

CHAPTER IV

CONCLUSION

After we read this thesis, we will find out that students of Electrical Engineering who come from outside Surabaya can accept slander words in their conversation.

First, they consider that those words are taboo, but bit by bit they do not care about the taboo sense, and even they start to use slander words in their conversation. In their opinion those words are not taboo, because by using those words, they can make an intimate conversation among themselves. But, there are some of them who still consider that slander words are taboo, and they are used only in anger situation. This is because their new environment, that is Surabaya society, where slander words are common words as the characteristics of Surabayan people. On the other side, those words are not permitted to be spoken in their place where they belong to. And the new atmosphere influences them as strangers who want to stay there, to use slander words in their conversation. So, we have a conclusion that students of Electrical Engineering who come from out-side Surabaya are brave to speak slander

words in their conversation with a consideration of to whom they speak, when, where, about what and what for.

They only speak slander words if they are in campus or in their apartment. Most of them never speak slander words in their home town where they belong before they live in Surabaya. And they speak slander words to their friends who study in Electrical Engineering or ITS in general, especially to their close friends. By using slander words, when they usually talk about relaxation discussion, they can make an intimacy between them as the students of Electrical Engineering. In fact, they never think that they have hurt somebody's feeling when they speak slander words. Here, we realize that slander words are not taboo anymore among students of Electrical Engineering who come from outside Surabaya.
