ABSTRACT

The aim of this research is to synthesis *p*-benzoxy cinnamic acid by Williamson reaction. Experiments were carried out by refluxing mixtures of *p*-hidroxy cinnamic acid in NaOH solution and benzyl chloride in diklorometane solution with tetrabutylammoniumhydrogensulphate as phase transfer catalyst. Refluxing the reaction mixture for four hours gave 5-7% yield of benzyl *p*-benzoxy cinnamic not *p*-benzoxy cinnamic acid. IR, NMR and mass spectrocopies confirmed that structure of the product was benzyl *p*-benzoxy cinnamic.

As conclusion, *p*-benzoxy cinnamic acid cannot be synthesised by Williamson reaction directly.

Keywords : Williamson reaction, phase transfer catalyst, *p*-benzoxy cinnamic acid, benzyl *p*-benzoxy cinnamic
