HIV (VIRUSES)

2009

ABSTRAK

Kota Mojokerto termasuk kota terbanyak ke enam di Jawa Timur dengan penderita Human Immunodeficiency Virus (HIV) dan sudah pada tingkat epidemi yang terkonsentrasi karena memiliki kantong-kantong epidemi dengan prevalensi lebih dari 5% pada subpopulasi tertentu. Tujuan penelitian ini adalah mengevaluasi pelaksanaan sistem surveilans sentinel HIV di Dinas Kesehatan Kota Mojokerto meliputi input, proses dan output serta berdasarkan atribut surveilans.

Penelitian ini bersifat deskriptif dengan bentuk evaluasi. Subyek evaluasi adalah sistem surveilans sentinel HIV di Kota Mojokerto selama tahun 2008. Pengumpulan data dilakukan dengan teknik wawancara kepada petugas pelaksana surveilans sentinel HIV dan telaah dokumen. Analisis data dilakukan secara deskriptif dan disajikan secara narasi dan menggunakan tabel, grafik dan gambar sebagai penjelas.

Hasil penelitian ini menunjukkan bahwa pelaksanaan sistem surveilans sentinel HIV Dinas Kesehatan Kota Mojokerto meliputi *input*, *proses* dan *output* keseluruhan sudah baik namun ketenagaan belum sesuai dengan Kepmenkes RI No. 1116/Menkes/SK/VIII/2003. Berdasarkan atribut surveilans, sistem surveilans sentinel HIV di Dinas Kesehatan Kota Mojokerto mempunyai format laporan, rekapitulasi data HIV dan sistem pelaporannya mudah dan sederhana. Fleksibilitas belum bisa diukur, mempunyai kualitas data yang tinggi, akseptabilitas yang tinggi, sensitivitas yang tinggi, NPP yang tinggi, stabilitas yang tinggi, representatif dan pelaksanaan surveilans sentinel HIV telah terjadwal dengan baik.

Kesimpulan dari penelitian ini adalah pelaksanaan sistem surveilans sentinel HIV Dinas Kesehatan Kota Mojokerto meliputi *input*, *proses*, *output* dan berdasarkan atribut surveilans sudah baik. Namun ketenagaan belum sesuai dengan Kepmenkes RI No. 1116/Menkes/SK/VIII/2003. Saran untuk pelaksanaan surveilans sentinel HIV di Dinas Kesehatan Kota Mojokerto adalah memperluas sub-populasi yang menjadi sasaran pelaksanaan surveilans sentinel HIV, meningkatkan intensitas penyebaran informasi tentang HIV, meningkatkan promosi pelayanan klinik VCT dan pentingnya pemeriksaan dini terhadap penyakit HIV.

ABSTRACT

Mojokerto City is the sixth city of greatest number of person with Human Immunodeficiency Virus (HIV) in East Java and it has reached concentrated level epidemic because this city has epidemic pockets with more than 5% of prevalence in such subpopulation. The purpose of this research is to evaluate the implementation of HIV sentinel surveillance system in Health Department of Mojokerto City that consists of input, process and output and according to surveillance attribute.

This research has descriptive nature with evaluation form. Evaluation subject was HIV sentinel surveillance system in Mojokerto City during year of 2008. The data collection was held with questionnaire technique to the implementor officer of HIV sentinel surveillance system and document review. Data analysis was done descriptively and was presented in narrative and used table, chart and picture as explanatory.

This research indicated that implementation of HIV sentinel surveillance system of Health Department of Mojokerto City covered input, process, and output entirely was good but the officers have not appropriate with the Decree of RI Health Minister No. 1116/Menkes/SK/VIII/2003. According to the surveillance attribute, HIV sentinel surveillance system of Health Department of Mojokerto City has report format, recapitulation of HIV data and the report system was easy and simple. Flexibility has not yet measured, it has high quality data, high acceptability, high sensitivity, high NPV, high stability, representative and the implementation of HIV sentinel surveillance has been scheduled well.

This research concluded that implementation of HIV sentinel surveillance system of Health Department of Mojokerto City covered input, process, output and according to the surveillance attribute was good. But the officers have not appropriate with the Decree of RI Health Minister No. 1116/Menkes/SK/VIII/2003. The suggestion for next implementation of HIV sentinel surveillance of Health Department of Mojokerto City was expanding sub-population of implementation target, increasing the intensity of information about HIV, increasing promotion of VCT clinic service and the importance of early examination to HIV to general community.
