

ABSTRAK

Pengembangan dan pertumbuhan kredit mungkin menguntungkan dalam jangka panjang, tetapi pertumbuhan kredit yang berlebihan akan memiliki dampak negatif pada kesehatan keuangan bank. Pertumbuhan kredit yang meningkat menunjukkan bahwa bank umum akan menghadapi risiko kredit yang semakin bertambah, sehingga sangat penting mengelola risiko karena industri perbankan merupakan industri yang sensitif terhadap perubahan kondisi ekonomi. Penelitian ini bertujuan untuk mengetahui pengaruh pertumbuhan kredit abnormal terhadap risiko kredit, profitabilitas bank dan *bank solvency* yang dimoderasi oleh ukuran bank. Penulis menggunakan 115 sampel bank umum konvensional di Indonesia selama tahun 2008-2012, dengan ukuran sampel sebanyak 425 observasi (model 1), 469 observasi (model 2), dan 457 observasi (model 3). Hasil regresi berganda menunjukkan bahwa pertumbuhan kredit abnormal berpengaruh signifikan positif terhadap risiko kredit, signifikan negatif terhadap profitabilitas bank dan signifikan negatif terhadap *bank solvency*. Ukuran bank memoderasi pengaruh pertumbuhan kredit abnormal terhadap risiko kredit, profitabilitas bank dan *bank solvency*. Hal ini berarti bahwa, secara umum pertumbuhan kredit abnormal akan berdampak buruk terhadap kinerja keuangan bank ditunjukkan dengan meningkatnya risiko kredit, penurunan profitabilitas dan penurunan tingkat solvensi bank saat terjadi pertumbuhan kredit abnormal.
