Penelitian ini merupakan penelitian kualitatif. Penelitian ini bertujuan untuk mengetahui bentuk-bentuk dukungan sosial pada ibu yang memiliki anak sindrom down. Menurut Gottlieb, dukungan sosial ialah sumber-sumber sosial yang dianggap tersedia atau benar-benar diberikan kepada mereka oleh non profesional baik dalam konteks kelompok dukungan formal dan hubungan bantuan informal. Sumber dukungan sosial didapat dari orang-orang terdekat seperti keluarga, suami, teman, dan tetangga. Ada empat dimensi dari dukungan sosial yaitu dukungan emosional, dukungan instrumental, dukungan informasi, dan dukungan kelompok.

Penelitian ini dilakukan pada ibu yang memiliki anak Down Syndrome di pusat layanan pendidikan Synergy Children Center yang berada di kota Tulungagung. Jumlah partisipan pada penelitian ini sebanyak tiga orang ibu. Alat pengumpul data berupa wawancara dan observasi. Analisis data dilakukan dengan teknik analisis tematik.

Hasil analisis data penelitian menunjukkan bahwa partisipan mendapatkan dukungan sosial dari orang-orang disekitarnya. Beban yang ditanggung partisipan dalam mengasuh anak penyandang Down Syndromemengjadi lebih ringan dengan adanya dukungan sosial yang diberikan orang-orang terdekat. Setiap partisipan mendapatkan dimensi dukungan sosial yang berbeda-beda. Tidak semua dimensi dukungan sosial diterima oleh partisipan.

Kata kunci : *Down Syndrome*, dukungan sosial

ABSTRACT

Afnia Khusnafiah, 110810180, Social Supports on Mothers with A Down Syndrome Child in Synergy Children Centre of Education in Tulungagung, *Undergraduate Thesis*, Faculty of Psychology Universitas Airlangga Surabaya, 2016.

12 + 44pages, 4appendix

This study is a qualitative research. The aim of this research is to acknowledge the kind of social support received by a mother who has a Down syndrome child. Social support is the social resources that persons perceived to be available or that are actually provided to them by nonprofessionals in the context of both formal support groups and informal helping relationships. The source of the social support perceived by the mother comes from her family, her husband, friends and neighbors. There are four kind of social supports which includes emotional support, instrumental support, information support and group support.

The participants in this research are three mothers who each have a Down syndrome child. The location of the research is in Synergy Children Centre of Education in Tulungagung. The data is being collected by an interview and observation. Thematic analysis is being used to analyze the data.

The result of the data shows that the mothers received social support from the people in their environment. It shows that social support can lighten the load of responsibilities of the mother in taking care of their child. The participants didn't receive the four kind of social supports. They each received different kind of social support.

Keywords: Down syndrome, social support
