Reviewer reports:

Reviewer #1: The manuscript is a cervical trauma analysis at Dr. Soetomo General Hospital in Surabaya, Indonesia. This study aims to provide an overview of the cervical cord injury profile and to analyze the functional outcome at the sixth month and the first year. In the literature there are many articles on the epidemiology of cervical cord injuries, even with higher numbers. For this reason, in my opinion, this article adds nothing to the literature, but it is fair to take it into consideration because it documents the epidemiology of cervical cord injuries in Indonesia and for this reason these data could be used by the health care organizations to be able to take awareness of the extent of the trauma problem and therefore direct their economic resources to improve the prevention and management of this pathology in that territorial context.

Reviewer #2: Please correct the two points and read my notes in the attached file
