

Syamon, B. P., 2015, Uji In vitro dan In silico *Carboxymethyl-chitosan (CMChi)-Benzaldehid* terhadap Bakteri *Escherichia coli*, Skripsi ini di bawah bimbingan Dr. Ir. H. Suyanto, M.Si dan Drs. Handoko Darmokoesoemo, DEA. Departemen Kimia, Fakultas Sains dan Teknologi, Universitas Airlangga

ABSTRAK

Carboxymethyl-chitosan (CMChi)-Benzaldehid disintesis sebagai agen bakteri terhadap *Escherichia coli*. Aktivitas antibakteri ditentukan dengan metode Cakram Disc Diffusion dan pengukuran zona hambat di sekitar kertas cakram. Aktivitas antibakteri *CMChi* dan *CMChi*-benzaldehid diuji pada variasi konsentrasi 2%, 4%, 6%, 8%, dan 10%. Konsentrasi optimum *CMChi* dan *CMChi*-benzaldehid dalam menghambat pertumbuhan *Escherichia coli* sebesar 4% dan 6% secara berturut. Hasil zona hambat (diameter) yang dilakukan secara duplo didapatkan sebesar 3 dan 4mm pada *CMChi* 4% serta 6 dan 9mm pada *CMChi*-benzaldehid 6%. *Energy binding* yang dihasilkan *CMChi* dan *CMChi*-benzaldehid berturut-turut didapatkan dengan uji *Molekular Docking* pada protein FhuA membran outer *Escherichia coli* dengan nilai sebesar -2,99 kkal/mol dan -4,71 kkal/mol.

Kata kunci : *CMChi*-benzaldehid, *Escherichia coli*, Antibakteri, Cakram Disc Diffusion, Molekular Docking, FhuA

Syamon, B. P., 2015, In vitro and In silico Test of Carboxymethyl-chitosan (CMChi)-Benzaldehyde Against Escherichia coli, Final project is advised by Dr. Ir. H. Suyanto, M.Si and Drs. Handoko Darmokoesoemo, DEA., Department of Chemistry, Faculty of Science and Technology, Airlangga University.

ABSTRACT

Carboxymethyl-chitosan (CMChi)-benzaldehyde was synthesised as an antibacteria agent against *Escherichia coli*. Antibacteria activity was determined by Cakram Disc Diffusion method and measuring the inhibition zone around cakram disc. The antibacteria activity between CMChi and CMChi-benzaldehyd was compared by varying concentration at 2%, 4%, 6%, 8%, and 10%. Optimum concentration of CMChi and CMChi-benzaldehyd of inhibiting *Escherichia coli* growth was attained at 4% and 6% respectively. The result of inhibition zone from duplo test showed 3 and 4mm for CMChi 4% and 6 and 9mm for CMChi-benzaldehyde 6% as the highest inhibition zone of each compound. The Energy Binding was determined by Molecular Docking of FhuA protein of *Escherichia coli*, results showed at -2,99 kcal/mol for CMChi and -4,71 kcal/mol for CMChi-benzaldehyde.
