

## ABSTRACT

### INFLUENCE FROM GIVER CURSE MIXED/OPHIOCEPHALUS ON INCREASE POWER ALBUMIN IN PATIENT NEUROSURGERY TRAUMATIC WITH HIPOALBUMIN

Examination Pre-Post Eksperimental in F Surgery Room  
Dr Soetomo Public Hospital Surabaya

**By: Yulia Hendriani**

Brain injured patient often in happen hipermetabolisme it so can be lowing of albumin power. In F surgery Room to give nutrition for supporting, this part of curse made from curse mixed/ophiocephalus with white of an egg.

Aim of this examination is to find optimal dosis to be can improving a power of albumin two times from curse mixed and three times to patient injured medium.

Design of examination made of Pra-Eksperiment that is two group Pre-Post Test Design. Total of population response is 15 person. Ordinary total of response to exam is 14 person fitting criteria of include. Criteria independent is frekwensi to give two times for curse mixed and three times. Criteria dependent is power from serum albumin, sample is brain injured patient with a power albumin not more than from 3,5 g/dl. This examination give indicate gathering data behaviour from observasi and treatment of curse mixed. Analising data to use Independent T-test with significans  $p \leq 0,05$  value.

Result from this examination inform to give two time of curse mixed with three times curse mixed with three times curse mixed it is no make influence for different value up patient injured medium brain ( $p=0,368$ ).

This is conclusion that are a patient injured medium brain, giving nutrition to support that is curse mixed not bringing influence to different power up albumint serum.

**Keywords : Albumin, Curse mixed two times frekwensi, curse mixed three times frekwensi**
