

## ABSTRACT

HIV and AIDS problems are rapidly developed. The risk group such as a group who has a highly mobility, example Indonesia army, are group with more possibility to be infected by HIV and AIDS. The intention of this research is to analyze the corelation among knowledge, attitude, and action from TNI about HIV and AIDS.

This research was an analytical examination with cross sectional method and used simple random sampling. Data is analyzed by Spearman correlation test. This research is held at Yonif 500/Raider Kodam V Brawijaya with TNI AD army who has productive age (20-40 years old) and has 1 year minimum experience out of java assignment as a population. 80 respondent as a sampling in this examination. The variable in this research were respondent's characteristic (age, education, marital status, working life, assignment mobility), knowledge, attitude, and action from TNI army about HIV and AIDS.

The result of this research shown a considerable part of respondent has 25-30 years old (51,3%). A considerable part of respondent graduated from senior high school (93,8 %). A considerable part of respondent has working life >5 years (88,8 %). Marital status in married (72,5 %). Assignment mobility in stretches time 1-2 years (97,5 %). A considerable part of respondent has a good enough knowledge and attitude. A considerable part of respondent has a good action. There was no corelation between knowledge of respondent and attitude of respondent ( $p=0,778$ ), there was no corelation between knowledge of respondent and action of respondent ( $p=0,188$ ), and there was no corelation between attitude of respondent and action of respondent ( $p=0,776$ ).

The conclusion according to the result of this research there is no corelation between knowledge and attitude, no corelation between knowledge and action, and no corelation between attitude and action. Suggestion for Yonif 500/Raider are to hold VCT test in routine schedule per 3 months to identify HIV and AIDS spread, increase the quality and quantity of HIV and AIDS information to explain right information about HIV and AIDS for TNI AD army, condom provisioning in Raider's medical service to help the army easily to get condom as a preventive way.

Key words: knowledge, attitude, action, TNI AD army, HIV and AIDS
