity in seedling populations of *Dipterocarpus gracilis* in Kecubung Uluanang Nature Conservation Reserve, Indonesia** 1138-1145
NESTY PRATIWI ROMADINI, SAPTO INDRIOKO, WIDIYATNO, ENY FARIDAH, YENI W.N RATNANINGRUM
- Correlation and path analysis for agronomic traits contributing to yield in 30 genotypes of soybean** 1146-1151
ANNA SATYANA KARYAWATI, ENO SINTHIA VINKY PUSPITANINGRUM
- The biological prospective of red-pigmented bacteria cultured from contaminated agar media** 1152-1159
ACHMAD ARIFIYANTO, HAPIN AFRIANI, MEISHY HANDERLIN PUTRI, BERLIANA DAMAYANTI, CINDY LUKYTA RATIH RIYANTO
- Normalized Difference Vegetation Index (NDVI) analysis for vegetation cover in Leuser Ecosystem area, Sumatra, Indonesia** 1160-1171
ADISTI PERMATASARI PUTRI HARTOYO, ARZYANA SUNKAR, RAHMATULLOH RAMADANI, SYAHLAN FALUTHI, SYAFITRI HIDAYATI
- Profile of cryptobrachytone C accumulation in *Cryptocarya pulchrinervia* leaves using MALDI-MSI** 1172-1178
JUJUN RATNASARI, RIZKITA RACHMI ESYANTI, MARSELINA IRASONIA TAN, LIA DEWI JULIAWATY, SHUICHI SHIMMA

GC-MS analysis of rhizome ethanol extracts from <i>Curcuma aeruginosa</i> accessions and their efficiency activities as anticancer agent WARAS NURCHOLIS, NURUL KHUMAIDA, MARIA BINTANG, MUHAMAD SYUKUR	1179-1186
Inhibition of α-amylase and α-glucosidase activities in vitro by extracts of selected medicinal plants DEEPAK RAJ PANT, BIVA ARYAL, DAMA PUN, SUSHILA SHARMA, GIRI PRASAD JOSHI	1187-1193
Combination on endophytic fungal as the Plant Growth-Promoting Fungi (PGPF) on cucumber (<i>Cucumis sativus</i>) SYAMSIA SYAMSIA, ABUBAKAR IDHAN, AMANDA PATAPPARI FIRMANSYAH, NOERFITRYANI NOERFITRYANI, IRADHATULLAH RAHIM, HENRY KESAULYA, RAKHMAD ARMUS	1194-1202
Salinity tolerance of larvae <i>Aedes aegypti</i> inland and coastal habitats in Pasangkayu, West Sulawesi, Indonesia ARINI RATNASARI, ARIF RAHMAN JABAL, SYAHRIBULAN, IRFAN IDRIS, NUR RAHMA, SRI NUR RAHMI NUR RUSTAM, MILA KARMILA, HAJAR HASAN, ISRAWAHID	1203-1210
Morpho-physiological changes of four tropical tree seedlings under aluminum stress CHARTINA PIDJATH, DIDY SOPANDIE, MAMAN TURJAMAN, SRI WILARSO BUDI	1211-1220
The association of follicle stimulating hormone receptor (<i>FSHR</i>) gene polymorphism of on egg productivity in hybrid chicken (<i>Gallus gallus gallus</i>, Linnaeus 1758) RIKHA RISKI KURNIA, INDRA LESMANA, ADITYA RAHMAN ERNANTO, AYUDHA BAHANA ILHAM PERDAMAIAN, TRIJOKO, BUDI SETIADI DARYONO	1221-1226
Exploring anticancer activity of wild and polyploid mutant of <i>Artemisia cina</i> SRI KASMIYATI, ELIZABETH B.E. KRISTIANI, MARIA M. HERAWATI, FERDY S. RONDONUWU	1227-1234
Forest cover changes in Indonesia's terrestrial national parks between 2012 and 2017 ASRI A. DWIYAHRENI, HABIBURRACHMAN A.H. FUAD, SUNARYO, TRI EDHI BUDHI SOESILO, CHRIS MARGULES, JATNA SUPRIATNA	1235-1242
Characterization of banana bunchy top virus on Sumatra (Indonesia) wild banana RUTH FETI RAHAYUNIATI, SEDYO HARTONO, SUSAMTO SOMOWIYARJO, SITI SUBANDIYAH, JOHN E. THOMAS	1243-1249
Culturable endophytic fungal diversity in cassava tubers of Indonesia ANASTASIA TATIK HARTANTI, FELICIA NIKE SUSANTI, VIVITRI DEWI PRASASTY, NANI RADIASTUTI	1250-1260
Application of inorganic and liquid organic bio-fertilizers affects the vegetative growth and rhizobacteria populations of eight banana cultivars TRI HANDAYANI, TIRTA KUMALA DEWI, DIYAH MARTANTI, YUYU SURYASARI POERBA, SARJIYA ANTONIUS, WITJAKSONO	1261-1271
Short Communication: <i>Cremanthodium indica</i> (Asteraceae, Senecioneae), a new species from the Eastern Himalaya, India DIPANKAR BORAH, RAJEEV KUMAR SINGH, LOBSANGTASHI THUNGON	1272-1276
Molecular identification of five species of family Chaetomiaceae (Sordariomycetes, Ascomycota) from Iraqi soil MUSTAFA A. AL-DOSSARY, SHAYMAA S. RAHEEM, MAYSOON K. ALMYAH	1277-1284
Short Communication: A small-scale coprological survey of the endoparasites in the Himalayan goral <i>Naemorhedus goral</i> (Hardwick, 1825) in Nepal JAGAN NATH ADHIKARI, ROSHAN BABU ADHIKARI, BISHNU PRASAD BHATTARAI, TEJ BAHADUR THAPA, TIRTH RAJ GHIMIRE	1285-1290
Extracellular protease from <i>Bacillus subtilis</i> B315 with antagonistic activity against bacterial wilt pathogen (<i>Ralstonia solanacearum</i>) of chili NUR PRIHATININGSIH, ARI ASNANI, HERU ADI DJATMIKO	1291-1295

A pilot study into ecological burning in forests as part of a species conservation plan MATTHEW W. PEARSON	1296-1303
Traditional knowledge of medicinal plants in the Kampung Orang Asli Donglai Baru, Hulu Langat, Malaysia MOHD RAZNAN RAMLI, SORAYYA MALEK, POZI MILOW, NURUL JANNAH AZIZ	1304-1309
Morphological diversity and heritability of nine local sorghum (<i>Sorghum bicolor</i>) genotypes in East Java MAFTUCHAH, LIA FEBRIANA, SULISTYAWATI, HELVI ARDANA RESWARI, ERFAN DANI SEPTIA	1310-1316
Evaluation of Indigenous <i>Pichia kudriavzevii</i> from cocoa fermentation for a probiotic candidate RAHAYU WULAN, RIKA INDRI ASTUTI, YAYA RUKAYADI, ANJA MERYANDINI	1317-1325
Short Communication: Identification of culturable marine fungi and bacteria from coastal region in Brunei Darussalam HUSSEIN TAHA, POOJA SHIVANAND, MOHAMAD ABDUL AZIM ZAINUDIN, NURUL AZIRAH HADANAN	1326-1331
Evaluation of the ambrosia beetles traps on <i>Pterocarpus indicus</i> in Indonesia HAGUS TARNO, YOGO SETIAWAN, BAMBANG TRI RAHARDJO, JIANGUO WANG	1332-1339
Short Communication: Taxonomy and the first report for pollen and leaf surfaces anatomy of the genus <i>Enkleia</i> (Thymelaeaceae) in Thailand PIYAPORN SAENSOUK, SURAPON SAENSOUK	1340-1344
Variations of grain physical properties, amylose and anthocyanin of upland red rice cultivars from East Nusa Tenggara, Indonesia JENNY E.R. MARKUS, A.S.S. NDIWA, SHIRLY S. OEMATAN, YOSEP S. MAU	1345-1353
Assessment of forest degradation condition in Natmataung National Park Watershed, Myanmar YADANAR OO, WATHINEE SUANPAGA, PONTHEP MEUNPONG	1354-1362
Prevalence, diversity and antimicrobial resistance of <i>Salmonella enterica</i> and <i>Pseudomonas aeruginosa</i> isolates from spring water in a rural area of Northwestern Morocco ILHAM NASSRI, LATIFA TAHRI, AMAL SAIDI, NAJIA AMEUR, MOHAMMED FEKHAOUI	1363-1370
Phenetic analysis and habitat preferences of wild orchids in Gunung Gajah, Purworejo, Indonesia THERESIA HENNY PRIMASIWI PURBA, ABDUL RAZAQ CHASANI	1371-1377
The occurrence of <i>Anisakis</i> larvae on hairtail, <i>Trichiurus lepturus</i> caught from the Pangandaran Waters, West Java, Indonesia NISA QUROTA AYUN, LUTFI SEPTIANA DEWI, MURWANTOKO, EKO SETYOBUDI	1378-1384
Involvement of purple acid phosphatase gene into nitrogen uptake of oil palm (<i>Elaeis guineensis</i>) SIGIT DWI MARYANTO, ZULFIKAR ACHMAD TANJUNG, ROBERDI, WIDYARTINI MADE SUDANIA, PUJIANTO, HAIRINSYAH, CONDRO UTOMO, TONY LIWANG	1385-1390
Short Communication: Prediction of body weight based on body measurements in female Saburai goat AKHMAD DAKHLAN, MUHAMMAD DIMA IQBAL HAMDANI, DELSI RUSITAIMI PUTRI, SULASTRI, ARIF QISTHON	1391-1396
Natural dye plants used by Dayak Iban in Sungai Utik, Kapuas Hulu, West Kalimantan, Indonesia WAHDINA, DEDE SETIADI, Y. PURWANTO, IBNUL QAYIM	1397-1404
Phytophagous insects and predatory arthropods in soybean and zinnia ERISE ANGGRAINI, WIDA NUR ANISA, SITI HERLINDA, CHANDRA IRSAN, SUPARMAN, SUWANDI, MUHAMMAD UMAR HARUN4	1405-1414

Cross shelf gradients of scleractinian corals in the Spermonde Islands, South Sulawesi, Indonesia	1415-1423
SYAFYUDIN YUSUF, MARIA BEGER, ASMI CITRA MALINA A. R. TASSAKKA, MAARTEN DE BRAUWER, AMANDA PRICELLA, RAHMI, WIDYASTUTI UMAR, GINO V. LIMMON, ABIGAIL MARY MOORE, JAMALUDDIN JOMPA	
Short Communication: Plant diversity utilization and land cover composition in the Subak Jatiluwih, Bali, Indonesia	1424-1432
SUTOMO, RAJIF IRYADI, I DEWA DARMA, I PUTU AGUS HENDRA WIBAWA, AYYU RAHAYU, SITI FATIMAH HANUM, SYAMSUL RIZAL, LEDYA NOVAMIZANTI, JANGKUNG RAHARJO	
Diversity of fungi associated with rhizosphere of healthy and diseased garlic crop	1433-1440
BAIQ NURUL HIDAYAH, NANI HERAWATI, AI ROSAH AISAH, NITA RIZKY UTAMI	
Morphological characteristics of Indonesian <i>Rubus</i> flowers	1441-1447
SULUH NORMASIWI, ANDI SALAMAH, MUHAMMAD IMAM SURYA	
Short Communication: Zooplankton as indicator of trophic status of lakes in Ilmen State Reserve, Russia	1448-1455
IRINA V. MASHKOVA, ANASTASIYA M. KOSTRYUKOVA, ELENA E. SHCHELKANOVA, VIKTOR V. TROFIMENKO	
Molecular characteristics and taxonomic status of morphologically similar barnacles (<i>Amphibalanus</i>) assessed using the cytochrome c oxidase 1 gene	1456-1466
SRI RIANI, ROMANUS EDY PRABOWO, AGUS NURYANTO	
Screening of endophytic fungi from oil palm (<i>Elaeis guineensis</i> Jacq.) in producing exopolysaccharides	1467-1473
YURNALIZA YURNALIZA, IT JAMILAH, ADRIAN HARTANTO, ANISA LUTFIA	
Identification of bioactive compounds in gambier (<i>Uncaria gambir</i>) liquid by-product in West Sumatra, Indonesia	1474-1480
AKHIS SOLEH ISMAIL, YOSE RIZAL, ARMENIA, ANWAR KASIM	
Identification of marine sponges-symbiotic bacteria and their application in degrading polycyclic aromatic hydrocarbons	1481-1488
ISMAIL MARZUKI, MUDYAWATI KAMARUDDIN, RASHEED AHMAD	
Mangrove ecosystem in North Sumatran (Indonesia) forests serves as a suitable habitat for mud crabs (<i>Scylla serrata</i> and <i>S. olivacea</i>)	1489-1496
RIKA KARNIATI, NURDIN SULISTIYONO, RIZKA AMELIA, BEJO SLAMET, YUNTHA BIMANTARA, MOHAMMAD BASYUNI	
Estimation Above Ground Biomass (AGB) and carbon stocks of <i>Tectona grandis</i> and <i>Gmelina arborea</i> stands in Gorontalo Province, Indonesia	1497-1508
YOSEP RUSLIM, DAUD SANDALAYUK, ROCHADI KRISTININGRUM, ANDI SAHRI ALAM	
Antifungal activities of the rhizome extract of five member Zingiberaceae against <i>Candida albicans</i> and <i>Trichophyton rubrum</i>	1509-1513
MUHAMMAD EVY PRASTIYANTO, NI'MATUR ROHMAH, LESITA EFENDI, RAHMATIA ARIFIN, FANDHI ADI WARDOYO, WILDIANI WILSON, ANA HIDAYATI MUKAROMAH, SRI SINTO DEWI, SRI DARMAWATI	
Surface ultrastructure of <i>Blastocystis</i> sp. isolated from cattle	1514-1518
NI KOMANG APRILINA WIDISUPUTRI, NUNUK DYAH RETNO LASTUTI, ENDANG SUPRIHATI, POEDJI HASTUTIEK, HANI PLUMERIASTUTI, MUFASIRIN, HENI PUSPITASARI, LUCIA TRI SUWANTI	
Indigenous <i>Streptomyces</i> spp. isolated from <i>Cyperus rotundus</i> rhizosphere indicate high mercuric reductase activity as a potential bioremediation agent	1519-1526
HANUM MUKTI RAHAYU,2 , WAHYU ARISTYANING PUTRI, ANIS USWATUN KHASANAH,6 , LANGKAH SEMBIRING, YEKTI ASIH PURWESTRI	
Fucoxanthin identification and purification of brown algae commonly found in Lombok Island, Indonesia	1527-1534
YENI SULISTIYANI, AGUS SABDONO, NORMA AFIATI, HAERUDDIN	

Inhibition of α-glucosidase activity, metals content, and phytochemical profiling of <i>Andrographis paniculata</i> from different geographical origins based on FTIR and UHPLC-Q-Orbitrap HRMS metabolomics	1535-1542
MOHAMAD RAFI,, DEWI ANGGRAINI SEPTANINGSIH, ALFI HUDATUL KAROMAH, LUKMAN, BAMBANG PRAJOGO, MUHAMMAD BACHRI AMRAN, ABDUL ROHMAN	
Valuing ecotourism in Bukit Merah Orang Utan Island, Malaysia based on visitors' experience	1543-1549
NABILA FARHANA MOHD-ASRI, SITI NORSYUHADA KAMALUDDIN, SABAPATHY DHARMALINGAM, WAN MOHD RAZI IDRIS, BADRUL MUNIR MD-ZAIN	
Molecular identification of coprophilous microfungi from Banyumas District, Central Java, Indonesia	1550-1557
ARIS MUMPUNI, ADI AMURWANTO, DANIEL JOKO WAHYONO	
Effect of fertilizer application on winter wheat productivity under precision agriculture in Kazakhstan	1558-1563
ALIBEK BAIMURATOV, SHOLPAN BASTAUBAYEVA, MEHMET ARSLAN, ZHANAR YERALIYEVA	
Molecular identification of a new isolate of actinobacteria ATIS61 and characterization of the protease activities	1564-1569
FADHLIAH AMFAR, LENNI FITRI, SUHARTONO	
Morphological evaluation and determination keys of 21 citrus genotypes at seedling stage	1570-1579
RAHMAT BUDIARTO, ROEDHY POERWANTO, EDI SANTOSA, DARDA EFENDI	
Diversity, conservation, potential uses, and alien species of lowland plants of Batang Toru, Sumatra, Indonesia	1580-1591
HIRMAS F. PUTRA, WENDY A. MUSTAQIM	

Surface ultrastructure of *Blastocystis* sp. isolated from cattle

Abstract. *Widisuputri NKA, Lastuti NDR, Suprihati E, Hastutiek P, Plumeriastuti H, Mufasirin, Puspitasari H, Suwanti LT. 2021. Surface ultrastructure of Blastocystis sp. isolated from cattle. Biodiversitas 22: 1514-1518. Blastocystis* sp is a protozoan parasite commonly detected in the intestinal tract of humans and various animals that causes zoonotic blastocystosis. The pathogenic potential of *Blastocystis* is still being evaluated, some *Blastocystis* sp are completely pathogenic, while others can be considered commensal and hypothetical, related to the role of the surface coat of *Blastocystis* sp. This study aimed to compare the surface ultrastructure of *Blastocystis* sp. in cattle with diarrhea and non diarrhea by Scanning Electron Microscope (SEM). Four *Blastocystis* sp. isolates were selected from the faeces of four positives cattle which consisted of two diarrhea and two non-diarrhea cattle. The result showed that *Blastocystis* sp. in cattle appeared in round shape and reproduced by binary fission. The surface cell of *Blastocystis* sp. isolates from diarrhea cattle had a rough surface while organism of non diarrhea cattle isolates was very smooth. Bacteria were seen attached to the surface of *Blastocystis* sp. from diarrhea cattle faeces. In conclusion, the features of the surface structure of *Blastocystis* sp. correlated with symptomatic appearance. The surface structure of *Blastocystis* sp. isolates from cattle with diarrhea was rougher than non diarrhea.

Keywords: *Blastocystis*, cattle with diarrhea, scanning electron microscope, surface structure

INTRODUCTION

Blastocystis sp. is a protozoan parasite that commonly found in the intestinal tract of humans and varied of animals and its infection caused blastocystosis (Wawrzyniak et al. 2013). Animals that were infected include mammals, birds, amphibians, and reptiles (Cian et al. 2017). In recent years, researches on the identification and prevalence of *Blastocystis* sp. both in humans and animals have been reported throughout the world (Lee et al. 2012) and several studies have shown that *Blastocystis* infection is zoonotic, this is evidenced by the discovery of the same subtype (ST) in humans and animals (Osman et al. 2016). *Blastocystis* infection is a waterborne or foodborne disease, and oral transmission occurs due to ingestion of the infective stage, cysts, which contaminate water and food (Lee et al. 2012). The prevalence of *Blastocystis* infection in humans in developing countries is significantly higher than in developed countries (El Safadi et al. 2016). Poor hygiene practices, close contact with animals, and consumption of contaminated food or water are factors in the high prevalence of blastocystosis in people (Wawrzyniak et al. 2013). Symptoms of blastocystosis are non-specific such as diarrhea, abdominal pain, constipation, flatulence, fatigue, urticaria and skin rash (Parija and Jeremiah 2013; Wawrzyniak et al. 2013) and most of cases are asymptomatic (Yason and Tan 2018). Some researchers found *Blastocystis* sp both in the host

with or without clinical symptoms, this is the reason why the pathogenicity of *Blastocystis* is still being (Roberts et al. 2014; Skotarczak 2018). However, some researchers point to serious consequences due to this parasitic infection, in which, *Blastocystis* sp. was known to play a role in irritable bowel syndrome (IBS) (Ragavan et al. 2014; 2015) and induced precancerous polyp formation (Kumarasamy et al. 2017).

Diagnose of *Blastocystis* sp. generally based on the morphologically parasite in faeces by direct examination using the light microscope or by *in vitro* cultivation method. *Blastocystis* sp. is morphologically in the form of vacuoles, granular, amoeboid, or cysts (Wawrzyniak et al. 2013), but the morphology of *Blastocystis* sp. isolates from humans and animals, is difficult to be distinguished only by light microscopy examination, as they were morphologically similar (Zhang et al. 2012). Previous study by Suwanti et al. (2020a) reported that the morphology of *Blastocystis* sp. in cattle were varied widely in size with 2.78 – 35.35 μm (average 14.76 μm) in which 100% of the cattle samples were positive for *Blastocystis* however differentiation between diarrhea and non-diarrheal cattle were not considered.

Examination using an electron microscope recently shed new light on the morphology of parasites, one of which by using Scanning Electron Microscope (SEM). Using SEM aimed to obtain detailed information on the morphology and topography of the cell surface of a

microorganism (de Souza and Attias 2018). Research on surface ultrastructure *Blastocystis* sp. using SEM has been reported in humans, monkeys, pigs, chickens, rats and cockroaches which have varying differences in their surface coat (Cassidy et al. 1994; Haziqah et al. 2017). According to Yason and Tan (2018), electron micrographs showed variations in the surface coats from the different *Blastocystis* isolates and these differences could be attributed to differences in the pathogenic potential of the *Blastocystis* subtype. It has also been proven by Ahmed et al. (2019) that the surface ultrastructure of *Blastocystis* sp. was rougher in isolates from patients with colorectal carcinoma.

Until now, the research of surface ultrastructure of *Blastocystis* sp. in cattle has not been reported. As already mentioned above, the results of previous studies showed the morphology of *Blastocystis* sp. in cattle with diarrhea and no diarrhea were the same. The aim of this study was to compare the surface structure of *Blastocystis* from cultured faeces samples of cattle with (symptomatic) and no diarrhea (asymptomatic) using SEM.

MATERIALS AND METHODS

Ethical approval

Ethical approval for this study was granted by the Animal Care and Use Committee of the Faculty of Veterinary Medicine, Universitas Airlangga (approval number: 2.KE. 095.05.2019)

Isolate of *Blastocystis* sp

Isolate was *Blastocystis* sp. isolated from the feces of Madura cattle in Kamal and Socah, Bangkalan, Madura, Indonesia. Isolation was carried out in 2018, by taking samples of fresh feces that had just fallen to the ground. A total of 108 samples were examined. The presence of *Blastocystis* sp. in feces was detected by both morphologically and genetically based on the 18S rRNA gene (Suwanti et al. 2020b). The Isolate were stored in the Department of Veterinary Parasitology, Faculty of Veterinary Medicine, Universitas Airlangga.

In Vitro Cultivation

Four *Blastocystis* sp. isolates were subcultured from four positive cattle samples consisting of two diarrhea and two non-diarrhea cattle. Each sample was cultured in RPMI 1640 medium (CP19-2763, Capricorn Scientific, Germany) and incubated at 37°C for 3 days. The growth of *Blastocystis* sp. in culture was observed morphologically under a light microscope (Nikon® E100, Japan) at 400X magnification. Microscope was connected to a camera (Optilab® MTN001, Indonesia) to capture the image of the parasites. The supernatant of the culture medium was inserted into the tube and centrifuged at 1500 rpm for 10 minutes. Supernatant was removed and pellets was resuspended with phosphate buffered saline (PBS) and stored for SEM observation.

Scanning Electron Microscope (SEM)

Cell of *Blastocystis* sp. were washed with PBS pH 7 for three times by centrifugation. It was centrifuged with speed 3000 rpm for 5 minutes. Then each sample was fixed by adding 2.5% glutaraldehyde and post-fixation with 1% osmium tetroxide. The isolate was mounted on a polycarbonate membrane and dehydrated using ethanol in sequence 30%, 50%, 70%, 80%, 90%, and 100%. Each ethanol series was done for 15 minutes and the last step was added with amyl acetate. Critical Point Drying (CPD) was performed using carbon dioxide, then the specimen was coated using a gold coating, and observed using SEM (Ragavan et al. 2014). SEM images were captured at the Faculty of Mechanical Engineering, Institut Teknologi Sepuluh November (ITS) Surabaya.

RESULTS AND DISCUSSION

Morphology of *Blastocystis* in medium culture

On culture media *Blastocystis* sp. most of the vacuolar forms (Figure 1). In previous study, it was found that the diameter of *Blastocystis* sp. in cattles was varied widely with ranged about 2.78 to 35.35 µm (average 14.76µm) and the size of *Blastocystis* sp. in culture was smaller than in fresh stool (Suwanti et al. 2020a). The main morphology of *Blastocystis* sp. has four forms: vacuole, granular, amoeboid and cyst form (Wawrzyniak et al. 2013) and the vacuolar form was the most common cell form found in cultures (Natalia et al. 2018). Under a light microscope, the morphology of *Blastocystis* sp. from healthy cattle (without diarrhea) and diarrhea cattle could not be distinguished. According to Tan et al. (2008), *Blastocystis* poses considerable challenges for diagnostic laboratories. The morphology of *Blastocystis* sp. is difficult to distinguish by using light microscopy only (Zhang et al. 2012). Yanson and Tan (2018) using an electron microscope show variations in the membrane surface from three *Blastocystis* isolates and these differences could be associated with the differences in the pathogenic potential of *Blastocystis* subtypes.

C. *Blastocystis* sp. from faeces of asymptomatic cattle. Red arrows are daughter cell. Black arrows are bacteria.

Appearance of the surface structure of *Blastocystis* sp. Using SEM

In this decade, SEM was used widely in the morphological studies of a cell based on the structural surface of the cell, including *Blastocystis* sp. (Boreham and Stenzel 1993; Zaman et al. 1999; Tan et al. 2008; Zhang et al. 2012; Ragavan et al. 2014; Ahmed et al. 2019). SEM revealed the external morphological shape of the cyst and various surface coat structures of the parasite (Zhang et al. 2012). The surface coat was a kind of fibrous substance in varying appearance, rough or fine, which adhere to the surface of the *Blastocystis* cells (Elsayad et al. 2019). This study is the first report on the surface structure of *Blastocystis* sp. in cattle, both in symptomatic (diarrhea) and asymptomatic cattle.

In this study, it was found that *Blastocystis* sp. in cattle appeared in round shape. This result was similar with the morphology of *Blastocystis* in human which presented by Boreham and Stenzel (1993), generally the shape of *Blastocystis* from *in vitro* culture were spherical in shape. Round shape was also found by Ahmed et al. (2019) in addition to other forms, oval and irregular. *Blastocystis* cells often possess one or two nuclei, and occasionally, quadrinucleate cells and cells possessing numerous nuclei have been reported (Tan 2008). According to Zhang et al. (2007), there were five modes of reproduction, namely, binary fission, endodyogeny, plasmotomy, budding and schizogeny. In this study, the reproduction of *blastocystis* sp is shown in Figures 2.A1 and 2.B1. Figure 2.A1 was probably the initial stage of plasmotomy reproduction. Plasmotomy reproduction occurred during the stage of vacuolar form, which a daughter cell came into being by forming a finger-like cytoplasmic extension from the cellular surface of the mother vacuolar cell (Zhang et al.

2007). Figure 2.B1, *Blastocystis* sp. was seen undergo binary fission similarly reported by Elsayad et al. (2019) and Mehlhorn et al. (2012).

The surface cell of *Blastocystis* sp. isolates from diarrheal cattle had a rough surface as shown in Figure 2.A and 2.B. Whereas organism of non diarrhea cattle isolates was very smooth (Figure 2.C). Elsayad et al. (2019), using SEM micrographs shown different outer morphology of *Blastocystis* in human covered by rough or smooth surface coat, but there was no further explanation regarding the differences. The smooth surface structure of *Blastocystis* sp. isolates from non diarrheal cattle is similar to *Blastocystis* in asymptomatic human isolates as described previously by Suresh et al. (1994). The rough surface cell illustration in diarrheal cattle in this study supported the results of a study previously reported by Boreham and Stenzel (1993) that rough morphology of cells was found on isolates of *Blastocystis* from a diarrhea patient. This cell surface structure may be related to the pathogenicity of organisms related to the symptoms shown. It is suggested that a rough surface *Blastocystis* is more pathogenic than a smooth surface and the features of the surface structure of *Blastocystis* sp. correlated with symptomatic appearance. Tan et al. (2008), Ragavan et al. (2014) and Ahmed et al. (2019) stated that there were differences in the surface ultrastructure of *Blastocystis* isolated from human derived from symptomatic and asymptomatic persons; *Blastocystis* from symptomatic isolates have coarser surface structure while asymptomatic isolates have a smooth surface structure. Rougher with excessive indentation surface was drawn from isolates derived from suffering patients IBS (Ragavan et al. 2014) and colorectal carcinoma (Ahmed et al. 2019).

Several studies using SEM to observed *Blastocystis* have indicated that the surface coat is associated with bacteria. The surface coat contains a variety of carbohydrates and has been postulated to play a role in trapping and degrading bacteria for nutrition (Tan 2008). In this study, bacteria were seen attached to the surface of *Blastocystis* sp. from cattle with diarrhea (Figure 2.B₁). The attachment of bacteria to the surface of *Blastocystis* isolated from human samples had been confirmed by SEM studies. Attached bacteria on the surface of *Blastocystis* have been seen in close association with the surface coat and often causing an indentation (Boreham and Stenzel 1993). Although some surface coat functions are not yet known exactly, it is thought to be a mechanism for trapping bacteria for nutritional purposes and attachment to the intestinal epithelial lining (Zaman et al. 1999) and according to Yason and Tan (2018), the surface coat of *Blastocystis* sp. associates with potentially pathogenic of *Blastocystis* subtype. There was a hypothesis that surface coat protects the organism from innate host immune response as well as contribute to greater *adhesion* during colonization (Yason and Tan 2018).

In conclusion, by SEM, most of *Blastocystis* sp. isolated from the *in vitro* cultivation method of cattle faeces appeared in round shape with and reproduced by binary fission. Meanwhile, the surfaces cell of *Blastocystis* sp. isolates from cattle with diarrhea had a rough surface while *Blastocystis* isolated from asymptomatic cattle isolates were having very smooth surface. Bacteria were seen attached to the surface of *Blastocystis* sp. from cattle with diarrhea. The features of the surface structure of *Blastocystis* sp. correlated with symptomatic appearance. The surface structure of *Blastocystis* sp. isolates from cattle with diarrhea was rougher than non diarrhea. Research on the determinants of the pathogenicity of *Blastocystis* is still needed.

ACKNOWLEDGEMENTS

The authors wish to express gratitude to Directorate General Research and Development Strengthening of Ministry of Research, Technology and Higher Education, for financial support with research grant through the Budget Execution Checklist 2019-2020.
