JUDUL :
ANALISIS HUBUNGAN ANTARA *TRADE OPENNESS*, *COUNTRY SIZE*, DAN
GOVERNMENT SIZE

ISI :

Hubungan antara *trade openness*, *country size*, dan *government size* telah banyak dilakukan oleh beberapa peneliti dalam beberapa dasawarsa terakhir. Namun, belum ada penelitian yang menganalisis hubungan kausalitas diantara ketiga variabel tersebut. Untuk itu, penelitian ini bertujuan untuk melihat hubungan kausalitas antara *trade openness*, *country size*, dan *government size*. Alat analisis yang digunakan untuk mengetahui hubungan kausalitas dalam penelitian ini adalah Uji Kausalitas Granger. Penelitian ini menggunakan data panel dari negara-negara di Asia Tenggara dan Asia Timur selama periode tahun 1965-2013. Hasil studi empirik menunjukkan bahwa terdapat hubungan kausalitas satu arah antara *trade openness* dan *government size*, yakni *government size* mempengaruhi *trade openness*. Hasil lainnya adalah terdapat hubungan kausalitas dua arah antara *trade openness* dan *country size*. Tidak hanya itu, penelitian ini juga menemukan bahwa tidak ada hubungan kausalitas antara *country size* dan *government size*.

Kata Kunci : *Trade Openness*, *Country Size*, *Government Size*, Uji Kausalitas Granger

Daerah Penelitian : Asia Tenggara dan Asia Timur

TITLE :
THE ANALYSIS OF RELATIONS BETWEEN TRADE OPENNESS, COUNTRY SIZE, AND
GOVERNMENT SIZE

CONTENT :

The relation between trade openness, country size, and government size had been done by many researchers in the last decades. However, there has not been any study that analyzes the causality relations between those three variables. Therefore, the objective of this study is to see the causality relations between trade openness, country size, and government size. The analytical tool that is used to determine the causality in this study is the Granger Causality Test. This study used the panel data from the countries of Southeast Asia and East Asia in the period of 1965-2013. The results of empirical studies showed that there was a one-way of causality relations between trade openness and government size, that the government size affects trade openness. Another result showed that there was a two-way of causality relations between trade openness and country size. This study also showed that there was no causality relations between country size and government size.

Keywords : Trade Openness, Country Size, Government Size, Granger Causality Test

Research Area : South East Asia and East Asia
