JUDUL : Dampak Investasi Sektor Konstruksi Bidang Pariwisata terhadap Produk Domestik Bruto dan Distribusi Pendapatan Rumah Tangga: Analisis Sistem Neraca Sosial Ekonomi Indonesia 2008

ISI:

Sektor konstruksi berdampak besar terhadap perekonomian Indonesia. Penelitian ini bertujuan untuk menganalisis dampak investasi sektor konstruksi yang dilakukan pemerintah terhadap pendapatan faktor produksi, golongan rumah tangga dan output sektor produksi, serta dampak terhadap produk domestik bruto dan distribusi pendapatan rumah tangga. Data yang digunakan adalah data SNSE Indonesia tahun 2008 dengan teknik analisis pengali neraca dan *structural path analysis* (SPA). Hasil analisis menunjukkan bahwa investasi sektor konstruksi bidang pariwisata mampu meningkatkan pendapatan faktor produksi, golongan rumah tangga, sektor produksi serta produk domestik bruto, tetapi mengakibatkan distribusi pendapatan rumah tangga semakin timpang, karena manfaat terbesar diterima oleh kelompok rumah tangga kaya seperti golongan atas di kota, sedangkan kelompok rumah tangga miskin seperti buruh tani menerima manfaat terkecil.

Kata Kunci: Distribusi Pendapatan Rumah Tangga, Investasi Bidang Pariwisata, Produk Domestik Bruto, Sektor Konstruksi, Sistem Neraca Sosial Ekonomi (SNSE)

TITTLE : Impact of Construction Sector Investment in Tourism Field to Gross Domestic Product and Household Income Distribution: Analysis Social Accounting Matrix Indonesia 2008

CONTENT :

The construction sector has an impact to economic condition in Indonesia. The purpose of this study was to analyze the impact of construction sector investment by the government in tourism field on income production factor, household and output production sector, also the impact to gross domestic product and the household income distribution. This study Using SAM Indonesia 2008 data with analysis technique multiplier matrix and structural path analysis (SPA). The analysis showed that construction sector investment in tourism field were able to increase the income of the production factor, household, production sector and gross domestic product, but in household distribution income, tourism investment makes the distributions more unbalanced, because the bigger benefit is received by a group of wealthy households as upper class in the city, while poor households such as farm workers receive the smaller benefit.

Keywords: Household Income Distribution, Tourism field Investment, Gross Domestic Product, Construction Sector, Social Accounting Matrix (SAM)
