

ABSTRACT

ANALYSIS FACTORS INFLUENCE DEVELOPMENT OF 3-5 YEARS OLD IN TK KARTINI PERUMNAS KAMAL BANGKALAN

Deskriptive Analytic Study

By : Yulia Syinta Dewi

Development is skill improvement in structure and function of body in more organized pattern and could be predicted, as a result of maturation process. The aims of this study is to study factors that influence children 3-5 years old development.

The study is descriptive analytic in nature conducted in TK Kartini Perumnas Kamal Bangkalan. Population in the study was children 3-5 years old. Sampling total in the study was 18 respondents. Data collection used structured interview and then analyzed (content analysis).

Result showed that almost all development of children 3-5 years old was normal, only 4 children with suspect development.

It concluded that parent knowledge was very important especially in improving information about children growth. Stimulation was very important to stimulate children's development. Instrument and infrastructure played a role in sustaining children development.
