Pendahuluan : *Discharge planning* merupakan pelayanan keperawatan yang diberikan untuk mempersiapkan pasien melakukan perawatan secara mandiri setelah meninggalkan pelayanan pasien di rumah sakit . Perawat cenderung melaksanakan *discharge planning* tetapi tidak mendokumentasikan secara keseluruhan. Oleh sebab itu di perlukan persepsi perawat yang baik dalam mendokumentasikan serta melaksanakan tindakan keperawatan. Penelitian ini bertujuan untuk menganalisis persepsi perawat terhadap pelaksanaan dokumentasi *discharge planning* di ruang rawat inap RSUD Prof. Dr. W. Z. Johannes Kupang .
Metode : desain penelitian adalah kuantitatif deskriptif dan menggunakan metode wawancara, pendekatan *cross sectional*. Populasi adalah perawat di ruang rawat inap RSUD Prof. Dr. W. Z. Johannes Kupang dengan besar sampel 58 responden. Pengambilan data secara wawancara di ambil 8 responden dari masing – masing ruangan yang di teliti. Variabel independen adalah persepsi perawat terhadap pendokumentasian sedangkan variabel dependen adalah pelaksanaan *discharge planning*. Data dikumpulkan menggunakan kuesioner dan wawancara serta di analisis menggunakan *spearman rho*.
Hasil : hasil penelitian didapatkan responden melaksanakan *discharge planning* sesuai dengan SNARS. Hasil uji statistis antara persepsi perawat dengan pelaksanaan *discharge planning* ($p = 0,000$), nilai koefisien ($r = 0,798$)
Diskusi : Persepsi perawat dalam pendokumentasian akan berdampak pada pasien dan perawat itu sendiri.

Kata Kunci : Pendokumentasian, persepsi, *discharge planning*

ABSTRACT

ANALYSIS OF NURSES' PERCEPTION ON THE IMPLEMENTATION OF DISCHARGE PLANNING DOCUMENTATION IN THE IN-PATIENT ROOMS OF PROF. Dr. W.Z. JOHANNES KUPANG HOSPITAL

Cross-Sectional Study

Introduction : Discharge planning is a nursing service provided to prepare patients for independent care after leaving patient services at the hospital. Nurses tend to carry out discharge planning but do not document in their entirety. Therefore, a good perception of nurses is needed in documenting and implementing nursing actions. This study aims to analyze the perceptions of nurses on the implementation of discharge planning documentation in the inpatient room of Prof. Dr. W. Z. Johannes Kupang. **Methods** : the research design was descriptive quantitative and used the interview method, cross sectional approach. The population is the nurses in the inpatient room of Prof. Dr. W. Z. Johannes Kupang with a sample of 58 respondents. Data retrieval by interview was taken by 8 respondents from each of the rooms studied. The independent variable is the nurse's perception of documentation, while the dependent variable is the implementation of discharge planning. Data were collected using questionnaires and interviews and analyzed using rho spearman. **Results** : The results showed that respondents carried out discharge planning in accordance with SNARS. The results of statistical tests between nurses' perceptions and discharge planning implementation ($p = 0.000$), coefficient value ($r = 0.798$) **Discussion** : Nurses' perceptions in documenting will have an impact on patients and nurses themselves.

Keywords: documentations, perception, discharge planning
