

**THE EFFECT OF SEMICONDUCTOR LASER SHOOTING ON  
GROWTH POINT TO THE BODY WEIGHT OF MALE HYBRID DUCK**

*(Anas platyrhynchos domesticus)*

Prischa Mutiara Insani

**ABSTRACT**

The aim of this research was to know the effect of semiconductor laser to the body weight of male hybrid duck. The acupuncture point used were *Hu Men* (ST-4) / digest point, *Bei Ji* (HT-1, BL-13 ,BL-15) / heart and lungs and *Gou Hou* (BL-64) / growth point. This research used 18 head male hybrid duck divided into 3 groups of treatment which are control group (P0) without semiconductor laser shooting, treatment 1 (P1) with 0.2 joule semiconductor laser shooting, and the last one (P2) with 0.4 joule semiconductor laser shooting. The data was analyzed using ANOVA (*analysis of variance*), with the further test Tukey HSD. Statistical comparison between P0, P1, and P2 showed there is a significant difference ( $p < 0,05$ ). The laser shooting treatment can increase the body weight of male hybrid duck (*Anas platyrhynchos domesticus*).

**Key words :** male hybrid duck, body weight, semiconductor laser.
