

ABSTRAK

Annisa Kharisma Septianti, 11111114, Hubungan Antara *Perceived Of Social Support* dengan *Loneliness* pada Remaja Madya yang menggunakan media sosial *LINE*, Skripsi, Fakultas Psikologi Universitas Airlangga, 2016. xx + 79, 18 lampiran.

Penelitian ini bertujuan untuk menguji hubungan antara perceived of social support dengan loneliness pada remaja madya yang menggunakan media sosial LINE. Penelitian ini diterapkan pada remaja madya yang menggunakan media sosial LINE dengan menggunakan teknik purposive sampling. Alat ukur yang dipakai untuk mengukur perceived of social support terdiri dari duabelas aitem dari tiga dimensi dan loneliness terdiri atas 20 aitem dari 2 dimensi. Reliabilitas untuk variabel perceived of social support sebesar 0,856 dan loneliness sebesar 0,951. Analisis data dilakukan dengan teknik korelasi Spearman Rho menggunakan bantuan SPSS 16.0 for Windows. Dari hasil data penelitian, didapatkan hasil koefisien korelasi sebesar 0,340 dengan taraf signifikansi sebesar 0,000 ($p < 0,05$). Hal ini menunjukkan bahwa ada hubungan antara perceived of social support dan loneliness pada remaja madya yang menggunakan media sosial LINE. Nilai koefisien korelasi yang negatif dan berada antara 0,30 – 0,49 menunjukkan arah korelasi yang searah dan kekuatan korelasi yang sedang. Artinya jika tingkat loneliness tinggi maka tingkat perceived of social support menurun dan keduanya memiliki hubungan yang sedang.

ABSTRACT

Annisa Kharisma Septianti, 111111114, the relationship between *Perceived Of Social Support*, was with *Loneliness* on middle adolescent who use social media Associate *LINE*, thesis, Faculty of Psychology Airlangga University, 2016. XX + 79, 18 attachment.

The aim of this research is to examined the connection between perceived of social support and loneliness on middle adolescent who used social media LINE. This research is applied on middle adolescent that used media social LINE with using purposive sampling technique. The instrument that used to measurie perceived of social support consists of 12 item of three dimension and loneliness consists of 20 item of two dimension. Reliability for perceived of social support is about 0,856 and for loneliness variabel is about 0,951. Data analysis was analyzed with spss 16.0 for Windows. Spearman Rho correlation tech nique. The result of the research shows that correlation coefficient is about 0,340 with significant level 0,000 ($p < 0.05$). This result mean that there is connection between perceived of social support and loneliness. Negative correlation coefficient between 0.30 – 0.49 explained that the same direction, which mean if loneliness level is high, the level of perceived of social support is high as well, and that two items has a connection.
