ABSTRACT

The Law Number 22/1999 and government Rule Number 25/2000 has effected drug budget availability which is the responsibility of the Regency to secure the sustainability of health services. The existing problem of drug management in Malang regency is over, under and out of stock, due to consumption based, leaving behind morbidity and standard therapy (serviced based). The objective of this research was to formulate drugs requirement plan and its budget based on morbidity and standard therapy according to the Ministry of Health. The object of the study was all (38) public health centers drug consumption and morbidity for from 1998 to 2002). The result of this research showed that drugs requirement base on serviced based in Malang Regency was 58 items from the previous 174 items saved was Rp. 272.498.788,- (0,99 %) and the medical treatment allowed the standard therapy and rational medication. In 2003, drugs requirement was 33 items and the budget was Rp. 5.089.248.521,-. From this research, hopefully in the future drugs requirement plan will use serviced based method, complete the LB1 form (suitable with morbidity and ICD), and complete standard therapy based on National list essential of drugs.

Keywords : drugs requirement plan, serviced based
