

ABSTRACT
STUDY ON THE FACTORS IN RELATION TO
FAMILY LATE IN LOOKING FOR TREATMENT
OF PSIKOSA/SKIZOFRENIA CLIENT

Cross sectional study at Dr. Radjiman Wediodiningrat Hospital for mentally sick
people of Lawang.

by : Albertus Setijono

Based on researcher survey in 1975 to the present, psikosa/skizofrenia client, who are treated at Dr. Radjiman Wediodiningrat Hospital for mentally sick people have been generally sick more than 6 months, even most of literatures stated that, once, someone who get skizofrenia, she/he has not been generally chronic.

Seeing the fact above, researcher would like to get a picture about the factors influenced to family late in gets treatment of psikosa/skizofrenia client at hospital for mentally sick people. The factors involves some aspects, they are : knowledge factor, attitude factor, and family trust factor.

The sort of the study used is cross sectional description method. The object is all the family of psikosa/skizofrenia client who go both to get out paient treatment and to treat at hospital of Dr. Radjiman Wediodiningrat of Lawang. The study instruments used questionnaire media, conducted in January 2-4, 2003 (3 days) sample totally, and 28 respondents.

The result through the questionnaire returned by the respondents, then analized, and can be found that there are 78,6 % cases in relation to family late.

Those factors influenced are knowledge factors that can be concluded that respondent's knowledge about mentally sick problem is usually lack, it's about 89,3 %, the attitude aspect is generally negative, it's about 60,7 %, the trust factor is generally positive, it's about 71,4 %.

Key words : Late, Family, Treatments, Psikosa/Skizofrenia.
