## **ABOUT JPPS**

The Journal of Pharmacy and Pharmaceutical Sciences (JPPS), the first OPEN ACCESS in the field established in 1998, is the official journal of the [Canadian Society for Pharmaceutical Sciences \(CSPS\)](#). JPPS is a broad-spectrum, peer-reviewed, international pharmaceutical journal circulated electronically via the World Wide Web. Articles are published with no page charge. Subscription to JPPS is also free of charge. Articles will appear individually as soon as they are accepted and are ready for circulation. For submissions, register as an author and follow the [Guidelines for Authors](#).

## Review Articles

<a href="#">A REVIEW ON INTERPENETRATING POLYMER NETWORK</a>	1-7
MURUGESH SHIVASHANKAR, BADAL KUMAR MANDAL	
<a href="#">FUNCTIONAL PROPERTIES OF CENTELLA ASIATICA (L.): A REVIEW</a>	8-14
VASANTHARUBA SEEVARATNAM, P.BANUMATHI, M.R.PREMALATHA, SPSUNDARAM AND T.ARUMUGAM	
<a href="#">THE GENUS RANUNCULUS: A PHYTOCHEMICAL AND ETHNOPHARMACOLOGICAL REVIEW</a>	15-22
M SHAHZAD ASLAM, BASHIR A. CHOUDHARY, M UZAIR, A SUBHAN IJAZ	
<a href="#">REVIEW ON HYDROXYAPATITE-CARBON NANOTUBE COMPOSITES AND SOME OF THEIR APPLICATIONS</a>	23-27
R. RAJESH, N. SENTHILKUMAR, A. HARIHARASUBRAMANIAN, Y. DOMINIC RAVICHANDRAN	
<a href="#">A REVIEW ON ALTERNATIVES TO ANIMAL TESTING METHODS IN DRUG DEVELOPMENT</a>	28-32
RANGANATHA N AND I. J. KUPPAST	
<a href="#">LECITHIN- CHOLESTEROL BIO- MEMBRANES AND THEIR CORRELATION WITH LIQUID MEMBRANES</a>	33-37
P.K. MISHRA RAHUL AND S.S. PANCHOLI	
<a href="#">MYRICA NAGI: A REVIEW ON ACTIVE CONSTITUENTS, BIOLOGICAL AND THERAPEUTIC EFFECTS</a>	38-42
PREETI PANTHARI, HARSHA KHARKWAL, HARENDRA KHARKWAL AND DEVI DATT JOSHI	
<a href="#">LIFESTYLE DRUGS</a>	43-45
POOJA REDDY, DEVESH GOSAVI, SRIKANTH REDDY	

## Research Articles

<a href="#">THERMODYNAMIC STUDIES ON THE INTERACTION OF 5-FLUOROURACIL WITH HUMAN SERUM ALBUMIN</a>	46-49
S. BAKKIALAKSHMI & D. CHANDRAKALA	
<a href="#">APPLICABILITY OF A COLORIMETRIC METHOD FOR EVALUATING STREPTOMYCIN SULPHATE LOADED SOLID LIPID NANOPARTICLES</a>	50-53
MANOJ KUMAR VERMA, MANDEEP SINGH, VANDITA KAKKAR, INDU PAL KOUR	
<a href="#">PHARMACOGNOSTICAL STANDARDISATION OF PLUMERIA ACUTIFOLIA (POIR) BARK</a>	54-57
SURENDRA KR. SHARMA AND NARESH KUMAR	
<a href="#">FORMULATION AND EVALUATION OF MICROSPHERES FOR SUSTAINED DELIVERY OF ACECLOFENAC</a>	58-65
ARTICLE HAS BEEN WITHDRAWN FROM PUBLICATION ON AUTHORS REQUEST	
<a href="#">STUDY ON THE SOLID INCLUSION COMPLEX OF COUMARIN-1 WITH B-CYCLODEXTRIN</a>	66-71
S. BAKKIALAKSHMI & T. MENAKA	
<a href="#">SIMULTANEOUS ESTIMATION OF METFORMIN HYDROCHLORIDE, PIOGLITAZONE HYDROCHLORIDE AND GLICLAZIDE BY VALIDATED RP-HPLC METHOD IN SOLID DOSAGE FORM</a>	72-76
NAZAR MUSTAFA MANSOORY, ANUREKHA JAIN	
<a href="#">ANTI-DIABETIC EFFECT OF CRUDE LEAF EXTRACTS OF OCIMUM GRATISSIMUM IN NEONATAL STREPTOZOTOCIN-INDUCED TYPE-2 MODEL DIABETIC RATS</a>	77-83
NELSON.I. OGUANOBI, CHIOLI PASCHAL CHIJIJOKE, SAMUEL GHASI	
<a href="#">DEVELOPMENT AND VALIDATION OF A REVERSE PHASE HPLC METHOD OF SIMULTANEOUS ESTIMATION OF TOLPERISONE HYDROCHLORIDE AND PARACETAMOL IN TABLET DOSAGE FORM</a>	84-88
I.CAROLIN NIMILA, P.BALAN, N.CHIRANJEEVI, VINNAKOTA.V.V.M.KUMAR	
<a href="#">IN VITRO EVALUATION OF ORAL TIMED RELEASE TABLET OF LOSARTAN POTASSIUM USING NATURAL GUM AND IT'S SOLID CHARACTERIZATION</a>	89-95
K LATHA, M U UHUMWANGHO, SA SUNIL, MV SRIKANTH AND KV RAMANA MURTHY	
<a href="#">METHOD VALIDATION FOR SPECTROPHOTOMETRIC ESTIMATION OF CILNIDIPINE</a>	96-98
PANKAJ P. CHAUDHARI, A. V. BHALERAO	
<a href="#">PHARMACOGNOSTIC EVALUATION OF TRIGONELLA FOENUM GRACEUM L. LEAF AND STEM</a>	99-102
R.ANITHA AND R.PRIYADHARSHINI	
<a href="#">FLURBIPROFEN LOADED SOLID LIPID NANOPARTICLES, FORMULATION AND OPTIMIZATION BY USING RESPONSE SURFACE METHODOLOGY</a>	103-108
SUBHRA PRAKASH BHATTACHARYYA, INDRANI BHATTACHARYYA	
<a href="#">METHOD DEVELOPMENT AND VALIDATION FOR THE SIMULTANEOUS DETERMINATION OF OMEPRAZOLE AND DOMPERIDONE IN SOLID DOSAGE FORM BY RP-HPLC</a>	109-114
ANITA S. KULKARNI, MANE VARSHA BALKRISHNA	
<a href="#">A VALIDATED SIMULTANEOUS RP-HPLC METHOD FOR DETERMINATION OF DESOGESTREL AND ETHINYL ESTRADIOL TABLETS</a>	115-119
M SARAT, AND C RAMBABU	
<a href="#">FORMULATION AND EVALUATION OF SUSTAINED RELEASE MATRIX TABLETS OF FLURBIPROFEN USING GUAR GUM</a>	120-123
GIRISH B, ISMAIL PASHA, GOWDA DV	

<a href="#"><u>ANTIMICROBIAL ACTIVITY OF IN VITRO RAISED ACMEILLA CALVA (DC.) R.K.JANSEN</u></a>	124-127

It's an enormous pleasure and honor to organize "15th World Congress On Bioavailability and Bioequivalence" scheduled during July 29-30, 2019 at Bangkok, Thailand. The conference is mainly focused on the theme of "Essential Innovation in the field of Pharmaceutical Science for Public and Medical health". BABE Conference 2019 is designed with prudent keynote sessions, session lectures, and poster presentations, presentations from the young researchers, panel discussions, and the B2B meetings with world-renowned speakers from the stream of clinical and pharmaceutical sciences. It provides the best platform for the researchers to the researchers all over globe to introduce themselves to the world with their unique researches. It's an open forum to discuss new researches and the challenges faced during the BA/BE studies, manufacturing the

### ABSTRACT

*Artocarpus champeden* Spreng. (Moraceae), commonly known as "cempedak", has been traditionally used for malarial remedies. Several studies reported that *A. champeden* Spreng. stem bark has *in vitro* and *in vivo* antimalarial activity. The main aim of this research was to isolate and identify an active marker compound of *A. champeden* stem bark for quality control purpose of *A. champeden* stem bark extract in the development of this extract as phytomedicine antimalarial product. The isolation method was bioactivity guided column chromatography and preparative TLC techniques. The marker compound that has been isolated showed potent antimalarial activity with an  $IC_{50}$  value of 0.18  $\mu\text{g/ml}$  against *Plasmodium falciparum* 3D7 strain. Based on UV, IR, <sup>1</sup>H NMR, <sup>13</sup>C NMR, 2D NMR (COSY, HMBC and HMQC) spectral and identification of other references, the active marker compound was identical with known prenylated chalcone compound, Morachalcone A.

**Keywords:** *Artocarpus champeden* Spreng., Antimalarial, Morachalcone A, Active marker compound.

### INTRODUCTION

*Artocarpus champeden* Spreng, commonly known as "cempedak", belongs to Moraceae. It is widely distributed in Indonesia and has been traditionally used for malarial remedies<sup>3</sup>. Previous studies reported that several prenylated flavonoids isolated from *A. champeden* Spreng. have potential *in vitro* antimalarial against *P. falciparum* 3D7 strain<sup>14</sup> and *in vivo* against *P. berghei* strains ANKA (unpublished). This indicates that *A. champeden* Spreng. is prospective to be developed as phytomedicine product for antimalarial.

The pharmaceutical requirements for a herbal product destined for a multi-target therapy are very complex<sup>4</sup>. The constituents of medicinal herbs can vary greatly as a result of genetic factors, climate, soil quality and other external factors<sup>12</sup>. Therefore, despite the use of authenticated botanical voucher specimens to help assure proper identity, modern concepts and methods relating to the quality (i.e., chemical consistency) of herbal materials and products pertain to phytochemical markers and fingerprint analyses are needed. These markers are the threads that tie together the production and the quality control<sup>11</sup>. Ideally, chemical markers should be unique components that contribute to the therapeutic effects of a herbal medicine<sup>6</sup>. Markers should be commercially available or able to be isolated in own laboratory as well<sup>11</sup>.

The standardized extract should have consistent constituent in order to ensure the consistency of quality, safety, and efficacy of the product. The marker approach to ensure consistency is based upon the assumption that the content of other constituents will vary in proportion to the marker compound. If each batch contains the same standardized amount of marker, the content of other constituents will also be relatively consistent<sup>5,8,15</sup>.

In order to develop *A. champeden* as antimalarial phytomedicine product with multi-component approach, it is needed to standardize *A. champeden* extract as raw material. Therefore, the study to obtain standardized extract of *A. champeden* Spreng. stem bark as raw material of antimalarial phytomedicine product using active marker compound was conducted.

The present study aims to isolate and determine marker compound from 80% ethanol extract of *A. champeden* stem bark. This study consists of several steps; marker compound isolation using chromatography techniques, followed by identification of isolate based on UV-Vis, IR, <sup>1</sup>H NMR, <sup>13</sup>C NMR, 2D NMR (COSY, HMBC and

HMQC) and MS spectra. Marker isolation from ethanol extract of *A. champeden* stem bark was done by bioactivity guided fractionation.

### MATERIAL AND METHODS

#### General Experimental Techniques

Silica gel was used for column chromatography (Merck, 0.063-0.200 mm) and preparative thin layer chromatography (Merck). Spots on plates were detected under UV light ( $\lambda$  254 and 366 nm) and by sprayed 10% H<sub>2</sub>SO<sub>4</sub> in water followed by gentle heating. IR spectrum obtained in a Shimadzu spectrometer IR Prestige-21 type. The NMR experiments (both 1D and 2D) were obtained in a Jeol spectrometer ECA 500 type operating at 500 MHz. HPLC analysis was performed with Hewlett Packard Agilent 1100 series, an Agilent 1100 series Degasser G1322A, a Rheo-dyne 7725 injection valve with a 20- $\mu\text{L}$  loop, Agilent 1100 series Quaternary Pump G1311A, Agilent 1100 series Column Compartment G1316A, Agilent 1100 series diode array detector (DAD) G1315A. Compounds were separated in a 250x4.6 mm Varian Microsorb MV 100-5 C8 column.

#### Plant material

The stem bark of *Artocarpus champeden* Spreng. was collected from Bogor, West Java, Indonesia, on June 2007 and 2008. A voucher specimen was identified and deposited at the Herbarium Bogoriense, Bogor Botanical Garden, Bogor, Indonesia.

#### Extraction and Isolation

One kilogram of *Artocarpus champeden* Spreng. stem bark was extracted with 80% ethanol at 60°C, yielded 74.64 g of crude extract. This extract was applied to ODS column chromatography, using MeOH-H<sub>2</sub>O (4:1 v/v)-MeOH-acetonitril (1:1 v/v) and acetonitril as eluent, resulting in 10 major fractions (fraction 1-10). Fraction 4 (686.9 mg) was applied to silica gel column and eluted with CHCl<sub>3</sub> followed by increasing polarity of CHCl<sub>3</sub>-MeOH 1-10% by gradient elution, yielded 9 major subfraction. Further separation of subfraction 4.8 (47.1 mg) was conducted by several steps of Preparative TLC techniques using silica RP-18 as stationary phase with MeOH-H<sub>2</sub>O (7:3 v/v) as mobile phase yielded active subfraction 4.8.8 (18.7 mg). The process was then continued using silica as stationary phase with CHCl<sub>3</sub>-MeOH (9.5:0.5 v/v) as mobile phase yielded active subfraction 4.8.8.7 (12.2 mg).

Purification of this subfraction was conducted by reverse-phase PTLC with MeOH-H<sub>2</sub>O (4:1 v/v) as mobile phase resulting an active marker compound, Morachalcone A (7.2 mg).

Morachalcone A: orange powder; UV (MeOH)  $\lambda_{\max}$  nm 250, 316 and 385; IR (KBr)  $\text{cm}^{-1}$ : 3,456, 1,697.  $^1\text{H}$  and  $^{13}\text{C}$  NMR data are given in Table 1.

#### Antimalarial activity Assay

The antimalarial activity of fractions and the isolated compound were determined by the procedure described by Budimulya *et al.* (1997). In brief, each fraction or compound was separately dissolved in DMSO ( $10^{-2}$  mol  $\text{L}^{-1}$ ) and kept at  $-20^\circ\text{C}$  until used. The malarial parasite *P. falciparum* 3D7 strain was propagated in a 24-well culture plate in the presence of a wide range of concentration of each fractions or compound. The growth of the parasite was monitored by making a blood smear fixed with MeOH and stained with Giemsa stain. The antimalarial activity of each fraction or compound was expressed as an  $\text{IC}_{50}$  value, defined as the concentration of the compound causing 50% inhibition of parasite growth relative to an untreated control.

#### HPLC Conditions

HPLC analysis was conducted using methanol-water (65:35 v/v) as mobile phase by isocratic elution, C8 250x4.6 mm Varian Microsorb MV 100-5 column at flow rate of 1 ml/minute, column temperature of  $30^\circ\text{C}$ , stop time of analysis at 20 minutes and detection wavelength set at 385 nm.

#### Sample preparation

10 mg of ethanol extract of *A. champeden* Spreng stem bark was accurately weighed and dissolved in methanol using vortex for 5 minutes. Sample solution was filtered through a  $0.45 \mu\text{m}$  syringe membrane filter.

#### RESULT AND DISCUSSION

The dried stem bark of *A. champeden* was extracted by 80% ethanol. In a preliminary test of in vitro antimalarial activity against *P. falciparum* 3D7 clone of this ethanol extract showed significant inhibition. Isolation of active marker compound from ethanol extract of *A. champeden* stem bark was done by bioactivity guided isolation. The ethanol extract was fractionated by open column chromatography using ODS as stationary phase and methanol-water as mobile phase, resulting in 10 major fractions and fraction 4 was active against *P. falciparum* 3D7 strains. Furthermore, fraction 4 was applied to silica gel column and eluted with  $\text{CHCl}_3$  followed by

increasing polarity of  $\text{CHCl}_3$ -MeOH 1-10%, yielded active subfraction 4.8 with an  $\text{IC}_{50}$  value of  $0.03 \mu\text{g mL}^{-1}$ . Further separation of subfraction 4.8 with several steps of PTLC techniques using RP-18 silica gel as stationary phase with MeOH- $\text{H}_2\text{O}$  as mobile phase yielded active subfraction 4.8.8 ( $\text{IC}_{50}$  value of  $0.10 \mu\text{g mL}^{-1}$ ), then silica as stationary phase with  $\text{CHCl}_3$ -MeOH mixtures as mobile phase yielded active subfraction 4.8.8.7 ( $\text{IC}_{50}$  value of  $0.39 \mu\text{g mL}^{-1}$ ). Purification of this subfraction by reverse-phase PTLC with MeOH- $\text{H}_2\text{O}$  as mobile phase resulting in active marker compound.

The identification of isolated compound was based on UV-Vis, IR,  $^1\text{H}$  NMR,  $^{13}\text{C}$  NMR, 2D NMR (COSY, HMBC and HMQC) spectra and comparison of other references. Marker compound was isolated as orange powder. The UV-Vis absorptions at 250, 316 and 385 nm were suggestive of a chalcone skeleton<sup>7</sup>. The IR spectrum of morachalcone A contained absorption bands at  $3,456 \text{ cm}^{-1}$  and  $1,697 \text{ cm}^{-1}$  corresponding to hydroxyl and carbonyl groups, respectively<sup>13</sup>. The  $^1\text{H}$  NMR spectrum contained characteristic signals ascribable to an isoprenyl group ( $\delta$  1.65, 1.77, 5.22, 3.34). 2 proton signals at  $\delta$  7.73 (1H, dd,  $J=15.25$  Hz) and 8.1 (1H, dd,  $J=15.9$  Hz) form an AB system, the large coupling constant indicating the trans geometry of a double bond. The  $^1\text{H}$ -NMR spectrum (table 1) also indicated signals for ortho coupled aromatic protons in ring A ( $\delta$  6.36 (2H, m) dan  $\delta$  7.52 (1H, dd,  $J=8.55, 3.7$  Hz) and two aromatic protons in ring B  $\delta$  6.43 (1H, q,  $J=8.55, 17.75$  Hz) dan  $\delta$  7.76 (1H, d,  $J=8.55$  Hz). The presence of proton signals at  $\delta$  13.93 and  $\delta$  14.48 indicated that the hydroxyl groups are located at C-2 and C-4 in ring A and C-2' and C-4' in ring B. The  $^{13}\text{C}$ -NMR spectrum contained signals from 20 carbon atoms including that of a ketone carbonyl carbon at  $\delta_c$  194.25 (table 1).

On the basis of HMQC and HMBC spectral analysis, all protons and carbon signals were fully assigned and the positions of the substituents on the aromatic rings were determined. The HMBC correlations for H-1''/C-2', C-3', and C-3'' confirmed that the 3,3-dimethylallyl group was located at C-3'.

The structure determination for marker compound also conducted based on the comparison of their spectroscopic data from literature values<sup>9,10</sup>. Thus, the structure of marker compound was deduced as known prenylated chalcone, Morachalcone A. Morachalcone A was previously isolated from callus culture of *Maclura pomifera* (Moraceae)<sup>9</sup> and also from methanol extract of *A. champeden* stem bark (unpublished).

Fig. 1: The chemical structure of active marker compound isolated from *Artocarpus champeden* Spreng.

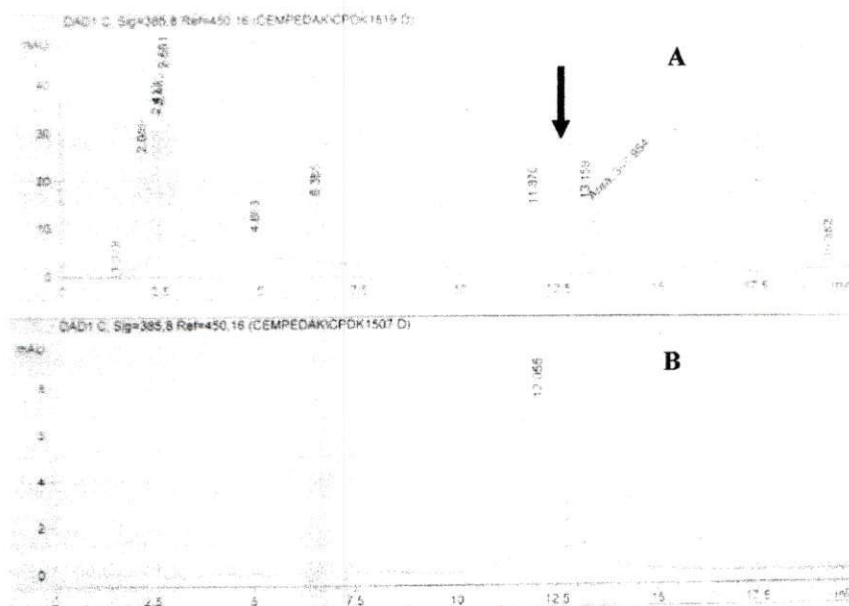

Fig. 2: Chromatogram obtained from ethanol extract of *A. champeden* stem bark (A) and marker standard morachalcone A (B)

The marker compound revealed inhibitory activity against *P. falciparum* 3D7 strain with an  $IC_{50}$  value of  $0.18 \mu\text{g mL}^{-1}$ . The inhibitory activity of this compound showed that the isolated compound was an active marker.

According to Reif [2004], marker compound should be accessible to the quantification of common analytical equipment (e.g., high-performance liquid chromatography [HPLC]) to keep costs of routine analysis moderate. Therefore, preliminary analysis of the existence of Morachalcone A in ethanol extract of *A. champeden* Spreng. stem bark was conducted using HPLC.

The chromatogram profile of ethanol extract using the mixture of methanol and water (65:35 v/v) as mobile phase by isocratic elution, C8 250x4.6 mm Varian Microsorb MV 100-5 column at flow rate of 1 mL/minute, column temperature of  $30^{\circ}\text{C}$ , stop time of analysis at 20 minutes and detection wavelength set at 385 nm (Figure 2) showed that peak at time retention shown as Mean  $\pm$  SD (RSD) of 13.001 minutes  $\pm$  0.37 (2.87%), has resolution of 1.42, plate number of 3524, peak width at half height of 0.5200, symmetry factor of 0.82 and selectivity factor of 1.11. The purity factor of this peak was 997.034, indicated that targeted peak fall within acceptable purity. The identity of this peak against marker spectrum

was shown as match factor value of 981.261 ( $>950.000$ ), indicated that targeted peak analyzed in ethanol extract was marker compound that has been detected in ethanol extract of *A. champeden* stem bark.

The result of this study showed that the active marker compound, Morachalcone A, can be used as a marker compound in standardization of ethanol extract of *A. champeden* stem bark as antimalarial phytomedicine product. Further studies are needed to develop an analysis method of Morachalcone A for quality control and standardization purpose of ethanol extract of *A. champeden* Spreng.
