February 8-9th 2017 | Gedung Lengkung UII Yogyakarta

WELCOME ADDRESS

International Indonesian Forum for Asian Studies

The International Indonesian Forum for Asian Studies (IIFAS) is an organically grown academic network to enhance the study of the Asia-Pacific region. It was initiated by several doctoral students from Indonesia, Australia and several other countries with the aim to provide an opportunity for young academics in their start-up phase of their career and established academics to meet together in academic exchanges. Sharing research findings and opening discussion in an interchange of knowledge at renown academic venues was the desire for the founding members. Building on a series of successful conferences and public lectures of some of its initial members has made IIFAS grown considerably.

After receiving a keen invitation from two hosting partners, Universitas Gadjah Mada (UGM) and the Universitas Islam Indonesia (UII), IIFAS has come to Yogyakarta in 2017. The Forum is dedicated to friendly and open exchanges in a truly academic tradition, thus actively welcoming participants from Asia, the Pacific and the rest of the world. The call for papers was circulated in May 2016 and by request extended till the 15th of January 2017. IIFAS is aware of the difficulties some far away students might face to present a paper in person at the conference venue in Yogyakarta. As a result of those difficulties, some presenters have been permitted to prepare a poster or absentee presentation at the conference.

I wish to thank the generous UII and UGM rectors, deans, heads of departments, lecturers, staff and volunteer students for the outstanding facilities granted and services provided at this 3rd IIFAS Borderless Communities and Nations with Borders: Challenges of Globalisation Conference. I encourage all delegates and guests a constructive time in creative exploration of innovative interdisciplinary research ideas. I wish you an enjoyable time at the conference, a wonderful experience meeting the Yogyakarta residents and visiting the magnificent sites of interest that virtually stretch between the beach of Parangtritis and the top of Mount Merapi volcano. Welcome and thank you for your endeavours meeting here together.

Johan Richard Weintré
Chairperson of the Forum

FOREWORD

Center for Southeast Asian Social Studies (CESASS),
Universitas Gadjah Mada

We are pleased to welcome all the honourable speakers, guests, and participants to the heart of Java in Yogyakarta, Indonesia, a city of arts surrounded by traditional ambience as a source of Southeast Asian treasure.

Universitas Gadjah Mada, through its CESASS, promotes a social transformation in Southeast Asian epistemic community based on how Southeast Asian see themselves, and to be a hub for its studies network in global scale. CESASS was also pointed as a Center of Excellence (PUI) in social science by Ministry of Research and Higher Education of the Republic of Indonesia since 2016. By this mandate, the Center prioritizes to develop advanced research management and to promote inclusiveness in reconstruction of Southeast Asian studies.

In regard to those roles, the Center aims to bound an epistemic community of Southeast Asian studies for knowledge transfer and scholars networking. 3rd IIFAS Conference is one of the significant agendas from CESASS, as well as our partners; IIFAS and UII, to deliver that purpose. By gather all the scholars to discuss a discourse in the studies, it might be useful for our research development near future. I do hope that you will take this opportunity to explore the potential knowledge and broadening your network.

We are glad for meeting you in this Conference and wish you have fruitful forums. Hopefully, it can contribute to the development of Southeast Asia and Social Studies.

Hermin Indah Wahyuni
Director of the Center

FOREWORD

International Relations Department,
Universitas Islam Indonesia

Welcome or selamat datang to the 3rd International Indonesia Forum for Asian Studies (IIFAS). This year the 3rd IIFAS Conference is held in Yogyakarta and co-hosted by the Department of International Relations of Universitas Islam Indonesia (UII) and the Center for Southeast Asian Social Studies of Universitas Gadjah Mada (PSSAT UGM). We are delighted to share with you the city of Yogyakarta, a well-known academic magnet for many students of the Indonesian Archipelago and international visitors alike who visit Indonesia every year. The city is a host to several hundred institutions of higher education and also truly one of the most important centers of Javanese culture. Therefore, Yogyakarta ought to be a perfect spot for this conference event and for us to meet at this occasion.

The two host universities of this year's conference have both their own uniqueness. It is not very well known but UII holds the title of the oldest national private university in Indonesia, while our partner in this conference, UGM, holds the title of the oldest state university here in Yogyakarta. UII has committed itself to provide study opportunities in the many fields of sciences and the religion of Islam for the benefit of the society. This IIFAS conference is one of UII efforts to fulfill its commitment in sciences and to provide a greater understanding of our particular religious' feelings. The conference has opened an opportunity for a greater interaction among academics and guests. As the conference theme indicates, we hope in these two days to explore and share ideas on how borderless communities interact in a field of nations with fixed borders. We hope that the conference will expose significant results for the development of knowledge and society.

Irawan Jati
The Head of the
International Relations Department

ABSTRACT

X Logistic Sdn Bhd is one of the logistic company located in Malaysia. Its service is to deliver Fast Moving Consumer Goods (FMCG) to all over Malaysia and some other South East Asia countries (Singapore and Brunei). The establishment of the ASEAN Economic Community (AEC) allows participating countries to make easier transactions so that market competitiveness will be increasing. On the other hand, Indonesia retail market is now experiencing growth. This phenomena leads enterprises to produce more FMCG products, therefore not only the quantities of products that is increasing but also the variety, especially, food and beverage products. Due to the interesting variety, foreign people imports Indonesia's products, including Malaysia. In the last 2015, Indonesia's ambassador for Malaysia, Herman Priyatno said that the import rate of Indonesia to Malaysia is increasing up to 14,08% every year. X Logistic Sdn Bhd saw this phenomena as a business opportunity. The company delivers FMCG products including Indonesia's product to more than 150 retailers in Malaysia, Singapore, and Brunei. Unfortunately, X Logistic Sdn Bhd does not implement any distribution method which leads company to losses because of its service. Therefore, company needs to implement a method to improve its service. Delivery route optimalization can be implemented using saving matrix method. The point is to arrange shortest and fastest delivery route to prevent delays. The result of this research is X Logistic Sdn Bhd is able to save 4.070,63 Ringgit Malaysia. Now, company can compete with other logistic companies in facing AEC as a manifestation of economic globalisation.

Keywords: logistic, AEC, routes, productivity, efficiency, globalisation.

1. BACKGROUND

Asean Economic Community (AEC) started in early 2016 is a program designed to form a single market in Southeast Asia. In the development of AEC, Indonesian retail market is experiencing growth. This phenomenon leads companies to produce Fast Moving Consumer Goods (FMCG) products. The number of FMCG produced is increasing and also the variety of products sold. These variative products attract foreign community to consume Indonesian products, including Malaysian. In 2015, Indonesian Ambassador to Malaysia, Herman Prayitno said that food and beverages market originated from Indonesia in Malaysia has increased by 14,08%.

There was Malaysian company that saw this phenomenon as a business opportunity. X Sdn Bhd is a logistic company which its main business is distributing FMCG products, mostly from Indonesia to hundreds retailers located throughout Malaysia. Unfortunately, X Sdn Bhd has transportation problem. X Sdn Bhd does not apply any specific distribution route, so there is a possibility that the distribution route used is not the shortest route and company should pay more for fuel cost. This problem leads company to distribution delays, impacting the company's losses. Final loss felt by company is, X Sdn Bhd is forced to raise its price of products offered so the prices set are not a competitive price.

Saving matrix method is used to find the shortest distribution route so company is now able to reduce its fuel cost because the distribution distance will become shorter. In addition, these new distribution routes help company to predict distribution time because the routes are fixed. Therefore, the authors conducted a study in order to find the shortest routes. The purpose of this study beside finding the shortest routes, is also determine the productivity of delivery service and cost efficiency that will be earned by company after applying the saving matrix method.

2. METHOD

2.1. Theories

1. Operation Management

Krajewski, Ritzman, dan Malhotra (2010:24) defined Operation management as a systematic design, directions, and control of a process that changes input into products or services for consumers. While the operation itself is a group of sources that do all or some parts of processes. These processes can be combined into a supply chain which connects internal and external processes of company.

2. Supply Chain Management

According to Hiezer dan Reinder (2014:468), Supply chain management is a coordination between all supply chain activities, started with raw materials and ended with a satisfied customer. Thus, a supply chain is consisted of suppliers, factories, distributor, retailers and/or wholesalers who ship products and/or services to the end customer. The purpose of supply chain management is to coordinate the activities of the supply chain to maximize its competitive advantage and benefits to consumers.

3. Saving Matrix

Wongso (2012) in Putranto and Hendayani (2014) stated that saving matrix is a tool do determine distribution routes based on customers coordinate and transporter capacity.

4. Efficiency

According to Horngren (2008) in Hapsari, Saputra, dan Rismadi (2013), efficiency is the amount of input used to achieve a certain level of output. Thus, efficiency value reflects how many inputs required to produce a given outputs. In this research, the percentage describes the efficiency of fuel costs after implementing the new routes. The formula used is:

$$Efficiency = \frac{Fuel\ costs\ after\ implementing\ the\ new\ routes}{Fuel\ costs\ before\ implementing\ the\ new\ routes}$$

5. Productivity

According to the OECD Compedion of Productivity Indicators (2015), productivity measures how efficient inputs of a production such as labor and capital which are used to produce an output. This research measures productivity of the new routes compred with the old ones. The formula is

$$Productivity = \frac{New\ routes\ (km)}{Old\ routes\ (km)}$$

2.2. Related Literature

1. Giri (2012) wrote a journal titled "Routing and Scheduling Analysis Using Saving Matrix Method for Modern Trade Area Delivery in Desc Kimberli Indonesia". Eventhough there is no routes improvements, Giri made a delivery schedule and transporters testing. The result of this study is the discovery of the shortest route and transporter costs decreased by Rp. 1.2375 million.
2. Fahmi (2013) conducted a study titled "Capacitated Vehicle Routing Problem (CRVP) Completion Comparative Study Using Saving Matrix and Generalized Assignment Methods". What makes this study different is Fahmi added Generalized Assignment method. Both methods are compared and the result that is saving matrix method produced a shorter distance compared with with generalized assignment method.
3. Machmudah *et al* (2013) conducted a research entitled "Design of Information Systems Determination of Routes and Transport Costs in New Sehati SMEs". SMEs New Sehati is the Small and Medium Enterprises (SMEs) that produce home-cooked chips. SMEs did not have a distribution method so that the transportation costs incurred quite high. After saving matrix method was applied, SMEs was able to save its distribution costs by 30%. This study does not propose delivery schedule.
4. Ikfan and Masudin (2014) wrote a journal entitled "Saving Matrix for Determining Distribution Route". The research subject was shuttlecock manufacture. This research discusses the application of saving matrix method to solve XYZ company distribution problem. . Results from this study is the distribution cost is saved up to 10.94% in each period. This research also did not implement any improvement method.
5. Putranto & Hendayani (2014) published a journal entitled "Distribution Route Optimization by Utilizing Saving Matrix: Case Study In. Limas Raga Bandung Inti ". The result is routes

productivity generated by 85.11%. Unlike the others, Putranto and Hendayani calculated routes improvements.

This research is done based on the related literatures by Giri (2012), Fahmi (2013), Machmudah *et al* (2013), Ikfan (2014), and Putranto & Hendayani (2014).

2.3. Research Method

There are some steps to determine the routes:

1. Identify matrix distance

The purpose of this step is to calculate the distance between customers. The formula to identify matrix distance is:

$$j(1,2) = \sqrt{(x_1 - x_2)^2 + (y_1 - y_2)^2}$$

Where:

X1 is X coordinate for customer 1

X2 is X coordinate for customer 2

Y1 is Y coordinate for customer 1

Y2 is Y coordinate for customer 2

2. Identify saving matrix

First, it is assumed that every customer will be exclusively visited by one transporter. So, there will be distance reduction if some customers are visited by the same transporter at once. Saving matrix takes place in combining these customers. If customer 1 and customer 2 are visited seperatedly, the total distance will be the distance from warehouse to customer 1 and vice versa, summed with the distance from warehouse to customer 2 and vice versa. On the other hand, if these two customers are visited at once, the total distance will be the distance from warehouse to customer 1, customer 1 to customer 2, and customer 2 to warehouse.

3. Allocate customers into distribution routes

The calculation in this step is based on the calculation result on the previous step. Customers will be divided into some routes by considering the saving matrix distance and also the capacity of each transporter used. A route will be categorized as a feasible route when the number of total customers do not exceed the limit of transporters and the total demand can be carried by one transporter. This step is started by sorting the saving matrix value between two different customers from the biggest to the smallest. Then, those customer will be placed into some transporters which are able to carry all the demands. If the capacity of the transporter is full, then the next customer will be placed in a different transporter which also be the different route.

4. Sort customers on route into a correct order

There are two similar ways to create optimal customers orders, nearest insert and nearest neighbor.

a. Nearest neighbor

First thing to do in this step is identify the nearest customer from warehouse. Then, that customer becomes the first visited customer in the route. After that, identify the second customer which has the shortest distance to the first customer. That customer will be the second visited customer and so on.

b. Nearest insert

The ordering concept of this method is by sorting the distance of customers from the nearest to the farthest from warehouse.

5. Calculate improvement method to the selected routes

Eventhough the optimal distribution routes have been obtained, the distance still can be reduced using 2-opt and or-opt method.

a. 2-opt

This method moves two paths on the existing route, then reconnects the path with a different point. The analysis technique can be seen in the following figure

b. Or-opt

Or-Opt method is identical to 2-opt method. The difference is, the number of paths that can be removed and added are more than two. The basic concept of this method is to relocate several nearby customers.

2.4. Data Collection

1. Primary Data

The primary data is collected by doing an interview with X. Logistic Sdn Bhd director and operational manager. The first writer also did an observation while doing an internship at the company.

2. Secondary Data

The data is collected by reading, understanding, and studying the object from other media; literature, company's documents, and books. The secondary data gathered are company profile, vision, and mission from its website, distance among customers from Google Maps, and some information about research methods from books, thesis, papers, and other references.

2.5. Framework of Thinking

Naik and Glickfeld (2015) stated that distribution system efficiency reflects retailers ability to maintain, operate, and control the distribution system. Putranto and Hendayani (2014) declared that as an effort to increase sales, company needs to make a system or route that well managed to ease distribution process. Therefore, saving matrix method is used to obtain the optimal routes. After calculating the saving matrix method, there is two additional methods, 2-opt and or-opt to get the shortest routes as the output. These methods are proved by Baldacci, Battara, and Vigo (2008) to produce better service by providing shortest routes. While Indrawati (2014) stated that in the VRP, achievable goal is to find the shortest route distribution using a minimum number of vehicles.

This objective of this research is to create system efficiency. This efficiency can be obtained by determining the most optimum distribution routes. This research can be said successful in meeting system efficiency if only the routes created generate better calculation. Routes can be said as a better ones if only the fuel cost of the new routes is smaller. The first step of this study is formulizing the vehicle routing problem. Then, saving matrix method was chosen because this method suits the real condition of the company. After calculating the saving matrix, the calculated routes are improved using or-opt and 2-opt method on Vehicle Routing Problem (VRP) Solver ver 1.3. The result of these

improvements is used as a reference to compare the distribution cost before and after the saving matrix method is applied. The smallest will be used by company to reduce its distribution cost.

3. DISCUSSION

X Logistic Sdn Bhd main business activity is to distribute FMCG products to its customers which are separated among Malaysia. The transporters used is Proton trucks with 3000 cartons capacity. The distribution area is divided into four main regions; Central, Southern, Northern, and East Coast. There are some sub regions in every region. The main calculation is using saving matrix method. This method can be done only if the data required are complete, there are: total demand (in carton) of each sub region, the coordinate of each sub region that was obtained using Google Maps, and the distance between each sub region to X Logistic Sdn Bhd's warehouse which also obtained using Google Maps. Saving matrix method created delivery routes and the order of customers that will be visited. The results are divided based on the main distribution regions:

1. Central

Table 2 Calculation Result for Central Region

| Route | Customer | Total Distance (km) |
|--------------|---|---------------------|
| 1 | G-3-4-46-45-44-41-43-40-42-51-21-54-56-53-55-19-26-52-49-48-50-47-36-34-G | 286.23 |
| 2 | G-6-8-7-2-9-29-5-23-G | 122.29 |
| 3 | G-20-22-16-18-17-27-25-24-30-33-32-G | 149.04 |
| 4 | G-28-31-35-37-38-39-15-10-14-11-12-13-G | 119.68 |
| Total | | 677.24 |

For the Central region, before saving matrix method is implemented, the total distance is 625.63 kilometers. After combining or-opt and 2-opt method, the total distance became higher which is 677.24 kilometers with the productivity level of 108,24%. The maximum level of productivity is only 100%, so it can be concluded that the new route is less productive than the old one. So, the Central region will use only the saving matrix method without the combination of or-opt and 2-opt method.

Figure 1: Central Region Routes Visualization

The visualization is created by VRP Software ver 1.3. Each color represents a single route. First route which is warehouse-customer 3-customer 4-customer 46-customer 45-customer 44-customer 41-customer 43-customer 40-customer 42-customer 51-customer 21-customer 54-customer 56-customer 53-customer 55-customer 19-customer 26-customer 52-customer 49-customer 48-customer 50-customer

47-customer 36-customer 34-warehouse is indicated by dark blue line. Second route which is warehouse-customer 6-customer 8-customer 7-customer 2-customer 9-customer 29-customer 5-customer 23-warehouse is indicated by red line. Third route which is warehouse-customer 20-customer 22-customer 16-customer 18-customer 17-customer 27-customer 25-customer 24-customer 30-customer 33-customer 32-warehouse is indicated by green line. Last route which is warehouse-customer 28-customer 31-customer 35-customer 37-customer 38-customer 39-customer 15-customer 10-customer 14-customer 11-customer 12 –customer 13- warehouse is indicated by light blue line.

2. Southern

Table 3 Calculation Result for Southern Region

| Route | Customer | Total Distance (km) |
|--------------|-----------------------------------|---------------------|
| 1 | G-3-6-5-2-9-4-7-8-G | 159.87 |
| 2 | G-10-G | 83.65 |
| 3 | G-11-14-15-22-28-17-G | 452.82 |
| 4 | G-12-16-G | 231.82 |
| 5 | G-13-G | 139.23 |
| 6 | G-19-25-20-19-21-23-24-29-27-26-G | 388.77 |
| Total | | 1456.16 |

The second region is Southern. Before saving matrix method is implemented, the total distance is 3945.40 kilometers and the total routes is seven. After combining or-opt and 2-opt method, the total distance and routes were reducing to 1456.16 kilometers and six routes. Then, the productivity level of this region is calculated. The result is 37.09%.

Figure 2: Southern Region Routes Visualization

First route which is warehouse-customer 1-customer 3-customer 6-customer 5-customer 2 –customer 9-customer 4–customer 7-customer 8-warehouse is indicated by dark blue line. Second route which is warehouse-customer 10-warehouse is indicated by red line. Third route which is warehouse-customer 11-customer 14-customer 15-customer 22-customer 28-customer 17-warehouse is indicated by green line. Fourth route which is warehouse-customer 12-customer 16-warehouse is indicated by light blue line. Fifth route which is warehouse-customer 13-warehouse is indicated by purple line. Last route which is warehouse-customer 19-customer 25-customer 20-customer 19-customer 21-customer 23-customer 24-customer 29-customer 27-customer 26-warehouse is indicated by yellow line.

3. Northern

Table 3 Calculation Result for Northern Region

| Route | Customer | Total Distance (km) |
|--------------|--|---------------------|
| 1 | G-6-9-15-16-20-22-23-25-24-21-18-19-14-13-8-19-7-G | 649.63 |
| 2 | G-5-2-3-4-12-11-17-G | 519.02 |
| Total | | 1168.65 |

The third region is Northern. The or-opt and 2-opt method did not reduce the total routes but reduce only the total distance. Before saving matrix method is implemented, the total distance is 1880.91 kilometers. After combining or-opt and 2-opt method, the total distance is now 1168.65 kilometers with the productivity level of 62.13%.

Figure 3: Northern Region Routes Visualization

Dark blue line represents the first route which is warehouse-customer 6-customer 9-customer 15-customer 16-customer 20-customer 22-customer 22-customer 23-customer 25-customer 24-customer 21-customer 18-customer 19-customer 14-customer 13-customer 8-customer 19-customer 7-warehouse. While the red one represents the second route which is warehouse-customer 5-customer 2-customer 3-customer 4-customer 12-customer 11-customer 17-warehouse.

4. East Coast

Table 5 Calculation Result for East Coast Region

| Route | Customer | Total Distance (km) |
|--------------|-----------------------------------|---------------------|
| 1 | G-4-G | 256.13 |
| 2 | G-5-6-9-G | 363.88 |
| 3 | G-7-2-19-13-15-21-18-20-16-8-10-G | 686.94 |
| 4 | G-11-12-14-17-3-G | 1399.64 |
| Total | | 2706.59 |

The last region is East Coast. The or-opt and 2-opt method did not reduce the total routes but reduce only the total distance. Before saving matrix method is implemented, the total distance is 5175.91 kilometers. After combining or-opt and 2-opt method, the total distance became 2706.59 kilometers and the productivity level is 52.59%. On the other hand, there are some factors that may affect this productivity level such as warehouse stocks, traffic, and the employers itself.

Figure 4: East Coast Region Routes Visualization

The first route is represented by the dark blue line which is warehouse-customer 4-warehouse. The red line represents the second route which is warehouse-customer 5-customer 6-customer 9-warehouse. The green line represents the third route which is warehouse-customer 3-warehouse. The last route is indicated by the light blue line which is warehouse-customer 11-customer 12-customer 14-customer 17-customer 3-warehouse.

4. CONCLUSION

This research object is located in X Logistic Sdn Bhd, Subang Jaya, Selangor, Malaysia. The study was conducted for approximately four months, from September 2016 to December 2016. X Logistic Sdn Bhd has more than 300 customers, spread all over Malaysia. However, the company refused to give all the customers data. Therefore, the location of customers which belong to the same sub region seen as a single distribution point that represents that sub region. While the quantity of demanded products is accordance with the original conditions. Due to the limited data given by company, there are some assumptions applied in this study; paths used are two-way roads so the distance from origin (warehouse) to destination (customers) and vice versa are the same, all customer orders can be fulfilled by the company, customers demand is fixed and known in advance, the distance from customer A to B equals the distance from customer B to A, and the diesel price is stable at 2.05 Ringgit Malaysia (RM)/Liter.

From the calculation that had been done, it can be concluded that the distribution routes that should be taken by X Logistic Sdn Bhd is divided into four major regions. For the Central region, the routes that should be implemented is the route before improvements. There are four routes and the total distance is 625.63 kilometers. For the Southern region, the improved routes that should be implemented. There are six routes, the total mileage is 1456.56 kilometers. The best routes for Northern region are the result of improvements method, the total routes are two and a total distance is 1168.65 kilometers. The last region, East Coast also should implement the improved routes. The total distance is 2706.59 and the total routes are four. The other things that can be concluded is the productivity level. Productivity of Central region is 108,24%, Southern region is 37,09%, Northern region is 62, 13%, and East Coast region is 52.29%. While the distribution cost efficiency that successfully obtained is 30,37%, equals 4.070,63 RM.

There are also some suggestions for future studies, which are: future studies should compare and combine saving matrix method with other VRP method to create shortest routes and also. Future research should also help company to implement distribution routes periodically.

ABSTRACT

Out of home media as part of the creative industry is a business that has huge growth potential, even the out of home media penetration in Indonesia become the second highest after television. However, this growth leads to changes in the out of home media industry that become a phenomenon in the strength of industry competition and affect the business performance of the out of home media industry. This study examines the strategic management as an alternative model (I-FOCUS Model) of the solution in improving the business performance of the out of home media, which is based on four aspects: the implementation of Digital Innovation, an adaptation of the Forces Driving Competition, increasing the Core and Unique capabilities. The process of I-FOCUS Model in the business of Out of Home Media must think about the ethical side, because creativity in advertising content is shown in digital out of home media that is personal and fulfill the current ethics.

Key Words : *Business Ethics, Digital Innovation, Strategic Management*

I. Introduction

Currently, there is a major transformation in the world economic order. Business persons are required to have insight, imagination, and high creativity to generate a competitive advantage in generating an economic added value. To succeed in the intense competition and rapid changes in the global economy the competition is no longer limited to the efficient management of raw material, service standard, and development of technology. The ability to focus on the power of innovation and seize every opportunity to offer products and services produced in a creative, artistic, and always foremost with brilliant ideas will gain a major place in the present.

That phenomenon has been explained partly by some of the classic modern theory in the period of 1950 - 1960; Walt Whitman Rostow pioneered one of them in *The Stages of Economic Growth* (1960). Modernization theory by Rostow shows that every stage of development can be attributed to the change from an agrarian society with traditional culture into the society of rational, industrial, and focuses on the service economy. In the last stage of development, the consumption is no longer limited to the necessities of life but has turned to a higher need. There were changes in the orientation of production and economic surplus that is not solely used for investments but also used for social welfare and sustainable development.

Economic development that had been providing increased prosperity for mankind portrayed by Pink (2005) went through several stages. Development of the world economy begins with the growth of the agricultural sector, followed by the industrial era, the dominance of information technology, up to the current conceptual era. Figure 1.1 shows how from time to time there has been a shift in the global economic order of the agricultural era to the conceptual era which in parallel followed by increased Affluence (prosperity), technology and globalization (ATG) in that era. This indicates that there is a positive correlation between the developments of the world economy with the increased of ATG as described in the classic modern theory.

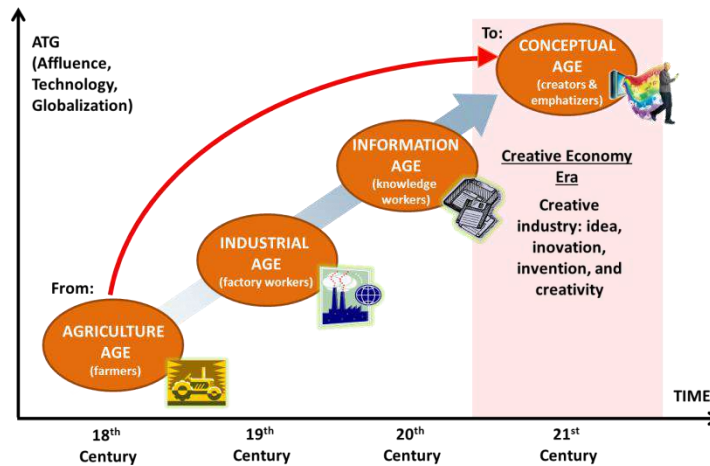

Figure 1.1 World Economy Experiencing Shift and the 21st Century is a “Conceptual Age”
 Source: Daniel H. Pink, *A Whole New Mind*, New York, Riverhead Books, 2005

The agricultural era in the 18th century has the lowest level of ATG; there were a lot of local and regional only products with the use of simple technology so that the level of prosperity in the era was limited. The 19th century was the century of industry; in 1876 a steam engine was introduced that resulted in the revolution of the system of manufacture goods to become bulk and faster. This era showed a higher level of ATG because of advances in technology and the ability to market goods become more widely thanks to the application of steam engines on ships.

The 20th century is the information era. At this time, a microprocessor began to be created for a computer device that plays a significant role in encouraging the exchange of data and information through the Internet, so that space and time to access the information became unlimited. The opening of opportunities in accessing information data encourages faster economic growth, so capitalization is growing and has caused the rising of ATG in all regions of the world.

The 21st century or present time is a conceptual era. The new idea to make people more prosperous becomes the primary focus in the development of the world economy. Innovations, inventions, and creativity are the main assets to enhance the excellence and provide an opportunity to lead the global economy. ATG value in this era is higher than ever because technology and globalization are the main requirements so that a country's prosperity becomes unlimited. When the era of labor or skilled worker intensive then it takes about 10,000 or 100,000 people for 100 industries, hence the knowledge-creative intensive of a person will contribute economically start from himself up to other elements of the industry. The industry with conceptual and creativity basis is known as the creative industry.

II. Theoretical Framework

Creative Industry, Advertising Industry and Out of Home Media

The creative industry has been around since the era of the agricultural, industrial, and information. But, at that time the level of human needs and the level of social interaction have not reached its present state, so in the era before the creative economy, the industry was not the center of attention or focus in the industrial development which is believed to contribute positively to the economy of a nation. This was revealed by Peter Drucker (2000) that "The success and failure of each country will be decided by the cultural industries in the 21st century. The final battleground is the cultural industry".

The unlimited innovation opportunities in the creative industry had also been formalized by the Indonesian government through Presidential Decree No. 6 of 2009 on the Development of Creative Economy and Creative Economy Development Plan 2009-2015, as well as the Development Plan of 14 sub-sectors of creative industry 2009-2015 by the Department of Tourism and the Creative Economy. Indonesian Ministry of Trade has also developed Guidelines for Development of Creative Economy Indonesia towards 2025

Creative industry can provide added value in several aspects of life, not only from the point of view of economics but can also provide a positive impact on other aspects. For example improving the image and

identity of the nation, foster innovation, and creativity of the nation, promotes the environment-friendly industry because using renewable resources, as well as having a positive impact in improving social relationships between people. Due to these reasons, it is very necessary for the creative industry to be developed in Indonesia.

Creative industry today which is growing rapidly is the digital technology-based creative industry. The future of the creative industry cannot be separated from the ability of the digital creative industry players in the use of Information and Communication Technology (ICT). Technology plays a significant role in the digital creative industry to stimulate the development of new product and service, distribution channel, business model, and even the possibility of expansion into the new sector of the economy. The example of ICT great role for the digital creative industry is in distributing content and software application by establishing a market for the digital industry players.

ICT has also boosted economic activity in a sustainable manner and provide an unlimited innovation space. With a variety of systems and gadget support, the users of information technology will be connected to the network and together using a variety of applications at a cost that is relatively cheap.

According to the book of Indonesia Creative Economy Development 2009-2015, the study of Creative Industry of Indonesia (2008), the development of creative industry in Indonesia is directed at several subsectors which are the creativity-based industries. First, Advertising subsector that includes creative activities related to advertising service (one-way communication using a specific medium). Second, the architecture subsector that includes creative activities associated with services related to the building. Third, subsector Art Goods that include creative activities related to the trade of original, unique and rare goods and has a high aesthetic value. Fourth, subsector handicraft that includes creative activities related to the creation, production and distribution of products created which produced by the skilled craftsmen. Fifth, Creative Design subsector that includes creative activities associated with the creation of graphic design, interior design, product design, industrial design, corporate identity consulting and marketing research service as well as the production of packaging and packing service. Sixth, Fashion that includes creative activities associated with the design creation of clothing, footwear, and other fashion accessories, production of fashion apparel, consulting of fashion product line, as well as the distribution of fashion product. Seventh, Video, Film and Photography that include creative activities associated with the creation of video production, film, and photography, as well as the distribution of video recording and film. Eighth, Interactive Game that includes creative activities related to the creation, production, and distribution of computer and video games for entertainment, agility, and education. Ninth, Music which includes creative activities associated with the creation or composition, performance, reproduction, and distribution of sound recording. Tenth, Performance that includes creative activities related to the business of content development, production of the performance, design and manufacture of performance clothing, stage design, and lighting system. Eleventh, Publishing, and Printing which includes creative activities related to content writing and publishing of book, journal, newspaper, magazine, tabloid, and digital content as well as the activities of news agency and news seeker. Twelfth, Computer and Software Services that include creative activities related to the development of information technologies including computer service, data processing, database development, software development, systems integration, analysis and design of systems, the architectural design of software, design of infrastructure of software and hardware, as well as portal design including maintenance. Thirteenth, Television, and Radio that include creative activities related to the business creation, production and packaging of the television program, broadcasting and transmission of television and radio content, including the activity of station relay of radio broadcast and television. And Fourteenth research and development, this subsector includes creative activities related to innovative businesses that offer science and technology invention and application of science and knowledge.

According to the study of Indonesia's Creative Industry (2008), to develop the creative economy, it is believed that the collaboration between the various actors involved in the creative industry, namely Intellectuals, Business and the Government will be mandatory and are the fundamental prerequisites. The interaction between the three is called triple helix which has a role. First, the scholar associated with the new creation (novelty) which has the bargaining power to the market and the establishment of creative people. Second, the Businessman where the connectedness in economic exchange relations, as well as the transformation of creativity, becomes the economic value. And third, the government in which the mechanism of incentive delivery program, the conducive business climate, educative directives as well as to the public and private sector to support the development of creative industries.

Those three Parties should synergize, so that what is required of the business can be supported or encouraged by the government, businessmen, and scholars. The synergy between these parties would increase economic activity based on the creative industry and provide unlimited development space and direct application in the real world or the working world. The result expected is the creative industry is always growing and sustainable.

industri kreatif dapat selalu tumbuh dan berkesinambungan.

Advertising Industry

Advertising in Indonesia is a sub-sector of the Creative Industry that has the potential growth of 12 percent (Antara News, June 29th, 2010). In fact, according to the survey by Nielsen Advertising Information Services which released by Nielsen Indonesia on May 17th, 2016, in the first quarter of 2016, the total value of advertising expenditure on the television media was increased to Rp 24.2 trillion or 24 percent from the first quarter of 2015.

The advertising expenditure on the television media is the biggest share in the total of advertising expenditure in Indonesia, but when viewed precisely the share growth of Internet media and out of home media experienced significant growth. Adrian Syarkawie, President Director of PT Mahaka Media Tbk, said that the growth of advertising expenditure on the internet media is expected to reach 43 percent while the out of home media, particularly the digital out of home media (DOOH) grew by 34 percent with a share of 20 percent compared to traditional out of home media.

Facing the phenomenon of the growth of advertising expenditure on out of home media, Nielsen as a global performance management company announced a strategic partnership on July 6th, 2015 with Fractal as the local leader in the research of out of home media in releasing measurement syndication services for the out of home media in Indonesia. This partnership will provide a better picture of the effectiveness of out of home advertising, to help advertisers to get the best return-on-investment from their advertising strategies through proper competitive analysis, selecting the right location, selecting the right target and the right investment.

The growth potential of out of home media industry in Indonesia is still high, even the penetration of out of home media in Indonesia is estimated at around 52 percent, the second highest after television. With more than two-thirds of consumers to go outside either on weekdays or weekends, twenty-five percent of consumers spend more time outdoors, and averagely dedicated to a trip for one to two hours, so the out of home media is a significant opportunity for advertisers.

A change of advertising paradigm is changing, advertising which is a paid impersonal message with packaging and a certain condition is delivered to the public by mass media in one way, it turns out being transformed into a two-way communication and is personal. With the development of technology, Digital Out of Home Media can be a means of interaction between the product or brand with consumers more personally. With the growth of technology and application, then Outdoor Digital Media can become the communication interaction medium between product or *brand* with the consumers more personally. Of course this will affect the *Media Habit* and *Business Ethic* in the advertising sphere. *Business Ethic* became so important because of the communication message that is personal will experience obstacles in communication ethical quandaries because the media's medium in this is the Out of home media in the public.

Out of Home Media

According to Grant, A. E. & Meadows, J.H. (2010), Out of home media is any form that could deliver a message from the message owner to recipient where the placement location are outdoors or outside their home. Business format of out of home media consists of Digital Out of home includes plasma screens, LCD monitors, LED monitors and projection screen; Analog Out of home includes billboards, banners, banners, banners and billboards, Mall Solution, Building Wrap and Ambient Branding in all places (offices, shopping centers, transport and so on)

Digital out of home media uses electronic media such as plasma screens, LCD monitors, LED monitors, and projection screen connected with a network system that is processed digitally. Digital out of home media is different from other media, because the out of home media is a combination of several technologies, which are the combination of the Internet network and the broadcast system (delivery system messages that enable the dissemination of messages to multiple points at the same time) in processing the data into information.

With the existing technology, it makes digital out of home media can present the message to the

recipients in the same time by using streaming system so it can present a message directly from a television program or taken from an internet server. Thus, the messages are real-time and dynamic.

The location of digital out of home media can be everywhere, on the streets, in pedestrian bridges, in the building (both inside and outside the building), at the train station, at the bus station, at the bus stop, at the airport, in front of the restaurant or cafe, in buses, trains and planes, in hotels, in malls, supermarkets, and even in public restrooms. Because of its position in certain locations, it can be said that the use of out of home media is directional, which acts as the primary media for its position closer to the intended recipient.

Business Ethics and Advertising Ethics

According to Sonny Keraf (1993:66), business ethics is a special ethics that started to grow in the United States of America. As the first applied philosophy branch. Business ethics highlighted moral principles of humans that has a profession in business and management. Because of that, business ethics can be seen as a business to formulate and apply ethic principles in the economic relation field between humans. Where the business ethics principles are as follows: First, the autonomy principle, is the attitude and skills of a human to take decisions and act based on consciousness about what is good to do. Second, the truth principle where there are 3 business activities that can be seen clearly that business cannot last long and succeed if it's not based on trust. (1) Truth in fulfilling agreement and contract requirements. (2) Truth in offering goods and services with the equal amount of price and quality. (3) Truth in internal work relations in a company. Third, the equal principle require that every person is treated the same as the rules, equal and fit the objective and rational criteria and can be accounted for. Fourth, mutual benefit principle is required so that business is run in such a way, so its beneficial for all parties. The meaning of Advertising is: "Marketing communication messages or public communication about a product that is delivered through a media, paid by an initiator and is aimed to a certain or the whole community." Therefore, there has to be 4 components in an advertisement, which is: (1) message, (2) product/service from an initiator/producer, (3) economic transaction, and (4) target audience. The message in an advertisement would be effective if it has a persuasive element, it has to persuade the audience, at least for them to pay attention to the advertisement and urge the audience to become the consumers of the product/service that is being advertised. News doesn't have a persuasive element because news in general has to be neutral.

Advertising ethics is regulated in the book of Etika Pariwara Indonesia (DPI, 2014) which mentioned 3 main advertising principles, which is: first, truth, valid, and reliable. Second, to have a healthy competition. Third, protect and appreciate the target audience and not discriminate religion, culture, country or a certain group, and not violating the law. An ethic advertisement is an advertisement that displays the truth and authenticity.

III. Discussion

This study examines the strategic management as an alternative model (I-FOCUS Model) of the solution in improving the business performance of the out of home media, which is based on four aspects : the implementation of Digital Innovation, an adaptation of the Forces Driving Competition, increasing the Core and Unique capabilities.

Parallel with the development of Digital innovation, then the effect for out of home media is the increase in flexibility with the current digital screen. In one of the articles (www.thedrum.com: Thinking outside the box: innovations in Out of Home advertising, 2012) explained that the additional flexibility that comes with digital screens has enabled brands to run campaigns with levels of connection and relevance previously unthinkable. with Digital Innovation, we look at the host of interactive elements being built into outdoor formats, such as billboards enabled with augmented reality, NFC and QR codes, as well as developments such as multi-sensory advertising and its use of scent, touch, sound and taste to add new dimensions to the out of home brand experience.

Digital Innovation gives a significant change in the out of home media (www.thedrum.com, 2012), here we can see : Contextual Ads: tailored to a consumer's situation - someone waiting on a delayed bus might be shown an ad for a local taxi firm, while an outbreak of rain would prompt ads for umbrellas and direct you to the closest retailer. Gladvertising: uses facial recognition software and cameras to match facial movements to expressions including happiness, anger, sadness, fear, surprise and disgust, allowing ads to respond to consumer moods and tailor ads. Multi-sensory: stimulating consumer senses via holographic video, sound, mood lighting and smells to multiply impact of ads. Personal preference profiles: supercharged social network profiles 50

times more in-depth than Facebook and including details such as body shape, allergies, anniversaries and favorite food. Phones that talk to adverts: ads identify a person via their PPP (personal preference profile) and customize accordingly. Gesture recognition: similar to technology used in Microsoft's Xbox Kinect, interactive, gesture-based games will set consumers physical challenges and reward them via coupons sent to their phones.

The connection between out of home media with business ethics became interesting to study when the advertisement has a personal characteristic. Business ethics constitute a way to do business activities that covers the whole aspect connected to an individual, a company and also the community. Business Ethics in a company can shape the value, norm and the behavior of the staff and leaders in building a fair and healthy relationship with the customer/partner, shareholder, community (Bertens, 2009). The company believes that a good business principle that is ethical, is a business with a good and sustainable performance that is run with obeying the rules and laws that apply. Three basic approach in formulating a business ethics behavior (Embse dan Wagley, 1988), is: first *Utilitarian Approach*: that every action needs to be based on its consequences. Because of that, in taking actions someone should follow the way that delivers the best benefit for the people, with a way that doesn't endanger them and also with the lowest cost possible. Second, *Individual Rights Approach*: every person in taking actions and behavior should have respected natural rights. However, those actions should be avoided if it's thought to cause a disruption with other's rights. Third *Justice Approach*: the decision makers have the same position and act equally in providing services to customers individually or even corporately.

Advertising ethics is regulated in the book of Etika Pariwara Indonesia (DPI, 2014) which mentioned 3 main advertising principles, which is: first, truth, valid, and reliable. Second, to have a healthy competition. Third, protect and appreciate the target audience and not discriminate religion, culture, country or a certain group, and not violating the law. An ethic advertisement is an advertisement that displays the truth and authenticity. The advertising contents in out of home media in principle should persuade the target audience in any creative way, the content has to stay truthful, valid and responsible. We are often given creativity content that is persuading consumers that precisely pass moral boundaries, because the objective is how this advertisement is seen and entry the minds of the consumers.

Interestingly when out of home media enters more personally then the content control function from the advertisement is hard to monitor. The control function is a way or a rule for advertisement content in out of home media where it fits the moral standards and appropriateness. If so, then there should be a rule that fits standard moral and appropriateness of an advertisement for the future of advertisement content in the whole digital out of home media.

IV. Conclusion

The research entitled "I-FOCUS Model: Today and Future OOH Media Industry – Ethical Considerations" where I-FOCUS Model is an alternative model as a solution to increasing out of home media industry business performance convergent to four aspects that implements Digital *Innovation*, an adaptation of the *Forces Driving Competition*, increasing the *Core and Unique Capabilities*. The process of I-FOCUS Model in the business of Out of Home Media must think about the ethical side. Because of developing technologies and application, then Outdoor Digital Media is able to become a communication interaction medium between product and *brand* with the consumer that is more personal. Of course this change will effect *Media Habit* and *Business Ethic* that is in the advertisement sphere. *Business ethic* becomes very important because a communication message that is personal will experience a problem in communication ethics restriction because the media's medium in this case is Out of home media in a public area.

Out of home media advertisement, in principle should persuade the target audience with any available creativity, the content should stay truthful, valid and responsible. An obstacle that we have to face is creativity from a content that is persuading the consumer that pass moral boundaries and appropriateness because the objective is how the advertisement is going to be seen and enter the consumers mind, therefore, when out of home media has entered more personally then the function control content of the advertisement is hard to monitor. The control function is a way or a rule for advertisement content in out of home media where it fits the moral standards and appropriateness. If so, then there should be a rule that fits standard moral and appropriateness of an advertisement for the future on advertisement content in the whole digital out of home media. As a part of the creative industry, ethics must be an important consideration.

ABSTRACT

Firm innovativeness is most frequently measured as the degree of newness of innovation or company rate adoption of innovation. We developed two indicators of innovativeness derived from the number of innovations (e.g. product, market) and the newness of innovations. This study attempts to increase understanding of innovativeness of ICT-based firms in Indonesia as the number of ICT-based small firms has grown vastly in the last ten years in this country. Many empirical studies have been done on the relationship between institutional conditions, network conditions and firm innovativeness in various industries. However, it is still unclear how those factors do affect firm innovativeness in ICT-based firms in Indonesia. To address this gap, this research focuses on the impact of institutional conditions, network strength and network openness on innovativeness of ICT-based firms in Indonesia. The study uses a sample of 100 small, medium and large manufacturing and service companies located in big cities in Indonesia.

Our preliminary findings indicate that the level of innovativeness is most often low to moderate. We unveil that there is a relatively strong correlation between number of innovations and institutional conditions, network strength and network openness. Our results also indicate that there is no correlation between newness of innovation and institutional conditions, network strength and network openness, but there is correlation with firm size.

Key Words: Innovativeness, ICT, Institutional Conditions, Networks

1. INTRODUCTION

The 250-million-population of Indonesia, supported by economic growth and political stability after the economic crisis in 1997, triggered the growth of the middle class up to 57% of population in 2010 (ADB, 2014). Parallel with the booming of e-commerce and social media, the concomitant markets have attracted a number of entrepreneurs to establish start-ups (i.e., a newly independent company) that engage in Information and Communication Technology (ICT). Following the trend in the world's ICT sector, the number of ICT-based small firms have grown vastly in the last 10 years in Indonesia. Many empirical studies have been done on the relationship between institutional, network conditions and firm innovativeness in various industries (Bell, 2005, Eisingerich et al., 2010, Indarti & Postma, 2013). However, it is still unclear how those factors affect firm innovativeness in ICT-based firms of Indonesia.

A study among Bandung technology firms by Fromhold-Eisebith and Eisebith (2002) indicates that there are some impediments concerning the institutional aspects hampering the competitiveness of Bandung technology firms. Bandung is one of the important ICT clusters in Indonesia because of the agglomeration of many ICT-based firms in this region (Dhewanto et al., 2015). The change of political regime in Indonesia in 1998 has brought a bureaucracy shift from 1999 to now (Nugroho, 2014, Tambunan, 2007), though little is known about how current institutional conditions influence firm innovativeness. Furthermore, concerning

developing countries, Tambunan (2007) and Van Geenhuizen et al. (2010) assert that the network of institutional ties influence firm innovativeness. With regard to networks, two network characteristics are thought to be especially important for innovative firms as mentioned by Eisingerich et al. (2010): (1) strong network ties, that are assumed to promote the knowledge transfer to and assimilation within network members; and (2) openness to new networks, that are assumed to provide network members with new knowledge access and ways of operating. The findings from Eisingerich et al. (2010) and Indarti and Postma (2013) indicate that the level of openness to new network members combined with different network strength may explain why certain networks decline while others adapt to changes in the business environment. Innovation is a way to adapt to external change and keep the rate of change inside the firm in pace (Kastelle, 2015). In addition, according to Baum et al. (2000), in highly uncertain environments (such as ICT-based firms), openness of networks may enable key drivers like novel ideas, technologies and ways of doing business to enter the firm while affecting sustainable business performance that in turn will define potentials for firm innovativeness.

The studies by Fromhold-Eisebith and Eisebith (2002), Indarti and Postma (2013), Van Geenhuizen et al. (2010) only cover specific regions in Indonesia, such as Bandung and Yogyakarta, and do not cover other regions in Indonesia that probably have different local institutional conditions and other region specificities that influence on networking situations. Moreover, those studies do not vary in firm characteristics (size, age, subsector and type of R&D). For instance, (Fromhold-Eisebith & Eisebith, 2002) focus on big companies in manufacturing industry only, while (Indarti & Postma, 2013) focus merely on small and medium-sized firms. Therefore, there is a gap in understanding the influence of institutional conditions, network strength and network openness on firm innovativeness that encompasses various firm characteristics in all regions in Indonesia, especially in ICT-based firms.

Given the above knowledge gaps, this study wants to answer two main research questions: (1) What is the level of firm innovativeness? (2) To what extent and how do institutional conditions, network strength and network openness influence firm innovativeness in ICT-based firms in Indonesia?

In this paper, we use measures of innovation based on previous studies. For product innovation, we follow the definition from OECD (2005) in measuring the number of new products or services launched to the market. Process innovation indicates the changes of software machine, or other new elements (such as: application server) used to finish or deliver the products/services (Union, 2006). Marketing innovation measures the changes in the product design, product promotion and the price (Chen, 2006). Further, the term institutional conditions refer to the ease of doing business indicated by simpler regulations for businesses (for instance taxation) and stronger protection of property rights (Business, 2015). For network parameters, we follow the definition from Eisingerich et al. (2010). Network strength demonstrates the degree of relationship among network members indicated by the extent of mutual trust, the meeting intensity and the idea/resources exchange frequency. Meanwhile, network openness shows firm willingness to cooperate with other parties, accept other party idea/ values and sharing knowledge/resources to improve firm innovativeness. Note that following (Crossan & Apaydin, 2010), this study will not measure organizational aspects due to its complexity and multidimensionality.

2. DATA COLLECTION

We conducted a web-based survey in November 2016 - January 2017. We sent the survey to around 1,000 ICT-based firms. The response rate was 10%, meaning that we collected 100 responses, of which 93 provide answers to all questions. The respondents are selected from small, medium and large manufacturing and service companies located in big cities in Indonesia: Jabodetabek (Jakarta, Bogor, Depok, Tangerang, Bekasi), Surabaya, Semarang, Makassar, Malang, Yogyakarta, Denpasar, Balikpapan, Batam, and Bandung. The target respondents are the middle manager or upper level of large firms (LFs) and the top manager of Small and Medium Enterprises (SMEs) who have a good understanding about their company so that the response bias could be minimized. We asked 22 questions including firm location, age, size, type of activity, type of R&D, percentage of Foreign Direct Investment (FDI), position in the supply chain, number and newness of innovations, institutional conditions, network strength and network openness. Due to the low response rate, there are no respondents representing manufacturers.

We use two ‘dependent’ variables to determine the level of innovativeness which are the number of innovations and the newness of innovations undertaken by the firms. We count the number of innovations undertaken by the firms (product, process and marketing innovations) and categorize it into four groups based on the number of innovations (0, 1-4, 5-10, >10). All types of innovation are measured in the last two years. The newness of innovation is grouped into five classes based on geographical coverage: no newness, new to the firm, new to specific region in Indonesia, new to Indonesia, and new to the world.

We employ seven ‘independent’ variables namely firm age, firm size, the position in the supply chain, FDI percentage, institutional conditions, network strength and network openness. The first four variables are the ‘demographic’ variables of the firms. The level of measurement for all independent variables is ratio level, except the variable position in the supply chain (ordinal). The descriptive statistics (N, range, standard deviation) for these variables are shown in Appendix 1. For ‘non-demographic’ variables: institutional conditions, network strength and network openness, we measure using a 1-10 scale. Next, for institutional conditions we asked the perception of the managers on the influence of institutional conditions such as taxation and other regulations to their firm willingness to innovate and the responses are from 1 (negatively influence) until 10 (positively influence). Network strength measures the strength of firm relation with other organizations (government, SMEs, LFs and research organizations) from 1 (very weak) to 10 (very strong). Meanwhile, network openness is the manager’s perception on the openness of the firm to accept new ideas/values or cooperation for innovation and it ranges from 1 (very low) to 10 (very high).

All responses are processed by SPSS and to check the normality of the data we perform a normality test based on histogram, Kolmogorov-Smirnov test and Shapiro-Wilk test (see Appendix 2 and 3) for the variable ‘number of innovations’. The ‘newness of innovation’ is an ordinal variable and it is obviously not normal (Hair et al., 2006). The histogram shows the data on number of innovation is normally distributed, however, the kurtosis and the skewness test (less than 1 for kurtosis and ~3 for skewness). The Kolmogorov-Smirnov test and Shapiro-Wilk test resulted in *p*-value less than 0.005 showing that the data is not normally distributed. To tackle this issue, we employ a nonparametric-statistical method that does not require the normality of the data (Hair et al., 2006). In addition, in data processing we removed seven outliers from our sample due to extreme variance.

3. Results: descriptive analysis

The majority of respondents are located in Jakarta (54%), Yogyakarta (13%), Bandung (11%) and the rest are in Semarang and other big cities in Indonesia (Appendix 1). These shares may represent the spatial distribution in Indonesia in which most of ICT-based firms (and also firms from other sectors) are located in Jakarta because of infrastructure availability (Bappenas, 2010).

Further, we categorized the firm age into three groups: less than 5 years, 5-10 years and more 10 years old. This categorization is based on Coad et al. (2016) finding, that innovation activities by young firms appear significantly riskier than those by more mature firms. The authors also reveal that new firms typically need time to accommodate to the situation in which they operate and improve performance from their innovation activities. Based on our survey, 35.4% of the firms have already established 5-10 years ago, 40.9% more than 10 years, and others (23.6%) less than 5 years. The average age of our firms is 10.3 years.

For firm size, we follow Statistics of Indonesia (BPS/Badan Pusat Statistik). In the definition, BPS (2017) does not include part time jobs, so we count only the fulltime employees. Based on firm size, our respondents represent all categories, with large firms (LFs) as the largest (38%), followed by small and medium-sized firms (SMEs) at 29% (small) and 33% (medium). On average, the firm has 358 employees, but this amount is skewed due to very large firms.

With regard to the type of activity, 86% of the firms are service companies and this may represent the situation in Indonesia. Based on a report of Oxford Business Group (2016) a growing number of companies are now offering ICT services, including local firms boosted by enormous investment in local start-ups (more than

\$2,5 million in first few months of 2015). Further, according to Ministry of Industry of Indonesia, by April 2015 Indonesia only has eight manufacturers of telecommunication products (Kemenperin, 2016).

Next, concerning the variables institutional conditions, network strength and network openness, the mean scores are 5.08, 5.16 and 7.38, respectively. Meanwhile, the standard deviation for institutional conditions, network strength and network openness are 2.53, 2.17 and 2.76. The range for the three variables is between 1 and maximum value 10.

With regard to type of innovations, a majority has been involved in all three innovations, product, process and (60.2%) and the remaining (25.9%) in one or two of them (Table 1).

Table 1 Type of innovations and number of firms involved

| Type of Innovation | Number of firms |
|-----------------------------|-----------------|
| Product, Process, Marketing | 56 (60.2%) |
| Product & Process | 10 (10.7%) |
| Product & Marketing | 4 (4.3%) |
| Process & Marketing | 1 (1.1%) |
| Product only | 7 (7.5%) |
| Process only | 2 (2.2%) |
| Marketing only | 0 |
| No innovations | 13 (13.9%) |
| Total | 93(100%) |

We also found that some respondents (13.9%) produced no innovations in the past two years. The tendency of the firms to produce various types of innovation simultaneously (at 76%) is in line with the finding from Van Geenhuizen et al. (2010) that different types of innovation may occur simultaneously since they are related with each other. With regard to overall number of innovations, 3.2% of the firms have produced more than 10 innovations in the last two years. However, 69.9% produced 1-4 innovations, 5.4% produced 5-10 innovations and 13.9% have produced no innovation at all in those years.

To identify trends between variables, we made cross tabulation of position in the supply chain, type of R&D and type of investment with our dependent variables (number and newness of innovations). First, we compare the position in the supply chain to number of innovations and newness of innovations of our respondents. The position in the value chain is divided into three groups which are: Manufacturer/service provider, supplier tier 1, and supplier tier 2&3 (Table 2). The position in the value chain according to Van Geenhuizen et al. (2010) may determine firm innovativeness because, derived from their research in a furniture cluster in Indonesia, small firms in developing countries usually have the lowest position in value chains (supplier tier 3 or lower). In our survey, 64.5% of respondents are manufacturer/service provider and the rest takes a lower position in the supply chain. Our cross tabulation is shown in Table 2.

Table 2 Position in the supply chain vs number and newness of innovations

| Number of Innovations | Position in the supply chain | | | Total |
|-----------------------|------------------------------|-----------------|-------------------------------|-------|
| | Supplier Tier 2&3 | Supplier Tier 1 | Manufacturer/Service provider | |
| 5-10 and >10 | 1(7.7%) | 4(20%) | 7(11.7%) | 12 |
| 1-4 | 10(76.9%) | 15(75%) | 45(75%) | 68 |
| 0 | 2(15.4%) | 3(15%) | 8(13.3%) | 13 |

| Total | 13(100%) | 20(100%) | 60(100%) | 93 |
|---|------------------------------|-----------------|-------------------------------|-------|
| Newness of Innovations | Position in the supply chain | | | |
| | Supplier Tier 2&3 | Supplier Tier 1 | Manufacturer/Service provider | Total |
| New to the world | - | 1(5%) | 4(4.3%) | 5 |
| New to Indonesia | 4(33.3%) | 8(40%) | 19(20.4%) | 31 |
| New to the specific region of Indonesia | 1(8.3%) | 5(25%) | 17(18.3%) | 23 |
| New to the Firm | 6(50%) | 3(15%) | 12(12.9%) | 21 |
| No newness | 1(8.3%) | 3(15%) | 9(9.7%) | 13 |
| Total | 12(100%) | 20(100%) | 61(100%) | 93 |

The largest number of innovations for all positions in the supply chain is 1-4 innovations, and this tends to be equally distributed over the three supply chain positions (75-77%). However, the newness of innovation tends to be dependent on the position in the supply chain. Supplier tier 2&3 produce relatively more innovations on the level of 'new to the firm' compared to higher positions in the supply chain (50 versus about 13%).

Additionally, we also cross the type of Research and Development (R&D) to the number and newness of innovation in order to see if there is any trend/pattern between type of R&D and the two dependent variables (Table 3). There are four types of R&D in our research based on organization structure (unit/no unit or collaboration, and no R&D). We can see from the table that a majority of the respondents perform R&D activities in different organizational ways (92.5%), only a small portion is not involved in R&D. However, even though some firms have collaboration with other institutions, in the last two years there is no innovation on the level of 'new to the world'. The largest category R&D organisation is 'in-house R&D but no unit' (47.3%) and this category tends to produce a relatively large part of innovations merely 'new to the firm'. The second largest category is the firms with R&D unit (36.6%) and this category tends to produce innovations merely 'new to Indonesia' more often than other R&D categories. Interestingly, some firms that involve in R&D activities, produced no innovation in the last 2 years. On the contrary, the small portion of firms that is not involved in R&D also produces innovations that are new to specific region and new to Indonesia. These firms are probably the representatives of foreign companies that operate in Indonesia.

Table 3 Type of R&D and number and newness of Innovation

| Number of Innovation | Type of R&D | | | | |
|---|-------------------|---------------------------------------|------------------|---|-------|
| | No R&D activities | We do R&D activities but have no unit | We have R&D unit | We collaborate R&D activities with other institutions | Total |
| 5-10 and more than 10 | 1(14.3%) | 4(9.1%) | 6(17.6%) | 1(12.5%) | 12 |
| 1-4 | 6(85.7%) | 33(75%) | 24(70.6%) | 5(62.5%) | 68 |
| 0 | - | 7(15.9%) | 4(11.8%) | 2(25%) | 13 |
| Total | 7(100%) | 44(100%) | 34(100%) | 8(100%) | 93 |
| Newness of Innovation | Type of R&D | | | | |
| | No R&D activities | We do R&D activities but have no unit | We have R&D unit | We collaborate R&D activities with other institutions | Total |
| New to the world | 1 (14.3%) | 3(6.8%) | 1(2.9%) | - | 5 |
| New to Indonesia | 1(14.3%) | 13(29.5%) | 16(47.1%) | 1(12.5%) | 31 |
| New to the specific region of Indonesia | 3(42.9%) | 10(22.7%) | 7(20.6%) | 3(37.5%) | 23 |
| New to the Firm | 2(28.6%) | 11(25.0%) | 6(17.6%) | 2(25%) | 21 |
| No newness | - | 7(15.9%) | 4(11.8%) | 2(25%) | 13 |
| Total | 7(100%) | 44(100%) | 34(100%) | 8(100%) | 93 |

Furthermore, we make a cross tabulation of the number and newness of innovation to type of investment of the firms (Table 4) and our findings reveal that only Foreign Direct Investment (FDI) firms tend to produce

innovations that are new to the world. However, they also produce more innovations that are new to the firm than the non-FDI firms. In addition, innovations new to Indonesia tend to be produced both by non-FDI and FDI firms, while non-FDI firms are more likely to produce innovations that are new to a specific region of Indonesia. Our findings also show that there is no stark difference in number of innovations between FDI and non FDI firms, however, the percentage of non FDI firm that produce no innovation is higher than the percentage of FDI firm that have no innovation. Consequently, non FDI firms that produce no newness is also higher than the percentage of FDI firm that have no newness. (Table 4). This may suggest that a relatively weak pattern between FDI and the indicators of innovativeness.

Table 4 Type of Investment and number and newness of Innovation

| Number of innovations | Investment | | |
|---|------------|------------|-------|
| | FDI | Non FDI | Total |
| >10 | 1 (3.2%) | 1(1.6%) | 2 |
| 5-10 | 3 (9.7%) | 7 (11.3%) | 10 |
| 1-4 | 24 (77.4%) | 45 (72.6%) | 68 |
| 0 | 3(9.7%) | 10 (16.1%) | 13 |
| Total | 31 (100%) | 62 (100%) | 93 |
| Newness of Innovation | Investment | | |
| | FDI | Non FDI | Total |
| New to the world | 5 (20%) | - | 5 |
| New to Indonesia | 8 (32%) | 23 (33.8%) | 31 |
| New to the specific region of Indonesia | 3 (12%) | 20 (29.4%) | 23 |
| New to the Firm | 9 (36%) | 12 (17.6%) | 21 |
| No newness | 3(12%) | 10(14.7) | 13 |
| Total | 31 (100%) | 62 (100%) | 93 |

4. KEY FINDINGS

To answer our research questions: What is the level of firm innovativeness? To what extent and how do institutional conditions, network strength and network openness influence firm innovativeness in ICT-based firms in Indonesia, we first analyse the level of innovativeness in ICT-based firms in Indonesia in more detail. After that, we perform a test to investigate the correlation between the two innovation indicators and the 'independent' variables.

4.1 Firm Innovativeness

We develop a matrix with number of innovations on the X-axis and newness of innovation on the Y-axis to reveal any relations between the two indicators of firm innovativeness (Figure 1). The matrix is divided into twenty boxes and each box is categorized based on the X & Y axis from 'low' to 'high' category. The number in the boxes shows the number of firm(s) involved in each category.

Figure 1. Categorization of firm innovativeness

Based on our survey, the largest number of firms is in the category 1-4 innovations produced in the last two years, with most of them in the newness categories New to the firm to New to Indonesia. Although there is no standard available for comparison, we may determine that the level of innovativeness of ICT-based firms in Indonesia is most often *low to moderate*. Some firms have a position in the lower level (no innovation and only new to the firm), but we can also see that a small portion of firms is already in the moderate and high segments (have 5-10 innovations and are new to the region or new to Indonesia).

4.2 Correlation of Innovativeness

To answer the second part of our research question: how do institutional conditions, network strength and network openness influence firm innovativeness in ICT-based firms in Indonesia, we next perform a basic statistical analysis as single correlation of the number and newness of innovations with institutional conditions, network strength and network openness. We employ number of innovations and newness of innovations as the dependent variables and seven independent variables as described in Table 5. We analyse the correlation between the dependent variable Y with the independent variables X_n : institutional conditions, network strength and network openness, but we also perform correlation test between the independent variables. We perform a Pearson correlation test. Pearson correlation coefficient is a measure of the strength of a linear association between two variables and is denoted by r . Accordingly, we define the hypothesis for the correlations:

H_0 : No correlation between X_n and Y

H_1 : There is a correlation between X_n and Y

If the significance level 0.05; if $\alpha < 0.05$ then H_0 is not rejected, otherwise H_0 is rejected.

The correlation of between Y and X_n , also between X_n s is shown in Table 5 below.

Table 5 Table of Correlations

| | Number of Innovation | Newness | Firm Age | Firm Size | Pos. Supply chain | Institutional Conditions | % FDI | Network Strength | Network Openness |
|--------------------------|----------------------|---------|----------|-----------|-------------------|--------------------------|-------|------------------|------------------|
| Number of Innovations | 1 | | | | | | | | |
| Newness | .438** | 1 | | | | | | | |
| Firm Age | .060 | .198 | 1 | | | | | | |
| Firm Size | .041 | .211* | .604** | 1 | | | | | |
| Position in Supply chain | -.050 | .129 | .132 | .194 | 1 | | | | |
| Institutional Conditions | .386** | .117 | .026 | -.090 | -.162 | 1 | | | |
| % FDI | .088 | -.088 | .063 | .219* | .014 | .168 | 1 | | |
| Network Strength | .269** | .135 | .187 | .106 | .032 | .356** | .075 | 1 | |
| Network Openness | .268** | .144 | -.052 | -.080 | .007 | .340** | .081 | .443** | 1 |

*Correlation is significant at the 0.05 level (2-tailed)

**Correlation is significant at the 0.01 level (2-tailed)

From table 5 we can see that there is a significant positive correlation between number of innovations and institutional conditions, number of innovations and network strength, and also between number of innovation and network openness. This correlation tends to be relatively strong ($\alpha < 0.01$). However, the correlation between newness of innovation and institutional conditions, network strength and network openness is not significant ($\alpha > 0.05$). These findings suggest that number of innovations in ICT-based firms in Indonesia are positively influenced by institutional conditions, network strength and network openness. The results also suggest that none of the three factors has an influence on the level of newness of innovation. Our findings also demonstrate a positive and significant correlation between our indicators of innovativeness (number of innovation and newness of innovation). Furthermore, while newness of innovation does not correlate significantly with institutional conditions and network characteristics, there is a trend of significant positive correlation between newness and firm size.

5. CONCLUSION

Our results are preliminary because we only performed basic statistical analysis due to time constraints and the limited size of the sample. From our findings we may conclude that the level of innovativeness of ICT-based firms in Indonesia is most often low to moderate. The number of innovations undertaken by the firms is low (1-4 innovations at a share of 73%) in the last two years and about 61% of the firms is not involved or only involved in innovation new to the firm or new to the region. However, there are also firms producing at higher levels of innovation, the share of firms involved in innovation new to Indonesia or new to the works is 39%. In addition, the results of the correlation analysis indicate that there is a relatively strong correlation between number of innovations and institutional conditions, network strength and network openness. However, none of the three variables (institutional conditions, network strength and network openness) shows a significant correlation with newness of innovation. It seems that such external circumstances are less important for the level of newness, which tends to be confirmed by the positive correlation with firm size as an internal factor.

This study has some limitation such as the number of respondents and the robustness of indicators. Further research should be conducted by adding more respondents from outside Jakarta, this also holds for pure ICT manufacturers that could not be provided in this study. Further research also should be conducted to develop more robust indicator for innovativeness, e.g., the situation in which there is R&D but no innovations, and a more thorough study by using regression analyses to further investigate the relationships between the two dependent variables and the independent variables, and eventually add influence from local/regional market demand.

The Influence of Resource Orchestration and Dynamic Capability on Competitive Strategy and Their Implications Toward Competitive Advantage of SOEs Construction Service

Siddik Siregar

The Influence of Resource Orchestration and Dynamic Capability on Competitive Strategy and Their Implications Toward Competitive Advantage of SOEs Construction Service

Siddik Siregar

Doctor of Research Management, BINUS University, siregarsiddik@yahoo.com

ABSTRACT

In a company that has been well-established and gone international, to grow, the company must adapt to its business environment and would certainly undergo strong external pressure, so that a conductor is required to align the activities of various divisions and subsidiaries. The purpose of this study is to discover the influence of resource orchestration and dynamic capability on competitive strategy and their implications toward competitive advantage. In addition, to determine the effect of dynamic capability towards the strategy and competitive advantage in SOEs Construction Service.

This study is conducted by a conceptual approach using grounded theory. Questionnaire and interview are distributed to 60 top leaders and project managers of SOEs Construction Service to explore their strategic perspective in the construction industry. The sampling technique by using proportional random sampling technique. The data is in the form of SEM and is analysed by Path Analysis. Novelty of this study result is the discovery of negative effect and insignificant of the resource orchestration variable against competitive strategy. On the other hand, the resource orchestration variable has positive effect and significant to the competitive advantage. Meanwhile, dynamic capability variable has positive effect on competitive strategy and competitive advantage. The study also shows that resource orchestration is not required to improve competitive strategy, but dynamic ability is necessary to adapt with the dynamic environment changes to enhance the competitive advantage.

Key Words: *External Environment Pressure, Resource Orchestration, Dynamic Capability, Business Strategy, and Competitive Advantage.*

1. INTRODUCTION

Several State-Owned Companies have invested abroad or Go International, among others in ASEAN region, South Asia, Australia, Middle East, and Africa (Table 1). The development undertaken such as government buildings, airports, hotels, bridges, plazas, toll roads, housing, factories, and others. The construction export value acquired by national companies is listed in the table below:

Table 1 Overseas Projects Acquisition of SOEs Construction Service

| No. | Country | Contractor | Project Name | Period | Project Value |
|-----|-----------------|--------------------------|---|-------------|--------------------|
| 1 | Uni Emirat Arab | PT Waskita Karya | Burj View Dubai; Trade License Dubai Government; Abu Dhabi Stock Exchange | 2007 - 2008 | IDR 1.039 Trillion |
| | | PT Wijaya Karya | Dubai | 2009 - 2011 | IDR 100 Billion |
| 2 | Qatar | PT Adhi Karya | Doha City Center Hotel | 2011 - 2013 | IDR 750 Billion |
| | | PT Pembangunan Perumahan | New Doha International Airport | 2005 - 2013 | IDR 1 Trillion |
| 3 | Oman | PT Adhi Karya | Tilal Complex Project (Grand Muscat Mall, 3 tower office, 3 tower apartment, 1 tower service apartment); Shaden Oman (1 level basement parking, 1 level GF, 6 level residential & service apartment, penthouse, swimmingpool) | 2007 - 2012 | Rp 973 Billion |
| 4 | India | PT Adhi Karya | Construction of Roadbed incl. Major & Minor Bridges Facilities with Construction of New BG Line Haridaspur Paradeep | 2007 - 2012 | US\$ 61.4 Million |
| 5 | Algeria | PT Wijaya Karya | Construction of housing in the amount of 3,100 units di Annaba | 2011 | IDR 923 Billion |
| | | PT Wijaya Karya | Continued Housing | 2013 | IDR 1.2 Trillion |
| 6 | Myanmar | PT Wijaya Karya | Precast Concrete Factory; Pyay Tower & Resident Yangoon | 2013 | US\$ 125 Million |
| 7 | South Africa | PT Wijaya Karya | Precast Concrete Factor | 2013 | US\$ 30 Million |
| 8 | Timor Leste | PT Pembangunan Perumahan | Ministry of Finance RDTL Building; Karimbala – Batugede Sector Road; Tibar – Gleno Road; Bridge in Oecusse (re-tender); Liquica – Mota Ain Road | 2012 - 2013 | US\$ 92 Million |

Source: Bulletin of the Directorate General of International Trade Cooperation, Ministry of Trade, 2015

From Table 1 above shows that SOEs Construction Service have been able and significant to obtain overseas projects. However, when viewed from the viewpoint of a country's competitiveness compared with other countries, then in overall, competitiveness ranking of Indonesia has a movement that tends to decrease as listed in the following table:

Table 2 Ranking of Infrastructure Development Competitiveness of Indonesia

| Year | Ranking |
|-------------|---------|
| 2010 – 2011 | 90 |
| 2011 – 2012 | 82 |
| 2012 – 2013 | 92 |
| 2013 – 2014 | 82 |
| 2014 – 2015 | 72 |

Sumber: World Economic Forum (WEF), 2015

To achieve the capability of bigger acquisition of overseas projects and to improve the competitiveness of infrastructure development, the ability to manage the available resources is necessary. Resources in the form of assets, divisions, subsidiaries, as well as the ability to apply strategies that appropriate to the situation and pressure in the environment where the company operates, should be driven by an expert to lead and run the resource wheel, thus forming a valuable synergies and able to build competitive advantage (Sirmon DG, et al (2011). If analogized with an orchestra, then such resource orchestration should be driven by a conductor who is

able to arrange in order to produce harmony and conformity with the strategy and simultaneously build competitive advantage (Sirmon DG, et al, (2011).

Behaviour of consumers is also tend to change, consumers need a product that change to adapt with their needs, it will force manufacturers to be able to adapt with the needs of these consumers. As a business, SOEs Construction Service will encounter external pressure that will affect the business strategy to achieve sustainable business (Smith and Grimm, 1987; Snow and Hrebiniak, 1980). This adaptive capability is defined as the ability to integrate, build, and reconfigure the internal and external capabilities to cope with the rapid environmental change.

The research question is, does resource orchestration of SOEs Construction Service affect the competitive strategy and able to build competitive advantage? Does Dynamic Capability affect the strategy and able to build competitive advantage?

2. METHOD

2.1. THEORITICAL FRAMEWORK

2.1.1. Overview of SOEs Construction Services

State Owned Enterprise (SOE) is a business entity that the entire or most of its capital owned by the state through direct investments coming from state assets set aside. The objectives and purposes of establishment of SOEs Construction Service pursuant to Article 2 of SOE Law shall be to: (1) make contributions to national economic development in general and state revenues in particular. (2) make a profit. (3) establish public benefit through supply of high quality and affordable goods and/or services for the lives of many people. (4) become the pioneer of business activities that cannot be performed by private sector and cooperatives. (5) participate actively to provide guidance and assistance to the weak economy entrepreneurs, cooperatives, and community. Noting such objectives and purposes, then SOE should utilize its resources to produce profusely for the contribution to national economic development, by doing competitive strategy that appropriate and profitable for shareholders.

SOEs Construction Service consist of several state companies that are: 1. PT Wijaya Karya, 2. PT Waskita Karya, 3. PT Adhi Karya, 4. PT Hutama Karya, 5. PT Pembangunan Perumahan, 6. PT Brantas Abhipraya, 7. PT Nindya Karya.

Table 3 Total Turnover Generated in the Last 4 Years

| No. | Name of SOEs Construction Service | TURNOVER (IDR Trillion) | | | | Remark |
|-----|-----------------------------------|-------------------------|-------|-------|-------|--------|
| | | 2012 | 2013 | 2014 | 2015 | |
| 1 | PT. Adhi Karya | 19.47 | 19.58 | 20.24 | 27.07 | |
| 2 | PT. Hutama Karya | NA | NA | NA | NA | |
| 3 | PT. Pembangunan Perumahan | 19.47 | 19.58 | 20.24 | 27.07 | |
| 4 | PT. Waskita Karya | 12.26 | 8.78 | 21.49 | 32.08 | |
| 5 | PT. Wijaya Karya | 17.13 | 17.73 | 17.63 | 25.22 | |

Source: Annual Report of ADHI, PP, Waskita, WIKA, 2012-2015

2.1.2. Dynamic Capability

Dynamic capability is defined as the ability of organization to integrate, build, and reconfigure internal and external pressures to overcome the change of environment (Teece, Pisano & Shuen, 1997). Dynamic capability will reflect the organization's ability to achieve new forms and innovative to build competitive advantage which demonstrated by the ability to create change to adapt with the pressure of external environment (Leonard-Barton, 1992).

Dynamic capability can be simulated and modeled. Quoted from the journal of Gary, M. S. et al. (2008) System Dynamics and Strategy, states that to make decisions toward overcome the decisions relating to external pressure can be simulated in the model that is now become a subsection of management science called System Dynamic.

From such various quotes, the dimension and indicator of Dynamic Capability can be summarized as described in Table 4 below.

Table 4 Variable, Dimension, and Indicator of Dynamic Capability

| Variable | Dimension | Indicator |
|--------------------|--------------------------|--|
| Dynamic Capability | a. Strategic capability | <ul style="list-style-type: none"> • Capability to have competitive flexibility • Capability to aware new opportunities and threats • Capability to have entrepreneurship characteristic • Capability to integrate knowledge |
| | b. Innovation capability | <ul style="list-style-type: none"> • Capability to evaluate the strengths and weaknesses • Capability to innovate at the right time and direction • Capability to develop promotion programs by using new |
| | c. Management capability | <ul style="list-style-type: none"> • Capability to understand the customers' needs • Capability to communicate and coordinate divisions • Capability to motivate the staffs • Capability to run business effectively |
| | d. Adaptive capability | <ul style="list-style-type: none"> • Capability to react properly to market change • Capability to withstand changes in the market • Capability to withstand e-commerce trend |

2.1.3. Resource Orchestration

Resource orchestration is a perfect solution to overcome the coordination problems among the functions in business processes/activities of a company. By applying the resource orchestration method, all of the available management functions will be integrated each other, conformable, mutual need/understanding, fair in sharing duties and responsibilities, balance and harmonious like an orchestra. In genuine, resource orchestration will improve the style of corporate culture to be proactive. Once implemented, this system will work/run by itself and will continue to be refined by the sharpness and sensitivity of the holders of top-level management (Wikipedia, Sirmon DG, et al, (2011).

Standard form of coordination line among management functions in the resource orchestration method is very different with coordination structure of management functions that applied/enforced in almost all companies at this time. Even for the advanced level, not only management functions within the company that made into orchestra, but will also involve related resources and the variety of external functions related to company business activities (Sirmon DG, Hit MA, RD Ireland, Gilbert (2011).

Resource management framework explicitly discuss the process-oriented managerial actions involved in achieving competitive advantage and creating value. Sirmon DG et al (2011) conclude that the framework indicates that resource management including resource portfolio management (i.e., acquiring, accumulating, and divesting), resource bundling to build excellence (i.e., stabilizing, enriching, and pioneering), and improve capability in the market (i.e., mobilizing, coordinating, and utilizing) to create more value than the competitors.

According to Simon DG et al, in his journal Resource Orchestration to Create Competitive Advantage, a leader or team leader is necessary to act as a conductor who will serve to direct overall resources and these rules in order to be conformable, efficient, and valuable.

Table 5 Variable, Dimension, and Indicator of Resource Orchestration

| Variable | Dimension | Indicator |
|------------------------|-----------------------|--------------|
| Resource Orchestration | Portofolio Management | Acquiring |
| | | Accumulating |
| | | Divesting |
| | Resource Bundling | Stabilizing |
| | | Enriching |
| | | Pioneering |
| | Build Marketing | Mobilizing |
| | | Coordination |
| | | Utilizing |

2.1.4. COMPETITIVE ADVANTAGE

Thomson, Strickland, & Gamble (2010) explain that to achieve competitive advantage in the best cost, a company must have the abilities as follows: (1) incorporation of low product cost on the same product features with competitors; (2) provide quality products at a lower price than competitors; (3) develop products that provide the best performance at a lower price than competitors; (4) provide lower price on providing the same customer service with competitors.

Barney (2010: 10) says that a company has competitive advantage when such company is able to create economic value more than its competitors. Porter (2004: 3) conclude that competitive advantage evolve from the value created by a company for its customers that exceeds the cost of company to create them.

Thus, it can be concluded that a resource is said to have competitive advantage if: 1. Able to provide better economic value than competitors, 2. Able to provide something rare in the present and future. 3. Able to provide lower price with the same quality. 4. Become a trusted company

Table 6 Dimension of Competitive Advantage Variable

| Thomson, Strickland and Gamble (2010) | Barney (2010) | Porter (2004) | Author Proposal (2016) |
|---|---|---|---|
| 1. At the same product quality with a lower price | 1. Able to provide better economic value than competitors | 1. The company is able to create superior value than competitors | 1. Able to provide better economic value than competitors |
| 2. Development of best performance product at a lower price | | 2. The company is able to offer lower prices than competitors with quality products / services that are useful and valuable | 2. Something that is rare in the present and future |
| 3. Provide better service at a lower price | | | 3. Able to provide lower price with the same quality |
| | | | 4. Become a trusted company |

2.1.5. COMPETITIVE STRATEGY

In general, definition of strategy is a way to achieve long-term goals. The methods taken may include geographic expansion, diversification, acquisition, product development, market penetration, employee rationalization, divestment, liquidation, even merger (David. P 15. 2014). Competitive strategy is an attempt to find a position in the industry (Porter, 1987), a process for good defense and resistance (Walker, 2001).

Wheelen and Hunger (2012: 183) state that competitive strategy focuses on the development of competitive position of business units engaged in goods and services. Pearce and Robinson (2011: 215) argue that competitive strategy is an effort to create sustainable competitive advantage through product uniqueness and cost leadership. Ireland, Hoskisson, and Hitt (2009: 90) reveal that competitive strategy is the integration and coordination in designing commitment and action to win the competition in a specific market. Furthermore, Hubbard and Beamish (2011: 20) state that competitive strategy is the method of an organization to position its business in order to be more competitive compared to other similar industries.

Table 7 Dimension of Competitive Strategy

| Porter (1987) | Ireland and Hitt (2011) | Pearce and Robinson (2011) | Hubbard and Beamish (2011) | Author's Proposal |
|-----------------|-------------------------|----------------------------|----------------------------|---------------------------|
| Overall Cost | | | | |
| Leadership | | Low Cost Strategies | | Cost Leadership |
| | Overall Cost | | | |
| Differentiation | Leadership | Differentiation Strategies | Cost Leadership | Differentiatiaon Strategy |
| Focus Cost | | | Differentia-tion | |
| | Differentia-tion | Speed Based Strategy | | |
| Leadership | | | | Time Speed Based Strategy |

2.2. CONCEPTUAL FRAMEWORK MODELS

Quoted from the Journal of Sirmon DG, Hit MA, RD Ireland, Gilbert (2011), Resource orchestration to Create Competitive Advantage, Journal of Gary, M. S. et al. (2008). System Dynamics and Strategy, and Journal of DJ Teece, G. Pisano, Shuen A. Dynamic capabilities and strategic management. Strategic Management Journal, mentioned that there is a relationship and influence of Dynamic Capability and Resource Orchestration toward Competitive Strategy and Competitive Advantage as shown in conceptual framework in Figure 1 below.

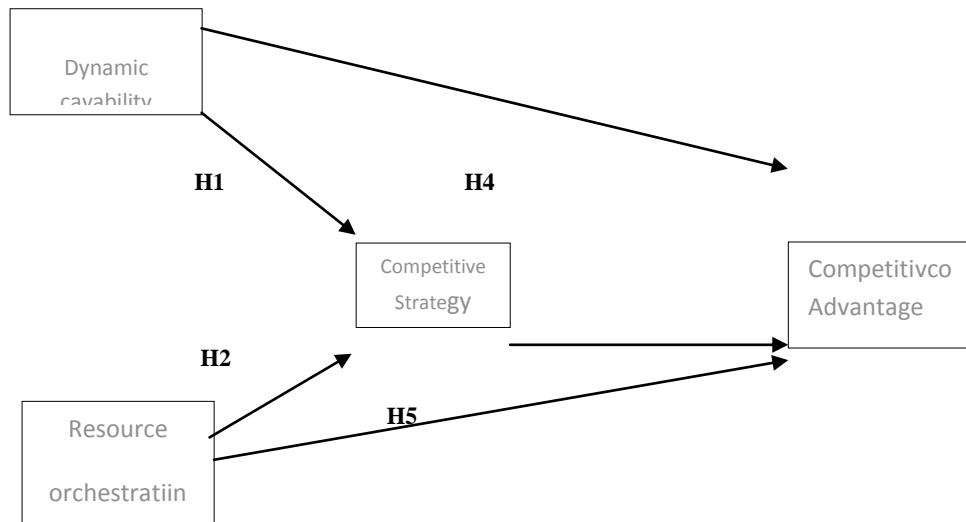

Figure 1: Conceptual Framework Model of SOEs Construction Service. Relationship among Dynamic Capability, Resource Orchestration, Competitive Strategy, and Competitive Advantage

Source: Sirmon, D.G., Hit, M.A., Ireland R.D., & Gilbert. (2011). Resource Orchestration to Create Competitive Advantage and Gary, M. S. et al. (2008). System Dynamics and Strategy. Processed by author

2.3. HYPOTHESIS

From Figure 3 Conceptual Framework, hypotheses obtained are as follows:

Hypothesis 1 Dynamic Capability has an effect on Competitive Strategy

Hypothesis 2 Resource Orchestration has an effect on Competitive Strategy

Hypothesis 3 Competitive Strategy has an effect on Competitive Advantage

Hypothesis 4 Dynamic Capability has an effect on Competitive Advantage

Hypothesis 5 Resource Orchestration has an effect on Competitive Advantage

2.4. RESEARCH METHODS

This study is a combination between literature review and descriptive research study, i.e. the method to resolve the problem by tracing the writing sources that have been made previously and conducting interview to respondents with questionnaire.

The questionnaire that will be used to collect research data must previously be examined for its validity and reliability. Instrument validity examination aims to find out the extent of precision and accuracy of the

measuring instrument in performing its functions. Meanwhile, reliability examination is related to the accuracy of the results. (Joseph E. Hair, William Ronald L, 1980, Multivariate Data Analysis, Printice Hall Publication).

Research data is analyzed by using path analysis technique. This path analysis technique will be used to examine the amount of contribution shown by the path coefficient for each path diagram of causal influence against X1, X2, X3, and Y variables and the impacts, correlation and regression analysis which are the basis for the calculation of path coefficients by using SPSS version 16 software.

In this study, descriptive research is conducted by survey method. Respondents of this study are the perpetrators of SOEs Construction Service who are selected based on their experiences and positions in the holding company. The number of respondents is 60 people, which consists of general manager and project manager of SOEs Construction Service.

The steps of Path Analysis are as follows:

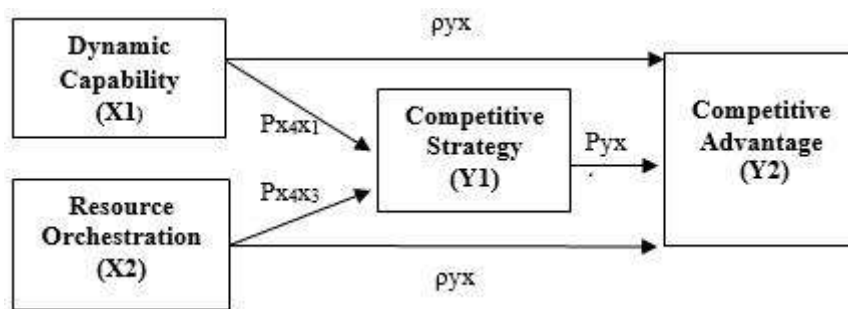

Figure 2 Relationship of X₁, X₂ Structures Toward Y₁ and Y₂

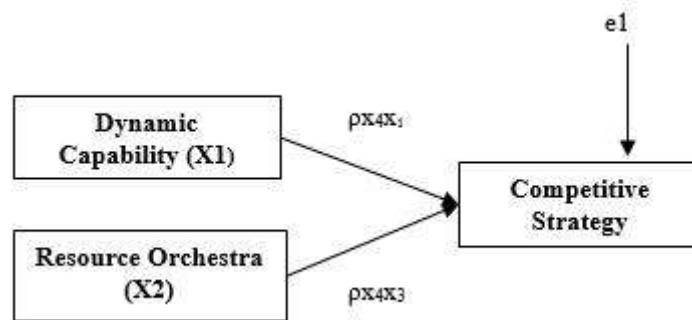

Figure 3 Relationship of X₁, X₂ Structures Toward Y₁

Figure 4 Relationship of X1, X2, and Y1 Structures Toward Y2

3. DISCUSSION

From the questionnaire data processing by using SPSS software, the path analysis result can be obtained as follows:

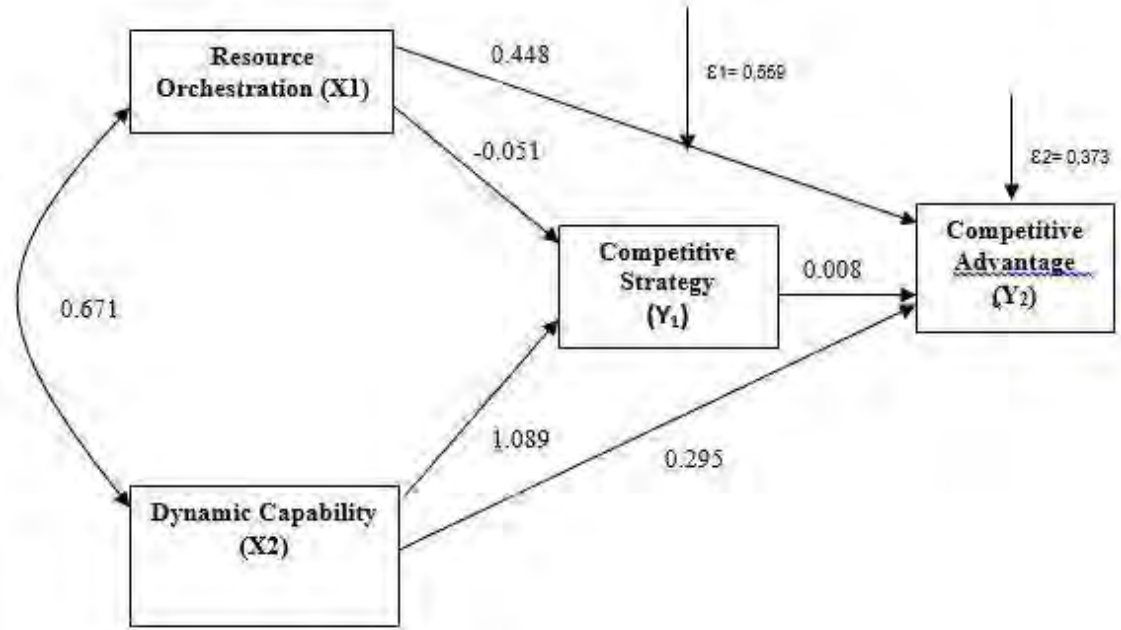

Figure 5 Empiric Causal Relationship of X1, X2, and Y1 Variables Toward Y2

The answer of this study problems are summarized in Table 8 as follows:

Table 8 Path coefficient, direct effect, indirect effect, total effect, and mutual effect of Resource Orchestration (X1), Dynamic Capability (X2), Competitive Strategy (Y1) Towards Competitive Advantage of SOEs Construction Service (Y2)

| Variable | Regression Coefficient | Effect | | | Mutual effect (R^2_{yx}) |
|----------|------------------------|--------|---------------------|--------|------------------------------|
| | | Direct | Indirect through X4 | Total | |
| X1 | 0,419 | 0.448 | 0,0004 | 0,4484 | - |

| | | | | | |
|----------------------|-------|-------|-------|-------|-------|
| X2 | 0,260 | 0.295 | 0.009 | 0.304 | - |
| Y1 | 0.008 | 0.008 | - | - | - |
| ϵ_1 | 0,559 | 31,25 | - | - | - |
| ϵ_2 | 0,373 | 13,91 | - | - | - |
| X_1, X_2 dan Y_1 | - | - | - | - | 0,861 |

Independent Variable Y_2

Source: Data Processing Result by Using SPSS

4. CONCLUSION

Resource Orchestration has negative effect and is not significant towards Competitive Strategy, it can be shown with sig value at 0.488 and effect value at -0.051. Effect value of Resource Orchestration has negative effect and is not significant towards Competitive Strategy. This is inconsistent with the study carried out by Sirmon DG, Hit MA, Ireland RD, Gilbert (2011) *Resource Orchestration to Create Competitive Advantage*, which states that the resource orchestration has positive effect towards competitive strategy. Researcher assumes that it happens due to the SOPs, organizational culture, and systems that have already been formed in the well-established SOEs Construction Service and run independently in accordance with the long-established regulations.

Dynamic Capability has positive effect and is significant towards Competitive Strategy, it can be shown with sig value at 0.000 and effect value at 1,089. Effect value of Dynamic Capability has positive effect and is significant towards Competitive Strategy.

Resources Orchestration has positive effect and is significant towards Competitive Advantage of SOEs Construction Service, it can be shown with sig value at 0.000 and effect value at 0.448. Effect value of Resource Orchestration has positive effect and is significant towards Competitive Advantage of SOEs Construction Service.

Dynamic Capability has positive effect and is significant towards Competitive Advantage of SOEs Construction Service, it can be shown with sig value at 0.011 and effect value at 0.295. Effect value of Dynamic Capability has positive effect and is significant towards Competitive Advantage of SOEs Construction Service.

Competitive Strategy has positive effect and is not significant towards Competitive Advantage of SOEs Construction Service, it can be shown with sig value at 0.034 and effect value at 0.008. Effect value of Competitive Strategy has positive effect and is not significant towards Competitive Advantage of SOEs Construction Service.

ABSTRACT

In implementing its duties and functions, an auditor required to work professionally based on its competence and independence to improve audit quality. Muna's inspectorate is under control of regional leader as the head of government. In recruiting auditor, local government occasionally ignore the quality, competence, technical education, educational background relevance, and adequate experience. The purpose of the research is to analyze audit quality in Muna's inspectorate. Descriptive analysis with quantitative approach is used as the method in this research.

Integrity dimension is in the adequate category, objectivity dimension is in the very adequate category, competence dimension is in the very adequate category, and independence dimension is in the adequate category. Based on the average value of supporting dimensions of audit quality, it can be obtained that 79% is an average value of audit quality. Thus, it can be concluded that the audit quality in Muna's inspectorate is in adequate category.

Key Words: *Audit Quality*

I. INTRODUCTION

Indonesia government in Joko Widodo's era is trying to realize a good governance (pemerintahan yang baik). However, the current situation shows the opposite. Making a good governance is still very far from expectations. Political interest, Corruption, Collusion, and Nepotism (KKN), unfair trial, working beyond duty, and the lack of integrity and transparency are some of the issues that make a good governance still can not be realized.

Democratic government implementation to achieve a good governance creates an open access of public information becomes important in order to make the public can monitor government implementation. The achievement of good governance implementation is a government that can run the trust of the people through government implementation efficiently, effectively, and economically. Thus, the mandate of government can be accounted to the people.

Regional Inspectorate is an internal working unit that inspect and supervise against the local government. Regional Inspectorate has a task to conduct a general supervision of local government and other duties assigned by the regional leader. Thus, in its duty, regional inspectorate acts as Government Internal Supervisory Apparatus (APIP) which is directly responsible to Governor / Regent / Mayor.

Generally, the role and functions of Provincial, District, and Municipal Inspectorates are regulated in Article 4 of Home Affairs Minister Regulation No.64 2008. In the article, it is stated that in implementing supervisory duty of government affairs, Provincial, District, and Municipal Inspectorates has a function as

planning surveillance program , formulating policy and controlling facility, and inspecting, investigating, testing, and supervisory duty assessment.

In implementing its duties and functions, an auditor required to work professionally based on its competence and independence to improve audit quality. Regulation of the Minister of Administrative Reform (Permenpan) No. Per/05/M.Pan/03/2008 mentions that the measurement of financial statement audit quality, which conducted by Regional Inspectorate as an internal auditor of regional government, must use the State Financial Inspection Standards (SPKN).

In implementing those duties and functions, APIP commonly experience a problem because of the sense of family, solidarity, emphasized humane consideration, as well as by increasing attitude or behavior of the auditor's ability in conducting an examination, so that the conducted supervision can run effectively and efficiently.

Muna's regional inspectorate is under control of regional leader as the head of government. In recruiting auditor, local government occasionally ignore the quality, competence, technical education, educational background relevance, and adequate experience. The impact of the government policies is problems at the regional inspectorate institution in implementing its duties as APIP which is independent, strong, and reliable. In addition, APIP's independence has a dilemma in revealing an finding. In one side, an auditor will uphold its independence as a professional, but on the other hand, it should be submissive and obedient to the regional leader as the head of government.

The obstacle of Muna's inspectorate in implementing its duties and functions is also due to the encountered workload (*beban kerja*) which is the number of regional work units (SKPD) that must be dealt with the limited time available to perform an audit. 84 people works as SKPD and 16 people works as inspectorate auditor with a ratio of 0.19 in Muna. The low ratio of inspectorate auditor as compared with SKPD has implications for the low audit quality which the workload of each auditor is very high.

Based on background description above, then the problem in the research is how the audit quality in Muna's inspectorate. The research aims to analyze the audit quality in Muna's Inspectorate.

II. THEORITICAL REVIEW

1. Audit

Audit is a problem identification, analysis, and evaluation which are conducted independently, objectively, and professionally based on auditing standards, to assess the truth, credibility, effectiveness, efficiency, and reliability of implementation information of government agencies duties and functions (Mahmudi. 2011:310).

Public sector audit conducted by an auditor, who a civil servant (PNS) having a functional position as an auditor and / or other parties who are given a full duties, powers, responsibilities, and rights by an authorized authority, in government agencies and on behalf of the APIP.

The types of audit consists of two, namely:

1. Judging from the audit extensive examination.
 - a. General Audit (*Pemeriksaan Umum*)
A general examination of the financial statements performed by an independent public accounting firm with the aim to be able to give opinion on the fairness of the financial statements as a whole.
 - b. Special Audit (*Pemeriksaan Khusus*)
An examination conducted if there is known fraud indications committed by management, or if the examination is outside of the group of financial, operational, compliance examinations.
2. Judging from the kind of examination
 - a. Operational Audit (*Managemen Audit*)

An examination of the operations of a company, including accounting policies and operational policies that have been determined by management, to determine whether these activities have been implemented effectively, efficiently and economically.

b. **Compliance Audit (*Pemeriksaan Ketaatan*)**

An examination of compliance level of company's operation executors in implementing any procedures and policies that have been regulated.

c. **Internal Audit (*Pemeriksaan Intern*)**

An examination conducted by the internal parts of the company against the financial statements and other accounting records, as well as compliance to the applicable policies (Sukrisno Agoes, 2011: 10-13).

2. Auditor

In terms of public accounting profession, an auditor is an examiner who examines objectively on the financial statements of a company or other organization with the purpose to determine whether the financial statements present fairly in all material aspects, financial position, and the operation results of the company or organization (Mulyadi, 2002).

Based on Permenpan No.64 2008, an auditor who is a civil servant (PNS) having a functional position as an auditor and / or other parties who are given a full duties, powers, responsibilities, and rights by an authorized authority to conduct supervision in government agencies and on behalf of the APIP.

There are two duties of auditor, namely:

1. To follow audit standard.
2. To increase competence.

3. Internal Audit

In 1999, Guidance Task Force (GTF) has been explained internal audit as "a consulting activity and objective confidence managed in independence in the organization and directed to improve the organization's operational. The audit helps the organization in achieving its goals to evaluate and improve the effectiveness of the risk management process, the adequacy of the control, and governance of the organization "(Ardeno Kurniawan. 2012).

According Sukrisno Agoes (2012: 13), internal audit (*pemeriksaan internal*) is an examination conducted by the company's internal audit, both on the financial statements and accounting records of the company, as well as compliance to the top management policy that have been determined and compliance with government regulations and provisions of applicable professional associations. Internal audit is a part of an organization that is integral, performing its functions based on policies that have been established and has a very big role in contributing to the organization management and the external examiner. Internal audit creates several audit findings (*temuan pemeriksaan*) concerning irregularities and fraud, internal control weakness, along with suggestions for improvement, but does not create opinion on the fairness of the financial statements.

a) Purpose of Internal Audit

According to Akmal (2007), the purpose of internal audit is to help an organization in achieving its objectives through a systematic approach, discipline to evaluate, and improve the effectiveness of risk management, control, and honest, clean, and nice process. It is done by testing that provides a reliability level of the organization activities and activity of the management consultancy to the organization that needs it.

b) Functions and Responsibilities of Internal Auditor

Internal auditor that commissioned to implement an internal audit function will assist management by evaluating the quality of the processes of organizational governance, risk management, and controls by implementing several methodologies which is used in the expectation that the organization that served by the internal audit function is capable to achieve things as follows:

1. Reliability of financial and operating informations which resulted by organization.

2. Risk management faced by the organization with various forms so that the risks can be limited to an acceptable level.
3. Obeyed to applied regulations.
4. Achieve the operating criteria satisfactorily.
5. The use of the existing resources effectively and efficiently.
6. The achievement of organizational goals effectively (Ardeno Kurniawan. 2012: 12).

4. Audit Quality

Financial statement users would be argued that audit quality is obtained when an auditor can find and report material misstatements and all forms of fraud in the auditee financial statements so that financial statement audit produced reliable and relevant. While the auditor believes that audit quality may occur if he is implementing their duties in accordance with the Public Accountants Professional Standards (SPAP) and the Code of Professional Ethics, prioritize auditee satisfaction, maintain the reputation, and minimize the litigation risk (Sholawatun Ning, 2015).

Accountants professional code of ethics is needed to maintain the quality of auditor's implementation in the field. It is done in order to keep public trust in accounting profession. The code and principles of ethics provided by the Institute of Internal Auditors (IIA) in professional guidelines for internal auditors, namely:

1. Integrity

Integrity is an element of character that underlie the emergence of professional recognition. Integrity requires an auditor to be honest and forthright without sacrificing secret of the recipients. Services and public trust should not be defeated by personal gain. In addition, an internal auditor should execute their work responsibly.
2. Objectivity

Objectivity is a quality that gives value for services provided by the auditor. Objectivity principle requires the auditor to be fair, impartial, intellectually honest, not prejudiced or biased, and free from conflicts of interest or being under the influence of others.
3. Secrecy

Internal auditor respects the information's value and ownership that they receive and did not reveal the information without appropriate authority, unless there is a legal obligation and a professional to do it. The obligation of confidentiality continues even after the relationship between members and clients even employer ended.
4. Competence

Competence can be defined as the control and capabilities in doing the profession so that create public trust. Auditors are required to have competence which covers knowledge (pengetahuan), skill (keahlian/keterampilan), and attitude (perilaku) aspects.

 - 1) Knowledge (Pengetahuan)

According Notoatmodjo (2010), knowledge is the result of human senses or somebody result of the object through its senses (eyes, nose, ears, and so on). In broad outline, it is divided into 6 levels of knowledge, namely:

 - a. Know (tahu)
 - b. Comprehension (memahami)
 - c. Application (aplikasi)
 - d. Analysis (analisis)
 - e. Sythesis (sintesis)
 - f. Evaluation (evaluasi)
 - 2) Skill (Keterampilan/keahlian)

Skills is an ability to perform a task well or better than average, so it must be owned by all auditors at all levels or positions. Skill owned by a person affected by several things, namely:

 - a) Education

Technical competence that must be owned by an auditor is auditing, accounting, administration, law, interacting skill, and able to communicate effectively. In APIP's general standard, it shows that an auditor must have undergraduate degree (S1) or equivalent as a minimum level of formal education. In addition, APIP must have specific criteria of the auditor which is required to plan an audit, identify auditor's professional needs, and to develop audit techniques and methodology to match with the conditions and situation faced by the unit that being served. It is expected to create a good audit performance.
 - b) Experience

Experience as a source of knowledge is a way to acquire knowledge of truth by repeating back the acquired knowledge in solving the problems faced in the past. Experienced auditors have a better

understanding and able to give a plausible explanation for the mistakes that occur. Experienced auditors can be seen through the duration of an auditor's work, the object assignment quantity, and variety of the audited entity.

3) Attitude (Sikap perilaku)

Attitude represents affection in someone on something. As a professional auditor, he must abide by the code of ethics stipulated that an integral part of the standard audit.

International Standards for the Professional Practice of Internal Auditing describes the attribute standards for internal audit and audit departments as follows:

1. The purpose, authority, and responsibility must be defined formally within a fact, consistent with the standards, and approved by the board.
2. Independence dan Objectivity
Internal audit activity must be independent and objective in implementing their work in order to increase their work credibility. An independence is a state free from influence, not controlled by the other party, and does not depend on other people. The independence of an auditor can occur if it is free from personal and external interferences. Personal interference caused by a relationship and personal views may lead the examiner limiting its question scope and disclosure or weaken the findings in all its forms. External interference to the auditor can limit the inspection or affect the examiner's ability to express an opinion or conclusion results of its examination independently and objectively.
3. Professional expertise and accuracy
Assignment should be implemented with professional expertise and accuracy, so that the auditors should have knowledge, skills, and other competencies needed to perform its responsibilities. In addition, an auditor must use its professional skills carefully and thoroughly (due professional care) and carefully (orudent) in every assignment.
4. Quality assurance (jaminan kualitas) and repairing program
An auditor must develop and maintain quality assurance and repairing program included all aspects of internal audit activity and continously monitoring its activity (Armin Widjaja Tunggal, 2011: 2-6).

5. Research Paradigm

Besides required to comply the employee's regulation and rule as a Civil Servant (PNS), public sector government which is in regional inspectorate is also required to comply code of ethics and APIP's audit standar or other audit standards that have been set. APIP's main activity includes audit, review, monitoring, evaluation, and other supervisory activities such as socialization, assistance, and consulting (Achmad Bajduri. 2012).

Integrity is a character element that underlie the emergence of professional recognition. Integrity requires an auditor to be honest and forthright without sacrificing its recipients secret. Objectivity is a quality that gives the value of services provided by the auditor. Competence is the mastery and capabilities in implementing their profession that create public trust. In internal audit, competence should include knowledge (ilmu), skill (keterampilan/keahlian), attitude (perilaku) aspects. Independence is an assessment which is not prejudiced (unbiased viewpoint) in examination and assessment of results. Independence becomes the crucial factor for the development and application of ethics fundamental principles in the accounting profession.

Furthermore, the paradigm in the research can be demonstrated by the following figure:

Scheme 1
Research Paradigm

III. RESEARCH METHODS

The object in the research is audit quality in Muna's inspectorate. The type of data used in the research are; (1) Quantitative data in the form of statistic data including assessment presentation of audit quality. (2) Qualitative data in the form of both oral and written informations related to the research.

Data sources used in the research are: (1) Primary data which is data obtained directly from 16 respondents who become sample in the research including Muna's inspectorate auditor. (2) Secondary data which is data obtained from the office internal data, journals, and books related to the research object.

Methods of collecting data in the research are: (1) Questionnaire which conducted by distributing questionnaires contain of statements to all Muna's inspectorate auditors which selected as respondents in the research. (2) Interview which conducted by reaching the respondents directly by using several questions prepared earlier related to the research.

Analysis method used in the research is descriptive analysis with quantitative approach.

Drawing conclusions on descriptive analysis based on the score and the percentage achieved for each of the dimensions of the variables, later it defined categorization based on the determination of the following criteria:

- 1) 80% to 100% categorized as very adequate
- 2) 60% to 79% categorized as adequate
- 3) 40% to 59% categorized as quite adequate
- 4) 20% to 39% categorized as inadequate
- 5) 0% to 19% categorized as very inadequate (Sumanto. 2014)

Operational definition of variables in the research is: Audit quality can be viewed through the audit process taken by someone competent and independent in order to gather and evaluate evidence about the information measured from an entity to consider and report on the suitability levels of measured information with the established criteria.

Based on audit standards and professional codes that apply, then in this study, it is using a dimensional measurement of audit quality, as follows:

1. Integrity
Integrity is a character element that requires an auditor to be honest and forthright without compromising recipients secret and responsible in implementing its work. Auditors are required to be honest to obey the rules, do not add or detract from the fact, and did not receive anything in any form. Integrity is also the auditor's responsibility not to harm others, improve their work, as well as being consistent with the appropriate norms of work and stick to regulations. Indicators used to measure the integrity of the study, namely:
 - 1) Honesty
 - 2) Responsibility
2. Objectivity
Objectivity is an auditor's attitude to act justly, not affected by cooperation relationship, and not be biased towards anyone, so that the auditor is reliable and trustworthy. An auditor must reveal in accordance with the fact by expressing neutral opinion, not looking for fault, maintain criteria, and use logical thinking. Indicators used to measure the dimensions of objectivity in the research, namely:
 - 1) Free from conflict of interest
 - 2) Based on fact
3. Competence
Competence is the mastery and capabilities in implementing a profession that creates public trust. Auditors must have competence including knowledge (pengetahuan), skill (kemampuan/keahlian), and attitude (perilaku) aspects. Competence indicators used in the research, namely:
 - 1) Knowledge
 - 2) Skill
 - 3) Attitude
4. Independence
Independence is a state free from influence, not controlled by the other party, does not depend on other people. An auditor's independence can be maintained if it is free from personal and external interferences. Independence indicators used in the research, namely:
 - 1) Personal interference
 - 2) External interference

IV. FINDINGS AND DISCUSSION

1. Findings

Assessment of the audit quality in Muna's inspectorate performed by respondents comments related to 4 measurement dimensions which are integrity, objectivity, competence, and independence, can be seen in the following table:

Tabel 1 Data Analysis Results

| Variable | Dimension | Indicator | Average Values (%) |
|---------------|-------------|--------------------------------|--------------------|
| Audit Quality | Integrity | Honesty | 79,24 |
| | | Responsibility | 81,56 |
| | | | 77,92 |
| | Objectivity | Free from conflict of interest | 80,05 |
| | | Based on fact | 78,44 |
| | | | 81,67 |

| | | | |
|--|--------------|-----------------------|-------|
| | Competence | Knowledge | 80,56 |
| | | Skill | 80,00 |
| | | Attitude | 78,75 |
| | Independence | | 82,92 |
| | | Personal interference | 78,67 |
| | | Extrenal interefence | 79,00 |
| | | 78,33 | |

Source: Primary data taken in 2016

Integrity dimension measured from two indicators which are honesty and responsibility. The measurement done by using instruments which consist of 7 questions and resulting 81.56% as the average values of measurement of honesty indicator and categorized as very adequate. The average values of measurement of responsibility indicator is 77.92% and categorized as adequate. Thus, integrity dimension categorized as adequate with average values of 79.24%.

Objectivity dimension measured from two indicators which are free from conflict of interest and based on fact. The measurement done by using instruments which consist of 10 questions and resulting 78.44% as the average values of measurement of free from conflict of interest indicator and categorized as adequate. The average values of measurement of based on fact indicator is 81.67% and categorized as very adequate. Thus, objectivity dimension categorized as very adequate with average values of 80.05%.

Competence dimension measured from three indicators which are knowledge, skill, and attitude. The measurement done by using instruments which consist of 15 questions and resulting 80.00% as the average values of measurement of knowledge indicator and categorized as very adequate. The average values of measurement of skill indicator is 78.75% and categorized as adequate. The average values of measurement of attitude indicator is 82.92% and categorized as very adequate. Thus, competence dimension categorized as very adequate with average values of 80.56%.

Independence dimension measured from two indicators which are personal and external interferences. The measurement done by using instruments which consist of 8 questions and resulting 79.00% as the average values of measurement of personal interference indicator and categorized as adequate. The average values of measurement of external interference indicator is 78.33% and categorized as adequate. Thus, independence dimension categorized as adequate with average values of 78.67%.

Based on the average value of the supporting audit quality dimensions, it can be obtained that an average value of audit quality is 79.75%. It indicates that audit quality in Muna's inspectorate categorized as adequate.

2. Discussion

Integrity is a quality that makes the emergence of public trust and the highest value order for profession members in testing all the decisions. Average percentage result of integrity indicator indicates that Muna's inspectorate auditor has a very adequate honesty. By honesty, the auditor will show the true audit results, not the false ones. The auditor's responsibility is in the adequate category. It means that the auditor should considering its duty as auditor which is to plan an audit in accordance with applicable standards. The auditor's integrity is in the adequate category with a percentage of 79.74%. It indicates that the auditor have sufficient integrity in implementing its duties and functions, however, there are 20.26% that have not been achieved, so that auditors

in Muna's inspectorate consider the state of a person / group of people or an organization unit to justify actions which infringe the provisions of applicable, such as planning an conducted audit sometimes not in accordance with the applicable standards.

Auditor who has objectivity is an auditor who able to give a balance assessment over all relevant conditions and not affected by its own interest or someone's else interest in making a decision. Free from conflict of interest is a situation where the auditor can not abusing its job for other interest. Thus, its attitude can affect the audit quality, as well as the audit quality is not creating disadvantages in society. Meanwhile, based on fact is an auditor must reveal the audit results based the true results so that the auditor can express its true opinion.

The presentation value of objectivity dimension is 80.05% and categorized as very adequate. In this case, Muna's inspectorate auditors have applied objectivity principles in implementing an audit. There are 19.95% of inspectorate auditor's objectivity that have not been achieved. It shows that even though the objectivity in Muna's inspectorate is very adequate, but it still has possibility to create subjectivity because basically the auditors are doing an audit in government agencies and the auditee are fellow civil servants (PNS).

Auditor's competence has been very adequate, but there are 19.05% that have not been achieved. It can be affected by several factors. Each auditor has different knowledge. These differences affect to the way of auditor finish a job. Skill achievement started with formal education, and then with experience and audit practice. Undergraduate degree (S1) is the minimal formal education that is required to become an auditor. Most of the auditors in Muna's inspectorate have been graduated from university. But, the lack of auditor who has accounting background and auditor who is in functional position compared to the SKPD's numbers and examination object requires fellow auditor must be able to execute examination with its skill and experience.

An experienced auditor will be more clearly detail the faced problems rather than less experienced auditor, which will affect the determination of the audit judgement. Most auditors in Muna's inspectorate involved in examination and supervision have a working period over five years. This can have an impact on the adaptation to circumstances on the area so as to allow determination of the mistakes which happened to be accurate. Although there are some of them who have working period under 5 years old.

Auditors said to have an auditor's attitude if during the examination, they can maintain their attitude and act professionally in every audit task. To realize objective and main goal that have been set, Muna's inspectorate resolves the obstacles which are the lack of auditor / inspector labor and supervision apparatus, competence of auditor/examine and supervision apparatus is not maximized in implementing supervision task. By proposing to Muna's regent in order to placed examiner/auditor and supervision apparatus from various disciplines, programming examiner/auditor and supervision apparatus to attend Government Internal Supervisory Apparatus (APIP) training.

Auditor's independence is necessary in order to not easily affected by certain parties which want to take advantage. There are 21.39% of the independence total percentage have not been achieved, so that it is suspected that independence of Muna's inspectorate auditor is still affected by regional leaders as policy makers and frequent regional working units (SKPD) mutation, and subjectivity when examining.

In general, audit quality in Muna's inspectorate has been adequate in implementing its duties and functions based on audit standar of Government Internal Supervisory Apparatus. There are 20.25% that have been not achieved. It shows that there is still many supporting components of audit quality which have not been fulfilled by the internal auditor.

V. CONCLUSIONS AND SUGGESTIONS

It can be concluded from the research that audit quality in Muna's inspectorate has been adequate with measurement dimensions of audit quality such as integrity categorized as adequate, objectivity categorized as very adequate, competence categorized as very adequate, and independence categorized as adequate. Audit quality in Muna's inspectorate still affected by regional leaders as policy maker, the lack of auditor with

accounting background, the lack of auditor in functional position compared to the SKPD's numbers, and the possibility of the subjectivity occurrence.

As for suggestions, it could be taken into consideration for the future as follows. (1) In this research, dimension of studied supporting variables have a percentage score of less than 100%. It means that there other influences outside these dimensions, so it is suggested for the next researcher to examine other dimension that may affect the audit quality at the regional inspectorate. (2) After conducting the research, the author realized that the result of audit quality assessment in regional inspectorate can not be generalized if the research's object is the inspectorate auditor. Thus, it is suggested for the next researcher to choose regional working units (SKPD) as research object.

Developing Penta-Helix Based Collaboration for Solving the Business Challenges of Indonesian Palm Oil Industry

Nopriadi Saputra

Developing Penta-Helix Based Collaboration for Solving the Business Challenges of Indonesian Palm Oil Industry

Nopriadi Saputra

Bina Nusantara University, nopriadisaputra@yahoo.com

ABSTRACT

Indonesian palm oil industry has unwittingly experiencing revolutionary development particularly in the area and production, the ownership by smallholders, the growth number of district as palm oil plantation centres, the contribution Indonesia in supplying global CPO demand and the growth of Indonesia's palm oil exports. Thus even though the Indonesian oil industry still face many challenges especially environmental, social and managerial issues.

This paper is based on qualitative research involving 37 unit manager PT Smart Tbk who have responsibility in managing palm-oil plantation operations in Sumatra and Kalimantan. The main goal of this research is to get answers about (1) what are the business challenges need to get high priority to solve? (2) who are stakeholders that must be involved in the collaboration to address these business challenges? (3) what are collaborative program should be recommended ?

Focus group discussion using CATWOE analysis which performed on two occasions helps us to find out five issues with the highest priority, namely: (1) the forest fires that have an impact on water deficit, (2) the scarcity of agriculture undergraduate, (3) innovation on palm oil derivative product is still limited, (4) negative stigma against palm oil companies, and (5) productivity or yield of the palm oil plantation is not optimal yet. Penta-helix model based collaboration recommend to involve villagers, informal leaders, national SAR Agency, palm-oil plantation companies and government to develop Desa Unggulan Siaga Api project.

Key Word : penta-helix model, collaboration, CATWOE analysis

INTRODUCTION

Starting from four seed of *Elaeis Guineensis* brought by Dr. D. T. Pryce in 1848 which was then grown commercially for the first time in Sungai Liput Aceh, after passing through more than a century - has now developed into Indonesia oil palm-oil industry (Widjaya, 2010). Many people do not know that the Indonesia palm oil industry has undergone tremendous development in the previous decades ago. In fact, palm oil developments can be categorized as a revolution. This revolution is not only a major impact on the socio-economic Indonesia but also to fulfil global demand of vegetable oil. There are five parameters that can be used to assess palm oil development as a revolution, such as: (1) from the aspect of acreage and production - In 1980 the palm oil plantation was about 300 thousand hectares with a CPO production of 721 thousand tons. But

in the 2015 Indonesian oil palm plantations has reached 11.30 million hectares with a production of CPO as many as 31 million tons, (2) from the aspect of smallholder ownership - In 1980 only 2% of palm oil plantations was owned by smallholder farmers. But in 1990 the composition grew to 26% and in 2015 the share of oil palm plantations owned by smallholder has reached about 41 percent, (3) from the aspect of the number of districts that became the center of the palm - In 1980 there were only two districts, which became the center of the palm oil plantation. But in 2015, there were already 190 districts in Indonesia, which became the center of the palm oil plantation, (4) from the aspect of Indonesia's position as a producer of CPO for the world - in 2006, Indonesia managed to surpass Malaysia and in 2016 Indonesia accounted for 53.3% of global CPO production, (5) from the aspect of export value – In 2000 the palm oil industry contributes to exports was only USD 1.08 billion. However, in 2015 the contribution of exports of CPO and its derivative products reached USD 18.6 billion (PASPI, 2016c)

Unlike the rice revolution in Indonesia which is fully driven and managed by the government, the palm oil revolution is actively involved company (both private and state-owned) and smallholder farmers who were together in a cooperative partnership. In the development of palm oil plantations, the Government uses big-push strategy. A strategic concept was first developed by economist Paul Rosenstein-Rodan (1943). According to the theory, rural development will be succeeded in significantly if carried through massive investment (big-push) and not bit by bit investment (PASPI, 2016a).

After running the collaborative program between farmers, banks with entrepreneurs, the development of Indonesian palm oil industry accelerated. The collaborative model called Nucleus Unit and Smallholders (NES) project or Perkebunan Inti Rakyat (PIR). This project is funded by World Bank (Saragih, 2015). Referring to the success of NES projects, and then from 1980 to 2006 Government run four kinds of NES program, namely: (1) PIR Special and PIR Local - in 1980 the Government implements this program in 12 provinces and managed to develop 231.535 hectares of new palm oil plantations, (2) PIR Transmigration - since 1986 the Government combines NES program with transmigration program in which private companies act as the core and transmigration farmers as plasma, conducted in 11 provinces and successfully develop new palm oil plantations around 566 thousand hectares, (3) PIR KKPA - since 1996, PIR Locally developed further in terms of financing and institutionally linked to the development of cooperatives. This program is known as PIR with Primary Cooperatives for Members or PIR KKPA. The program is run through the 74 cooperatives. that At PIR KKPA management of smallholdings is determined more by the farmers themselves, (4) PIR Plantation Revitalization - in 2006 the Government provided credit facilities (interest rate subsidized) for the development of bio energy and plantation revitalization for smallholder. It is also encouraging private investment and farmers independently go into the palm oil business. (PASPI, 2016a). All four PIR programs have made a significant impact on the development of the Indonesia palm oil industry, as seen in Figure 1.

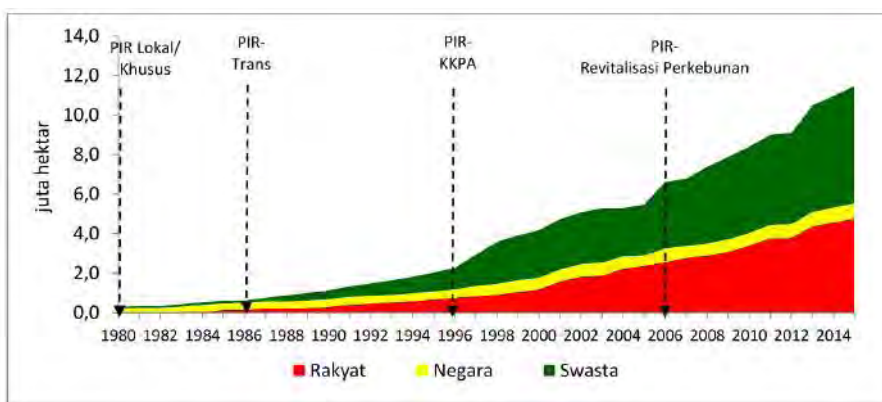

Figure 1 : The impact of PIR on Indonesia palm oil plantation (PASPI, 2016a)

Although Indonesia has now become the largest CPO producer in the world (Sipayung, 2016) does not mean that Indonesian palm oil industry free of challenges and problems. Widjaya, Bangun, & Sinaga (2013) reveals some of the challenges facing Indonesian palm oil industry in the future, namely: (1) negative stigma toward the progress of the palm oil industry in Indonesia. (2) low productivity of plantation crops. Average yield reached only 2.5 to 6 tonnes / ha / year, still far from the ideal potential 15-20 tonnes / ha / year, (3) derivative products is not developed seriously Indonesia, (4) increasing operational cost while CPO price are tends to decline, (5) insufficient availability of human resources who expert in modern agricultural practices. Meanwhile Erwidodo (2015) more see social and environmental challenges facing Indonesia palm oil industry in the future : (1) conversion of forest land or deforestation, (2) the emergence of peatland degradation and habitat of endangered species, especially orangutans, (3) the incidence of forest fires and the burning of land, and (4) frequent conflicts over land ownership of plantations. Besides environmental, social and business issues mentioned above; climate change is increasingly unpredictable is also a challenge that must be faced by Indonesian palm oil industry. As an El Nino in 2015, which resulted in land and forest fires in many places in Kalimantan and Sumatra. This causes water deficit which leads to lower production of CPO from Indonesia and Malaysia amounted to 3.6 million tonnes in 2015 and amounted to 9.4 million tons in 2016 (PASPI, 2016b). So despite being the largest, Indonesian palm oil industry still has a lot of homework particularly with regard to environmental, social, economic and managerial issues.

This paper took perspective from palm oil company, PT. SMART Tbk. The company was established since 1962, and has become a public company. PT SMART Tbk produce consumer and industrial products the largest palm-based and integrated in Indonesia. As the challenges faced by the Indonesian palm oil industry in general, PT SMART Tbk in its business also faces numerous challenges and problems associated with environmental, social, economy and managerial. Learning from the history of the Government to develop the palm oil industry in the early 1980s, PT SMART Tbk also see that the collaboration model by involving various stakeholders to generate growth is best approach too for solving business problems.

THEORITICAL BACKGROUND

Indonesian palm revolution is a combination of three advantages those are comparative, competitive and collaborative advantage. First, the comparative advantage that is because the destiny of God Almighty puts Indonesia on the best location for palm oil plantation. That is between 5 degrees north latitude and 5 degrees south latitude, get high rainfall and humidity, receive sunlight throughout the year and has fertile soil. It is not owned by the state or other nations such as EU, USA, China and India. Second, the competitive advantage that is due to the willingness to learn, to work hard and unyielding spirit to constantly develop oil palm plantations as one of the mainstays of the national economy. Until eventually Indonesia can surpass Malaysia as palm oil producer since 2006 (Sipayung, 2016). And third collaborative advantage that is through the synergistic collaboration between the Indonesian government and the World Bank. Also synergistic collaboration between banks, farmers and entrepreneurs (private and state owned company). The collaboration eventually create remarkable results, namely the Indonesian palm oil revolution (PASPI, 2016c).

Lank (2006 p7) defines collaborative advantage as an advantage in which an organization can achieve far greater results than the results they may have achieved independently as they develop effective cooperative relationships with other organizations. Kanter (1994) gives the definition of collaborative advantage as a "well-developed ability to create and sustain fruitful collaboration that gives company a significant competitive leg up". Huxham & MacDonald (1994) explains that collaborative advantage is "the organization's ability to create synergies together with other organizations to achieve a common goal".

From the perspective of plantation companies, collaborative advantage is reflected in the company's ability to build and develop cooperation with the stakeholders. The concept of Cluster Strategy constitutes the frame of view or approaches that are relevant to use. According to Porter (1998) Cluster is a "groups of companies and institutions co-located in a specific geographic region and linked by interdependencies in providing a related group of products and / or services". Cluster is also a natural manifestation of the knowledge, skills and infrastructure that is distinctive and support the industry increase productivity and maintain high

levels of prosperity in a particular geographic location. A combination of inter-supplier relationships, similarity of the labour market, competition, knowledge and learning that affect the economic conditions facing companies that are in a cluster (Ketels & Memedovic, 2008). From all kinds of models of Cluster concept, penta-helix model is the most widely used model. Penta helix model illustrates the five organizations are collaborating synergistically in a cluster to solve a particular problem or to achieve certain common objectives. In penta-helix based collaboration, the five organizations are Academics, Business, Community, Government, and Media. Caldecott, Howarth, & McSharry (2013) states that every organization owns several of five kinds of assets. Those are financial assets, physical assets, natural assets, human assets, and social assets. In collaboration, every organization is expected to contribute based on the assets they own.

RESEARCH METHOD

This paper is based on qualitative research through focus group discussion approach. Bader & Rossi (2002) defines the focus group discussion as a structured group interview which is designed to obtain an opinion or a more detailed knowledge about a given topic from a group of selected participants. The main topic of this study is what is the best model of penta-helix based collaboration applied for palm oil company - in this case PT SMART Tbk to address business problems. The participants who have been selected are 37 unit managers of PT SMART Tbk in Sumatra and Kalimantan. Why were they? Because more than 90% of Indonesia palm oil development is in Sumatra and Kalimantan (Cattau, Marlier, & DeFries, 2016). Even among those islands there are differences and peculiarities in the challenges faced by business. Focus group discussions were conducted for 3 hours or half a day of work and were held twice. The first focus group was held in Riau, Sungai Roka in August 2016 and followed by 18 unit managers. The second FGD was held in Banjar Baru South Kalimantan in September 2016 and was followed by 19 unit managers.

Through those FGD sessions were expected to find answers of the three research questions as follows: (1) what are business challenges or problems important to get high priority to be solved? (2) what are stakeholders or parties involved in the collaboration to address those business challenges, (3) what collaborative program should be recommended?

To answer the first question, the author divided the participants into three groups. Then each group was asked to identify environmental, social and management problems those operations encountered in the field. Priority based on three criteria: large or small impact, association with other problems, and how important is the collaboration to address the problem.

While answering the second and third question, the author used CATWOE analysis which is part of the Soft Systems Methodology (Checkland, 2000; Checkland & Poulter, 2010; Mingers, 2000). Soft system methodology is an action research method used to find a solution for the problematic situation faced by the organization. This method is widely used in the social sciences and management, especially to identify any program changes that could be developed. Basden & Wood-Harper (2006) explain that CATWOE analyzes the six terms of a change program. Those are: (1) Customers - parties who are affected or benefit from the changes, (2) Actors - the party who is responsible for running the steps by step change, (3) Transformation - in more detail what sort of change is desired. Change of conditions such as what to be like what, (4) Weltanschauung or Worldview - a broader impact of change program, (5) Owner - party who has great influence to stop or speed up the implementation of change program, and (6) Environmental Constraints - limitations, shortcomings or like any resistance that may arise as a consequence of the planned changes are implemented.

RESULT & DISCUSSION

Business Challenges of Palm Oil Industry- The author obtained fifteen issues that are important to get immediate attention and treatment from FGD Sumatra and FGD Kalimantan. The fifteen issues consist of five environmental, five social and five managerial issues. Those are shown in Table 1. The highest score of environmental issue from FGD Sumatra are "forest fires that affect water deficit" and "kind of palm oil that are susceptible to water deficit". The highest score of environmental issues from FGD Kalimantan are "forest fires

that affect water deficit" and " road damages during heavy rainfall". The highest score of social issues from FGD Sumatra are "theft fruit by villagers" and "negative stigma against palm oil". The highest score of social issues from FGD Kalimantan are " social conflict that impact operational cessation" and "assertion of villagers to be employed". The highest score of managerial issues from FGD Sumatra dan FGD Kalimantan are the same. Those are "scarcity agriculture graduate", "limited derivative product innovation" and "yield of the crop that is not optimal". Finally the highest total score from the both FGD are five issues such as: (1) the forest fires that have an impact on water deficit, (2) the scarcity of agriculture graduate, (3) innovation derived products are limited, (4) the negative stigma against companies oil, and (5) or yield of the garden that is not optimal

Stakeholders Involved in Collaboration - From the five issues that had highest priority, this research focused on the problem of "The forest fires that affect water deficit". By using CATWOE analysis, the author guide the participants to discuss deeper. From FGD Sumatra and FGD Kalimantan, the author summarize the results in Table 2.

From Customers aspect or the parties affected the impact of forest fire there are two parties that suffered direct losses from fires that occur are: (1) general public especially the children and road users in Indonesia, Singapore and Malaysia. Airports and airlines were also noted the impact of the forest fires. They were in difficulty for to fly or land the plane because the visibility is impaired by thick smoke, (2) palm oil companies - fires are more prevalent outside of oil palm plantations. Particularly in the area of peatland in dry years as stated Cattau et al. (2016) that "we find that, from 2012 to 2015, fire activity (the density of fire detections and fire ignitions) is significantly lower on RSPO certified concessions than non-RSPO certified concessions when the likelihood of fire is low (on non-peat lands in wet years), but not statistically different when the likelihood of fire is high (on peat lands in all years or on non-peat lands in dry years)". Fires in peat land can creep into concessions resulting water deficit affecting crop production next period. Besides that the plantation companies were often accused of no facts or evidence as the cause of the fire. This can lead to legal consequences such the termination of plantation permit.

From the Actors aspect or parties that caused a fire are (1) villagers - those who live around the peat land prone to fire. Generally villagers assume that the fire may stop on its own without the need for outages or prevention efforts, (2) nomadic planters – villagers who have a habit of nomadic planting, moved from one place to another and burning the forest for land preparation before planting.

Tabel 1 Business Issues from FGD Sumatra & Kalimantan

| No | Business Challenges | FGD Sumatra | | | Score | FGD Kalimantan | | | Score | Total |
|-----------------------------|--|-------------|--------------|------------|-------|----------------|--------------|------------|-------|-------|
| | | Impact | Interrelated | Importance | | Impact | Interrelated | Importance | | |
| Environmental Issues | | | | | | | | | | |
| 1 | forest fires that affect water deficit | 5 | 4 | 5 | 14 | 5 | 5 | 5 | 15 | 29 |
| 2 | pests or plant diseases | 3 | 2 | 1 | 6 | 2 | 3 | 1 | 6 | 12 |
| 3 | road damages during heavy rainfall | 2 | 1 | 2 | 5 | 4 | 4 | 4 | 12 | 17 |
| 4 | the spread area of peatland | 1 | 3 | 3 | 7 | 3 | 2 | 3 | 8 | 15 |
| 5 | kind of palm oil that are susceptible to water def | 4 | 5 | 4 | 13 | 1 | 1 | 2 | 4 | 17 |
| Social Issues | | | | | | | | | | |
| 6 | theft fruit by villagers | 5 | 2 | 5 | 12 | 3 | 2 | 3 | 8 | 20 |
| 7 | negative stigma against palm oil | 4 | 5 | 4 | 13 | 1 | 3 | 5 | 9 | 22 |
| 8 | conflict areas that impact operational cessation | 3 | 1 | 3 | 7 | 5 | 4 | 4 | 13 | 20 |
| 9 | assertion of villagers to be employed | 1 | 4 | 1 | 6 | 4 | 5 | 2 | 11 | 17 |
| 10 | many illegal charges | 2 | 3 | 2 | 7 | 2 | 1 | 1 | 4 | 11 |
| Managerial Issues | | | | | | | | | | |
| 11 | yield of the crop that is not optimal | 5 | 3 | 3 | 11 | 5 | 3 | 3 | 11 | 22 |
| 12 | limited derivative product innovation | 4 | 4 | 4 | 12 | 4 | 4 | 4 | 12 | 24 |
| 13 | scarcity agriculture graduate | 3 | 5 | 5 | 13 | 3 | 5 | 5 | 13 | 26 |
| 14 | increasing the labor cost | 4 | 2 | 2 | 8 | 4 | 2 | 2 | 8 | 16 |
| 15 | increased administration due to certification | 1 | 1 | 1 | 3 | 1 | 1 | 1 | 3 | 6 |

From the Transformation aspect or changes to be made is to change the habits of villagers particularly nomadic planters, from "ignoring the fire" to become "preventing and extinguishing the fire", from "burning for land clearing" to become "using the chemical in land clearing", from "nomadic" to become "settle in one place" planting.

Table 2 - Analysis CATWOE on "Impact of Forest Fires Water Deficit"

| | |
|----------------------------------|--|
| Customers | <ul style="list-style-type: none"> • General Public (especially children and road users in Indonesia, Singapore and Malaysia,) airports and airlines, disrupted by acute smoke pollution that inhibits the activity and their business. • Palm oil Companies - because the fire can creep enter into plantations, especially in peat land resulting water deficit affecting crop production further next period. Beside that palm oil companies often accused of being the cause of the fire |
| Actors | <ul style="list-style-type: none"> • Villagers - living around the peat fire-prone areas. Generally assumed that the fire may stop on its own without extinguishing or prevention efforts • Nomadic Planters - have a habit of nomadic cultivating, move from one place to another and burned for land preparation before planting |
| Transformation | <ul style="list-style-type: none"> • Changing the habit of villagers especially nomadic planters • From 'ignoring the fire' to become 'preventing and extinguishing the fires' • From 'Burning for land clearing' to become "using the chemical in land clearing" • From "nomadic" to become "settle in one place" planting |
| Worldview | <ul style="list-style-type: none"> • The forest is saved so maintained sustainability and diversity of the nature • The general public can live and run a business as usual • The uneventful flight schedule is not interrupted by the smoke haze pollution • Do not cause water deficit that can reduce the production of plantation • The developing skills and welfare of rural communities particularly nomadic planters |
| Owners | <ul style="list-style-type: none"> • Informal Leaders –religious leaders or public figure that have influence to encourage the villagers to prevent the fire and stop nomadic planting • BASARNAS –has the experience, skills and equipment for the prevention and suppression of fires and other disasters |
| Environmental Constraints | Nomadic planters have no money to buy chemicals for land clearing. Nomadic planters do not mastered the knowledge and skills to run settled plantation. Villagers do not have the skills and equipment and means for fire fighting |

From the Worldview aspect or a wider impact if the transformation is successfully performed are (1) forest saved so maintained sustainability and diversity of the nature. Since forests are the "lungs" of the world and an essential element for the balance of the living things, (2) the general public can live a life and business as usual. Without the need uninterrupted activity and health due to pollution in the thick smoke that lasted for days, even weeks, (3) The current flight schedule is not interrupted by smoke pollution occurs. No flight delays or the airport closure as a consequence of the thick smoke that shut visibility, (4) it can reduce the risk of water deficit, and (5) improving the skills and welfare of rural communities particularly nomadic planters. They no longer need far open fields and their crops can also be purchased by plantation companies or the wider community.

From the Owners aspect or parties that can stop or speed up the transformation process, namely: (1) Informal Leaders such as religious leaders and public figures that in many formal or informal occasions can influence the villagers to prevent the forest fire and stop nomadic planting (2) BASARNAS - National SAR Agency has the experience, skills and equipment needed to carry out prevention and extinguishing fires and other calamities.

From Environmental Constraints aspect or limitations, difficulties or else resistances might be encountered to carry out the transformation are (1) rural or nomadic planters do not have enough money to buy chemicals for land preparation, (2) nomadic planters do not mastered the knowledge and skills in implementing the principles of settled plantation, and (3) the villagers mainly located in areas prone to fires do not have the skills, equipment and means for fire fighting.

Table 3 - Penta-Helix and Type of Asset

| Penta Helix | ASET | | | | |
|-----------------------|-----------|-------|---------|--------|---------|
| | Finansial | Fisik | Natural | Sosial | Manusia |
| Masyarakat Desa | | | | | |
| TOGAMA | | | | | |
| BASARNAS | | | | | |
| Perusahaan Perkebunan | | | | | |
| Pemerintah | | | | | |

Referring to the result of the CATWOE analysis, there are five parties or organizations that maybe synergized in penta-helix based collaboration models for addressing "forest fires that affect water deficit" issues. They are (1) the Villagers, particularly nomadic planters, who have rights and access to utilize land in areas prone to wildfires (2) Informal Leaders - religious leaders or public figures who have an influence on rural communities, (3) BASARNAS who have the experience, skills and technologies to prevent and extinguish the fire disaster, (4) plantation companies, who have the experience, tools, and organizational structure to implement the principles of modern agriculture, and (5) government, especially the Ministry of Forestry and the Ministry of Environment has the authority, access and budgets to involve many parties, from within the country and abroad to become a sponsor or donor for the prevention of forest fires in the future. The mapping between the stakeholders and the types of assets is shown in Table 3.

The plantation company in this case PT SMART Tbk may also contribute to some of the following: (1) Provide a place and means for meeting and training, (2) providing training, information and guidance for helping transformation of nomadic to become settled planters, (3) help providing chemicals, seeds, fertilizers and agricultural equipment, (4) strengthening detection and fire fighting teams together with BASARNAS and villagers, and (5) buy products from plantation of villagers rural at a reasonable price. BASARNAS is expected to play a role and contribute in terms of: (1) provide training forest fire prevention and suppression, (2) coordinate the regular monitoring of the potential of fire, and (3) coordinate prevention activities and fire suppression. Informal leaders play a role in influencing and encouraging villagers particularly nomadic planters to be actively involved in this program. And the villagers are expected to participation and contribution in three main topics, such as : becoming a participant in the training program of modern agriculture, as farmers or planters who settled and became the core team of Desa Unggulan Siaga Api.

Program Collaboration Recommended - By understanding the five stakeholders involved along with the assets of each of the parties, the proposed penta-helix based collaboration program to prevent the "forest fires that affect water deficit" issue in the future is a Desa Unggulan Siaga Api. This program two main objectives: (1) to change the habit of moving and burning planting by the villagers, and (2) to involve community nearby village which vulnerable to forest fires in preventing and extinguishing the fires. The main activity of Desa Unggulan Siaga Api are helping villagers to build superior crop plantation and providing advice and infrastructures for villages to prevent forest fires. The expected role and contribution of the five stakeholders is listed in Table 4. The Government represented by the Ministry of Forestry and Ministry of Environment may raise funds or assistance from the Government of Malaysia and Singapore to jointly fund the project "Desa Unggulan Siaga Api" in some villages in Sumatra and Kalimantan.

Table 4 - Expected Role and Contribution of Stakeholders

| Stakeholders | Expected Role and Contributions |
|---|---|
| Government (Ministry of Forestry and Ministry of Environment) | Offer to the Government of neighboring countries (Malaysia and Singapore) and also as airports and airlines companies to become financial donors. The funds will be used for: the procurement of chemicals, agricultural training, procurement of vehicles and fire extinguishers, and the incentive for the village which managed the most effective to lose forest fire |
| Palm Oil Company | <ul style="list-style-type: none"> • Provide space and equipment for modern agricultural skills training • Provide training, counseling and coaching for nomadic planters • Help to provide chemicals, seeds, fertilizers and farm equipment • Strengthen the detection and fire fighting teams together BASARNAS and villagers* Buying the product of villagers plantation produce at the reasonable price |
| BASARNAS | <ul style="list-style-type: none"> • Provide training of forest fire prevention and suppression • Coordinating the periodic monitoring of the potential for fire • Coordinate the activities of prevention and fire fighting |
| Informal Leaders | <ul style="list-style-type: none"> • Encouraging villagers mainly nomadic planters • Directing the villagers to care and guard against fire disasters |
| Villagers | <ul style="list-style-type: none"> • Being a participant in the training program of modern agriculture* • Being sedentary farmers or planters • Being a core team member in Desa Unggulan Siaga Api program |

CONCLUSION

A revolutionary development of the palm oil industry in Indonesia achieved through a collaboration involving the government, banks, planters and companies. The business challenges of Indonesian palm oil industry in the form of environmental, social and management in business. Based on both FGD has been done, gained five issues with the highest priority, such as: (1) the forest fires that have an impact on water deficit, (2) the scarcity of agriculture graduate, (3) innovation derived products are limited, (4) the negative stigma against companies oil, and (5) or yield of crop is not optimal. This paper is limited for elaborating on the forest fires that impact water deficit. By using CATWOE analysis, there are five important parties involved in penta-helix based collaboration model. They are villagers, informal leaders, BASARNAS, palm oil companies and the government. The recommended collaborative program named Desa Unggulan Siaga Api. A program to change the habit of nomadic and burning plantation into settled farming and no-burn plantation.

This paper limit the discussion only on one issue, does not address the other issues. If it could be also discusses the other prioritized issues, it may provide a different perspective on penta-helix based collaboration model. This research is a case study in a private plantation company, PT SMART Tbk. When a case study carried out at the state-owned or multinational companies it would surely get a different pattern and approach. The study also did not involve all managers and input from top management to provide strategic perspective in the discussion.

This research can be developed with the involvement of several companies (private national, state owned and multinational companies). Opinions and feedback from stakeholders in penta-helix model also needs to be obtained in order to reconcile the interests of many stakeholders in the formulation of collaborative programs recommended. Use of Soft Systems Methodology more fully, not only using CATWOE analysis alone can make research results more comprehensive and reliable.

Implementation of Information Technology and Innovation to Increase Competitive Advantage Studi at Rural Bank (BPR) in Indonesia

Argogung Murba Putranta

Bina Nusantara University, Argogungmp.89@gmail.com

ABSTRACT

Bank financing to micro and small enterprises business segment charged at higher interest rate than another business segment there are medium and large enterprises. Factors of high overhead cost and higher credit risk have determinant influence to perform high interest rate of credit. That condition influence competitive advantage of financial institution as Rural Bank (BPR) to disburse lending and serving target market. This research aimed to know influence of implementation of information technology and innovation business process at Rural Bank (BPR) in Indonesia to increase competitive advantage and impact for pricing of credit to micro and small enterprises.

The phenomena of higher overhead cost and credit risk that influence higher interest rate of credit, can be solved through implementation of information technology and innovation business process which create effective business process and efficiency that increase competitive advantage. The other side, communication and intensive interaction between bank and customer which support by information technology will create loyalty of customer, empowerment customer which influence to decrease credit risk, that why bank have opportunity to implement lower interest rate of credit.

Data which be used is secondary financial report data of Rural Bank from Bank Indonesia and OJK. Efficiency of business process and competitive advantage will be appraised by percentage of overhead cost to total cost in run the business, financial indicator and level of credit risk. Source of from Rural Bank data also relevant data which support to analysis. Analysis method both quantitative to know efficiency, impact of implementation of information technology and innovation which influence to efficiency and competitive advantage and qualitative analysis to explain competitive advantage.

Keywords: *information technology, innovation, efficiency business process, competitive advantage, rural bank*

1. INTRODUCTION

Rural Banks/BPR (Bank Perkreditan Rakyat) is a financial institution that serves the financing of micro and small business segment. Some commercial bank that serves the financing on this segment such as Bank Rakyat Indonesia (BRI), through a network of offices BRI Unit and Teras BRI, Bank Mandiri through a network of offices Independent Business Partner, Bank Niaga through services Mikro Laju, Bank Danamon through Danamon Simpan Pinjam (DSP), Bank BTPN, Bank Pembangunan Daerah (BPD) as well as various other commercial bank. There are 1,637 rural bank in Indonesia

Rural Banks (BPR) has a strategic role for the business segment serves the micro and small enterprises (MSEs) and run the intermediary function in support of local economic activity. Number of account BPR reached 14,123,886 customer accounts and a loan amount of Rp.80.86 trillion (November 2016), showed fairly significant contribution to drive economic activity and be one source of financing for MSEs. BPR business activities have to compete with commercial banks that serve segment similar to BPR.

The challenge facing rural banks is the high overhead costs or labor costs are reflected in the figures ROA (Operating Expenses to Operating Income) BPR nationwide reached 81.13% (November 2016), so in terms of the efficiency of BPR must be increased in order to become more competitive. On the other hand, BPR generally apply relatively high interest rates compared to commercial banks. BPR loan rates by an average of

28.25% (working capital loans), whereas commercial banks amounted to 11.6% (working capital loans). Determination of the interest on the loan in order to cover costs, generating profits and maintaining business continuity. In terms of performance to maintain business continuity, BPR face problems of credit quality or non performing loans (NPLs) in the amount of 6.67%. High NPL can disrupt business continuity due to be set up reserves of greater costs for anticipating losses. For that mitigate risk and intensive relationship and monitoring customer must be better managed.

In terms of profitability, the BPR has a high level of profitability seen from the figure reaches 2.69% ROA and ROE of 23.71% (November 2016). However, high interest rates on the other hand may result in less competitive rural banks in providing financing to MSEs, when competing with commercial banks. This condition in the long run be a factor that weakens the competitiveness of rural banks and can disrupt business continuity

Source: Bank Indonesia

The development and performance of BPRs in Indonesia complete data are in appendix 1,2, 3 and 4.

Current conditions, financing to micro and small businesses incur relatively high lending rates compared to lending rates for medium or large business segment. Interest rates on commercial bank loans to micro and small enterprises is higher than the medium-size and large, given that the loans were small and had to serve the large number of borrowers, operational or overhead costs are high.

Conditions of high overhead costs of the key considerations determining loan interest. As for BPR, high lending rates in addition to overhead cost reasons, also caused the cost of funds more expensive than commercial banks, so that the interest rate be higher than commercial banks. The data of BPR and Commercial Bank interest rate, see appendix 5.

The risk factors anticipation of bad debts often considered granting loan interest rates higher, although it depends on the ability of BPR to mitigate and control risks. On the other hand with the assessment that the micro and small businesses have a high viability, the actual risk factors were not the instigators of the high lending rates.

According to the OJK, some of the conditions that caused the increase in NPLs BPR, namely:

- Characteristics of BPRs classified unbankable debtor so that the legal aspects of the binding guarantees tend to be weak, which in turn encourages an increase in bad loans.

- Attempts borrowers who financed a small business and individual so that if problems occur individually on the debtor will affect the quality credit borrowers are concerned.
- On the internal side of the bank, among others:
 - The unmet composition of Board of Directors according to the provisions regarding corporate governance
 - The debtor supervision system has not gone well as the impact of IT technology is still simple BPR affect the accuracy of monitoring data,
 - Insufficient human resources competencies that affect the depth of the credit analysis

Based on the background of the problems that have been described above, the formulation of the problem of BPR in this paper include:

- Does the information technology applied appropriately can increase the effectiveness and efficiency of business processes so as to enhance its competitive advantage?
- Does the innovation business process can increase competitive advantage?

Benefits of study:

- Creating a paradigm that high overhead costs is not a reason or consideration for applying high interest rates in financing to micro and small enterprises, if BPR implement information technology to the scale of the business and the uniqueness of the business, so it has an efficiency in business processes.
- Prove the impact of implementation of information technology and innovation business process to increase competitive advantage

2. METHOD

This paper propose as conceptual. Source data from various sources, secondary data from Bank Indonesia (BI), Otoritas JasaKeuangan (OJK), literature study and other relevant resources to support the analysis.

3. DISCUSSION

The challenge facing the BPR is to improve efficiency, competitiveness, and to maintain business continuity. BPR existing condition can be described as follows:

Figure 1: BPR's Conditions faced

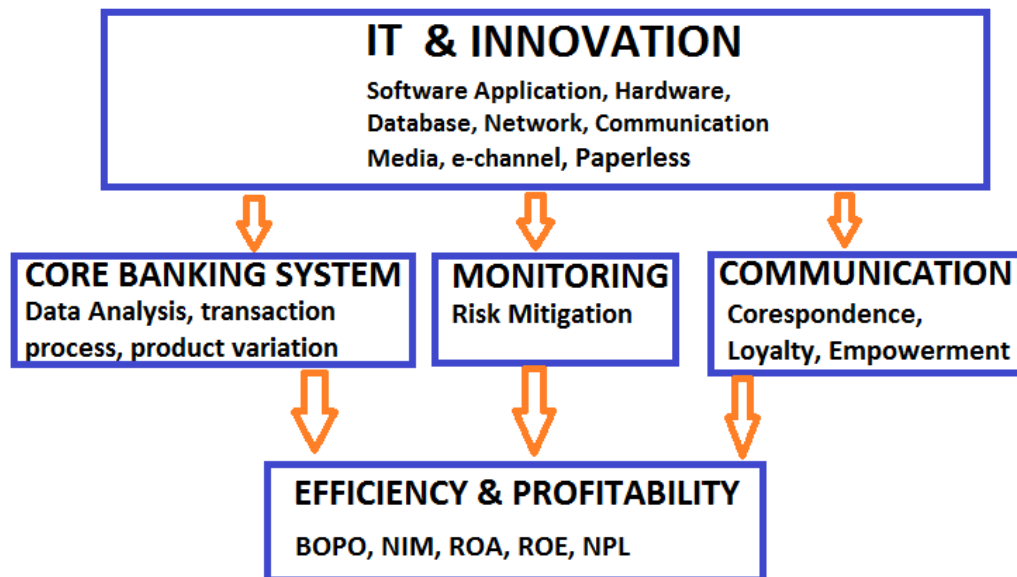

Going forward the bank has to adapt, have the agility to adapt the changing business environment primarily due to changes in information technology and applications improve efficiency and competitiveness. Business segments BPR is not only contested between BPR but also a growing number of commercial banks that entered into these segments, including financial services with models made by financial institutions technology (fintech) whose development is growing rapidly, so that the market share and the ability BPR to grow continuously (sustainability) be disrupted if no change.

To improve the efficiency and competitiveness of BPR, it is necessary to reform and improvements in the ability to serve and interact intensively with clients who are supported by the application of information

technology to improve efficiency and innovation of business processes that have the system delivery product that is simple, effective, productive and competitiveness.

Competence BPR needs to change so that it has a dynamic competence to meet the challenges faced. Improved dynamic competence with a focus on the implementation of information technology (IT) that supports increased efficiency and the ability to reach customers in a more comprehensive, intensive and communicative, so as to create customer loyalty and become a means of mitigating the risk because it can perform monitoring and relationship better. In addition to its main business innovation processes in the context of delivery of products, systems and procedures are more simple but still pay attention to risk mitigation, speed of service, thereby increasing their competitiveness. The concept was developed to improve the competitiveness of rural banks is as follows:

Figure2: Implementation IT & Innovation

The application of information technology and business process innovation as the main variable to improve competitiveness, has various dimensions assumed various dimensions are a key factor or influence to improve competitiveness. Variable information technology has dimensions that are expected to explain the effect of the application of information technology, namely: software, database, data analysis, communication model, monitoring, network. While business process innovation variable has several dimensions, namely, service level agreement, transaction, core banking system, paperless.

Application of information technology enables the Rural Bank to expand approach positions to deepen customer satisfaction and loyalty, driving long term relationships and profitability. Also has the potential to meet customers' expectations and bring customer back to the bank. Bank providing the cohesive, cross channel experience that customer expect requires. BPR should implementing appropriate information technology to gain customer values these are loyalty, convenience, interaction and excellent relationship against the bank's values such are profitability, operating efficiency, risk mitigation, expansion and loyalty. Due to increasing capability of risk mitigation, BPR has opportunity to maintain credit risk and minimize Non Performing Loan.

Implementation of innovation business process focus on engaging customers relationships that present new sources of value : marketing, sales, service level agreement, servicing and connection holds the potential to deepen customer relationship and generate new revenue streams and competitiveness.

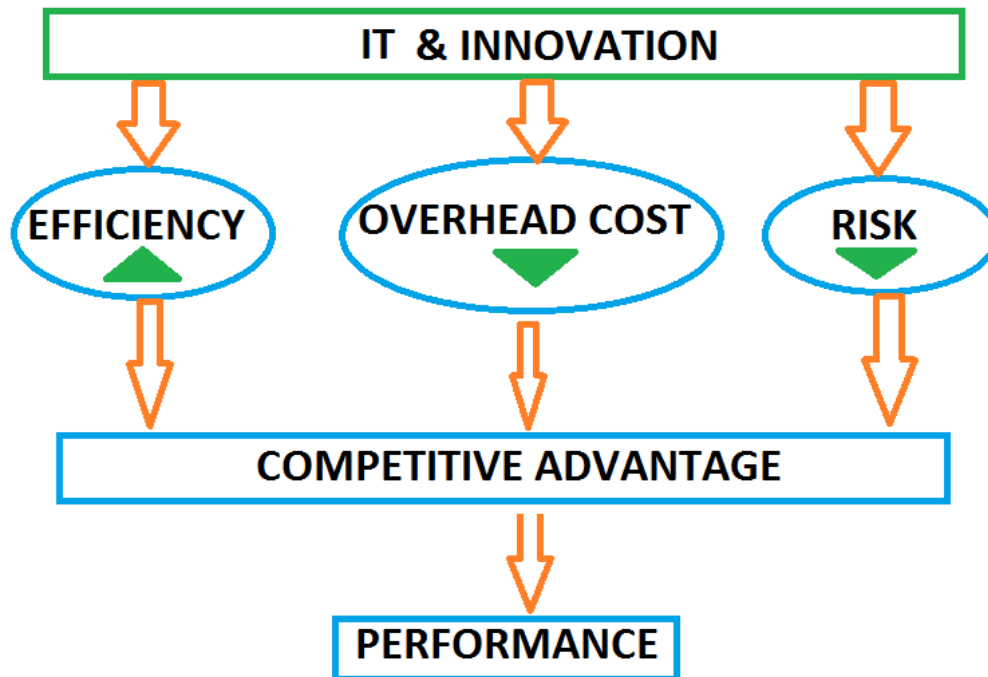

Information technology is the main driver of change in the business model of banks and bank services and relationship with customers. Information technology becomes a driver to compete and survive through a variety of innovations in a changing business environment. Implementation of information technology should be able to improve competitiveness through the creation of cost reduction, the efficiency of data processing capabilities of management, analysis, and provide added value to customers (Rasa, 2011).

The phenomenon of reasons for the high overhead costs caused lending rates to be high, should be overcome if BPR to apply information technology which is able to create a business process that is effective both in the context of information technology required to run the operation, do delivery product or customer transactions, as well as to communication and a more intense interaction with customers including to create loyalty and customer empowerment. Application of information technology appropriate to the scale of the

business and the unique needs of each BPR can increase the efficiency, effectiveness and delivery of products to maintain customer loyalty and empowerment, thus can provide a lower interest rate from the current condition. Create efficiency in operational systems and business processes can increase the competitive advantage in providing the financing. These conditions will have an impact positive to micro and small businesses, as they can access financing at lower interest rates and provides the opportunity grow and develop their business in the long term. On an ongoing basis the relationship between BPR and MSEs to create mutual benefit in the long term. On the other hand, it increase sustainability of BPR.

Theoretically to improve efficiency can be done with the implementation of relevant information technology because it can change operational systems and business processes to more effectively and save costs.

Figure3: BPR's Expected Condition

This study is expected to direct BPR implementing information technology relevant to business scale and uniqueness so that it can operate with effective, and efficient, has a cost advantage, able to provide interest rate lower than the current condition, as well as improving competitive advantage and impact to performance. Whereas in the context of pragmatic financing conditions to micro and small businesses today, is expected to be the trigger for the reduction in interest rates of credit to micro and small businesses, so they can be more developed.

The study was based on the thought that the granting of interest rate loans to small and micro businesses should be lower than the current condition, if BPR that have business processes efficiently because it supported the application of information technology in accordance with the scale of the business and the uniqueness of its business. In line with the development of information technology to support effectivity and create efficiencies for BPR to financing micro and small businesses, it can be influenced to lower the interest rate the credit, can improve competitive advantage in developing its business, increase performance and gain sustainability.

4. CONCLUSION

BPR has a strategic role to provide financing to micro and small businesses and boost economic activities in the local area. The challenge facing the BPR is to sustain the competitiveness of business due to the increasing number of commercial banks that serve the same segmentation with BPR, so BPR should be able to increase the competitiveness. Improvement of competitiveness hypothesis can be done through the application of information technology and innovation business processes that can improve the competence of the rural banks for interaction, communication, analysis, speed of delivery of products, servicing, monitoring and mitigation of risks better so as to improve efficiency, customer loyalty and improve competitiveness that affect the performance of BPR and can maintain business continuity.

Innovation Leadership to Enhance the Performance of Construction State Owned Company in Indonesia

Agung Yunanto

Innovation Leadership to Enhance the Performance of Construction State Owned Company in Indonesia

Agung Yunanto

agungyunanto@wikamail.id, Bina Nusantara (Binus) University - Indonesia

ABSTRACT

The main issue on this study is Innovation Leadership in enhancing the performance of construction project that managed by Indonesian's Construction State Owned Company (SOE). The performance of each construction project will influence the performance of Indonesia's construction SOE and as a consequences will improve the competitiveness of the SOE.

The performance of Construction project; consist of customer satisfaction level, project quality, time project accomplishment, and profit in construction project level; influenced by innovation leadership and innovation diffusion at each project management. Innovation leadership defined as a process for creating direction, alignment, and commitment needed to create and implement something new that adds value for the company. Innovation diffusion consist of perceived support for innovation and innovation outcomes; is influenced by innovation management and innovation leadership. Innovation leadership influenced by toolset of innovation, skillset of innovation, mindset on innovation and leaders' behavior. The innovation management consist of self-management team, management practices, management process and organizational structure.

This study will review references that relate with leadership, innovation and construction project management and will be supported by survey on leadership and innovation at one State-Owned Construction Companies member of Indonesian Contractor Association (AKI).

The result of the study showed the importance of innovation leadership, innovation management and innovation diffusion in enhancing the performance of every construction projects and as a consequences will enhance the performance of Indonesian Construction SOE.

Key Words: *innovation leadership, innovation management, innovation diffusion, construction project performance.*

I. INTRODUCTION

Every business entity will face significantly challenges due to the business environment changes that occur more rapidly and more volatile (Gary Hamel, 2007) in the future (era of the 21st century). And no one will know exactly what will happen in the future. As a consequence every company shall prepare by themselves for future. Institute for the Future for The University of Phoenix Research Institute concluded there were six (6) drivers of change, namely:

1. Extreme Longevity: The changing nature of careers and learning due to the intensity of globalization. In 2020, there will be five (5) generations working together in one company (Karie, 2012). Globalization and Global access to markets and talent will further strengthen the company (Karie, 2012).
2. Rise of Smart Machines & Systems: Automation of employment.
3. Computational World: Digitizing the world of work.
4. New Media Ecology: Media communication broader than just text. Social Media will connect employees, customers, and business partners for fast communication (Karie, 2012). Internet and electronic communication has changed the way the technology works and ways of doing business (Lim Ghee Soon, 2015). Internet is also rapidly shifting bargaining power from producers to customers (Gary Hamel, 2007).
5. Superstructured Organisations: Technology that encourages new forms of production and the creation of added value.
6. Globally Connected World: Increased interconnectivity made 'diversity' and 'adaptability' becomes central to any company's operations.

These drivers of changes resulted in a fundamental change (shifting) in the operations and business environment in each company, including the shifting in managing the company, and most felt was the increasing levels of competition. In the context of the planning strategy (strategy playbook), according to Rita G. Mc Grath (2013), the competitive advantage of the company is being "transient", our competitive advantage is not sustain

anymore, and eroding more rapidly than ever before (Gary Hamel, 2007). Every company will face the strategic challenge include:

1. Companies have to develop the capability of self - improvements or self - development, the innovation capability that continually practices in their daily activities, either at the time the company experienced a critical period or when the company is developing well. A good innovation management is needed so that companies can adapt strategically and successfully compete in a frequently higher turbulence situation of business environment (Gary Hamel, 2007).
2. Making innovation as the responsibility of every employee and it made in their daily activities. Making innovations everyone's job, everyday (Gary Hamel, 2007).
3. Increasing the engagement level of employees, where each employee willing to give the best for the company.

Innovation has become a critical competency for leaders operating in a world surrounded by challenges that require new thinking and solutions. Innovation is increasingly being acknowledged as a strategic imperative for sustainability and differentiation. UN Secretary General Ban Ki-moon challenged the 2011 World Economic Forum at Davos to apply revolutionary thinking and innovation to the challenges of our time (Awie Vloka, 2012). Innovation matters, not only at the level of the individual enterprise but also increasingly as the well-spring for national economic growth. (Joe Tidd and John Bessant, 2009).

In the construction industry, the current construction firms face the challenge of leadership development (89% of respondents) and succession planning (72%). Likewise, in the next five years, leadership development and career management a major challenge faced by construction companies. Developing leadership is very critical of every manager in the construction sector (Roffley Park et al, 2014). According Roffley Park (2014) key to the success of the construction sector is innovation, and as many as 24% of construction companies in the study implementing leadership development strategy to boost innovation.

In Indonesia context, the Ministry of Public Works and Public Housing of Republic of Indonesia, revealed that the construction industry is one of the main sectors that support the structure of the national economy. Indonesia has the largest construction market potential in ASEAN with an estimated reach 60-70 percent of the total market value of ASEAN. Infrastructure development in Indonesia has become one of the priorities in the pursuit of the era of the ASEAN Economic Community. Commencing in 2014-2019, the value of Indonesian construction market is estimated to reach IDR 5,000 trillion. This potential makes Indonesia an attractive single market in the ASEAN Economic Community (AEC) (<https://m.tempo.co/read/news/2015/10/28/090713865/mayoritas-pasar-konstruksi-asean-Indonesia>). In Indonesia, the competition in construction industry is very high due to so many construction companies involve in the market. There are 61 contractors, 83 consultants and an integrated 163 (contractor and consultant) from overseas company.

Opportunities as well as challenges in infrastructure and construction industries mentioned above should be taken seriously by all Indonesia construction companies through the development and fostering its competitiveness. This challenges is become higher due to the position of Indonesia in the Global Competitiveness Index (GCI) ranked 34th in the year 2014 to 2015. More specifically, the competitiveness of Indonesia's infrastructure included in the top 72.

One of The basic strategy to enhance the competitiveness of Indonesia companies can be achieved through the development of innovation as well as improving the quality of Human Resources especially leadership of each leaders (Evan Sinar, Ph.D. et all, 2015). The successful of construction project most likely depend on the effectiveness leadership skill (Peter Kesting et all, 2015). So, the company's performance today is not only influenced by the quality of the product or service itself but also a leader's ability to anticipate and innovate in the face of uncertainty and the speed of the business changes.

In the innovation context, Indonesia ranked in level 97 from 141 countries in the world based on The Global Innovation Index 2015. This is the important sign for the Indonesian companies, including State Own Enterprises (SOE), to be more concern in managing its innovation strategy and activities. One of the main factor of the successful of innovation is leaders. Leaders are the major influencer of innovation (29a, p.3) and as the best predictor of innovation performance (McKinsey Quarterly No 1, 20018). Innovation Leadership addresses this challenge by developing the leadership and people so they can execute the strategy, process, and technology of innovation (www.kalypso.com) and innovation leadership significantly enhanced firm performance (Awie Vloka, 2012). Current literature suggests that there is a knowledge gap on which competencies might be required for successful innovation leadership. Research findings suggest that the success behaviors of innovation leaders are indeed different from the leadership behaviors that are deemed to be sufficient in conventional leadership development initiatives. New competencies are thus required for leading in the context of increasing demands for innovation in many facets of organizations and society (Awie Vloka, 2012).

II. METHOD

2.1 Source of Data

The main data sources include the questionnaire that send to Business Unit Leader (General Manager, GM) who has experienced involving in construction projects as well as has responsible for the performance of projects in his department, Division Manager (MD) who supervise the project managers, and Project Manager (PM) who has already involved in PMBOK training (Project Management Body of Knowledge) at one of the best and biggest SOEs Construction Company – member of Indonesian Contractor Association (AKI). The questionnaire used for this study of the leadership behaviors is questionnaire developed by DDI.

This study also use secondary data such as research journals, white papers, text book, mainly for literature study and research.

2.2 Research Method

This study uses a survey approach through questionnaires distributed to the study sample; 18 GM, 30 MD, and 107 PM. Data were collected through questionnaires processed using google app. The result of the questionnaire was discussed and reviewed with the talent management specialist of the company.

2.3 Literature Review

2.3.1 Innovation management

Creativity and innovation have become important parts of business strategy for many organizations (Feng-Cheng Tung & Tsu-Wei Yu, 2015) and the necessity of having a systematic approach to managing innovation is summarized well by Lewis Lehr, the former CEO of 3M: "Innovation can be a disorderly process, but it needs to be carried out in an orderly way". The rate of innovation in construction sector lags behind most other sectors. A systematic approach is needed to manage both the development of innovation and adoption of innovation in construction projects. Construction sector comprises the functions of construction project management, on-site production activities or manufacturing and distribution of construction products and components (Petro Pöyhönen, Juho-Kusti Kajander, Matti Sivunen, 2016). This study focus only in construction project management.

Oracle reported that 78% of top innovators manage innovation in a formal or structured way that aligns concept to market. They expect to grow 27% more than average innovators over the next five years (oracle, 2014). A significant positive relationship was found between innovation practices and business growth performance, meaning a consistent finding with previous research studies (Yahya Darwish Yahya Al-Ansari, 2014, p235).

2.3.1.1 Innovation – Definition

Definitions of innovation may vary in their wording, but they all stress the need to complete the development and exploitation aspects of new knowledge, not just its invention (Joe Tidd and John Bessant, 2009), it means intentionally "bringing into existence" something new that can be sustained and repeated and which has some value or utility. According to a rather broad definition by Baregheh et al. (2009: 1334), "Innovation is the multi -stage process whereby organizations transform ideas into improved products, service or processes, in order to advance, compete and differentiate themselves successfully in their marketplace (Peter Kesting, John P. Ulhøi, Lynda Jiwen Song, Hongyi Niu, 2015, p24):

Innovation is broadly understood as a subset of change (there is no innovation without change (Peter Kesting, John P. Ulhøi, Lynda Jiwen Song, Hongyi Niu, 2015, p24). Daniel Adjei defined innovation as the development of new values through solutions that meet new requirements, inarticulate needs, or old customer and market needs in value adding new ways (p103)

Tidd et. all defined innovation is more than simply coming up with good ideas. Innovation is the process of growing them into practical use, not just its invention, need to be useful in order to be considered innovative (Feng-Cheng Tung & Tsu-Wei Yu, 2015). Drucker defines innovation as a reform that expresses a new dimension of performance of the company (Bruce, 2014).

The real challenge in innovation was not invention – coming up with good ideas – but in making those inventions work technically and commercially (Joe Tidd and John Bessant, 2009). Innovation is always related to some practical "in the world" value. The important of workability also stated by oracle report that the CEOs say the #1 challenge for making innovation happen is not a lack of ideas. It's taking ideas to market quickly and in a scalable way (Oracle, 2014).

2.3.1.2 Innovation – Advantages and Benefits for Company

From the point of view of management development practices and perspective, innovation (open innovation) will answer the business challenges in the future come (Lim Ghee Soon et al, 2015). From strategic point of view, innovation is extremely or very important to companies' growth strategy (McKinsey Global Survey, 2011; Evan Sinar, Ph.D. et al, 2015), and innovation contributes to achieving competitive advantage in the future in several aspects include market share, profitability, and new product development (Urbancova H, 2013; Failte Ireland, 2013; Awie Vlok, 2012; Erlend Nybakk and Jan I.J, 2012). DDI concluded that the ability to innovate is universally admired across all industries and the innovation put in the top five challenges list for Asia, Europe and USA (DDI, 2011; McKinsey Quarterly 2008). Fostering innovation is one of the top strategical priorities for CEO over the next 3 years (KPMG International, 2016; BCG, 2015) and 77 percent of CEO said that innovation should be included in business strategy (KPMG International, 2016). This was confirmed also by Gary Hamel (2007) and Bruce Rosenstein (2015) that the company needs to build a vision on the management in the future and needs to be a pioneer in developing new management in improving business performance. Innovation has become more than just a company priority; it has become a national imperative (DDI, 2011, p5).

Innovation can drive improvements in the 10 types of innovation that the Doblin Group identified: profit model, network, structure, process, product performance, product system, service, channel, brand, and customer engagement (Doblin Group, ND) (David Magellan Horth and Jonathan Vehir, 2014, p10)

Joe Tidd and John Bessant (2009) conclude the advantages and factors of being successful innovative company, small- and medium-sized enterprises, are:

- Innovation is consistently found to be the most important characteristic associated with success, stay a head competition (Lim and Ofori, 2007), and tend to out – perform (John Kissi, 2012).
- Innovative enterprises typically achieve stronger growth or are more successful than those that do not innovate.
- Enterprises that gain market share and increasing profitability are those that are innovative, (Lim and Ofori, 2007).

2.3.1.3 Type of innovation

The trend of innovation evolved from focusing on technological aspects of innovation toward exploring other forms of innovation, such as process innovation, service innovation, and strategic innovation. Daniel Adjei concluded that innovation vary from making new tools, products or process, until developing something new that we are not able to be accomplish previously.

According to Gary (2007), the innovation consists of four types / levels:

- operational innovation: innovation that focus on business process or changes in the ways in which they are created and delivered (Joe Tidd and John Bessant, 2009), including making new tools (Daniel Adjei)
- product/service innovation: change in product and services offered by the company (Joe Tidd and John Bessant, 2009; Daniel Adjei).
- strategic innovation: changes in business model – offering a new and better experience for customers (Langdon, 2014; including in this type is position innovation (Joe Tidd and John Bessant, 2009)
- management innovation: Changes in how the company is carried out or the management process of the company such as innovation of strategic planning, project management and training and development; significantly modify or customary organizational forms to advances organizational goals.. According to Gary (2007), management innovation adds value higher, in terms of value creation and competitive defensibility, than other types of innovation.

The changes of dimension can be incremental (doing what we do better), changes that new to the company, and radical changes (new to the world) (Joe Tidd and John Bessant, 2009).

Strategic approach in building innovation excellence need to consider the type of innovation that is appropriate to the business environment and customers in the future. Seelos and Mair (2012) suggested in some circumstances, it may be more beneficial for organizations to pursue incremental improvements and refine on-going processes rather than seek completely new and innovative approaches. Radical innovation which is associated with a breakthrough in science or technology and subsequent changes in the disposition of the industry are as rare as they are unpredictable. (John Kissi, 2012).

Slaughter (1998) in (John Kissi, 2012) identified five models of innovation relevant to the construction industry based on their degree of change from current practices and their links to other components and systems. These were incremental, modular, architectural, system and radical innovation. Modular innovation can easily

be implemented within an organization as less interaction is required with other firms while architectural innovation requires changes to interacting components. (John Kissi, 2012).

Following a comprehensive review of the literature on construction innovation, Hardie and Newell (2011) grouped the internal and external factors influencing innovation into 5 key categories, namely;

- Company resources, Company resources refer to the internal capacity and capability at the disposal of the company which can be applied to support the innovation process. These include items such as technical capabilities, capital investment, time allocation and the enthusiasm of individuals such as innovation champions (Hardie and Newell, 2011).
- Client and end-user influences,
- Project based conditions, Project-based conditions refer to the inherent nature of projects which is primarily temporary but complex set of activities requiring careful planning and execution.
- Industry network and
- Regulatory climate. (John Kissi, 2012).

Managers who manage project teams in construction professional services firms need to make the necessary adjustment to their leadership behaviour to facilitate successful delivery of innovations.

2.3.1.4 Innovation Management – Definition

Peter Kesting, John P. Ulhøi, Lynda Jiwen Song, Hongyi Niu (2015, p24): Amabile et al. (1996: 1155) understand innovation management as the “successful implementation of creative ideas within an organization.” Creativity is therefore a necessary, but not sufficient, condition for innovation (Amabile et al., 2004).

Joe Tidd and John Bessant (2009) defined management innovation— specifically is the invention and implementation of a management practice, process, structure, or technique that is new to the state of the art and is intended to further organizational goals. At the more operational level we can identify management practices that cover management processes, management techniques, and organizational structures (Ala' nge et al., 1998; Guille' n, 1994) as different facets of the rules and routines by which work gets done inside organizations.

2.3.1.5 Innovation Management – The process

The challenge of innovation is the company continuously need to think about changing what they offer to the targeted market and the ways the company create and deliver that offering in order the companies can survive and grow. The strategic challenges is that innovation involves a moving target – not only is there competition amongst players in the game but also the overall context in which the game is played out keeps shifting. Another challenge, especially in the service industry, innovations are often much easier to imitate and the competitive advantages that they offer can quickly be competed away (Joe Tidd and John Bessant, 2009). As a consequence, the company shall manage the innovation process due to the process innovation plays just as important a strategic role. The Innovation process or management is a powerful source of advantage (Joe Tidd and John Bessant, 2009) and the process should consider 7 aspects of critical to an innovation framework as reported by OVO Innovation (OVO, 2012) included strategic alignment (aligning innovation to corporate strategy), culture (defining and sustaining an innovation culture), environment (identifying internal and external innovation environments), common language (creating a common innovation language, rationale and context), structure (designing and developing an innovation structure), Governance (establishing innovation governance), and motivations and measures (developing innovation measures and motivation)

The company should develop a systematic approach in managing innovation and it should be carried out in an orderly way. In the construction industry, the rate of innovation is lags behind most other sectors. A systematic approach is needed to manage both the development of innovation and adoption of innovation in construction projects (Petro Pöyhönen, Juho-Kusti Kajander, Matti Sivunen, 2016).

In general, Joe Tidd and John Bessant (2009) structured the innovation process into four steps that cover search (find the opportunities for innovations), select (choose the right ideas), implement (to make it happen in the valuable innovation) and capture (to get benefit from innovation). Oracle (2004) developed the equal four steps in managing innovation successfully that cover align (identify the right ideas in accord to customer requirements and company's goal by analyzing different investment scenario), Repeat (choose the right ideas in accord to overall product portfolio), Scale (develop the ideas into products and commercialize), Get strategic (raise company return on investment).

Julian B. et. All also developed the 4 process in managing innovation that have equal understanding with Joe Tidd et.all and oracle, but highlight the major role and influence of two groups of individuals to shape the innovation process: (1) *internal change agents*, who are the employees of the innovating company proactive in creating interest in, experimenting with, and validating the management innovation in question, and (2) *external*

change agents, who, are independent consultants, academics, and gurus proactive in creating interest in, influencing the development of, and legitimizing the effectiveness and retention of new management practices.

2.3.2 Leadership

Facing the new and most challenging business environment, the company need to develop the capacity and capability of human capital, especially its leaders. Evan (2015) stated that human capital is important but leadership is critical; especially innovation leadership (David Horth, 2014). Various innovation studies explore the influence of leader behaviors using models developed in relation to performance outcomes, that is, leader behaviors positively affect outcomes such as effectiveness and efficiency (Jeroen P.J. de Jong and Deanne N. Den Hartog (2007).

Leadership defined as the process of influencing others towards achieving some kind of desired outcome (Jeroen P.J. de Jong and Deanne N. Den Hartog, 2007). David Magellan Horth and Jonathan Vehar (2014) defined leadership as A process by which an individual or group creates direction, alignment, and commitment for their shared work. Leadership have an integrative three dimensions of leadership that covers concern for task; concern for people; and concern for change. Leadership occurs among people, involve the use of influence, and is used to attain goals. Leadership are involved with other people in the achievement of the goal. Leadership is people activity (Ricahard, 2012, p436). Peter Kesting, John P. Ulhøi, Lynda Jiwen Song, Hongyi Niu (2015) report of four generic dimensions in leadership:

- People – By its very nature, leadership is a supra -individual concept that requires a logical distinction between leaders and followers. This distinction can be explicit or implicit, temporary or persistent, but without it, leadership is pointless.
- Means – The essence of leadership is that leaders lead, i.e. they carry out certain activities in order to direct or influence followers.
- Effects – The effect of leading is to induce a certain reaction in the followers, i.e. to make them follow.
- Goals – Leadership is ultimately associated with certain goals. . In the context of this paper, goals are essential as leadership here is always directed towards the goal of innovation.

New competencies are thus required for leading in the context of increasing demands for innovation in many facets of organizations and society. Two skills that were noted as most critical are fostering employee creativity and innovation and leading across countries and cultures (Evan Sinar, Ph.D. et al, 2015).

2.3.2.1 Leadership and Innovation

Innovation and leadership are closely related. These terms are distinguishing different but intersecting dimensions of the same phenomenon. (Daniel Adjei, 2013, p104). Whether we are speaking about leadership or innovation, our concern is about accomplishing some sustainable change whether large or small, continuous or breakthrough. Leaders and innovators participate in changes, but leadership always occurring in a context of some intention to create the breakthrough - to break with the status quo. Leadership is an important factor for creativity in an organization (Kriengsak Panuwatwanich, Rodney A. Stewart and Sherif Mohamed), the initiation and implementation of innovation (Feng-Cheng Tung & Tsu-Wei Yu, 2015). More specifically, leadership style is perceived to be an important individual attribute that influences innovation (Aragón-Correa et al., 2007; Bossink, 2004).

The leader behaviors, innovation leaders, are crucial in creating and sustaining an environment to motivate and to develop innovation capability (DDI, 2011). What Leaders Need Now Is Innovation Leadership (David Horth and Dan Buchner, 2014, p2).

One of the most important roles that leaders play within organizational settings is to create the climate for innovation. (Joe Tidd and John Bessant, 2009). The creation of an innovation-friendly culture requires that leaders acquire new leadership skills to engage and lead staff. These skills include: coaching (as opposed to instructing) subordinates and facilitating collaboration across boundaries (Awie Vloka, 2012).

Each leadership at all levels of management must play a very active in integrating innovation into the corporate culture, so that innovation can be a culture in the company. Innovation should be seen as the main task of every leader. The main contribution of the leadership is to give recognition to good ideas, supporting new ideas, willing to "challenge" system in order to obtain products, processes, services, and the new system. So it can be said that the leadership was "early adopter" of an innovation (Jatin, 2013). Actively pursuing innovation requires innovation leadership (10, 29 , 2014, p3). Leaders with innovation leadership competencies shall understand the concept, behavior and management innovation in order to produce an innovative outcome (19ca, 2013, p103). The results suggest that innovation leadership significantly enhanced firm performance (Awie Vloka, 2012).

Current literature suggests that there is a knowledge gap on which competencies might be required for successful innovation leadership. There is opportunity to be observed and researched what innovation leaders do that brings about success in innovation? This question needs to be addressed because there are no indications yet that the pressure on leaders to drive innovation will decline (Awie Vloka, 2012).

Leadership will influence the level of innovation diffusion outcomes. Innovation diffusion defined as “the process by which an innovation is communicated through certain channels overtime among the members of a social system” (Yahya Darwish Yahya Al-Ansari, 2014). Utilisation of innovative design technologies and practices, on the other hand, indicates effective diffusion through successful top-down adoption and implementation of innovation. Whilst the mainstream of innovation research in the area of construction concentrates on the adopted innovation (e.g. Kale and Arditi, 2005; Peansupap and Walker, 2005), both innovation types were considered in this paper as outcome indicators of effective diffusion (Kriengsak Panuwatwanich, Rodney A. Stewart and Sherif Mohamed).

Kriengsak Panuwatwanich, Rodney A. Stewart and Sherif Mohamed reported the three perceived social psychological constructs (i.e. leadership, organisational culture, and team climate) would influence the extent of innovation diffusion outcomes which, in turn, would influence business performance.

2.3.3 Innovation Leadership

Innovation leadership appears to be a new branch of study dealing with new complexities in value realization and the role of innovation in dealing with these. The results suggest that innovation leadership significantly enhanced firm performance (Awie Vloka, 2012), and innovation leadership is crucial for long-term success of the company. (David Magellan Horth and Jonathan Vehar, 2014, p10). Innovation leadership that cultivates a way to pinpoint issues and encourage individual initiatives is a key for successful change and adaptation. Innovation leadership, by providing the necessary guidance and atmosphere, can assist and encourage these employees and managers to adjust to new changes

Understanding when to adopt innovation leadership is important for three reasons (Feng-Cheng Tung & Tsu-Wei Yu, 2015). First, leadership is one of the most important factors for producing business performance, employee creativity, and innovation. Second, the research has shown that goal orientation can influence the behavioral strategies that people choose for pursuing their own creativity and innovation goals. Third, it is important to measure innovation leadership from an integrated perspective. Innovation Leadership Management will birth indisputable innovation, invention and Creativity. (Daniel Adjei, 2013, p106). The results suggest that innovation leadership significantly enhanced firm performance (Awie Vloka, 2012). Innovation leaders’ had strong links between innovative activities and business performance (Joe Tidd and John Bessant, 2009).

2.3.3.1 Definition of Innovation Leadership

Innovation leadership is defined as a process for creating direction, alignment, and commitment needed to create and implement something new that adds value (David Magellan Horth and Jonathan Vehar, 2014). It encompasses a variety of different activities, actions, and behaviors that interact with one another to produce an innovative outcome (Daniel Adjei, 2013, p103). Abraham Carmeli, Roy Gelbard, David Gefen (2010) defined the innovation leadership that covers the encouragement of individual initiatives, clarification of individual responsibilities, provision of clear and complete performance evaluation feedback, a strong task orientation, emphasis on quality group relationships and trust in organizational members (Van de Ven & Chu, 1989). Fosters trust among its employees and creates ways of resolving conflicts is a key determinant of firm performance (Burton, Lauridsen, & Obel, 2004).

Innovation Leadership Has Two Components (David Horth and Dan Buchner (2014) that covers:

1. An innovative approach to leadership. Applying innovative thinking to leadership task. Innovative thinking is not reliant on past experience or known facts. It imagines a desired future state and figures out how to get there. It is intuitive and open to possibility. Rather than identifying right answers or wrong answers, the goal is to find a better way and explore multiple possibilities.
2. Leadership for innovation. the three tasks of leadership as setting direction, creating alignment, and building commitment are created around innovation, organizations emerge as more productive and more innovative

Innovative leadership—the use of innovative thinking and the leadership that supports it—is the key to finding what’s new, what’s better, and what’s next.

2.3.3.2 Characteristics of Innovation Leadership

Innovative leaders are concerned with vision and ethics, and they can be expected to be the catalysts for organizational innovation. They have leadership style that cover (Feng-Cheng Tung & Tsu-Wei Yu, 2015):

- catalyze organizational innovation in order to encourage employee creativity. Stimulating corporate imagination is becoming important and not many in leadership can do this or would even like to do so. This allows for new inputs, envisioning the future and generating profound insights that are not constrained by current policies and procedures (Awie Vloka, 2012).
- decisions will have a significant influence on the performance of both their enterprises and innovation
- strongly believe that they can and should be shaping the future with a shared vision
- act courageously and take risks to achieve that future successfully

Innovation leadership also have an innovative behaviors, behaviors through which employees can contribute to the innovation process, and directed towards the initiation and application (within a work role, group or organization) of new and useful ideas, processes, products or procedures. Unlike creativity, innovative behavior is intended to produce some kind of benefit. Innovative behavior has a clearer applied component since it is expected to result in innovative output.

The effective innovation leadership have sets of capabilities and competencies including innovative behaviors that cover:

David Magellan Horth and Jonathan Vehar (2014, p10) has defined three essential building blocks included Toolset, Skillset, and Mindset.

1. Toolset (David Magellan Horth and Jonathan Vehar, 2014, p10)
The collection of tools and techniques used to generate new options, implement them in the organization, communicate direction, create alignment, and cause commitment. The toolset included prototyping, brainstorming, mind mapping, ethnography, forced connections, praise first, phrasing problems as questions, and reframing the challenge.
2. Skillset (David Magellan Horth and Jonathan Vehar, 2014, p10)
A framework that allows innovation leaders to use their knowledge and abilities to accomplish their goals. More than tools and techniques, it requires facility, practice, and mastery of processes. Different level of management need different skillset for innovation.
3. Mindset (David Magellan Horth and Jonathan Vehar, 2014, p10)
The attitudes and resulting behaviors that allow the tools and skills to be effective. The mindset is the fundamental operating system of the creative thinker and distinguishes those leaders who enable creative thinking and innovation from those who shut it down. The mindset include curiosity, paying attention, customer centric, affirmative judgement.
4. Competencies.
Innovation Leadership Competencies (Awie Vloka, 2012) that cover:
 - a. Strategist: ability to develop and communicate a compelling vision, to provide thought leadership (expressing thinking that is original and different), to shape collective thinking, to facilitate high-impact decision-making to lead by example, and demonstrates exceptional leadership skills/abilities;
 - b. Capability builder: ability to assess and manage across the innovation value chain, to facilitate an innovation-enhancing environment, to facilitate improvement and learning/development, to facilitate knowledge management, to develop and maintain high-performance teams, and to build and maintain high-impact networks;
 - c. Matchmaker: understand the contextual environment, apply entrepreneurial thinking, clear and compelling communicator, recognized influencer in the external environment;
 - d. Achiever: ability to motivate others to superior performance, to build a high-performance culture, to manage individual and group performance, and to achieve results.
5. Innovator behaviors.
Behaviors that crucial in creating and sustaining of innovation that covers (DDI, 2011):
 - a. Inspire Curiosity: encourage employees to expand their understanding of both internal and external stakeholders. Kriengsak() et al give another example behavior in the curiosity is to create and communicate exciting visions of the future and Engage members and encourage them to share resource throughout the entire work processes;
 - b. Challenge Current Perspective: help and support employees in viewing the problem and opportunities differently and envision alternative possibilities, as well as innovative approaches (Kriengsak, ;Abraham, 2010) ;
 - c. Create Freedom: empower experimentation, risk taking, learning from mistakes, and valuing effort over perfection. Kriengsak() et al give another example behavior in creating freedom such as Encourage members to develop their own ideas and support them and Spend time mentoring members; creating an environment in which quality relationships are valued and fostering trust (Abraham, 2010);

- d. Drive Discipline: help and support employees identify execution implication early and align efforts to ensure successful implementation of innovative solutions; making individual responsibilities and performance evaluation systems clear and explicit (Abraham, 2010).

Kesting, Ulhoi, Song, Niu (2015) concluded that no one leadership style that meets all the requirements for the competence of the leadership of innovation. From the matrix developed by Kesting (2015), it can be concluded that the competence and behavior of transformational leadership style has the highest conformance with innovation leadership competencies. Each stage of innovation process require different leadership style to improve the effectiveness of innovation management and the effectiveness of innovation outcomes.

2.3.4 The Objective of The Study

The study was implemented in one the best and the biggest Indonesia SOE Construction to understand the applicability of innovation leadership in construction sector included:

- Understand current condition of the innovation activities in the construction sector in Indonesia;
- Understand the applicability of innovation leadership behavior;
- Understand the influence of leadership style into innovation management, innovation performance (outcomes);
- Understand the influence of innovation management to innovation performance;
- Understand innovation performance to project performance.

III. DISCUSSION

3.1 Survey Result

3.1.1 The Respondents

Within 3 weeks of the end of December 2016 and first week of January 2017; the respondents who responding the questionnaire were 6 of GM, 9 of MD, and 53 of PM; totally there were 67 respondent from 145 persons (46.9 %). 3 persons of section head at project level and 1 bureau manager was computed into PM level. So the profile of the respondents are 77.6% are Project Manager Position, 13.4% are Manager Division and 9% are General Manager. The age category of majority of respondents, which is 89.6%, are in the age of 36-52 year; and the rest are 6% in the age of 22-35 and 4.5% in the age above 52. It shows that 59.7% respondents are undergraduate degree, 38.8% respondents are postgraduate degree and 1.5% respondents are diploma degree.

3.1.2 Current Innovation Practices in The Respondents' departments and projects.

Current innovation practices in the respondents' unit work (department and construction projects) can be concluded as:

- Innovation management that practiced in their projects positively has significant impact to innovation outcomes. There is only one person who strongly disagree with this statement.
- Within the last 3 years, the innovation practices in order to achieve projects goals is increase.
- Innovation has been becoming top 3 priorities in achieving projects' goals.
- The most influence to the performance of innovation at project level is project manager (76% responses) and the Board of Director (9% responses). And the source of innovation ideas is come from employees (88% responses) and owner (9% responses).
- Mostly of the respondents agree that there are reward from the company (at the corporate level, the department level and project level) for the performance of innovation. There are only 22% who answer no reward for innovation achievement.
- The innovation type proposed and implemented in their projects are innovation in construction methods (56.7%), business model (16.4%), and management system (16.4%).
- Only 32.8% respondents who know that the company already monitored the innovation process in order to achieve projects' goals.
- The innovation phase that most effective in achieving projects' goals are in the implementation phase and in the development of projects strategy.
- The key success factor as well as the challenges for successful in innovation in order to achieve projects' goals are engineering capability, risk management capability and commitment from senior management.

From the result of the survey we can conclude that the innovation practices of the construction company at the project level is already executed. The management of the company already succeed in developing innovation

culture due to the innovation already put as a top three priority by the respondents. The practices is for achieving and enhancing the projects' goals not only in the monetary terms but also in the technical terms in accordance with the project requirements. The project managers have a significant for the performance of the projects.

In this construction company, the type of innovation is already achieved what Gary (2007) defined, except at the project level there are a little result of management innovation. So it need to further study through the respondents in the corporate levels.

In order to enhance the significance of the innovation outcomes, the construction company should consider in developing and communicating the appreciation and rewards for the individual and teams who have contribution in innovation practices and outcomes. The construction company should strengthen the development in key capabilities and competency such as engineering and construction risk management, mitigation and analysis.

3.1.3 Leadership Behaviors

The majority of respondent agree that innovative leadership behaviour affects innovation performance of construction project, only small percentage the respondents not agree to implement some behaviours that not suitable with the requirements of the project. And from the open question to the respondents, can be conclude that they agree (60%) leadership capability relate positively with project performance and will effect to the willingness of employee to innovate. Most of the respondents (27%) also said that the openness of the project manager (building trust and the quality of relationship) with the employee will have positive impact to the performance of the projects.

3.1.3.1 Inspiring Curiosity

Inspiring Curiosity have significantly impact toward innovation performance, almost 97% of respondent agree and strongly agree that behaviours of Inspiring Curiosity have a positive impact to innovation. There are 3% respondent who not agree with 2 (two) behaviour in enhancing innovation performance which are challenge subordinate to use a different perspective in answering assumptions and give their subordinates an opportunity to interact and observe suppliers and other companies that have similar business industry.

3.1.3.2 Challenging Current Perspectives

Challenging Current Perspectives are significantly impact toward innovation. None of respondents said disagree about Challenging Current Perspective are impacted toward innovation performance. Only 6.75% of respondents answer quite agree to this behaviours.

3.1.3.3 Creating Freedom

Creating Freedom Perspectives are quite impact toward innovation performance due to a lot of respondents who were not agree with specific behaviour of creating freedom.

- a. 40 respondents disagree to the behaviour of supporting subordinate decision although not based on in-depth data and analysis, and
- b. 8 people respondents disagree to the behaviour of encourage subordinates to think of new ideas independently without the consent of the other party, and
- c. 4 respondents disagree to the behaviour of give my subordinates an opportunity to choose freely how to achieve their goals

In the Construction industry, specifically in the construction projects, all the activity and practice shall confirm and fulfil the contractual requirements, technical requirements such as standard and code as well as regulatory requirements. So every changes shall consider these requirements. The project manager and the management should make assure that all changes is confirm and fulfil the requirements.

3.1.3.4 Driving Discipline

Driving Discipline Perspectives have significant impact toward innovation. There is only 1 respondent who disagree with the behaviour of give a special time for subordinates to generate new ideas beyond their regular activities

When the respondents ask to give comment and opinion on leadership style, it is conclude that most of respondent respond the behaviours that meet with the innovation leadership competencies (Awie Vloka, 2012). The respons listed in the table – 1.

The “new” aspects of behaviour that give attention from the respondents is the risk management, the commercial understanding and capability, including the digital mindset. The communication of company vision is not stated specifically in the survey due to the projects manager most give attention to projects’ goals that already stated in the contracts also in their key performance indicator determined by the management of the company. So it can be assume that the project managers give more attention on communicating the projects’ goals rather than vision of the company. It will need further study.

| Innovation Leadership Competencies | WIKA’s Behavior |
|--|--|
| Strategist | |
| 1. Develop and communicate a compelling vision | -influence others |
| 2. Provide thought leadership (expressing thinking that is original and different) | |
| 3. Ability to shape collective thinking | -democracy -listening |
| 4. Ability to facilitate high-impact decision-making | -providing a framework for decision making & action |
| 5. Ability to lead by example | - Role Model |
| 6. Demonstrates exceptional leadership skills/abilities | -trust -closeness relationship -commitment -discipline |
| Capability builder | |
| 7. Ability to assess and manage across the innovation value chain | -balancing task |
| 8. Facilitate an innovation-enhancing environment | -shaping organizational environment -freedom to express -giving opportunity to express the ideas |
| 9. Facilitate improvement, learning/development | -Empowering -guiding, mentoring |
| 10. Facilitate knowledge management | |
| 11. Develop and maintain high-performance teams | -Controlling, monitoring |
| 12. Build and maintain high-impact networks | -delegating -openness in relationship |
| Matchmaker | |
| 13. Understand the contextual environment | -culture awareness -Dynamic |
| 14. Apply entrepreneurial thinking | -Open minded |
| 15. Clear and compelling communicator | -influence others -two way communication |
| 16. Recognized influencer in the external environment | |
| Achiever | |
| 17. Ability to motivate others to superior performance | -Challenges -supporting -influence others |
| 18. Build a high-performance culture | -provide space to discuss target |
| 19. Manage individual and group performance | - Controlling, monitoring - Care |
| 20. Ability to achieve results | -contribution |
| Project Management | |
| | -Take risk & responsible -Digital mindset |

Table-1. The Innovation Leadership Capabilities and Respond from the survey’s respondents.

3.1.4 The influence of Leadership Style to Innovation Management, Innovation Outcomes, Project Performance.

The influence of Leadership Style to Innovation Management, Innovation Outcomes, Project Performance can be concluded as follow:

- Leadership Style have significant influence to Innovation Management at project level. 99% respondents strongly agree and agree that leadership style, which is reflected their style, to innovation management.

- Leadership Style have significant influence to Innovation outcomes at project level. 100% respondents strongly agree and agree that leadership style, which is reflected their style, to innovation outcomes.
- Leadership Style have significant influence to project performance (100% respondents strongly agree and agree).

3.1.5 The Influence of Innovation Management to Innovation Outcome

Innovation Management have significant impact to Innovation Outcome at project level. Most of respondents agree that Innovation management have direct impact to Innovation Outcome while only 1.5% of this respondents disagree.

3.1.6 The influence of Innovation Outcome to Project Performance

Innovation Outcome have significant impact to Project Performance. Overall, we can see clear that 97% respondent agree that Innovation Outcome have direct impact to Project Performance. There are w only 2 Respondent (3%) disagree about this statement (1.5% strongly disagree and 1.5% disagree).

IV. CONCLUSSION

It is conclude that, despite its limited scale of respondents, the significance of the study relate to the following contribution:

- The role of innovation leadership and innovation management to innovation outcomes and performance of the construction projects. The role of innovation management to the innovation outcomes, and innovation outcomes have positive influence to the performance of the projects.
- The comparation of leadership behaviors between the scholarly result and the actual behaviors in the project site can be served as assessment for leadership development purposes.
- The suitability of the innovative behavior in the construction projects, except for some behaviors of freedom perspectives, due to all the innovation practices and changes shall consider and comply with the requirements from the project's owner as well as with related technical and non - technical requirements of the projects.
- The result of the study give space for further research with similar companies, in term of size and similarity of the industry, even though the limitation of this study caused by relatively small sample in the one SOE construction company.
- All the type of innovation that already resumed by Gary (2007) defined, can be implemented in the construction sector / industry. Further study should be intensified not only in the project sites but also in the management side at the company offices, in the corporate levels.

Predicting Data-Driven Power Shifts Through Decision Maker Cognitive Styles

Andreas W. Djwandono

Predicting Data-Driven Power Shifts Through Decision Maker Cognitive Styles

Andreas W. Djiwandono

Bina Nusantara University, Jakarta, Indonesia, andreas.djiwandono@binus.ac.id

ABSTRACT

Power shifts have been observed in firms that successfully adopt data-driven decision-making. These power shifts see influence and authority moving away from intuition-based decision makers and moving towards data-driven decision makers. Data-driven decision makers are individuals in the firm that embrace the use of data in their analyses, recommendations and decisions. Special focus has been put on decision makers in firms, as decision makers in both tactical and strategic scenarios determine the strategy and implementation of strategy, which heavily influences the firm performance. This study revisits the latest research explaining cognitive styles and the correlation between business analytics, data-driven organization culture and data-driven decision-making. It also offers a framework for empirical research to measure the impact of decision maker's cognitive styles towards data-driven decision-making, and predict the power shift based on the decision maker's cognitive style. This framework will offer a research agenda for academia, and practical use for operations management in preparing firms to fully embrace the potential of data analytics.

Key Words: *data-driven, power shift, decision-making, cognitive style*

1. INTRODUCTION

Every 60 seconds there is more than 1,800 TB of data being created in the world. This data is coming from all the servers, applications, devices and sensors used in business and by consumers, and stored on a device, server or in the cloud. It is believed we create so much data, that 90% of all the data available in the world was only made in the past 2 years. Lycett (2013) describes big data as data characterised by the three Vs: volume, velocity, variety. Big Data (with capital letters) is used as the term for the latest business analytics methods and technologies that has taken business studies by storm by making it technically possible and economically feasible to analyse big data. With the promise of Big Data for any business in the future, data-driven decision making will take a bigger role in both strategic and tactical decision making to fully take on the opportunities Big Data offers.

Previous studies have shown the relationships between business analytics, data-driven organization culture, data-driven decision-making, and the impact towards more efficient decision making and firm performance. The discussion of intuition in decision making saw rapid growth in the 1980s (Agor, 1986) and cognitive styles saw an increased interest from management decision making in the 1990s (Allinson and Hayes, 1996). However, both intuition and cognitive styles have not yet been incorporated in the data-driven decision making literature. This paper makes an attempt to fill that gap to study the impact of decision maker's cognitive style towards the way they make decisions, and see if the cognitive decision style can be used as a tool to predict a power swing in the organization's decision making process. The practical use of this research finding would be to measure the propensity of decision making shifts in an organization which would prepare the organisation to make more effective decisions in the future.

2. LITERATURE REVIEW

Previous studies have empirically proven causal relationships between antecedents of data-driven decision making such as the study by Năstase and Stoica (2011) that concluded analytics as the main tool in business decision making, Davenport (2006) laid out a series of case studies showing companies that have successfully built a competitive advantage from analytics and making decisions based on data. Kiron et.al (2012) saw an advanced adoption of analytics form a data-driven organization culture where analytical innovators were more open to new ideas and had a data-driving organization structure such as dedicated data analyst teams. Research by Cao et al (2015) includes 3 similar variables: Business Analytics, Data-Driven Organization Culture, and Data Driven Decision Making. Brynjolfsson, et al (2011) studied how big data and

business analytics offer improvements in firm performance, and research by Lavalley et.al. (2011) shows how top performing companies are making more data-driven decisions than non top performing companies. Many studies cover the impact of information technology systems, or its business impacts such as decision making to firm performance. As mentioned earlier, the focus of this paper will be to fill the gap in the literature and will focus on a power shift in decision making and the decision maker's cognitive style.

2.1 The Decision Making Power Shift

Kiron et al (2012) identified a power shift happening in organizations as an impact of business analytics. They categorized companies into 5 levels depending on how sophisticated the organizations were in conducting data analytics. They found that “analytical innovators” (organizations at the highest level of analytics sophistication) have seen a power shift in their organization as the result of advanced use of analytics. This power shift is offered as the key construct in the research model used in this study. As Figure 1 shows below, the proposed construct is formed by how much decision making is being made based on intuition, and how much is made based on data analysis (data-driven decision making).

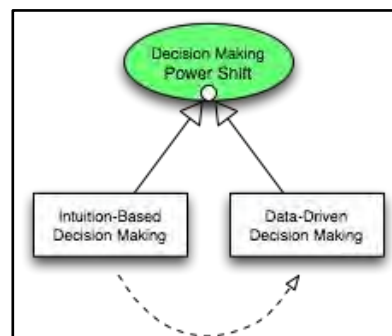

Figure 1: The Key Construct: The Analytics-Driven Decision-Making Power Shift

McAfee and Brynjolfsson (2012) argue that analytics do not only influence how decisions are made, but also who gets to make those decisions. They found that when data is scarce, then most decisions are made by the HiPPO (Highest Paid Person's Opinion). These hippos are formed based on intuition which they define as the style of inference based on experience and internalised knowledge. Although the study of intuition mainly started in Psychology (Akinci and Sadler-Smith, 2012), intuition has also been a part of the decision making theory in management studies since as early as 1938. Barnard (1938) brought intuition into management scholarship by declaring that mental processes fall into two distinct categories: “non-logical” and “logical”. He argued that most executives make many decisions based on intuitive responses as they are faced with a limited and pressing amount of time, unlike scientists who have the luxury of time and laboratory models to take a fully analytical approach to decision making. Unfortunately, as Barnard wrote his seminal book as a practitioner with amazing insight and introspection, his work was not based on the normal scientific methods. However, the bounded rationality of Simon (1947) opened the door to scientifically analysing intuition's role in management, as it clearly offered that managers satisfied due to bounded rationality, and therefore there would need to be another force that helps managers decide based on limited knowledge and processing capabilities. Akinci and Sadler-Smith (2012) identified further work by Herbert Simon that described intuition as recognition of previous analyses based on previous information and experiences which has been coded into tacit habit and knowledge and stored in long term memory. This definition would later be confirmed by pattern recognition and unconscious thought theory in psychology scholarship.

Despite seeing intuition going through many more developments in other basic sciences, it only emerged again in management through Mintzberg (1976) who was inspired by advances in psycho-biology that identified the separate basic functions of the left and right hemispheres of the brain. Mintzberg took this new knowledge as building blocks for his view on how left brain vs right brain would translate into logical / analytical vs creative / intuitive skills in managerial actions. As decision making is one of the most important activities in management Mintzberg (1976) offered a view on how intuition, driven by the right brain, played a big role in decision making. Especially in decision making scenarios which could not be explicitly explained by executives in his research. Example of these scenarios would be decision making under pressure such as with limited decision making time, and decision making in a dynamic environment that has interruptions, delays and also limited time. It would be in these types of scenarios that intuition and experience take over rational analytics. However Mintzberg (1976) also saw a gap in management literature in explaining certain key strategic decision making processes. From the 7 routines in strategic decision making (recognition, diagnosis, search, design, screening, evaluation/choice, and authorization), most management literature covered the evaluation step intensively, but lacked explanation in the diagnosis and design routines; areas where again Mintzberg believes has a lot of

influence from intuition and experience. These notions of intuition being used was later confirmed by other researchers who found intuition being used more than rational in certain scenarios. Isenberg (1984) found that intuition was used more by higher level managers, especially for sensing problems, performing well-learned behaviors, integrating and synthesizing data, checking results of rational analysis, and by-passing in depth analysis to make decisions. Agor (1986) intuition was used best in scenarios that involved uncertainty, incomplete information and time pressure.

It was only at the turn of the millennium that Akinici and Sadler-Smith (2012) saw a more scientific approach to the study of intuition in management that resulted in much more empirical work. Of special notice would be three studies they found to be related to decision making: Khatri and Ng (2000), Hough and Ogilvie (2005), and Elbanna and Child (2007) which covered topics such as the use of intuition in strategic decision making, strategic decision preferences, and strategic decision effectiveness.

2.2 Decision Maker's Cognitive Style

Cognitive style is defined as one's personalized way of information processing. Tools to measure cognition behavior between rational and intuition that were previously developed before the turn of the century, such as the Myers-Briggs Type Indicator developed in 1944 by mother and daughter Katharine Cook Briggs and Isabel Briggs Myers who developed it as a tool to help place people in suitable jobs during and after the war. There was also the Cognitive Style Index which was developed as a measurement of intuition-based analysis for organizational research by Allinson and Hayes (1996).

Mintzberg's (1976) premise on the polarisation of rational (data and analysis-driven) and intuitive-driven decision making would stay in the management scholarship as a continuous research agenda. Ahmed et al (2012) showed that personality types and cognitive styles of decision makers influenced their decision making style. Most important for this study is that Ahmed et al (2012) found that their research subjects that had a "systematic" cognitive style preferred "analytical" decision making styles which relate to data-driven decision making, while subjects with an "intuitive" personality styles tend to adapt to a "conceptual" decision making style.

3. METHOD

Based on the research background and literature review conducted, a simple research model was constructed for the study as seen in Figure 2 below. The operationalisation of the variables was done mostly using existing academic research papers with novelty offered in the power shift measured as a unique variable, and the inclusion of decision maker's cognitive style used to see how personal cognition styles of decision makers would impact overall decision making shifts in the organisation. The main hypotheses of the study is that a decision maker's cognitive style that is more rational than intuitive has a positive direct influence to a shift in decision making towards more data-driven decision making.

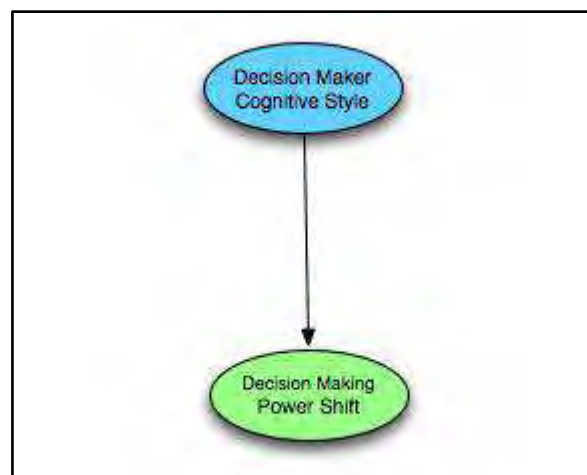

Figure 2: High Level Research Model

3.1 Operationalization of Variables

The first draft of dimensions and indicators are shown in Figure 3 below. The cognitive style variable is formed by intuitive and systematic style dimensions, which in turn are reflected by the respondent answers to the Cognitive Style Index questionnaire, a 38-item measure that has a true/false response mode (true coded as “1” and false coded as “0”). The Cognitive Style Index was developed as a measurement of intuition-based analysis for organizational research by Allinson and Hayes (1996). The reason in choosing the Cognitive Style Index is based on the literature review done by Allinson and Hayes (1996) that critically examined a number of other questionnaire measures. Measures such as the Group Embedded Figures Test, Kolb’s Learning Style Inventory, the Kirton Adaption-Innovation Inventory each had its own shortcomings which would not fit a large scale organization study on cognitive style. Meanwhile, more recent measures such as the Cognitive Style Instrument, BrainMap measure, Herrmann’s Brain Dominance Instrument and the Benziger Thinking Styles Assessment had not been evaluated enough in independent publications. A more popular measurement, the Myers-Briggs Type Indicator (MBTI) uses a questionnaire which is too long as it employs between 94 to 166 items and may take too long for a management survey.

The power shift variable is a formative variable formed by a combination of intuition-based decision making and data-driven decision making. From their literature review, Calabretta, Gemser, and Wijnberg (2016) came up with a list of decision making practices that could be used to identify the type of decision making being intuitive or rational. They regarded decision making as intuitive when it showed one or more of the following acts: “The act of making a decision is prevalently non-conscious (Dane & Pratt, 2007), the act of making a decision happens rapidly, especially when compared with rational thinking (Dane & Pratt, 2007; Gore & Sadler-Smith, 2011), the act of making a decision involves the use of action scripts: the recognition of cues triggers action scripts held in long-term memory, which then leads to action, namely the implementation of intuition (Gore & Sadler-Smith, 2011), the act of making a decision uses mental simulation, in that the decision maker mentally simulates the deployment of a given script before acting (Gore & Sadler-Smith, 2011; Kahneman et al., 1982), the act of making a decision relies on holistic associations (also called pattern recognition and matching): stimuli are matched with some deeply held (non-conscious) categorizations and patterns based on perception of coherence (Dane & Pratt, 2007; Gore & Sadler-Smith, 2011), the act of making a decision relies on feelings and emotions rather than logic; the process of intuiting is generally accompanied by affect or emotions, like excitement or harmony (Dane & Pratt, 2007).” (Calabretta et al., 2016, p.8)

Furthermore, Calabretta et al. (2016) regarded decision making as rational when it showed one or more of the following: “the act of making a decision involves collecting (as much as possible) relevant information (Dean & Sharfman, 1996), the act of making a decision relies on formal and systematic analysis of the available information (Dean & Sharfman, 1996; Langley, 1989), the act of making a decision aims at comprehensiveness in the collected information and formal analysis (Fredrickson, 1984; Papadakis, Lioukas, & Chambers, 1998), the act of making a decision follows a step-by-step process (Dean & Sharfman, 1996), the act of making a decision relies upon logic: choices are based on rules and cause-effect relationships (Evans, 2003; Hodgkinson et al., 2009), the act of making a decision involves cognitive capacity intentionality: the decision maker intentionally commits time and cognitive capacity to making the choice (Dean & Sharfman, 1996).” (Calabretta et al., 2016, p.9)

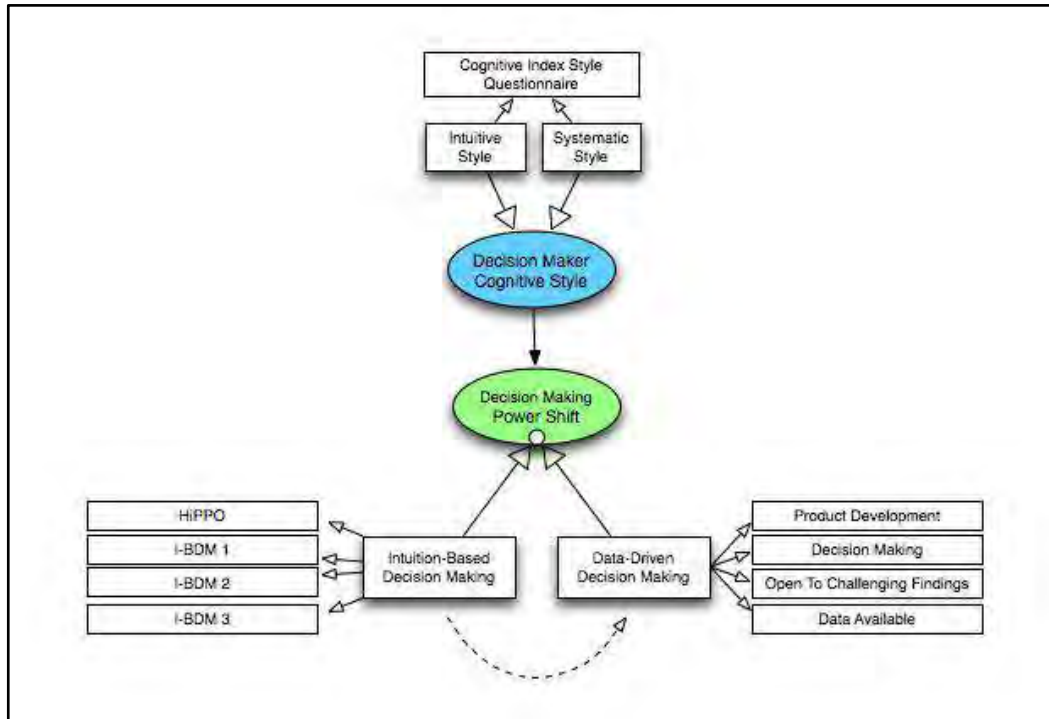

Figure 3: Operationalization of Variables

However, other studies offered tested quantitative empirical measures for such as Brynjolfsson and Kim (2011) and Cao et al (2015) who both measured data driven decision making in their studies. The level of data-driven decision making is measured by means of perception of data-driven decision making by decision making respondents. It is measured on a 1-5 Likert scale to agree or disagree on the use of data insights in product development, the dependency towards data in decision making, the openness to new ideas based on data, and the availability of data for decision making in general decision making. Intuition-based decision making will be measured with 3 questions that measure the HiPPO approach in decision making that tests if HiPPO does prevail in decision making, if data is used to reinforce the decisions. Khatri and Ng (2010) measured intuitive synthesis using 3 more questions that measured the use of judgement, experience and gut-feeling in decision making, and measured the impact towards financial performance.

3.2 The Research Design

A quantitative analysis utilising will test the hypotheses and study the relationship between the two variables in the research model developed in this study (Hair, Black, Babin, Anderson, 2014). PLS-SEM is recommended for research situations where theory is less developed and the objective is prediction or to explain relationships among a set of constructs in research where the phenomenon under study is new (Cao et.al, 2015 p. 10)

3.2 Data Sources

Survey respondent acquisition will leverage the author's working networks in idEA, ATSI, MMA, ASPI, AKKI, and ADEI. Survey respondents will be taken from 3 different decision making positions: Top Level management, Marketing, and Information Management. Example of job titles of respondents will be CEOs, CMOs, CIOs and Sales & Marketing promotion or BI/Data Analytics leaders.

3.3 Data Collection

Respondents will be sent emails with a URL to an online questionnaire. After the first deadline, it will be followed up by sending private messages to respondents with the URL. After the second deadline passes, a hard copy questionnaire will be sent. This will then be followed up at the last deadline by sending surveyors to meet the respondents personally.

4. CONCLUSION

There may be other challenges that have not been covered which may appear due to the focus on cognitive styles. One would be that switching cognitive styles is a challenging feat for individuals, as "a strong

preference developed for intuition or rationality is a result of the decision maker's experiences and inclinations (Hodgkinson et al., 2009; Salas et al., 2010).” (Calabretta, Gemser, and Wijnberg, 2016, p.4). One solution to this may be to create cognitive diversity in a decision making group. Or utilize cognitive style index studies during recruitment or internal movement of new decision makers. Nevertheless, as described in this paper, the result of the studies should allow a better understanding on how decision makers may adopt more data-driven decision making based on their cognitive style. It will then be combined with other studies and research plans to study the impact towards the firm performance, as would be the ultimate goal of a management study.

Open Career System and the Opportunity for Female Civil Service to Occupy the High Leader Position in Local Bureaucracy in Indonesia

Eunike Prapti Lestari Krissetyanti
Universitas Indonesia, Indonesia

ABSTRACT

The number of female civil service in Indonesia's bureaucracy workforce had increased for recent years, but only few female civil services who have structural positions especially in high leader position. Women under representation in high leader position in bureaucracy showed that there are some problems related to empowering against women civil service. Female civil service career developments are always lags behind male civil service. As an effort to reform the management of public apparatus, organization of bureaucracy implement the open career system. Open career system emphasize on the competition and competence of public apparatus (civil service) in promotion and filling of the position, especially in high leader position. The policy expands opportunities for female civil service to develop their career to the top position. It means that in career development context, female civil services are positioned equal with male civil service. This focus of this paper was the impact of the open career system on female civil service career development in high leader position in local government. The locus of this research is the Provincial Government of Daerah Istimewa Yogyakarta. This study was conducted using qualitative method. Data collection based on in-deep-interview. Interviews were conducted against female civil service who held structural position in the provincial government of DIY. In-deep-interview also conducted toward key person related to promotion system and selection in the Provincial Government of DIY, namely Local Civil Service Agency of the Province of DIY and National Civil Service Agency. The data of this study also based on secondary data that support the argument of this study. The finding of this study showed that female civil service in structural position perceived that open career system policy in promotion system motivated them to develop their career. That's because they perceived that their career development not only determined by order of rank that made by organization, but depending on their competence. Nevertheless they perceive that they naturally have limitations, that sometimes taken into consideration in the development of their careers. Their limitations often related with work-family balance. Therefore female civil service needs support from their family and organization where they affiliate, to eliminate artificial barriers to upward mobility. The practical implications of this study are that public organization should take policy or strategy to support female civil service to achieve upper position in bureaucracy.

Keywords: *open career system, career development, female civil service, glass ceiling*

INTRODUCTION

Open career system was adopted in public organization since the need of capable and competence workforce. In contrast to closed career system that based on seniorities, open career system prioritizes competency and competition in filling positions. In Indonesia, since the implementation of Law no. 5 of 2014, open selection system has been became basic procedure for filling the structural positions in bureaucracy, especially at the high leader position (upper echelon). According to Law No. 5 of 2014 (section 108, 109 and 110), the filling for high leader positions in central and regional government office be open and competitive among the civil service by taking into account the requirements of competency, qualifications, rank, education and training, track records office, and integrity as well as the requirements of other positions in accordance with the provisions of the legislation. Therefore, the Ministry of Empowerment of State Apparatus and Bureaucratic Reform formulate the Regulation of the Minister of Empowerment of State Apparatus and Bureaucratic Reform (PERMENPAN-RB) No. 13 of 2014 about the Procedure of Open System for Filling the High Leader Position in Government Agencies. This regulation shall be implemented since 2014.

Selection for filling the high leader position that conducted openly, provides the wider opportunities for all civil service who meet the requirements (including from the private sectors), to apply the high leader position. It means that it gives a wider opportunity for female civil servants to be able to reach the high leadership positions (upper echelon). That because for filling the position is not based on order of rank and appointment by their boss anymore, but rather based on merit system, that regardless some individual characteristic, include gender. This is in accordance with the Law no. 5 of 2014, section 72 that state "promotion

of civil service is conducted by comparing the objective of competence, qualifications and requirements needed by the office, the assessment of job performance, leadership, teamwork, creativity, and consideration of the assessment team performance of civil servants in Government Agencies, regardless of gender, ethnicity, religion, race and class”.

The need to support women to be able to achieve high leader position due the representation of women in high leaders position in Indonesia is remains low. Statistics show that although the number of women civil service almost equal to men civil service (Table 1), women representation in high leader position (echelon I and II) in the is only 17.42 percent from all of official in high leader position. There are 314,879 civil services that occupy structural job. Of that number, 70.24 percent are man civil service and 29.76 are women civil service (Table 2).

Table 1. The number of civil service in Indonesia by gender 2007 s.d. 2015

| Year | Men | | Women | | Total |
|------|-----------|---------|-----------|---------|-----------|
| | Amount | Percent | Amount | Percent | |
| 2007 | 2.292.555 | 56,00 % | 1.774.646 | 44,00 % | 4.067.201 |
| 2008 | 2.257.408 | 55,28 % | 1.825.952 | 44,72 % | 4.083.360 |
| 2009 | 2.455.269 | 54,27 % | 2.068.936 | 45,73 % | 4.524.205 |
| 2010 | 2.460.283 | 53,51 % | 2.137.817 | 46,49 % | 4.598.100 |
| 2011 | 2.403.178 | 52,58 % | 2.167.640 | 47,42 % | 4.570.818 |
| 2012 | 2.332.549 | 52,21 % | 2.135.433 | 47,79 % | 4.467.982 |
| 2013 | 2.260.608 | 51,82 % | 2.102.197 | 48,18 % | 4.362.805 |
| 2014 | 2.288.631 | 51,37 % | 2.166.672 | 48,63 % | 4.455.303 |
| 2015 | 2.319.334 | 51,11 % | 2.218.820 | 48,89 % | 4.538.154 |

Table 2. The Number of Structural Job in Indonesia’s bureaucracy (2015)

| Structural Job | Men | | Women | | Total | Percent |
|----------------|---------|---------|---------|---------|---------|---------|
| | Amount | Percent | Amount | Percent | | |
| Echelon I | 1.344 | 0,30 % | 497 | 0,11 % | 1.841 | 0,42 % |
| Echelon II | 23.913 | 5,39 % | 4.831 | 1,09 % | 28.744 | 6,48 % |
| Echelon III | 77.542 | 17,49 % | 20.275 | 4,57 % | 97.817 | 22,07 % |
| Echelon IV | 208.582 | 47,05 % | 106.297 | 23,98 % | 314.879 | 71,03 % |
| Total | 311.381 | 70,24 % | 131.900 | 29,76 % | 443.281 | 100 % |

(National Civil Service Agency/NCSA, 2016)

Women under representation in government workforce also occurred in several countries. One of them is Korea. According to the data from the Ministry of Public Administration and Security (MOPAS) of Korea, in 2011 only 3.2 percent of senior executive ranks in the Korean Government were occupied by women (Choi & Park, 2014). Korea had introduced the Open Selection System (OPS) for Grade 1-3 position, in 1999 (Namkoong, 2003). In the US, although almost half of employment in the US government’s administration were women, but career development of women to reach the top level or executive level, are still lagging behind men (Ballard, 2015; D’Agustino & Levine, 2010). In Canada, according to data from the Public Service Human Resource Management Agency of Canada in 2007, the percentage of women working in the Canadian Federal Public Service (CFPs) is about 53.5 percent of the total number of employees, which means that the number of women employees out number of men employees. However, only 38.8 per cent of women employees occupying executive level positions (Gray, 2011).

Women representation on government workforce become an important issue due the gender mainstreaming that became one of national development planning program, that one of those focus are women empowerment. Women representation in high leader position is one form of women empowerment in government. This paper focused on the impact of the open career system that be introduced by the Law no. 5 of 2014 and Permenpan-RB no.13 of 2014 on female civil service career development in high leader position in local government.

METHOD

a. Research Method and Data Collection

Qualitative method is used in this study, because author need in deep information about career development and implementation of open selection system. In gathering the information about barriers that inhibit female civil service to advance their structural career, in-depth interview was conducted against eight female civil services that consisting echelon II, III and IV. Information about these barriers based on perception of the participant, except individual factors. Information about the implementation of open selection is gathered using interviews that conducted against stakeholder of Local Civil Service Agency and National Civil Service Agency. Documentation is also conducted to gather the secondary data in order to complete the primary data. Interviews were conducted using interview guide that contains primary questions, which could be developed at the time of interview. All primary and secondary data were be analyzed using open coding analysis.

b. Theoretical Review

The reviews of theories and concepts aim to provide limits concepts that be studied (not confirmed the theories), due the purpose of this study to explore the open career system and career development of female civil service.

Open career system is identical to the selection and promotion system that is based on a merit system, due the aim to get the capable and competence candidates. Open career system is opposite the closed career system that more based on seniority to get some candidates to occupy the vacant position. As open career system, civil servants who meet the requirements, have an equal opportunity to occupy a position through the selection and promotion.

According to the Todd and Bird's study, an equitable promotion process is essential if all employees within an organization are to have an equal opportunity to progress in their career (Todd and Bird, 2000). When based on the merit system, another aspect is no longer an important issue, such as gender issues. This is because all the results of the selection will be justified as merit. Considering the gender differences, it is seen to make injustice to women. One form of gender differences is that women's careers are different from men's careers (O'Neil and Bilimoria, 2005). Promotion outcomes have always been described as being based on 'merit'. Therefore, by implication, women have been less meritorious in their performance than male employee (Todd and Bird, 2000, p. 3). Most of organizations include public organization now define merit in detail criteria (Todd and Bird, 2000). The criteria tend to same to all civil services. That is it is indeed the merit principle, but to certain criteria could be inclined unfair for one group.

Women career development is different with men, due to the characteristics of traditional career development. Career development is traditionally a work-related experience, in a given period, and the introduction of a progressive role and responsibility in the work. Indeed, women's career development does not simply lag behind that of men but may proceed in a completely different manner (Mavin, 2001). It means that women's careers are different from men's careers (O'Neil and Bilimoria (2005). According to Burke (2001), a framework for successful career development which includes three elements that interact over time to spur and sustain development. These three elements are (1) *challenge* of new situation and difficult goals prompts employee to learn the lessons and skills that will help them perform well at higher level; (2) *recognition* involves acknowledgement and rewards for achievement and the resources to continue achieving promotions; and (3) support involves acceptance and understanding along with values that help employee incorporate their career into rich and rewarding (Burke, 2001). These three element have same relative proportion (balance) overtime to maintain development. For women, an imbalance typically is occurred such that the level of challenge exceeds the other two elements. Common barriers to advancement for women, contribute to this imbalance (Burke, 2001).

The barriers faced by women in the career achievement are called glass ceiling phenomenon (Choi and Park, 2014; Cornelius and Skinner, 2005; Daley, 1998; Burke and Vinnicombe, 2005; Bullard and Wright, 1993; Sumpter, 2010; Murniati, 2012, Bombuwela and Chamaru, 2013; and Newman, 1996). Glass ceiling phenomenon is described as the obstacles and barriers, that is transparent, that inhibit women seeking promotions to the top levels of organizations (Burke and Vinnicombe, 2005). Conceptual framework about influence factors for women to achieve their career advancement consists of three factors. These factors can be barriers or support factors.

These three factors are individual factors which focus upon source of power the individual bring to a position in organization (Metz, 2003). These factor include demographic variables (age, education, experience), family factors (marital status, number and age of children) (Metz, 2003; Choi and Park, 2014; Choi, 2015; McMahon et.al, 2006; Tharenou, 2005; MSPB, 2011; Sumpter, 2010; and Murniati, 2012). The second factor is interpersonal factors, that focused on relationship among individual in the context of their position in organization (Metz, 2003). These factors include family support, mentor support and informal network (Metz, 2003; Tharenou, 2005; Choi, 2015; Agustine and Levine, 2009; and Murniati, 2012). The third factor is

organizational factors that focuses on practices related to selection and promotion (Metz, 2003) (organizational policy about selection and promotion, women role model, and masculine career pattern) (Foster, 2001; Choi, 2015; Sumpster, 2010; Metz, 2003; and Murniati, 2012).

This conceptual framework can explain whether open career system that be implemented as open selection is one of the organizational factors that should support women career development. Open selection system is a position-based system, since those positions are selected based on job analysis, qualifications and other necessary criteria for each position are previously established and vacancies are filled with the most qualified applicant from both public and private sector through open and fair competition (Kim, 2010). There are two main characteristic of open selection system. Those are job analysis, job qualification and job criteria for each open selection position, and open and fair competition for applicant.

FINDING AND DISCUSSION

1.1. Profile of Civil Service by Gender of the Provincial Government of DIY

According to statistical data of Local Civil Service Agency of DIY, the number of civil service in the Provincial Government of DIY amounted to 6.707 in 2016. This number has declined compared to 7.115 in 2015. This amount consist 2.809 (42 percent) female civil service and 3.898 (58 percent) male civil service. The percentage of female civil service has increased compared to 2015 (41 percent). Although the number of female civil service almost equal with male civil service, the percentage of female civil service who occupy structural positions, especially the upper echelon or high leader position is much less compared with the percentage of male civil service. According to data of Local Civil Service Agency of the Provincial Government of DIY, percentage of female civil service who occupy the upper echelon (high leader position) only 24,3 percent (Table 3). Percentage female civil service who occupy the lower echelon (echelon IV) is 42 percent. It means that it almost equal with male civil service. However, the percentage of female civil service who occupy structural positions in the provincial DIY is higher than the national percentage.

Table 3. The Number of Structural Official in the Provincial Government of DIY (2016)

| Structural Job | Men | Percent | Women | Percent | Total |
|----------------|-----|---------|-------|---------|-------|
| Echelon I | 1 | 100 % | - | 0 % | 1 |
| Echelon II | 28 | 75,7 % | 9 | 24,3 % | 37 |
| Echelon III | 105 | 67,5 % | 52 | 32,5 % | 157 |
| Echelon IV | 241 | 58,0 % | 174 | 42 % | 415 |

(Local Civil Service Agency of the Province of DIY, 2016)

1.2. Implementation of Open Selection System in the Provincial Government of DIY and the Impact for Female Civil Service to Achieve the High Leader Position

According to the result of interview with stakeholder of Local Civil Service Agency of the Provincial Government of DIY, job analysis for high leader positions (Jabatan Pimpinan Tinggi Pratama) that vacant, have been prepared, including the qualifications and criteria for the position holders. The high leader positions that vacant have been also announced at the 30 days before the selection process begins. The announcement was made to all agencies in provincial government of DIY, and government agencies in four counties and one city in the provincial government of DIY. That is means that selection process for filling the high leader position is open for all civil services that meet the requirement or qualification. Announcement also conducted via mass media, to give opportunity for employees for privates or other institutions, who meet to qualification, to apply this vacancy.

To ensure fairness and objectivity in the selection process, the selection committee was formed consisting of people from various elements. The selection committee consists of internal elements (officers who are competent, according to the task and function, and have integrity); and external element (professionals, practitioners, academic, community leaders, NGOs, media etc, that being competent and have integrity). The proportion of selection committee of high leader position in the provincial government of DIY are 45 percent from internal element, and 55 percent from external, namely academic, professional, or someone that have the same competence with the job that that will be occupied by the candidate who followed the selection. This committee prepared as neutral as possible, to avoid bias, include gender bias. For example, this committee is arranged due the gender aspect. The selection committee meets women representation quantitatively.

Although the selection process for filling the high leader position openly and fairly, that process still dominated by male candidates. Stakeholder of Local Civil Service Agency as a member of the selection

committee said that selection process that conducted in the end of 2015, only one female civil service that be promoted in high leader position. Related to this fact, stakeholder from Local civil service argues the following statement.

“...We provide equal opportunities for civil service, both men and women who meet the requirements to participate in an open selection for the post of high leader position. If the fact that the participant of selection are dominated by male civil service, most likely obstacle is the female civil service themselves, who might have reason reluctant to participate in the selection...”

As confirmed with participant that is a female civil service who occupy the high leader position, she argues the following statement.

“...Basically, women career are a little lag behind in the men, because women have a greater domestic role compared to men. When women decide to pursue a career, such as following the selection of high leadership position, many considerations to be made, and especially is a factor family (domestic). Women must be prepared to commit to the duties and responsibilities increase, which will reduce the time to implement a domestic role in the family...” (participant 2)

Another participant that is a female civil service who occupy the echelon III (middle manager), argues the following statement.

“...The provision of equal opportunities for civil servants both men and women to occupy positions of high leadership does provide a great opportunity for women to compete with men. however, although capabilities, such as formal education, perempun can compete with men, but the experience and also training civil servants often women less than the men. This is because women have to divide their time between family and work demands to increase competence through training...” (participant 5)

This fact means that organizational factor that is equal opportunity to occupy the high leader position has not been able to push more women to get the high leader position. Although almost all female civil services that be participants in this study perceived that open selection system in filling the structural positions give more opportunity for them to advance their career in structural position, but the fact there is some barriers that inhibit women for their career advancement (upward mobility). This finding support the previous research conducted by Todd and Bird (2000) that argue that Women’s domestic responsibilities have often been assumed to be another factor explaining their lack of progression through the ranks (Todd and Bird, 2000, p.2).

Barrier for female civil service to career achievement in high leader position can identified from the source of barriers. Some participant perceived that barriers from organizational barriers of organizational factors are not overly hampered. They perceived that is depended on how they overcome the organizational barriers. More fully, barriers for female civil service career development can be grouped into the three factor as describe in the following table

Data collected by interview against women civil service, were examined. Any indications found were coded and the codes were compiled into group. The result of open coding analysis can be summarized in the following table.

Table 4. Factors Inhibit or Support for Female Civil Service in their Career Development

| Factors | Barriers/ Supports | Detail |
|------------|--------------------|---|
| Individual | S | Demographic factor: All of participant’s ages are over 30 years. That means that they are included in the endurance phase of career development. Level of education of all participants met the requirement of their position/ occupation. Almost all of the participant have experience that required by the job requirement of the positions that they occupied. |
| | S/B | Family factors: All of participants have been in marital status with children. Some of them have some adult. |

| | | |
|----------------|-----|--|
| Interpersonal | S | Family support is perceived by participant as a something important for their career development. Their families get support if they can balance work and family. Javanese culture that they abut can help them to balance their multiple roles. |
| | B | There are no formal mentors for their career development. There are only informal mentoring by their direct supervisor. |
| | B | Unlike men, women often do not have more time to build informal networking. |
| Organizational | S/B | Organizational policy about selection and promotion: It is perceived that organizational policy support women to achieve women to higher position, for example the open selection system. But sometimes some regulation that made by organization not fair for women. For example the job requirement that demanded women's equal with men (geographic mobility, etc). |
| | B | Women role model: Informally, often policies to place women in a position/ occupation with regard to women role models. There is no doubt to put women in positions that have not been previously occupied by women |
| | B | Masculine career pattern: It is perceived that no problem with the masculine career pattern that practiced in public organizations. Participants realize that when they join the workforce of public organizations will meet masculine career patterns. They tend to address this by building a career by trying the same strategy with men in building a career. But the reality, not all women can do it. |

According to the table 4, three factors that influence women career development can be support or barriers for female civil service career development. Female civil service that be participant in this study perceived that competence or merit based selection system means that organization give the same opportunity to male and female civil service to reach the higher position. This finding support the previous study that conducted by Cole (2015). Cole's study assumes a "contest-mobility model" approach of career success. According to this approach, upward mobility is more than just about merit, but people advance their careers by differentiating themselves from other through competition (Cole, 2015). It's means that open selection system can be encourage more civil service, include female civil service to participate in selection process for filling the high leader position. But actually, organizational policy about selection and promotion that is open selection system has not been able to encourage women to achieve the high leader position yet. In addition the barriers that comes from individual and interpersonal, personnel policies made by organization that are gender neutral contributed the lack of women to achieve their top career. Career development policies that gender neutral give a different impact for between male and female civil service. Theoretically, as the approach model of traditional careers are 'masculine' that indicated by career mobility that follow the organizational structure, women are often forced to come out of the 'fast track' career, to meet family responsibilities nature (O'Neil and Bilimoria, 2005; O'Neil, et. al, 2004). It means that women are lacking 'competitive advantages' in career advancement, as has been structured within organization.

CONCLUSSION

The objective of this study was to analyze the impact of open career system that implemented as open selection system on opportunity of female civil service to occupy the high leader position. Theoretically this open selection system that perceived as support by female civil service would drive more women to reach the high leader position. But actually although had be implemented for about two years, this policy cannot reduce the problem of the lack of representation of women in high leader position yet. Many other factors that inaction

contributed to the female civil service career development. That is individual and interpersonal factors, and also the other organizational factors in addition to the organizational policy.

This study recommended to public organization to formulate the personnel policy that gender sensitive. Policy that gender neutral is well in accordance with the merit principle, but its implementation will give different impact between male and female civil service.

ABSTRACT

The concept of flexibility in business organizations emerged in the 1970s as a response by large corporations to a perceived over specialization, particularly in operational areas. Flexibility is most commonly associated with the inherent property of systems which allows them to change within pre-established parameters. In turbulent environments, business agility, that is, the ability of firms to sense environmental change and respond readily, is an important determinant of firm success. The extensive literature on agile development approaches has developed since the Agility Forum was founded at Lehigh University in 1991. Agility is predominantly used to describe an approach to organizing that provides for rapid system reconfiguration in the face of unforeseeable changes. There is growing interest in the concept of "agile" amongst management practitioners and academics. Agility is a new idea, with fundamental differences to other concepts such as flexibility. A particular area of confusion appears to be over the difference between "agility" and the established concept of "flexibility". Business flexibility as a business's capacity to adjust its internal structures and processes in response to changes in the environment. The review of research on flexibility by Volberda (1996) and De Toni and Tonchia (1998) show that most of the definitions of the flexible organization emphasize the ability to adapt and respond to change. Business Agility is the ability of surviving and prospering in a competitive environment of continuous and unpredictable change by reacting quickly and effectively to changing markets, driven by customer-defined products and services. Kidd (1994) defined agility as a rapid and proactive adaptation of enterprise elements to unexpected and unpredicted changes. An agile mind is defined as having a quick, resourceful, and adaptable character. So, agile organizations respond quickly, they are resourceful, and they are able to adapt to their environment.

So we defined business agility is the ability to sense highly uncertain external and internal changes and respond reactively, based on innovation of the internal operational processes, involving the customer in exploration and exploitation based on agile mind as having a quick, resourceful, and they are able to adapt to the environment. Business agility needed to sense environmental change, respond readily and to survive in turbulent environments, is an important determinant of firm success.

The main objective of this conceptual study is to study the often overlapping use of the related terms Business Flexibility and Business Agility in the strategic management literature to clarify differences between the terms. This special issue is to bridge this gap of a business's ability to respond and adaptation to changes.

Key Words: *Business Flexibility, Business Agility, Management Strategic.*

1. INTRODUCTION

In the early twenty-first century, the world faces major changes in market competition, technology innovation and customer demand. The market in which manufacturers and service companies compete increasingly affected by intense foreign competition, rapid technological change, shorter product life cycles, and customers are increasingly unwilling to items or services that are mass produced with limited value. This gives rise to competitive pressures around the world, one of the key requirements for the company's survival is its ability continuously to meet the needs and demands of customers (market) (Supnick, 1984; Tseng & Lin, 2011). In this turbulent environment like this, the company's ability to sense environmental change and respond easily, an important determinant of the success of the company (Overby, Bharadwaj, & Sambamurthy, 2005).

The world-wide growth in education and technology has led to intense and increasingly global competition and an accelerated rate of innovative change in the marketplace. There is a continuing fragmentation of mass markets into niche markets, as customers become more demanding with increasing expectations. This critical situation has led to major revisions in business priorities, strategic vision and the viability of the conventional and relatively contemporary models and methods.

Strategic management environment to detect emerging threats and opportunities, make predictions of the impact of their future, and to develop the organization how to respond. Ideally, the future can be predicted fairly well through the work plan has been prepared in advance. Because the environment is very erratic and fast moving with a lot of potential threats and opportunities, organizations often find it difficult to react using conventional strategic management approach (Margolis, Goode, & Bernier, 2003).

A review of the strategic management literature, however, indicates inconsistency and ambiguity regarding the use of the flexibility and agility construct. Therefore, we conducted a literature review about unclarity whether flexibility and agility, are synonyms or distinct concepts. A comprehensive analysis of environmental trends and prospects identifies additional strategic issues. Resolution of these strategy and environment derived issues becomes the central preoccupation of the annual planning process. Thus strategic issue analysis (analysis of impact and response to significant developments) was added to strategy analysis (determination of thrusts for the future development of the enterprise) (Ansoff, 1980).

The concept of flexibility in business organizations emerged in the 1970s as a response by large corporations for perceived excessive specialization, particularly in the operational area (Baker, 1996). From the 1980s, a new emphasis has been given to the importance of flexibility for competitiveness in the manufacturing system. It is based on several factors that occurred at that time, a) The environment in which manufacturing enterprises have operational have been very turbulent. This condition leads to limited situations in which the stability and predictability that ultimately requires an increased ability to respond well to changing circumstances or, in other words, to develop flexibility. b) A development of new technologies in the manufacturing process has the potential to "offer" the flexibility of the technology for any organization that can manage to change the "potential" to the actual flexibility. c) The fact that the manager has constantly told that flexibility is essential (Corrêa, 1992).

The term agile manufacturing gained wide recognition since the publication of the report Iaccoca Institute "21st Century Manufacturing Enterprise Strategy". And agility have recently attracted attention in the study of system development system and management of information technology (IT), there is limited recognition in the disciplines of information systems to the importance of the impact of agility that has been owned by the organization in general (Overby et al., 2005). Agile mind which is defined as a way of thinking that has the character of a fast, resourceful and adaptable. Thus, the agile organization able to respond quickly, they are resourceful, and they were able to adapt to their environment (Mathiassen & Pries-Heje, 2006).

This study seeks to contribute to the Strategic management literature by proposing conceptual definitions and differentiation among the flexibility and agility constructs. As aforementioned, the ambiguity surrounding the phenomenon of Business Flexibility and Business Agility. This study addresses the recent call in the

Strategic Management literature for development of formal conceptual definitions before any traditional empirical statistical analysis.

The next section describes our methodological approach and provides a literature review, which addresses the theoretical use of the terms as they appear in the literature in various contexts. This is followed by sections containing the insights gleaned from literature review and content analysis, proposed conceptual definitions that allow for differentiation of the two terms and finally discussion and concluding remarks

2. LITERATURE REVIEW

2.1. Flexibility

In stable environments flexibility is not a serious strategic option to achieve control. A stable environment in which there is infrequent and predictable change increases the likelihood that the critical variables can be identified and allows plans to be developed. However, in extremely turbulent environments in which change is frequent and radical, organizations choosing the planning option may become easily adrift.

There are three reasons commonly offered for the re-emergence of an interest in flexibility are that: the globalization of markets increases unpredictability which imposes the need for greater organizational capacity to respond to change; the saturation of mass markets leads to increasing demand for customized rather than standardized products and greater emphasis on quality and customization is dependent on the capacity to elicit employee commitment which, given increasing workforce diversity (Reed & Blunsdon, 1998).

The concept of flexibility in business organizations emerged in the 1970s as a response by large corporations to a perceived over specialization, particularly in operational areas (Baker, 1996). Flexibility normally refers to the capabilities of a factory floor to rapidly change from one task or from one production route to another, including the ability to change from one situation to another, with each situation not always defined ahead of time. (Supnick, 1984).

From the early 80's, a new emphasis has been given to the importance of Flexibility for the competitiveness of manufacturing systems. This new concern is based on some factors, a) The environment in which the manufacturing companies have had to act has been extremely turbulent. These conditions lead to a situation of limited stability and predictability and therefore demand an increasing capability to respond well to changing circumstances or, in other words, to develop flexibility. b).The development of new process technologies which potentially "offer" technology flexibility to any organization who can manage to transform "potential" into actual flexibility. c) The fact that the managers have been constantly told that flexibility is important (Corrêa, 1992).

Flexibility can be defined broadly as an organization's capacity to adjust its internal structures and processes in response to changes in the environment (Reed & Blunsdon, 1998). It means Dealing with change has always been an important issue in organizations. Where change is predictable and the response required can be largely predetermined, organizations need to be flexible. The business environment is more complex it shown by the environmental change is increasing, markets are becoming more global, product life cycles are shortening. Balancing being flexible with maintaining clarity of focus, coordination and control is a nearly insurmountable task for most managers (Volberda, 1997).

Otherwise (Volberda, 1999) define flexibility as the degree to which an organization has a variety of actual and potential managerial capabilities, and the speed at which they can be activated, to increase the control capacity of a management and improve the controllability of the organization. (Volberda, 1997) distinguishes three types of flexibility: operational flexibility (referring to reactive routines to familiar changes that are based upon existing structures or goals of the organization), structural flexibility (referring to the capacity of the management to adapt its decision and communication processes within a given structure as well as the rapidity

by which this can be accomplished) and strategic flexibility (referring to capacity of the management to react in unstructured non-routine unfamiliar changes that have far-reaching consequences and need quick response).

There is another notation about flexibility like Flexibility is the ability to yield to change without disappearing, i.e. without losing identity (Regev, Soffer, & Schmidt, 2008). Flexible if it is possible to change it without replacing it completely. Flexibility is the capability to implement changes in the business process type and instances by changing only those parts that need to be changed and keeping other parts stable. Some authors distinguish between internal and external flexibilities. Internal flexibility as the operations strategy and the set of capabilities a firm nurtures to respond to its environment, and external flexibility as capabilities possessed by the firm and used to accommodate sources of variability to which the firm must respond and which are seen as flexible by the market (Santos Bernardes & Hanna, 2009).

2.2. Agility

Agility concept began in the early nineties in the area of manufacturing in the United States were first introduced with the publication of a report entitled 21st Century Manufacturing Enterprise Strategy (van Oosterhout, Waarts, van Heck, & van Hillegersberg, 2007) and consensus regarding the definition of agility has not appeared (van Oosterhout, Waarts, & van Hillegersberg, 2006).

Agility refers to the ability of a company positioned to do adapt and accommodate the rapid changes unplanned and sudden market opportunities and pressures, so, in this sense becomes more comprehensive flexibility. (Supnick, 1984).(van Oosterhout et al., 2007) Mention that agility is a way to cope with changes in the external and the internal, highly uncertain. There are three types of uncertainty: uncertainty of the country, the effects of uncertainty, and uncertainty of the response. The uncertainties relating to the state of uncertainty about whether or when a particular change will occur. The effect of uncertainty was related to the inability to predict what impact properties will change in the organization. And the uncertainties response was defined as a lack of knowledge about the response options and / or the inability to predict the likely consequences of response options by organization.

The creators of “agility” concept at the Iacocca Institute, of Lehigh University (USA) defined it as: A manufacturing system with capabilities to meet the rapidly changing needs of the marketplace. As a system that shifts quickly among product models or between product lines, ideally in real-time response to customer demand (Yusuf et al., 1999). They also proposed that agility is a form of exploration success competitive base: speed, flexibility, innovation proactive, quality and profitability which integrates with the resources and best practices in an environment that is rich in knowledge to provide products and customer service driven in a rapidly changing market environment.

Agility is required when organizations are faced with the necessary changes never imagined when the organizational process and the system set up (van Oosterhout et al., 2006). In other cases, changes may occur in more unpredictable and requires a response that might not have been prepared earlier. In such cases, the flexibility can not be easily engineered into organizational processes and systems. The organization's ability to act quickly both on the strategic and operational level for unexpected changes that require a new level of flexibility, which they refer to as agility (Overby et al., 2006).

The concept of agility was concerned with economies of scope, rather than economies of scale (Dove, 2001). While lean operations are usually associated with efficient use of resources, agile operations are related to effectively responding to a changing environment while at the same time being productive. The idea was to serve ever-smaller niche markets and individual customers without the high cost traditionally associated with customization. So an agile organizations are not only must capable of successfully implementing change; they are nimble and capable of responding quickly to both expected and unexpected events in their environment.

2.3. Business Swing

Before the advent of modern information technology, production is done mechanically and activities in the value chain are performed using the manual method, the paper process and verbal communication. When the first wave of IT, which was during the 1960s and 1970s, the activities of individuals turn out to be automated in the value chain, ranging from order processing and payment for design and manufacturing resource planning are all aided by a computer. Productivity is dramatically increased, partly due to large amounts of data can only be captured and analyzed in every activity. The advent of the Internet, the connectivity is cheap and ubiquitous that, releasing a second wave of IT-driven transformation, in the 1980s and 1990s was enables the coordination and integration in each of the activities; with outside suppliers, channels, and customers; and across geography.

Two waves of change in information technology led to major productivity gains and growth in the economy. Been going twice a big change in the last 50 years, information technology is radically changing the shape of competition and strategy. We now stand on the threshold of the third transformation will be a large number of new product usage data enables a lot of changes in the order of everyday life. In addition there will also be a leap of productivity in the economy which is contributed by new products better. These conditions will drive another wave of increased productivity based value-chain, triggering further innovation and economic growth of the previous two (Porter & Heppelmann, 2015).

In the ever-changing market, businesses must be able to make rapid changes in order to adapt to the needs of clients and cope with competitors' offerings. For that organization must be able to master both planning for unexpected changes, and has a business process in place that allows for a change. How businesses can successfully handle unexpected environmental changes, dynamic and constantly changing has become a hot topic in the industry and academia over the last few decades. Many different solutions have been proposed, we focus on business flexibility and agility.

Flexibility in business organizations began to emerge in the 1970s as a form of response from large corporations to high specialization, especially in the area of operations, the new emphasis given to the importance of flexibility for the competitiveness of the manufacturing system. But in the early 1990s, the environment has changed more dynamic so that it appears a new concept called agility. When businesses need to act quickly both on the strategic and operational level to respond to the unexpected change and that change was not envisaged when the organizational process and the system was established. This means requiring a new level of flexibility, which we refer to as agility.

Agility concept because it looks expand the concept of flexibility. Where Agility is the ability to quickly and easily change the business and business processes beyond the normal level of flexibility that can be done so that they can effectively manage external and internal changes are unpredictable (van Oosterhout et al., 2006). Agility is a form of organization's ability to respond to changes in dimensions beyond the ability of flexibility. While more flexibility refers to an organization's ability to move from one task to the other quickly and as a routine procedure, every situation is defined ahead of time so that the procedures needed to manage it in place. (Vokurka & Fliedner, 1998).

Agility is the specific context of the difference between the market limit the generalizability of the detailed rules to be agile. When agile companies embrace change is a manifestation of their ability to not only understand their current market, product line, competencies and customers, but also understand the potential of the future customer and market. Agility enables the organization to react more quickly than in the past and also proactively anticipate customer needs and lead to the emergence of new markets (Vokurka & Fliedner, 1998).

When we referring to flexibility concept, the managers generally scheduling or planning for an unforeseen development. These types of developments are usually the unexpected surprises, but businesses can plan for them and make room in their regular business procedures for adaptations, as necessary. On the other hand when referring to agility, managers usually mean being able to respond to unplanned for or unscheduled external circumstances. When a business is agile, it can respond to a wide variety of unexpected external surprises. However, a flexible business may only be able to respond to already-hypothesized situations. Being flexible

leads to success when a predicted event occurs, while being agile will assist businesses who face unpredictable circumstances. When a business is flexible, it is able to make changes within the current organizational system, while agile businesses are able to change the overall system completely in response to an external force.

3. Discussion

Changes may occur more unexpected and requires a response that might not have been prepared earlier. In such cases, flexibility is not possible can be easily engineered into organizational processes and systems. To be able to act quickly both at strategic and operational level for unexpected changes that require a new level of flexibility, which we refer to as agility. (Overby et al., 2005).

So business needs to swing from the flexibility to agility, Why? because it has become difficult to still survive and succeed in a business environment that existed at this time. However today's business being agile and being capable of sensing and responding to both predictable and unpredictable events holds promise much better than others which didn't did it. Business agility was a relatively new paradigm as a solution for maintaining competitive advantage during times of uncertainty and turbulence in the business environment. (Sharifi & Zang, 2001).

The characteristics of a business today must have an agile mind as has the speed, mind, and they were able to adapt to changes in their environment. Quickness is about the speed with which organizations can respond to customer demand, the dynamics of changes in the market, and the emergence of new technology options. Resourceful is about the capabilities available within the organization including people, technology, processes, and knowledge. While adaptability is about how well the organization to respond to the changing demands, threats or opportunities (Mathiassen & Pries-Heje, 2006).

4. CONCLUSION

After giving a summary of the literature review, we would like to add some brief consideration of the various aspects that have been analyzed. Strategic management involves detecting emerging threats and opportunities in the environment, impact predictions about their future, and the development of organizational response. Ideally, the future can be predicted with sufficient confidence to justify the commitment to whatever is needed by the resulting action plan. Because the environment is very erratic and fast moving with a lot of potential threats and opportunities, organizations often find it difficult to react using conventional strategic management approach (Margolis et al., 2003).

Agility requires a company to be able to respond to unpredictable changes in the market or customer requirements. It requires a capability beyond flexibility, where responses are made to known changes with predetermined procedures. Agility is context specific where the capabilities depend on the competitive situation so no standard model can be used for all firms to follow.

We defined the concept of business agility. Our definition is "Business agility is the ability to sense highly uncertain external and internal changes and respond reactively, based on innovation of the internal operational processes, involving the customer in exploration and exploitation based on agile mind as having a quick, resourceful, and they are able to adapt to the environment."

Clearly empirical research is necessary to support this initial model, a measurement of agility has not yet been reported in the literature, so this construct also needs development. Similar to flexibility, agility is a complex and multidimensional concept, and is context-specific. Empirical studies need to be undertaken to measure agility with attention given to properties such as multidimensionality, reliability, and validity. Specific company or industry studies need to be made with the eventual establishment of a universal measure of agility. The impact of various attributes of agility on performance then needs to be studied. As the measurement of

flexibility and agility are better defined and quantified, studies may then be conducted addressing the proposed model.

Developing Values-Based Leadership in Family Business for Sustaining Business Success across Generations

Nopriadi Saputra

Bina Nusantara Univeristy, nopriadisaputra@yahoo.com

ABSTRACT

One of the family business challenges is how to sustain the business success from generation to generation. PT XYZ made a strategic decision to develop values-based leadership, when the founder decided to retire and second generation took over the leadership roles of business . This paper based on three research questions: (1) at what level is the leadership capacity of the management team ? (2) what kinds of values are relevant to be cultivated for the whole organization ? (3) what are the initiative programs to be developed for cultivating the values role for the whole organization ?

This study used a mixed method approach which is a combination of quantitative and qualitative approaches. A qualitative approach was used to answer the question "what kind of values are relevant to be cultivated?". The qualitative approach used the 5D cycles of appreciative inquiry. While the quantitative approach used descriptive statistics to answer : "at what level is the leadership capacity of the current management board" and "what are the initiative programs to be developed for cultivating the values role for the whole organization".

The conclusion of this research are: (1) PT XYZ need to increase the leadership capacity of the management team, (2) there are seven values that are relevant for enabling the new vision and mission, namely: integrity, responsibility, ownership, learning, creativity, consistence and quality, (3) the management of PT XYZ prosecuted for more serious role as a role model, promoter and protector of the seven values especially on learning, creativity, quality and consistence.

Key Words: *values based leadership, family business, appreciative inquiry*

INTRODUCTION

Family business plays a major role in economy in many countries both in the developed and developing countries. Based on data from the Family Firm Institute, the family business contributes about 70% to 90% of global GDP. In the United States about 80% - 90% of the companies in northern America are family businesses. Family businesses in the United States provide 62% employment for the workforce. Some leading companies such as Ford Motor, Wal-Mart, Hilton and Marriott are also family businesses. Meanwhile in the Middle East, about 75% of private sector is controlled by the 5000 richest families which absorb about 70% labour force and controls more than 90% of trading activity (Susanto & Susanto, 2014).

A company is classified as a family business when it has several of the following characteristics: (1) majority of the company is owned by family, (2) the company is managed by family, (3) the company is controlled and directed by family, (4) the company become an identity of certain family, (5) the company is led

by several generations of a family, and (6) the pattern of corporate succession is aimed only at family circles (De Massis, 2012).

Gimeno, Baulenas, & Coma-Cros (2010) explained that the family businesses have at least five major challenges: (1) overlapping roles. It occurs an overlapping roles in ownership, families, and management. So often happens interpersonal conflicts that tend to ignore the interests of business and better accommodate the interests of the family, (2) succession planning. There are some difficulties in running business over the generations. Frequently encountered the next generation does not have enough interest to continue the leadership of the family company. Or the next generation does not have enough capabilities and characters required, (3) family constitution. There is a pattern complexity relations among individuals within the company. A conflicting relationship between the owners and the managements to maintain family harmony or to keep business performance, (4) family governance. The difficulty to get a unanimous decision in the governance of the organization, (5) communication. Not easy to create an open, direct and clear communication in daily activities.

The other challenge is about sustainability. It is about 70% of family businesses go bankrupt or be sold before it was taken over by second generation, and only 10% were able to stay until the third generation and not more than 3-5% were able to sustain until the fourth generation (Stalk & Folley, 2012). Tjiptono (2013) states that many family firms die along with the old cap founder. This is caused by the excessive dependence of the company on the founder and weak mechanisms for leadership succession. According Tjiptono (2013) even though the succession is crucial for family business, there are still many businesses, particularly in Indonesia, which looked at the issue of regeneration as a taboo discussed formally, openly and systematically; until companies are really in trouble when the next generation to continue the leadership.

To dealing with those challenges, Fishman (2009) recommends nine important points should be implemented by a family business, namely: (1) creating and sharing personal vision statements, (2) hiring and firing family-member employees, (3) compensating family-member employees, (4) selecting the family-member successor, (5) grooming the family-member successor, (6) aligning the culture of the family business with the company vision, (7) addressing spousal business partners' multiple role challenges, (8) recruiting, retaining, and inspiring non-family-member employees in a family business, and (9) transitioning ownership to family members

THEORITICAL BACKGROUND

This paper relies on two main theories - leadership theory and the theory of values. Based on those theories, this paper elaborates the development of value based leadership in family business which did transition of leadership from the founder to the second generation – his two daughters.

Leadership Theory - Simply Robbins & Judge (2013) defines leadership as the ability to influence a group of people to achieve a vision or a set of specific objectives. This is in line with the opinion of (Yukl, 2010) who argued that most definitions of leadership reflect the assumption that the leadership is efforts to influence a planned manner or intentional influence on people in the form of guidelines, structures facilitating the diverse activities and relationships within a group or organization. Osborne (2014) defines leadership as ability to create an environment where everyone understands what their contribution is expected and feel fully committed to doing an incredible job. More comprehensively Yammarino (2013) explains that leadership is a process of multi-level (individual, pairs, groups, organization) between leaders and followers that occurs in certain situations where a leader (superior, supervisor) and followers (subordinates, team members work) to share a specific purpose (vision, mission) and together make it happen (goals, objectives, tasks) happily without compulsion.

Referring to the definition of those scholars (Robbins & Judge, 2013; Yukl, 2010; Osborne, 2014; Yammarino, 2013); this paper defines leadership into three dimensions : (1) ability to influence, (2) concern to others, and (3) orientation towards the future. Based on these dimensions, Leadership Capability is constructed into eight levels. The highest level of Leadership Capability or level 8 are those who have a strong ability to

influence others, highly concern to others and have a long term or future orientation. The lowest level of Leadership Capability or level 1 are those who have low ability to influence others, more dominant to self-concern and have short term or current oriented thinking. The whole level of Leadership Capability are described in Figure 1.

Theory of Values - Lavigna, (2013) describes that values are a set of ideas or principles which are important and used as criteria for individuals, groups and organizations to make decisions or priorities in personal or business life. Kuron et al. (2015) explain that the values are parameter or indicator of anything which are considered important or desirable by the individual for life or work. Furthermore Krause, (2015) divides the values into two main groups: (1) organizational values - which serves as a guide for all people in the organization in making daily decisions, and (2) individual values - a set of standards by which individuals make decisions, evaluating others, explaining something or taking action and also assessing which are valuable, important, or preferably on behaviour, preferences or specific action.

Referring to earlier works of the values theory (Schwartz, 1992) and also the results of a review of hundreds of studies about the values which are universal, Krause (2015) managed inventory of 19 kinds of individual values within the scope of personal, group or universal. Those are (1) self-direction-thought, (2) self-direction-action, (3) stimulation, (4) hedonism, (5) achievement, (6) power-dominance, (7) power-resources, (8) face saving, (9) security-personal, (10) security-societal, (11) tradition, (1) conformity rules', (13) conformity-interpersonal, (14) humility, (15) benevolence-dependability, (16) benevolence-caring, (17) universalism-concern, (18) universalism-nature, and (19) universalism-tolerance.

Values-Based Leadership - Crumpton (2011) explains that there has been an evolution in leadership theory. First generation of the leadership theory is more focused on "who is the leader?". It is marked by theories about the characteristics of the leader and charismatic leadership. The second generation of leadership theory is focused more on "what is done by the leader?". It is marked by leadership behaviour theory. Then the third generation of leadership theory is focused more on "under what conditions it can be effective leadership?". It is marked by contingency theory and situational leadership. Then in the fourth generation, leadership theory focuses more on "how the leaders are thinking, judging and acting?". It is marked with the theory of transactional-transformational leadership, servant leadership, authentic leadership. And today the theory of leadership has entered the fifth generation that is spiritual leadership.

The concept of value-based leadership-values when is viewed in the context of the evolution of leadership theory is one concept from the fourth generation. It is authentic leadership. According to Robbins & Judge (2013) authentic leaders are leaders who know themselves well, have confidence that the full values and they act based on these values either overtly or covertly to gain complete confidence of followers

RESEARCH METHOD

This research is a case study in PT XYZ which is a family business and the leading manufacturer of sliding walls and blinds in Indonesia. Their products are used in many offices, hotels, shopping mall and luxury houses in many major cities in Indonesia. PT XYZ stood since 1980 and was founded by Mr. Bruno an architect who graduated from the Universitas Parahyangan, Bandung. Mr Bruno and his friends had started the business from their first factory in Klender, Jakarta Timur. Several times the company experienced ups and downs in starting, running and managing the business. Currently Mr. Bruno plans to get more involved in the socio-religious activities. He gave control of the company leadership to his two daughters. They are Mrs Jean and Miss Fin who graduated from the leading universities in Australia. Some family and friends of Mr. Bruno was involved in the management of this business. Mr. Bruno wants the company continue to grow and develop under the leadership of the second generation.

Research Question - The goal of this research is to answer three questions: (1) "how is the leadership capability of the current management team of PT XYZ?". Is the leadership capability of the current management team at high or low level? By knowing the current level of leadership capability, we can design the leadership development programs which are relevant which business challenges faced by PT XYZ in the

future, (2) " what are the relevant values to be developed in PT XYZ ?" In line with the transition leadership to the second generation, it is important to redefine what are the vision and mission of the company for the next. The first generation has built a strong business foundation so that PT XYZ becomes a prominent provider for sliding wall and blinds in Indonesia. Is there any ambition to make the company become bigger? What are the new vision and mission to be redefined? And what are the relevant values which support mission and the vision in the future ? (3) " what are the recommendation for developing value based leadership in PT XYZ ?" After understanding the capacity leadership of the current management team and the relevant values to be cultivated, then the next question is what action are supposed to be conducted by the management team? What are the current values to be strengthened?

The approach of this research is mixed method which use the combination of quantitative and qualitative research . Quantitative research is a descriptive one which used to answer question "how is the leadership capability of the current management team of PT XYZ?" and the question " what are the recommendation for developing value based leadership in PT XYZ?". Then qualitative research is used to answer question " what are the relevant values to be developed in PT XYZ ?". For this paper, the qualitative research uses Appreciative Inquiry approach.

Data Collection - quantitative research carried out by census to the entire management team. The management team consists of two directors, nine managers and 52 supervisors. Quantitative research utilized a written survey by using Kapasitas Kepemimpinan and Deskripsi Perilaku Kerja questionnaires. Kapasitas Kepemimpinan is used to measure someone’s level of leadership capability based on three dimensions those are influence, concern to others and future orientation. It consists of 15 statements and produce eight levels of leadership as shown in Figure 1. Deskripsi Perilaku Kerja is to measure how often the values displayed in the daily working activity. It consists of 63 statement, where each value are described in three key behaviours and every key behaviour are describe in three statements. Both Kapasitas Kepemimpinan and Deskripsi Perilaku Kerja used Likert scale with five self-composed responses: "never", "rarely", "sometimes", "often" or "always".

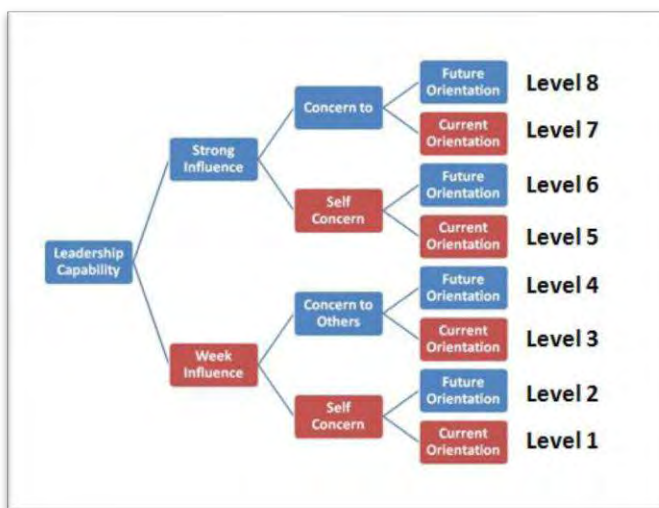

Figure 1 : Leadership Capability

Qualitative research was using appreciative inquiry method. According to Stavros, Godwin, Cooperrider, & Wiley (2012) appreciative inquiry is a positive approach to encourage changes in the organization by using images of the best possible future is articulated and visualized by people or stakeholders that will greatly affect human system in the organization. Appreciative Inquiry (Cooperrider, Whitnye, & Stavros, 2008; Schlombs, Howard, Delong, & Lieberman, 2015; Yuliani, Adnan, Pierce Colfer, & Indriatmoko, 2014) in this study involves the founder, the second generation, and all the manager. They were invited to join

in the one day workshop for running the 5D cycle of Appreciative Inquiry. The 5D cycles consist of Defining, Dream, Design, Destiny and Discovery phases. As shown at Figure 2. The product of the workshop are new vision and mission statement of the company and list of relevant values that must be cultivated in PT XYZ.

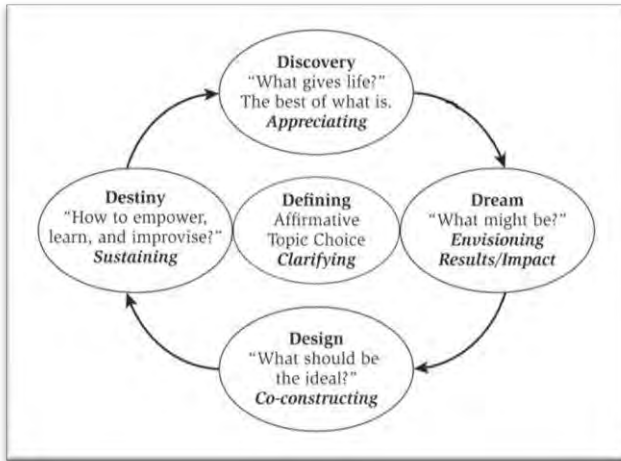

Figure 2 : 5 D Cycle of Appreciative Inquiry

RESULT & DISCUSSION

Profile of Management Team - Management team of PT XYZ are dominantly men (70%), have age less than 40 year old (63%), with senior high school as their educational background (67%), and their years of service are more then 3 year (73%). The management team consists of 3% the second generation as top management, 14% of managers as middle management and 83% supervisors as frontline management.

Figure 3 : Leadership Capability of Management Team

Leadership Capacity of Management Team - Based on the three dimensions of leadership capacity, the management team has a profile as follows: ability to influence others are low (75%), more concern to others

(51%), and have current or short-term orientation (62%). Figure 3 show that management team of PT XYZ has big opportunity for developing their ability in influencing others, especially influencing the work team and the ability to think ahead through strategic planning both in the scope of teams or organizations.

Table 1 Leadership Capability of Management Team

| Leadership Capability | | Level | | | | | | | | Average |
|-----------------------|----|-------|-----|-----|-----|-----|-----|-----|------|---------|
| | | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | |
| Top Management | 2 | | | | 1 | | 1 | | | 5 |
| Middle Management | 9 | | | | 5 | | 1 | 1 | 2 | 5,33 |
| Frontline Management | 52 | 12 | 10 | 17 | 2 | 4 | 2 | 5 | | 3,04 |
| Frequence | | 12 | 10 | 17 | 8 | 4 | 4 | 6 | 2 | 3,14 |
| Percentage | | 19% | 16% | 27% | 13% | 6% | 6% | 10% | 3% | |
| Cummulative | | 19% | 35% | 62% | 75% | 81% | 87% | 97% | 100% | |

When we want to know more detail about leadership capability of management team in every managerial position, Table 1 describes can help us. Leadership capacity of management team is on average at level 3 (3.14). Top and middle management are on average at level 5 (5 and 5.33). Leadership capability of the frontline management is on average at level 3 (3.04). This result suggests that ability to lead of the management team needs to be developed further, especially in terms of conceptual, strategic and future-oriented thinking. And for frontline management is important for improving their ability to influence others or the work team.

The Relevant Values for The Future - Excavating the relevant values to be cultivated in the PT XYZ is done by Appreciative Inquiry session. This session was conducted in a full day workshop in Bogor and followed by the founder (first generation), the top management (second generation) and middle management. The workshop participants were 26 people and divided into several groups. The activities and results of each 5D cycles of Appreciative Inquiry is described in Table 2.

Defining is first phase when the founder gave speech about his hope and desire for the company in the future. Founder do not want the company is trapped into declining growth or even die after he is no longer actively involved in the company's business management. There are four expectation of the founder: (1) the company must have the bigger newly vision - mission and the management team must work together to achieve the vision and mission, (2) all employees are inspired and motivated to progress in line with the achievement of the vision and mission of the company, (3) the company should have operational support system that can meet the needs of customers and all stakeholders, and (4) the company must produce leaders with great character who brings change both in the company and the broader society.

Table 2 Activity and Results of 5D Cycles

| CYCLE | ACTIVITY | RESULT |
|---|---|---|
| DEFINING – focusing on the main goal of workshop | Founder or first generation convey his hope and expectation for the growth and progress of the company in the future | There are four things which founder expected: (1) having the bigger vision and mission and the management team must work together to achieve those vision and mission, (2) all employees are inspired and motivated to progress in line with the achievement of the vision and mission of the company, (3) having the operational support system that can meet the needs of customers and all stakeholders, and (4) producing leaders with great character who brings change both in the company and the broader society |
| DREAM – visualizing the future of company | All participants were divided into four groups. They were given the task to illustrate how the ideal conditions of the company is expected. The idea was visualized in the poster. Then each group presented the poster in front of class |  |
| DESIGN – developing vision and mission of company | Based on the whole posters presented, all participants were divided into two large groups to formulate a new vision and mission statement of the company | <p>Based on the plenary discussion all participants agreed upon as follows:</p> <ul style="list-style-type: none"> • Vision: "Becoming a trusted and biggest organization in providing interior solutions for luxury homes, offices, and hotels in Asia Pacific" • Mission: "We are here for, (1) providing a solution to every problem customers and stakeholders related, (2) demonstrating a commitment to the creation of quality human resources professionals, (3) are committed to meeting the needs of the market, (4) producing optimum benefits for the owner, and (4) caring about the interests of society and the environment" |

| CYCLE | ACTIVITY | RESULT |
|---|--|--|
| DESTINY – formulating the relevant values | After listening to the presentation poster of the entire group, all participants were divided into two groups of newly weeks to discuss values and work habits as what will be developed transform and achieve the vision and mission of the company running the new | <p>Proposed values that are relevant, namely:</p> <ul style="list-style-type: none"> • Pok A: Quality, Confidence, Honesty, Professional, Responsible, Creative and Belonging • Pok B: Responsible, Creative, Responsive, Loyal, Learner, Consistent and Integrity <p>Finally all participant agreed on seven relevant values to be cultivated:</p> <ul style="list-style-type: none"> • values within a individual context are: (1) Integrity, (2) Responsibility and (3) Ownership • values in the group context: (4) Learning and (5) Creativity • values in the organizational context: (6) Quality and (7) Consistence |
| DISCOVERY – defining expected working behaviors | Once agreed upon seven values that are relevant, the participants was divided into seven groups to formulate a definition, and key behaviors. Each value was defined in three key behaviors and key behavior was translated into three expected working behaviors | <ul style="list-style-type: none"> • Integrity is defined as "behave honestly, consistently, shows words with deeds both in personal and company level". Key behaviors are honesty, courage and self-alignment • Responsibility is defined as "behave accountable in every process of work and duty". Key behaviors are accountability, responsiveness and meaningfulness • Ownership is defined as "always show a caring attitude towards the various situations and make efforts to produce something better". Key behaviors are personal involvement, emotional engagement and working excitement • Learning is defined as "showing an open and flexible attitude. Being able to draw wisdom of every situation that occurs, both positive and negative to bring up and produce something better with regard to the development of quality self or concerning the progress of the company". Key behaviors: knowledge seeking, knowledge application and knowledge sharing • Creativity is defined as "always explore and merge many ideas one ways, as well as the process to produce a better result. Key behaviors are optimism, making value adding and entrepreneurship • Quality is defined as "ensuring results and processes meet the excellent standard in every task and work performed". Key behaviors are customer orientation, process excellence and continuous improvement • Consistence is defined as "indicating permanence and stability in acting. Enterprising and persevering to achieve the outcomes and goals". Key behaviors are holding the principles, long term orientation and persistence |

After Defining phase, the workshop went into Dream phase. At this phase the participants were divided into four groups consisting of 6-7 people. Each group was asked to visualize the expected future of company. They discussed it in groups and the conclusion of discussion were visualized in the form of posters. After finishing their poster making, each group presented their poster to in front of the class.

Then the workshop was continued to the Design phase where all participants were divided into two groups. Based on understanding about all poster presented, each group was asked to formulate a vision and mission statement for company. Proposed vision and mission statement of each group presented and discussed by all participants. The result of Design phase is the new vision and mission statement. Based on the plenary

discussion all participants agreed upon as follows: (1) new vision statement : "Becoming a trusted and biggest organization in providing interior solutions for luxury homes, offices, and hotels in Asia Pacific", (2) new mission statement : "We are here for; providing a solution to every problem customers and stakeholders related, demonstrating a commitment to the creation of quality human resources professionals, are committed to meeting the needs of the market, producing optimum benefits for the owner, and (4) caring about the interests of society and the environment".

Then workshop went into Destiny phase where the participants were divided into two distinct groups than before. Each group were asked to identify any values that are relevant to be cultivated in order the company are possible to achieve the vision and mission effectively. Then proposed the values of each group were discussed by all participants. And all participant agreed on seven relevant value to be cultivated : Integrity, Responsibility, Ownership, Learning, Creativity, Quality and Consistence.

Finally the workshop went into Discovery phase where the participants were divided into seven smaller groups. Each group were asked to formulate the definition and three key behaviours associated with the values. Each group presented their findings in front of the class. The result of this phase were the definition and key behaviours of the seven relevant values. Table 2 describes all activities and results from each phase of 5D Cycle. Through this appreciative inquiry workshop, the company have agreed on seven relevant values with definition and key behaviour as follows : (1) **Integrity** is defined as "behave honestly, consistently, shows words with deeds both in personal and company level". Key behaviors are honesty, courage and self-alignment. (2) **Responsibility** is defined as "behave accountable in every process of work and duty". Key behaviors are accountability, responsiveness and meaningfulness. (3) **Ownership** is defined as "always show a caring attitude towards the various situations and make efforts to produce something better". Key behaviors are personal involvement, emotional engagement and working excitement. (4) **Learning** is defined as "showing an open and flexible attitude. Being able to draw wisdom of every situation that occurs, both positive and negative to bring up and produce something better with regard to the development of quality self or concerning the progress of the company". Key behaviors: knowledge seeking, knowledge application and knowledge sharing. (5) **Creativity** is defined as "always explore and merge many ideas ore ways, as well as the process to produce a better result. Key behaviors are optimism, making value adding and entrepreneurship. (6) **Quality** is defined as "ensuring results and processes meet the excellent standard in every task and work performed". Key behaviors are customer orientation, process excellence and continuous improvement. And (7) **Consistence** is defined as "indicating permanence and stability in acting. Enterprising and persevering to achieve the outcomes and goals". Key behaviors are holding the principles, long term orientation and persistence

Implementation of The Seven Values – Based on the definition and key behaviour of the seven values, Deskripsi Perilaku Kerja questionnaire was developed. This questionnaire consists of 63 statements and uses Likert scale with five self-composed responses: "never", "rarely", "sometimes", "often" or "always". Questionnaire was distributed to all levels of management team (63 people). The result of this survey presented in Figure 4.

All values have been applied well in daily working activity by management team. This conclusion is based on score of seven values are more than 4 where Integrity (4.22), Responsibility (4.29), Ownership (4.22), Learning (4.24), Creativity (4.19), Quality (4.07) and Consistence (4.03). The implementation of values in individual context (Integrity, Responsibility, and Ownership) are better implementation than values in group context (Learning & Creativity) or values in organizational context (Quality & Consistence).

For strengthening the implementation of the seven value in PT XYZ, management team are recommended to play three roles as value based leaders: (1) role model of the seven value – the management team must lead by example. Before instructing the followers to implement the seven values, they must apply it first. (2) promoter of the seven values - the management team must promote the implementation of the seven values in various occasions. They always advocate the followers to believe and apply the seven values an opportunity for getting more successful achievement, and (3) protector of the seven values - the management team must provide opportunities for the followers to take initiative in seven value implementation and also provide negative consequences on behaviour of the followers that are contrary to the seven values. For better

implementation of the seven value, the management team may focus on Consistence, Quality, Creativity and Learning especially in key values : Knowledge Application (Learning), Making Added Value (Creativity), Continuous Improvement (Quality) and Holding The Principles (Consistence).

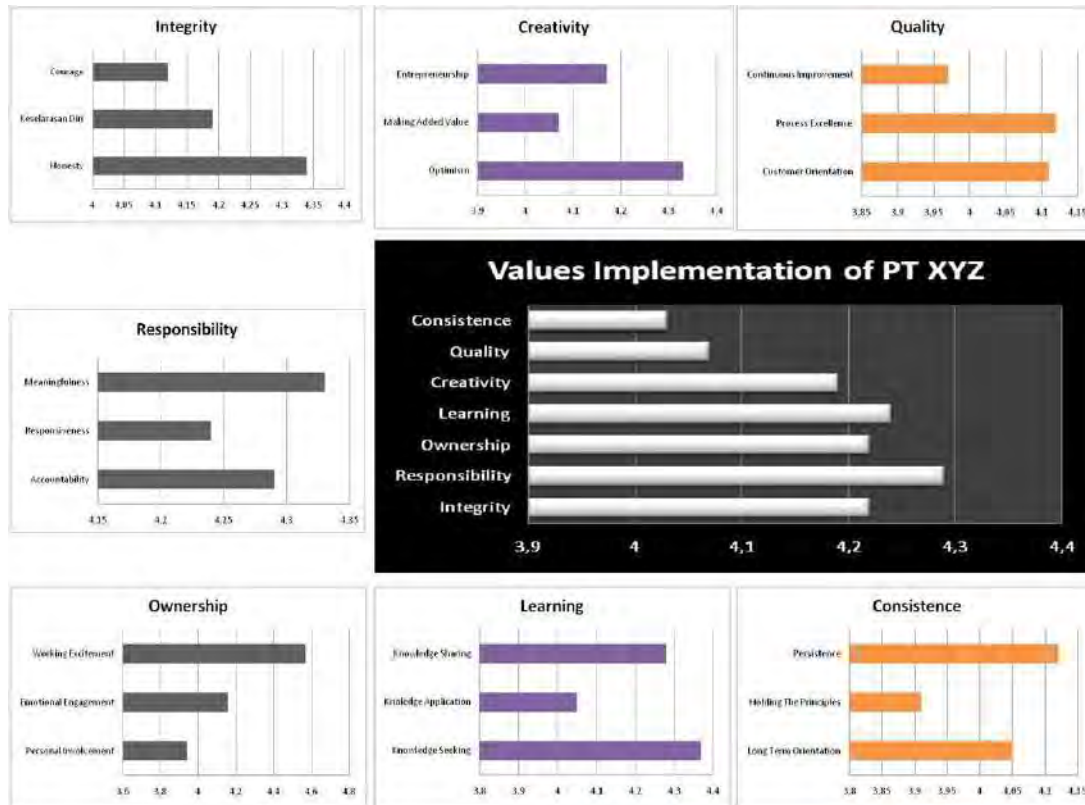

Figure 4 : Implementation of The Seven Values

CONCLUSION

For developing value based leadership in PT XYZ, management team need to develop leadership capacity in their ability to influence others and the ability to think strategically. PT XYZ have found and committed to implement the seven value for the successful future. Those values are: Integrity, Responsibility, Ownership, Learning, Creativity, Quality and Consistent. For strengthening the implementation of the seven value in PT XYZ, management team are recommended to become role model, promoter and protector of the seven value. Management team may focus on several key values such as : Knowledge Application (Learning), Making Added Value (Creativity), Continuous Improvement (Quality) and Holding The Principles (Consistence).

Research limitations - This paper limits the discussion only on values-based leadership, not discuss other related systems such as strategic planning, human resource management, performance appraisal and career development system. This paper do not discuss the application of the seven values as part of the corporate culture. According to Schein (2010) the values is one of three element of corporate culture culture. There are two other elements such as basic assumptions and artefacts. For the future research, I recommend to involves many companies from various industry. The research may performed several times in the years different. The research can be developed to examine the causal relationships between leadership capability, value implementation and corporate performance.

Followership and Leadership Role in Improving the Competitive Advantage of Companies at The Global Market (Case Study on Quick Service Restaurant)

Lo Nelly

Bina Nusantara University, nelly@binus.edu

ABSTRACT

Quick Service Restaurant (also called Fast Food Restaurant) growth in Indonesia was the 2-digit percentage, this is a big opportunity for food service industry to boost their store sales performance. However, Quick Service Restaurant in Indonesia face challenges of high employee turnover. As we know, Fast Food Store naturally have small of numbers of workers to run a store with high-intensity job serving many customers with a short period with hospitality. This paper tries to provide a summary of how the behaviour of a follower influence job satisfaction, which effect on intention to stay. This paper tries to answer the question whether relationship between followers and their leader (LMX) make a contribution to follower job happiness and make the longer plan to stay. The results of this study are expected to help improve sales performance QSR from the standpoint of Human Resource strategy for increase Performance Company.

Key Words: *Follower style, LMX, Job Satisfaction, Intention to Stay, Sales Performance*

INTRODUCTION

A company is established mainly aimed to benefit from the process undertaken by the company, so also happens on firm QSR (fast food) in Indonesia. QSR growth in Indonesia is based on a growing number of outlets between 2% to 14.9% with sales growth between 5.5% to 60 % (Wright, 2014), see Table 1 Indonesia Fast Food Outlets.

With growth of many outlets, Fast Food company will face tight competition that will be lower the market share of their products and will lower their sales performance in terms of revenue (Turhan, Akalın, & Zehir, 2013).

The way to increase sales performance are make promotion like discount, one of the trending marketing today is using framework Integrated Marketing Communication, using one type of promotion through various marketing communication like Short Message Service (SMS), Social Media (twitter, Facebook) or others internet coupon system likegroupon.com, lakupon.com. By using this internet coupon, promotion can be marketed to their customer database and can increase new customer intake to store.(Budijono, 2015).

Other one way to make a profit so that the company could still survive is to reduce the cost, in terms of cost the largest in the fast food industry is the cost of raw materials, rent, employee salaries.(Hayes, 2002; Institute, 2007)

In term of sales growth, many possibilities to make sales increase or decrease (Institute, 2007) like store location (Turhan et al., 2013), turnover of employee (Julie I Hancock, Allen, Bosco, Mcdaniel, & Pierce, 2013; Medina, 2012; Park & Shaw, 2013), store manager performance (Netemeyer, Maxham Iii, & Lichtenstein, 2010; Yu-Jia, Yi-Feng, & Islam, 2010), communication leader with member (Robin Martin, Guillaume,

Thomas, Lee, & Epitropaki, 2013; Susskind, Kacmar, & Borchgrevink, 2017), and also employee satisfaction (Keiningham, Aksoy, Daly, Perrier, & Solom, 2006).

Table 1 Indonesia Fast Food Outlets

Based on the findings above, the fast food industry that requires a lot of workers, makes the important part that contributes to the high cost, performance and the presence of these workers affect the performance of

the company.(Lusch & Serpkenci, 1990; Netemeyer et al., 2010; Shaw, Park, & Kim, 2013). Peoples are important in company like foodservice industry, "There are two elements that are most important to the company, People and Brand. If I had to choose one, I would choose the People, with the great People, I can create a superior brand (Radjasa, 2012). Satya Radjasa on portalhr.com website quoted the opinion of Maurits Lalisang - Chairman of Unilever Indonesia, noticed about the importance of understanding employee in an organization.

An organization requires a leader who has a leadership to improve performance of the company, to establish communication with her team (Boies, Fiset, & Gill, 2015) both in the hospitality industry by influencing the performance of the individual employee and his unit (Liden, Wayne, Liao, & Meuser, 2014) in several industry as well as in making the environment pollution decrease the better in the petroleum industry - Oil Refineries - without reducing the performance of the industry (Gouldson, Carpenter, & Afionis, 2015).

Leadership in an organization has five components: Leader, Follower, Goal, Environmental and Culture as seen in Fig.1. (Routledge, 2010) . The five components of the followers have the same level with the leader for having mutual communications with the leader in achieving a goal.

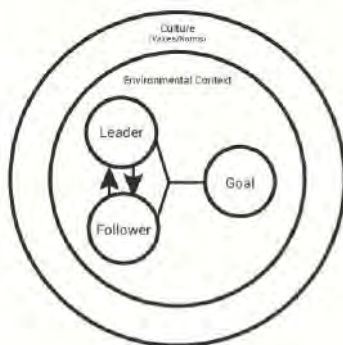

Figure 1. The Five Components of Leadership

In Fast Food Industry with strong involvement of follower and leader in a workplace, it is important make the employee within a workplace to be loyal to maintain lower employee turnover. Lower turnover makes increase profitability, reduce operational cost and affect the level of customer satisfaction that is served by employee (Davidson, Timo, & Wang, 2010)

At one organization, more employee act as followers than act as a leader, whereas with turnover rising in recent years, with a global increase in turnover from 21.5% in 2010 to 22% in 2012, and continues to increase and expected to reach 23.5% in 2018 (HayGroup, 2012). This condition will certainly reduce corporate profits by increasing operational cost as a result of the increasing cost of new employee hired. (Davidson et al., 2010)

In Indonesia, where turnover rose steadily at 2008 was 7.2% and a significant increase to over 11% in 2011(Haygroup, 2012). When paired with a global turnover rate increases, the turnover in Indonesia is also predicted to increase in line with rising global turnover (Haygroup, 2012).

Employment in Indonesia in 2012 is the largest in the sector of agriculture, forestry, hunting and fishery, contributing 35.09% following the Wholesale and Retail Trade as well as restaurant and hotel with the contribution of employment amounted to 20.9%. Restaurant in that it has an organizational structure in which leaders and followers into groups foodservice hospitality industry with a large group (BPS, 2012)

In the hospitality industry this is the highest turnover occurred, in 2014 the global turnover in the hospitality industry reached 27.6% as see in Fig.2. (Compensationforce, 2014)

With the number of labour absorption Indonesia's second largest, and the high turnover rate hospitality industry, need to make research about antecedent of high turnover in the hospitality industry in Indonesia, especially in the foodservice industry specific in F & B industry which has an organizational structure of leader, crew & training. Need to be investigated antecedent of high turnover in the hospitality industry more specifically on the F & B industry in order to make it more healthy thus contributing revenue to the company.(Rosado, James., 2015)

| 2014 Voluntary Turnover | |
|------------------------------|-------|
| All Industries | 11.0% |
| Banking & Finance | 13.3% |
| Healthcare | 13.0% |
| Hospitality | 20.2% |
| Insurance | 8.1% |
| Manufacturing & Distribution | 8.6% |
| Not-For-Profit | 11.2% |
| Services | 8.6% |
| Utilities | 6.9% |

| 2014 Total Turnover | |
|------------------------------|-------|
| All Industries | 15.7% |
| Banking & Finance | 17.4% |
| Healthcare | 17.5% |
| Hospitality | 27.6% |
| Insurance | 11.7% |
| Manufacturing & Distribution | 13.7% |
| Not-For-Profit | 15.6% |
| Services | 12.5% |
| Utilities | 8.6% |

Fig 2. Global Turnover by Industry

With this paper will asks the following question: How employee at fast food industry can increase sales performance considering the follower style of employee, communication between leader and follower that make comfort at the workplace so that employees can be stay longer with the company?

METHOD

This paper will search the linking about follower style, communication between leader and follower, job satisfaction, intention to stay to sales performance.

This paper attempt to answer question by showing an integrative literature review, after give an overview of the theory then discuss key findings and finally discuss the theoretical and practical implications of this paper.

This literature research used to compile all past identified relevant literature to prepare for next or future research by using quantitative or qualitative statistic method.(The & For, 2003)

DISCUSION

This section will be discussing factors that affect performance such as follower behaviour style, LMX, satisfaction and turnover.

QSR (Quick Service Restaurant)

QSR / fast-food restaurant is the type of food business (Food & Beverage), which provides food to consumers accurately and quickly. Number of employees in this business at every store are generally limited, this is because the vast store is limited, while the workload during the day unevenly, so it requires a proper strategy to determine the number of employees and the ability of employees in the store.

Performance

Performance of one organization can be measure from turnover as a predictor of organization performance (J. I. Hancock, Allen, Bosco, McDaniel, & Pierce, 2011), customer satisfaction (Chen, 2012), brand and store location (Khorshidi, Niknia, Daneshvar, Ashrafi, & Hashemi, 2013) and also by increase sales profit.

Performance can be measure in form of "tangible" and "intangible", many research in intangible measurement of performance such as turnover, satisfaction of customer, employee satisfaction. Model that links intangibles to performance organization is using Jonathan Low's and Pam Cohen Kalafut's Value Creation Index, model is based on the following intangibles measurement of (1) Management/Leadership (Strategy Execution, Communication, Transparency). (2) Organization (Technology and Processes, Human Capital,

Workplace Organization and Culture, Innovation, Intellectual Capital, Adaptability). And (3) Relationships (Brand Equity, Reputation, Alliances and Networks). (Kamien, 1993).

At organization, human capital can be one of intangible performance measures in term of employee's performance. Employee performance can come with satisfaction of employee and part of non-financial performance that has relation with financial performance, by using balance score card framework research to 794 employees and customers in 55 table service restaurants and cafes in Surabaya, research find positive relationship of employee satisfaction and profitability (Devie, 2012)

Job performance of employee contribute to organization performance, Employees who have positive motivation, loyalty and commitment have reported higher productivity (Jewoola, 2014), performance of employee related to productivity employees in organization and become antecedent of organization performance (Delaney et al., 1996; Killham, 2003; Mark A. Huselid, 1995)

Followership

Followership introduced by Robert Kelley in the literature in the Harvard Business Review (Kelley, 1988) the results of monitoring Kelley companies when there is a recession, corporate downsizing to some divisions are no longer headed by a leader, but directly led by the supervisors of the level next. From this condition Kelley saw their subordinates remain productive work even if there is no leader who monitored. Ricketson's dissertation examined the role of a follower in the QSR industry finds followership not influenced by the style of the leader superiors. A good follower will work fine without their leader (Ricketson, 2008).

Basically in an organization are more people who apply as subordinate compared to a supervisor, this study becomes important to better understand the characteristics of a subordinate in the workplace (Richard Martin, 2015) without any influence how old follower or his superiors for an the characteristics of each person as analysed in the dissertation Johnson.(Johnson, 2014)

Mary Uhl-Bien, Ronald E.Riggio, Kevin B. Lowe and Melissa K. Carsten in 2014 review all followership theory (Uhl-Bien, Riggio, Lowe, & Carsten, 2014), one of their frameworks is Role-Base Followership, about "leader as recipient or moderator of follower influence in producing outcomes" (Uhl-Bien et al., 2014) page 85. Strengthen the relationship between the leader and the member (LMX) with follower behaviour.

Leader Member Exchange (LMX), Performance.

One of Meta analytic research within LMX and performance is "LMX and Performance" by Robin Martin, Yves Guillaume, Geoff Thomas, Allan Lee and Olga Epitropaki, the positive relationship occurs between LMX and Performance (work performance, task performance) (Martin, 2015)

Leader Member Exchange (LMX), Job Satisfaction.

Kenneth J. Harris and K. Michele Kacmar finding relationship between LMX and Job Satisfaction that contribute to Turnover and performance of organization and find that employees empowerment contribute to relationship of LMX-Job Satisfaction and LMX-turnover intention.(Harris & Kacmar, 2009)

Leader Member Exchange (LMX), Turnover.

Investigate relationship quality of LMX with turnover is depend on supervisory presence (Kim, Lee, & Carlson, 2010), (1) for supervisory employee turnover intention become lower for relationship LMX is Higher the graph is linear, but (2) not same for employee that does not have supervisor (U shape) see Fig. 3. Graph of the relationship between LMX and turnover intent.

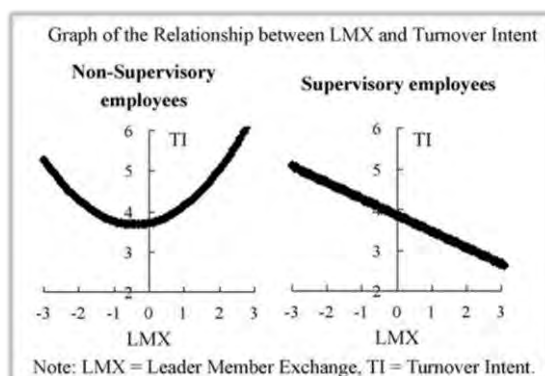

Fig.3. Graph of relationship between LMX and turnover intent.

According to above literature, there is a gap of turnover intent for employees with supervisor and non-supervisory, author suggest that follower behavior take account of this gap.

Followership, Job Satisfaction, Turnover, Performance

Behaviour of follower in organization / company effect to follower turnover intention, Rodger Adair proposed the 4-D Followership model to help explain the types of people who exist within an organization (Adair, 2008). The framework Adair proposed for understanding follower’s level of job satisfaction and productivity, and based on the combination two of variable job satisfaction and productivity someone will decide to leave the organization like Fig. 3. (Adair, 2008 page 144).

Favara’s dissertation "Examining Followership Styles and Their Relationship with Job Satisfaction and Performance" finding that positive relations exist between followership styles, job satisfaction and performance within 131 employees at Midwestern automotive engineering and manufacturing company. (Favara Jr, 2009)

In (Favara Jr, 2009) finding that person who indicate exemplary followers report higher levels of job satisfaction and also find that person indicate exemplary followers report higher levels of job performance those finding contradictive with research by other research in Botswana University, findings that low performance of lecturers who indicated exemplary, pragmatist and alienated followership styles more finding positive relationship between passive followership style and job performance; indicating high performance of lecturers who indicated this style of followership.(Oyetunji, 2013)

Followership, LMX

Woods dissertation (Woods, 2009)finding that positive relations exist between followership and relationship between leader member exchange. According Woods, influence followership style on the quality of LMX was not great, but if look deeper to followership dimension, relation LMX with engagement follower is higher than relation LMX with high thinking follower.

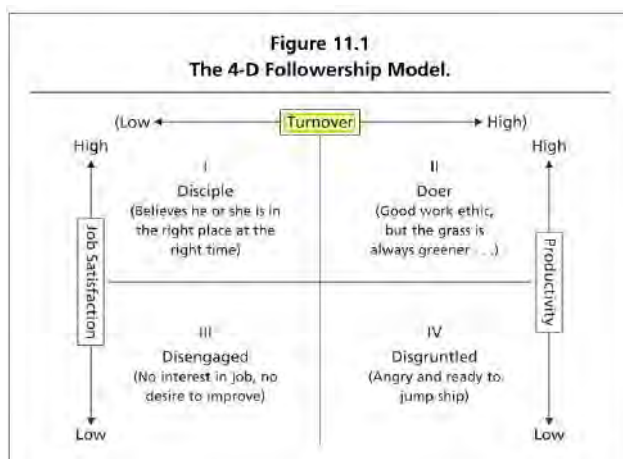

Fig. 3. Adair 4-D Followership Model

After analyzing followers behavior and its relationship with job satisfaction, turnover intention and performance and the role of the supervisor in a relationship with a subordinate to job satisfaction, turnover and performance, created a new framework in which the follower together with LMX has contributed to job satisfaction, turnover and performance. This framework

The framework reinforces the framework previously made by Uhl-Bien and friends (Uhl-Bien et al., 2014) on their literature “Followership theory: A Review and Research Agenda” where one framework shown is Strengthen the relationship between the leader and the member (LMX) with follower behavior in order to improve job satisfaction, reducing turnover intention that ultimately improve performance store on the F & B industry

CONCLUSION

Benefits of this research can be viewed from two perspectives:

Perspective theoretical – scientific

This research is useful to enrich and expand research on followership theory, particularly by providing additional knowledge about the influence of moderator variable quality leader-member relationship and the relationship followership and job satisfaction, which in turn contributes to the company's performance.

Perspective practical - applicative

This research contributes to the foodservice industry (more specifically on the F & B) regarding the type of followership styles appropriate to improve the performance of each store through the mediating variables of leader-member relationship quality. Where to find out the type of followership styles of each individual can be made in ways followership styles change through human resource management in order to keep improving store performance in the foodservice industry.

Innovate or Die: Future Management is an Integrated Innovation

Agung Yunanto

Innovate or Die: Future Management is an Integrated Innovation

Agung Yunanto

agungyunanto@wikamail.id, Bina Nusantara (Binus) University - Indonesia

ABSTRACT

This study is a literature study to determine the appropriate management that fulfill business demands and challenges in the future, the management that can bring success for the company in the business climate of rapid change significantly ("volatile and uncertain environment"). Context of the discussion of this study is the State Owned Enterprises (SOEs), especially the construction sector. Currently SOEs, including Indonesia construction state-owned company, facing a strategic challenge to improve performance at the regional level and become a world class company. From the study of literature, there are two main focus of management in the future that is open innovation (collaboration innovation) and the workplace that highly technology content.

This study is more emphasis on the integrated collaborative innovation which is defined as significantly changes that are done in an integrated, systematic and sustainable process by using the right kind of innovation of work methods, products and services that can enhance the business performance of the company. Study conclude that the added value of Innovation Management is higher than other types of innovation. But by looking at the experiences of successful companies in innovation, they are not only innovate on its management but also innovate in its work processes, products and services and its business model. This is an integrated innovation.

The study will define the characteristics of innovative companies and nine (9) key to success factors in building innovative companies as well as the strategic direction for companies in Indonesia, especially the Indonesia state-owned construction companies. The strategic directions include the need to expand the orientation of innovation, from the oriented operational innovation and business model, towards management innovation to survive and excel in an increasingly competitive business situation.

Key Words: *management development, innovation, management innovation, innovative companies*

1. INTRODUCTION

Each business entity will face challenges very significantly since the business environment changes occur more rapidly in the future era (era of the 21st century), and no one will know exactly what will happen in the future. Such changes include aspects: (1) technology of new industry to support the new technology; (2) the global economy, not only the international economy; (3) the emergence of pluralism institutions world- wide; and (4) knowledge as the most important resource. Institute for the Future for The University of Phoenix Research Institute concluded there were six (6) drivers of change, as follow:

1. Extreme Longevity: The changing nature of careers and learning due to the intensity of globalization. In 2020, there will be five (5) generations working together in one company. Global access to markets and talent will further strengthen the company (Karie, 2012).
2. Rise of Smart Machines & Systems: Automation of work
3. Computational World: Digitizing the world of work.
4. New Media Ecology: Media communication broader than just text. Social Media will connect employees, customers, and business partners for fast communication (Karie, 2012). Internet and electronic communication has changed the way of the technology works and the way of doing business (Lim Ghee Soon, 2015). Internet is also rapidly shifting bargaining power from producers to customers (Gary Hamel, 2007).
5. Superstructured Organisations: Technology that encourages new forms of production and the creation of added value.
6. Globally Connected World: Increased the interconnectivity made diversity and adaptability becomes central to any company's operations.

Karie Willyerd (2012) concluded there are three (3) driving change in 2020, which are: Globalization, Demography and Social Web. Drivers of these changes resulted a fundamental shifting to the operation and environment in each company, including the management of the company, and the most was the increasing levels of business competition.

The consequences on such business environment, according to Rita G. Mc Grath (2013), in the context of the planning strategy (strategy playbook), resulting competitive advantage is more transient, no longer as sustained competitive advantage. Other consequences of such business environment, every **company** faces the strategic challenge include:

1. Build a company that has the ability to conduct improvements / developments automatically, either at the time the company experienced a critical period or when the company is in well development.
2. Making innovation as the duty of every employee and make it as daily activity.
3. Increasing the engagement level of employees, where each employee gives the best for the company.

As the result of improvement and innovation, the products and services perceived and judged better by the customer (Target Market) rather than the products and services rendered by competitors, as well as the improvement and innovation must create an operating company more efficient than its competitors (Kenichi Ohmae , 1982).

To answer the challenges of the business, we need a new capability, a new working environment, and the new organization so that the company can adapt strategically and accompanied by efficient operations (Gary Hamel, 2007). Langdon Morris et al (2014) concluded that the success of the business in this era only for companies that have the capacity not only can adapt to change, but also grow successfully in these changes, and the ability to create positive change. In the field of management, it required good innovation management so the company can adapt strategically and compete in a higher frequency of business turbulence situation. Companies need to build a vision of the future management and become a pioneer in developing new rules to manage the company (Gary Hamel, 2007; Bruce Rosenstein, 2014).

In addition through innovation, to respond to increasing adaptability capability demand towards higher changes in the environment, companies need to be supported by technology ('business intelligence') and patterns of strategic cooperation, and a corporate culture that is oriented to excellence and innovation. The Culture developed is every leader must be able to inspire every employee so they give their best daily - "Making Innovations everyone's job, everyday" (Gary Hamel, 2007).

From the viewpoint of development practices and management perspective, shown in Figure-1, the innovation (open innovation) and the working environment or workplace-based technology is the right direction of management practices and will be developing to address business challenges in the future (Lim Ghee Soon et al, 2015). Thus, innovation which particularly utilize internal and external talent and knowledge , is one of management perspective that can address the business challenges in the future. According to Langdon et al (2014), the company must be an expert in innovation and this expertise will be a power-full "weapon" to win the business- competition. There is no other choice except innovation. This was confirmed also by Gary Hamel (2007) and Bruce Rosenstein (2015), the company needs to build a vision for future management and the company also needs to be a pioneer in developing new management in improving business performance.

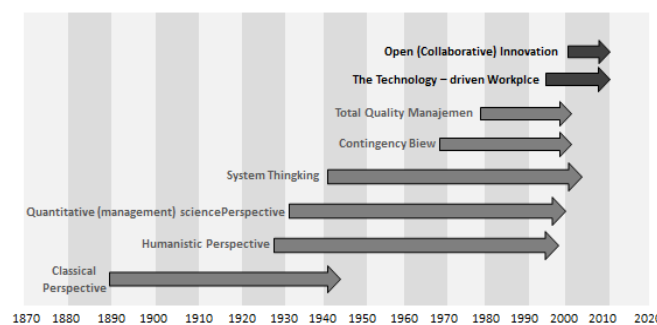

Figure1 – Perspectif of Managemen along the time ((Lim Ghee Soon et al, 2015)

| Elements | Past Management | | Current Management | Future Management |
|--------------------------|---|--|---|--|
| | Classic Perspective | Humanistic Perspective | | |
| Time Period | 1880 - 1920 | Evolve in the 50's | This concept emerged after the end of World War II | It requires innovative management thinking to answer challenges in business environment |
| Sub-areas and its Figure | 1. "Scientific Management" (SM) emphasised in setting the assignment and management practices which scientifically defined as a way to increase efficiency and productivity of the labour. | Humanistic perspective emphasised the importance of understanding the behaviour, needs, and attitudes of its human resources in a work environment as well as social interaction and group process. | In addition to the use of the concept of humanistic, during this period of time also use the concepts referred to as "systems thinking", "the contingency view", and "total quality management" | Gary Hamel (2007) emphasized the importance of companies in implementing innovation management. Lim Ghee Soon (2015) shows the future will be the era of "open (collaboration) innovation" and manage the work environment which filled with the usage of technology |
| | Figures: | | | |
| | 1. Frederick Winslow Taylor (1856-1915), defined the Taylor theory | 1. "Human Relations Movement" is based on the idea that a truly effective control coming from within the employee / worker than from a strict regulation. It is, starting in 1985, a phenomenon known as the "Hawthorne Effect". | 1. "Systems Thinking" adalah kemampuan untuk melihat elemen dari suatu sistem atau interaksi diantara sub elemen sistem. Tokoh yang memperkenalkan konsep ini adalah Peter Senge. | |
| | 2. Henry Gantt, defined the Gantt-Short | 2. Human Resources Perspective combined the draft assignment with theory of motivation | 2. "Contingency View" is the principle of this perspective, where success in one place does not necessarily guarantee in other places. | |
| | 3. Frank B. dan Lillian M. Gilberth, defined the Time and Motion Study | The main contributor of this perspective is Abraham Maslow dan Douglas McGregor, where McGregor invented the Theory X and Theory Y. | 3. Total Quality Management (TQM) is a concept that focused on the total management of the organization to provide better quality to its customers. | |
| | Harvard Business Review defined "Scientific Management" - including the influential 12 innovations | 3. Behaviour Science Approach. | There is 4 main elements in TQM, which are : "employee involvement", "focus on the customer", "benchmarking", dan "continuous improvement". | |
| | 2. Burreauchratic Organisation (BO) is a systematic approach which was developed in Europe that viewed organisation as a whole. | The humanistic perspective is still relevant and in use nowadays | TQM is still very popular nowadays. However, there is a new system that is more "challenging", such as: Six Sigma which was developed by Motorola 6 General Electric. | |
| | Figure : Max Weber (1864-1920) | | | |
| | 3. Administrative Principles is an approach that focuses on organizational productivity in total. | | There are three (3) tools that its usage has become increasingly popular: customer relationship management, outsourcing, and supply chain management. | |
| | Figure: Henri Fayol (1841-1925) who formulated 14 general principles of management, where most of the concept is still relevant today. For example: "unity of command", "division of work", "unity of direction", "scalar chart". | | | |

Table 1 - Development of Management & Organizations - Resume
(Lim Ghee Soon, et al, 2015)

2. METHOD

2.1 Source of Data

This study use secondary data such as research journals, white papers, text book, that relate with the key words (management development, innovation, management innovation, innovative companies).

2.2 Research Method.

Research method use literature review from the research journal and report, white papers and text book that relate with the topics.

2.3 Literature Review

2.3.1 Business Management for Managing Business in The Future.

2.3.1.1 Development of Management in the Past, Current and in Coming

Development of the organization and management are shown in Table 1. In the table shows that to respond the more complex business challenge in the future, every company needs to innovate on its management. It should be noted that the elements of a management perspective that developed in the past, is still being used by companies today.

Development perspectives and management practices are as follows:

1. Classical Perspective

This perspective was the first formal studies this management. In this era, the 19th century up to the beginning of the 20th century, began to grow the professional managers. For example, in the United States, the professional managers grew from 161,000 to over one million people. The professional manager was starting to apply the evolution of modern management by using the classical perspective as a reference. Classical perspective has three subfields, namely management science, bureaucratic organization and principles of administration.

This perspective encourages every job and every task is accompanied by standardized and documented methods. Selection of employee is based on the ability requirement. Each employee is given training on standardized methods. Incentive is given to employee. Overall this perspective is the foundation for the company to achieve the productivity of employees, and is still used in current management practices. The basic concept is to increase productivity through the development of management systems.

This perspective does not consider the social context and the needs of employees, so in its application often led to conflicts among managers with subordinates and may eventually form a negative perspective of the parties associated with the company.

2. Humanistic Perspective.

This perspective emphasizes the importance of understanding the human resource aspects such as behavior, attitudes, needs and social interaction and group formation process in the company. This perspective is still implemented by many companies until today. There are three subfields in this perspective, namely the movement of the interaction of human resources, human resources perspective, and behavioral science approach. This perspective is better recognized developed by Mary Parker Follet and Chester Barnard.

Some of the principles developed by Follet which is still used in management practice today is the need for any employer to formulate the goals of the work unit, approach more focus on human resources aspects, including the dynamics interaction of organizations - management, compared to engineering techniques in developing leadership. Another thing that was introduced by Follett which is still implement in management practices today are business ethics, power, and the ways to lead motivate of employees to give their best to the company. Follett also introduces the concept of delegation, the concept of manager as a facilitator than as a controller.

Contributions Barnard in a management perspective in this era is an informal organization, including the intrigues between groups, the formation of sub-groups within the company; and "acceptance theory of authority" that every employee has the right to choose, refuse or accept any assignment of management. Barnard reminded that management should treat well the employee, because acceptance authority of workers can determine the success of achieving corporate goals.

3. Quantitative Perspective.

Quantitative perspective or also known as "management science" give solution to decision making for more complex and more global enterprise issues. This perspective emphasizes the use of mathematical, statistical and other quantitative techniques, supported by computerized calculations, to support problem solving and decision making. Techniques such as "operations research", " operation management ", and "information technology (IT)" is widely used since the era post the second world war until today. IT accompanied by intranet, internet, and software, widely used in information management system to support fast and efficient decision-making. Bain & Company's study showed many executives from China and India, invest in the operational IT company (83%); compared with other countries such as North America (58%), Europe (56%) and Latin America (65%).

4. The Perspective of New Management

Post the 2nd world war, there were popping new concepts of management, accompanied by further strengthening to the humanistic perspective as group dynamics and team, as well as other management concepts that oriented and related to human resources aspects. There are three new management concepts, which are "systems thinking", "The contingency view", and "Total Quality Management". Systems thinking is the ability to see well the essential elements of a system or a complex interaction between these elements. The change from

a system element can affect other system elements or even affect the system as a whole. By using the "system thinking", managers can know the linkages and interactions between elements in an organization or company.

5. Directions of Management Development

Future development direction of Management is innovative management that can address the higher and more complex business challenges. A survey conducted by Bain & Company (bain.com, seen early August 2016) on "Management Tools & Trends 2015" showed the company Leader places innovation as its first agenda. Each executive is looking at innovation as a strategic aspect that can address the future business challenges. For long-term success, 74% mentioned that innovation is more important than cost reduction. Likewise, 84% of executives in China and India as well as 83% of executives in Europe mentioned the same thing that innovation is more important than cost reduction. China and India will use innovation to make them as one of the global market leaders. China and India are two countries that the highest usage of the concept of innovation (disruptive innovation). The importance of innovation was also shown by the McKinsey Global Survey (2010) that concluded 84% of executives mentioned innovation is very important for the company to run its growth strategy.

Although innovation is seen as an important future management and competence, companies generally use a combination of several management tools in order to manage workplace-based technology and in order to improve sustained company performance. In order to manage workplace-based technology; as mentioned by Lim Ghee Soon (2015), currently popular is the "customer relationship management (CRM)", "outsourcing" and "supply chain management". Bain & company fully conveyed the results of his study, that the most popular from 2012 through 2014, are as follows:

1. Customer Relationship Management. This tool is the most popular tool used globally.
2. Benchmarking. The most popular tool used by large corporations.
3. Employee Engagement Survey. The most popular tool used in North America.
4. Strategic Planning. The most popular tool used in Latin America.
5. Outsourcing. Almost 41% of companies using this management tool.
6. Balanced scorecard. This tool is especially useful to use in the emerging markets, compared to in the stable market.

Supply chain management, according to the survey Bain & company, has the popularity of usage at 8 (eight) ranks. China and India who use it a lot. Then, the latest trend is "Big Data Analysis" which occupies the most satisfactory tools used, although their use is still limited, which is approximately only 30%. Bain & Company suggests that the use of such management tools need to be chosen that most suitable and should adapted to the conditions and context of the company.

2.3.1.2 Capability Required in Managing Business in The Future

Companies should develop competence skills according to the demands and challenges of future work / business. Tower Watson and Oxford (2012) classifies skills that should be developed for 2020 and the coming years are "Global Skills", "Agile Thinking", Digital Business Skills ", and" Relationship Building ".

In global capabilities, there are three (3) most prominent abilities, which are the understanding of the international market, the ability to manage employees with different backgrounds, and the ability to work in various locations abroad, as well as the "Cross Cultural Competency", the ability to operate in different cultures (Institute for the Future for the University of Phoenix Research Institute, 2011)

The most prominent in "agile thinking" is the ability to consider and prepare a variety of scenarios, INNOVATION, and the ability to manage complexity and ambiguity. Need to be also included in this group are "novel and adaptive thinking", which is the ability to provide the best solution, and "Design mindset", that is an ability to describe and develop tasks and work for the determined result (Institute for the Future for the University of Phoenix Research Institute , 2011)

The most prominent in the digital business capabilities is the ability of digital business, the ability to work virtually, system and corporate software capabilities. Need to be included also the ability to "Computational Thinking", that is the ability to translate quickly a number of data into concepts and to understand the reasons based on the data, as well as "New Media Literacy", that is the ability to follow and build content using a new media form (Institute for the Future for the University of Phoenix Research Institute, 2011)

In building relationships, ability that stands out is "co-creativity and brainstorming", build relationships with customers, partners, governments and others, and cooperation. It also includes Sense of "making" , that is the ability to determine the deepest meaning or interests of a person's expression, "Social Intelligence" which is the ability to relate to others properly, "Cognitive Load management" , that is the ability to sort and distinguish the importance level of information, and understand how to maximize cognitive function using various tools and techniques, as well as virtual Collaboration: ability to work productively, pushing engagement , and show a

presence in a virtual team members (Institute for the Future for the University of Phoenix Research Institute, 2011) .

2.3.2 Developing Innovative Company

2.3.2.1 Reasons to Build Excellence Innovation Competence

The main reason the need for each company to build excellence competencies of Innovation is, consider always changing business environment, with the faster frequency of changes and accompanied by a significant degree of change ("volatile and uncertain environment"). As the implication, in the context of strategic planning, it should be seen as a "transient", competitive advantage, not as a "sustain" excellence, so each company, in order to survive and excel in business, requires a sustained effort to find better procedures and products or services than the nearest competitor. Rita (2013) called it by building excellence innovation competence.

More detail, Jatin Desai (2013) says there are four (4) main reasons that drive the need for innovation; which are "Profit", "People", "Prosperity" and "Planet". Aspects of "profit" associated with the creation of new added value to continuously generate growth and added value. Survey Langdon et al (2014), concluded that the "highly Innovation Fortune 500 Companies return four times more value to their shareholder" (p 60). Aspects of "People" associated with the work climate and corporate culture, which is building a corporate culture with maximum engagement level that enables every employee to contribute to the company's innovation. Aspects of "prosperity" associated with clarity and strategy that is the scale of companies commitment to invest to improve the clarity of future of company and reduce the uncertainty of market fluctuations. And the aspect of "planet" related to "citizenship" that is the scale of company's commitment to improve the welfare of society and build a corporation's "legacy" based on business ethics practices. Langdon Morris (2014), p 9, concluded "only organization that innovate have a chance of survival in the long run. Those that do not Will not ". "Mastering innovation is a strategic imperative" (p 40) .

2.3.2.2 Definition of Innovation

Drucker defines innovation as a reform that expresses a new dimension of performance of the company (Bruce, 2014). Langdon et al (2013), defines innovation as "the act of discovering new opportunities by looking beyond the commonly held views, by questioning rather than accepting the limitations that conventional wisdom imposes " (p 40). The focus of innovation based on execution, not control, with the following principles:

1. Constructive Leadership to accelerate the innovation process.
2. Built collaboration through "agile" team.
3. Continuous learning

2.3.2.3 Strategic Approach

A strategic approach to build excellence in innovation need to consider the type of innovation that is appropriate to the business environment and customers in the future

2.3.2.3.1 Type of Innovation

According to Gary (2007), the innovation consists of four types / levels: operational innovation, product / service innovation, strategic innovation and management innovation. According to Langdon et al (2014), innovation can also be distinguished from the "incremental innovations", that is small changes to the current products and services, to the "breakthrough innovations". Derrick Palmast Soren Kaplan, describing the type of innovation as figure -2.

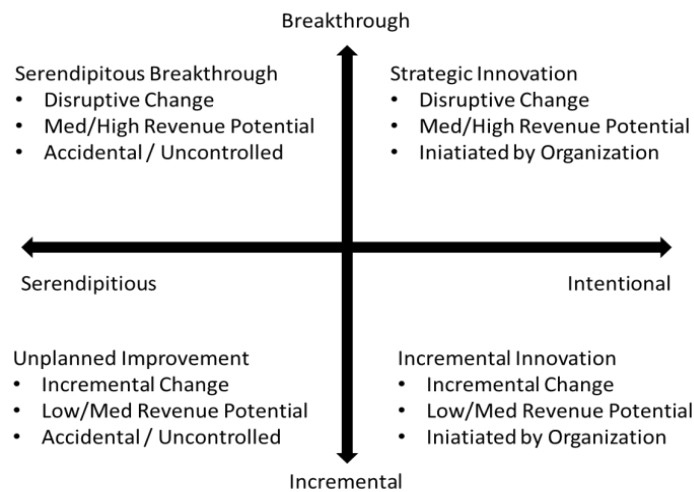

Figure-2 Type of Innovation

2.3.2.3.2 Integrated Innovation

Refer to Gary (2007), Innovation management is "anything that substantially alters the way in which the work of management is carried out; or significantly modify or customary organizational forms, and by so doing, advances organizational goals.

In simply way, Innovation Management is a significant change that was done systematically and continuously to procedure that enable to improve company's performance. According to Gary (2007), Innovation Management give higher added value rather than other types of innovation, so the context of innovation and management innovation positions can be described as figure- 3 below:

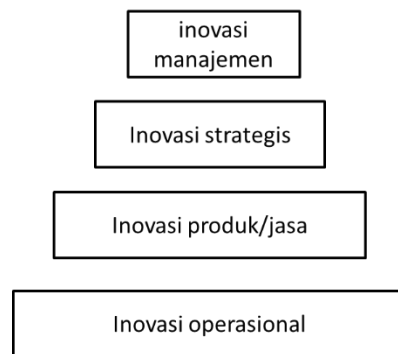

Figure-3. "The innovation stack"
source: Gary, 2007, p32

Operational innovation is focus on business processes, while the focus of management innovation lies in the management process of a company. Examples of the company's management process is, strategic planning, project management, training and development. Companies that innovate with good management are:

1. General electric: "Invention management".
2. DuPont: techniques in "Capital budgeting".
3. Procter & Gamble: managing in-tangible assets include "Brand management".
4. Toyota: "Toyota Production System" that drive every employee to make improvements / continuous improvement.

Innovation of products / services focus on product / service aspects, but this innovation can not give a guarantee to enable company as the market leader in the long term. Strategic innovation leads to new business model, which is directed to provide a better experience for the customer (Langdon, 2014). Based on the lessons learned from the application of innovation at Procter & Gamble (P & G), companies can apply all kinds of innovations in order to stay ahead in the market. P & G applied innovation that is "incremental", commercial innovation, "transformational-sustaining" innovation and "disruptive innovations". (Bruce Brown and Scott D.

Anthony, 2011). P & G implemented integrated innovation. Thus, it need to implement integrated innovation to be continuously excellence.

2.3.3 Characteristics of Innovative Companies

Jatin Desai (2013) describes one of the characteristics of innovative companies (Innovation Engine) is an innovative company driven by highly "self-motivated" human resources, and has a freedom as well as gain access to the corporation resources in order to achieve the Company's vision, mission, business targets and business plan. "People are naturally at the very core of everything involving innovation" (Langdon et al, 2014, p 153). Companies that have the excellencies in innovation (innovative enterprises), according to Rita G. McGrath (2013), has the characteristics which are carried out systemic and sustainable investment, starting from the customer to assist customers in meeting their needs, "customer insight" (Langdon, 2014) , provided specific resources for innovation, and oriented to finding something new or better ("experimentation") thus every failure is acceptable (but requires lesson learning).

2.3.4 Key Success Building Innovative Businesses

1. Innovation is the key competencies that must be built and professionally managed. Here is the key to successfully build Innovative Company, building core competencies of companies - Innovations. At the top management level, innovation is believed and managed as a critical to successful of company. Innovation must be the first agenda of every leader (Rita G. McGrath, 2013). Companies need to establish "innovation intent" which is translated in stages from the highest levels, to divisions, departments up to the individual level (Jatin Desai, 2013).
2. Build the leadership of every leader at every level of management in order to lead the company's innovation (Jatin Desai, 2013; Langdon Morris, 2014). As presented by Bruce (2014) and Jatin Desai (2013) to prepare future leaders through training and development regarding current effective of leadership elements in order to create a "legacy" that drive corporate performance. Current Leaders must be encouraged to create a positive difference through innovation.
3. Readiness to innovate through the development of corporate climate, including system and process (jatin Desai, 2013) where each employee can discuss and follow up any improvement / development management opportunities to enhance the competitiveness and performance of the company. Peter F. Drucker mentioned the most effective and successful way to manage company is through the creation of changing itself. To survive and succeed, every company has to transform itself as an "agent of change". Mindset of change agent must occur at all levels of the company. Systematic innovation requires a willingness to see change as an opportunity. "Mind-set" of the leaders, proactively, oriented to manage change, (Langdon et al, 2014) change toward transformation.
4. Focus on the root causes of the problem rather than on symptoms.
5. Every employee, including staff at the lowest level, is given the opportunity to do the "improvement" of the company's processes, especially those under his/her responsibility. Every employee of any level of management is motivated to contribute to the innovation program (Jatin Desai, 2013; Langdon Morris, 2014). According to Drucker, do minor improvement continually can drive to a creation of innovation (Bruce, 2014).
6. Drucker added another key to success is to stop doing un useful things, build / develop appropriate strength of the company, and do something new (Bruce, 2014).
7. Jatin Desai (2013) requires formulating a strategy innovation, which is innovation become a core capabilities of the company through the implementation of activities (1) the formulation of innovation intent integrated with the vision, mission and values of the company; (2) formulate an innovation strategy that is integrated with business strategy; (3) formulate integrated innovation programs with strategic business initiative. Montgomery and Gail S. Perry (2011) encourage the application of "balanced scorecard" in integrating innovation into the corporate strategy. Innovation will be strategic if fully integrated in the strategic planning process. Gail (2011) provides an example of the integration of innovation in the strategy (see Figure-4), with a mechanism for measuring the results of innovation activity.

Theme: Innovation

Result: We have an innovative culture in which good ideas are generated and the best ones are turned into new products and services that our customers value.

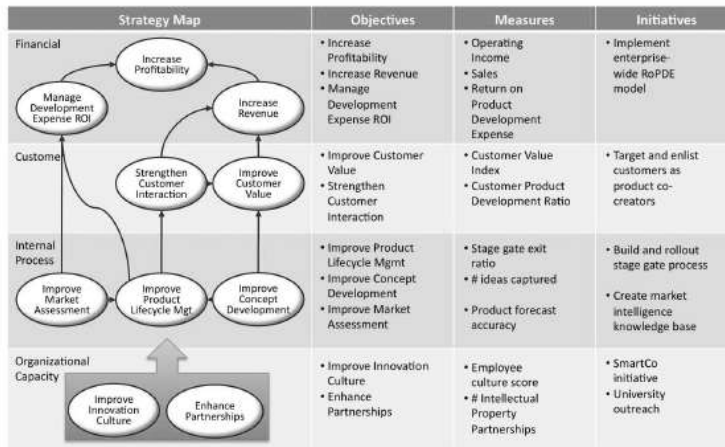

Figure-4

- Having a systematic approach in innovation. The Company establishes a framework, systematic process and understood by every employee. (Langdon Morris, 2014) suggested creating "innovation Master Plan".
- Implementation of innovation by the talents (innovator) is carried out continuously, "on-going", and systematically to build relationships with customers during implementation. This consider the implementation of innovation that not continuous and systematic, can not provide the maximum benefit for the company (Rita Gunther Mc Grath, 2013). One way to ensure that happens, Rita (2013) mentioned the need of innovation activity to be part of career development.

2.3.5 Innovation Skill

Innovation skill required to ensure the success of innovation comprise of technical and business skills, and also talents innovation. Talents innovation involves empathy, listening and "observing", "modeling", "ideating", "prototyping" and "risk tolerance" (Langdon et al, 2014). This talent by Jeffrey H. Dyer (2009) named as The Innovator's DNA which consist of finding skills (associating, questioning, observing, experimenting, networking)

2.3.6 Manage Implementation of Investment

Derrick Palmer & Soren Kaplan (2009), p 9, formulate the well managed innovation process (Figure 5), which covers the entire innovation activity.

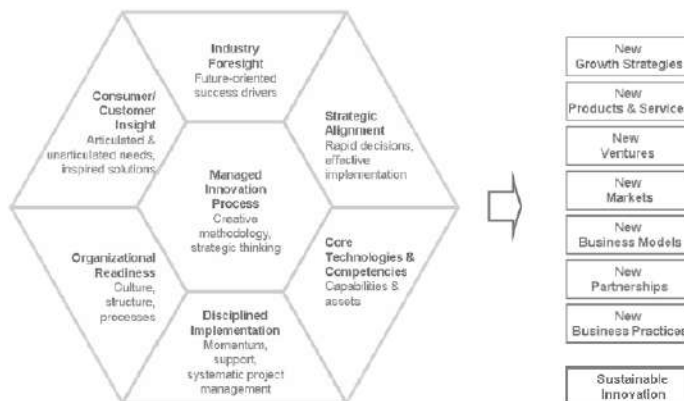

Figure-5
A Manage Innovation Process
(Derrick Palmer & Soren Kaplan, 2009)

2.3.7 Leadership Role in Developing Innovative Company

Each leader at all levels of management must play actively in integrating innovation into the corporate culture, so the innovation can become culture in the company. Leader has an important role in building employees engagement to support the creation of an innovation culture of at all levels of the company. "Without engaged employees, sustainable innovation is not possible" (Jatin, 2013, p 27). Innovation should be seen as the main task.

The main contribution of the leader is to give recognition to good ideas, supporting new ideas, willing to "challenge" system in order to obtain new products, processes, services, and system. So it can be said that the leader was "early adopter" of an innovation (Jatin, 2013).

3. DISCUSSION AND CONCLUSION

In the future, two management perspectives that can answer more complex business challenges are innovation (open innovation) and technology – based workplace. In the future, every company is required higher skills in implement innovation, so that the company can survive and excel in a sustainable manner.

As P & G, the company needs to run an innovative, both in "incremental" , capable of "breakthrough" in all types of innovation that is operational, products and services, business models and management. Companies need to run integrated innovation.

There are nine key success factors in order innovation can be implemented successfully for the company's performance, which are constructive role; corporate culture oriented to change / transformation; focus on the root causes of each problem; the innovation is done by all levels of management; focus on the strength of the company; integrated with strategic planning and corporate strategy; make documented innovation master plan; and performed continuously based on fulfilling the needs and requirements of customers.

Internalization of Idealism and Relativism on the Perception of Accountants' Ethics Code

Ayu Dwidyah Rini

Internalization of Idealism and Relativism on the Perception of Accountants' Ethics Code

Ayu Dwidyah Rini

Ciputra University, Indonesia

ABSTRACT

The purpose of this research is to (1) identify the effect of internalization of idealism in accounting active learning method on the perception of accountants' ethics code and (2) to determine the effect of internalization of relativism in accounting active learning method on the perception of accountants' ethics code. The quantitative approach was employed in this research in order to reveal the effect of idealism and relativism on the perception of accountants' code of ethics by using multiple regression analysis as data analysis technique. The findings showed that there is significant effect of the internalization of idealism in accounting active learning method on the perception of accountants' code ethics; nevertheless, the effect of internalization of relativism in accounting active learning method on the perception of accountants' ethics code showed is not significant.

Keywords: *accounting active learning, idealism, relativism, ethics code*

INTRODUCTION

The global economy has prompted to the emergence of new businesses, causing fierce competition in the business world. The business competition encourages the orientation of businesses to be profit making. In achieving the purpose of profit-making, businessmen have a tendency for doing many ways though it disregard moral and ethical dimensions of business itself. Let's take an example of Enron's case as the issue of moral ethics' crisis in the world of business. The case involving one of the big five accounting firm "Arthur Anderson as the accounting firm of Enron. He was suspected to violate the code of ethics of accountants because he considered being neither independent and objective nor fair in doing audit task and giving feedback to the Enron Company (Prajitno, 2006).

Malpractice cases in businesses that involving professional accountants (Ludigdo, 2006) led to the issue that accounting profession has a big responsibility for the decline of the economy development. The teaching of attitude in this regard plays a major role in building economic morality and ethics of accountants in the business world. Unethical behavior that occurs in the world of education is one of predictor of unethical behavior in the business world (Irianto, 2003). The learning process is required to develop students' ability to be professional accountants and internalize the skills, knowledge, and integrity as the prevention of fraud actions (Setiawan and Kamayanti, 2012).

Higher Education or university as the moral change agent in education should be able to develop students' professional behavior. The teaching of attitudes in higher education is integrated to curriculum and quality of lecturers. The American Accounting Association (1986) explains that the accreditation standards for accounting program are prompted to integrate ethical matters to its curriculum. On the other hand, Research related to the internalization of accounting ethics in the learning process is still less. A previous study related to the ethics in accounting in learning process (Malone, 2006) is still limited to the justification of the ethical

behavior of students in different situations. He then explained that students have a tendency to do unethical behavior when experiencing situations that endanger themselves.

The second research proposed by Haas (2005) concerned to the ethics in the teaching of accounting in the accounting program at 44 public and private universities in New York. The result of the study showed that there were 66% programs which incorporating attitude matters and it was only given in introductory accounting lesson. Referring to the previous research above, it implied that they have not been able to reveal how the relationship between internalization of ethics in the learning process of accounting and students' perceptions of the accountants' ethics code is and its impact on the students' ethical behavior.

The learning and learning process of ethics in the accounting department is presented by using active learning method. This method is selected to be the object of research because it considered integrating ethic values in terms of cognitive, affective as well as psychomotor aspects through character buildings. The fundamental difference of this study with the previous research is at the functional level on the internalization of ethics values in the teaching and learning process. The researcher is interested to reveal the effect of internalization of ethics value in the teaching learning process by using accounting active learning on the comprehension and implementation of accountants' ethic code in business run by students.

Referring to the background of the research above, this study empirically aims to (1) examine the relationship between the internalization idealism in accounting active learning method and accountants' ethic code and (2) to determine the influence of relativism in accounting active learning method on accountants' ethic code. Furthermore, the research questions are formulated in the following: (1) Is there any significant effect of the internalization of idealism in accounting active learning method on accountants' ethic code? (2) Is there any effect of the internalization of relativism in accounting active learning method on accountants' ethic code?

THEORETICAL FRAMEWORK AND HYPOTHESES

Ethics in the Teaching and Learning of Accounting

Ethics is a normative behavior that is derived from Greek "ethos" and the meaning is custom. Ethics explains all true matters according to the law and moral principles. Furthermore, Moral translated is derived from Greek word "mores" as it is interpreted as custom or way of life. Moral is justified through attitudes and actions during interaction with another person or group, while ethics is a study related to moral action, code system code or behavior followed. Ethics is a normative study of the underlying principles of the human action types. Ethics encourage people to be mature and critical in the field of moral.

Ethics education considered important for students since they need it for the business world. Business world not only requires excellent students but also has better ethics. The teaching and learning of Accounting give an impact on accountants' ethical value because it is not only responsible for transferring knowledge but also developing personal intact (Khomsiyah and Nur Indriantoro, 1998). Ethical behavior in accounting can be generated into the integration of the ethics values in the teaching and learning of accounting. Saris' research (2012) found that there is significant effect of the integration of ethics into the teaching of accounting on students' ethical perceptions which is projected on understanding financial accounting and ethics in a profession. Provision of ethical value in the form of senses for the development of emotional and spiritual intelligence quotient can be integrated into the curriculum that can develop students' awareness to the ethical issues.

Waddock (2005) asserted that it is necessary to employ mindful accounting education at universities in order to build ethical manner of accountants. Universities are required to produce mindful personality in which they able to understand realize the consequences convince in their ability as well as the impacts on their actions. The development ethics and moral in education deemed to be an essential issue for building a civil society (Utami 2005,1). According to Yudhisthira (2015) the accounting is learnt as a science that is not only limited to the reporting of financial statements alone, but also involving the building of moral and spiritual values. Moral values are required to be involved in accounting for realizing a peaceful and fair life. In fact, accounting which is grasped by students nowadays is still largely dominated by educators' character and educational system Therefore, it is necessary for changing the system of the teaching and learning of accounting.

Internalization of Ethical Values by using accounting active learning methods in building students' perception on Accountants' Ethic Code

Internalization of ethical values in the teaching and learning process of accounting is a process of building idealism and relativism in students' behavior. Research conducted by Rezam M and Irianto (2014) revealed that the integration of ethical values in the learning process in ethics and business subject contributed positive changes of students' behavior. Those positive changes are in the form of (a) an increase in awareness to the environment, (b) the contemplation of the purpose of life, (c) awareness of the existence of God theirs life, (d) awareness of the importance of honesty, and (e) the importance of ethics in social life. Idealism is an independent attitude and it is far from various interests (Shaub et al, 1993). He then explained that relativism is the rejection attitude of moral values in directing the ethical behavior (Shaub et al, 1993). Relativism specifically rejects moral principles and universal rules, as well as other circumstances will affect morality differently (Forsty, 1992). Also, Gabriel (2005) asserts that there is no significant relationship between students' perceptions of creative accounting and ethical orientation of each individual.

Accounting active learning method is considered to be effective method for integrating ethical values in the teaching of accounting. Research overtaken by Rini (2015) proved that the accounting active learning method which was developed through cooperative learning is able to develop students' awareness and responsibility to solve problems related to accounting matters. Internalization of idealism and relativism in accounting active learning method is applied by a process of assimilation and accommodation in shaping awareness, responsibility, and self-reliance of students in solving problems. Accounting active learning aimed at shaping perceptions and attitudes of students, especially in understanding and implementing the ethics of the profession.

Perception is defined as a process of integrating knowledge as well as information received based on the stimulus from the environment. Perception of each student depends on a person's cognitive aspects (internal factors) and visual stimuli aspects (external factors). The ability to find information involves three main abilities (Herman 2001.186), namely: (a) cognitive ability, it is defined as the ability to know (understand, comprehend and reflect) and remember things they have been accepted, (b) affective abilities, it is defined as the ability to feel something that is already known (love, hate, good and bad), (c) Ability connative ability, it is believed as the ability to achieve something that has been perceived. It includes willingness, desire, and passion. Affective and cognitive ability can be developed through the teaching and learning process, however, connative ability is developed in accordance with the ones' awareness and willingness.

There are seven principles of professional ethics code for accounting profession (Mulyadi 2001.53). The first principle is (a) professional responsibility. Accountants are required to have this attitude in deciding moral and professional judgment in doing accounting activities. Secondly, (b) the public interest is defined as the appeal of the people and institutions that are served by the accounting profession. Due to the demand of society for the existence of accountants, the accountants have to maintain public trust. Next rule is (c) integrity. Integrity is deduced as a character that underlies the acknowledgment of professional accountants. Integrity is manifested in the form of the honesty. The fourth one is objectivity. It deals with the attitude of fair, impartial, honest, unprejudiced and free from the influence of interests of a particular group. Then (e) Competence and prudence is considered to be the fifth principle. Accountants have to fulfill their obligation in performing professional services as well as in accordance with their abilities, service users, and responsibilities to the public. The next principle is (f) Confidentiality. Finally, (g) professional is the last principle. It refers to the ability to keep the case confidentially and avoid awful actions that infringe the profession of accountants.

Research undertaken by Martinson et al (2002) showed that the ethical code of accountants affect the ethical perception and considerations of accounting management in solving problems. Management accountants who realized the ethical values has been proven to solve the problem, in this case they can give better consideration in selecting solution of the problem. Therefore, the result of the research above provides evidence that perception plays an important role in the process of decision making and providing correct judgment. Januarti (2011) reported that there is significant effect of ethics on the perception and considerations. Idealism as predictor variable in ethics is able to considerably influence the ethical sensitivity (Fallah, 2006). It implied that the rules in ethic code that is outlined in idealism and relativism influence the accountants' decision making. Also, Marwanto (2007) asserted that idealism affect students' moral judgment. Furthermore, Forsty (1980) explained that idealism and relativism is considered to be two fundamental characters to be approach in conducting moral character assessment.

Referring to the previous research above, the research hypotheses is formulated as follows:

H1: There is significant effect of internalization of idealism in accounting active learning method on the perception of accountants' code ethics.

H2: There is significant effect of internalization of relativism in accounting active learning method on the perception of accountants' code ethics.

Conceptual framework of hypotheses can be illustrated as follows:

Figure 3.1: Conceptual framework of hypotheses

RESEARCH METHODS

Research Design

This study employed quantitative approach, in which ex-post facto was selected to be the design of the research. It intended to determine the effect of idealism and relativism in accounting active learning on the perceptions accountants' ethics code.

Population and Sample

The population of this research was the accounting students of Ciputra University that experienced accounting active learning method in the Business Ethics course. It utilized purposive sampling technique. Eligibility sample is determined by two basic points, namely, (a) student majoring in Accounting and Business Management Faculty of the Ciputra University and (b) students have taken the of business ethics course. The researcher selected this sample due to the assumption that the student has taken business ethics course, therefore, students have knowledge and idea of the accountants' code ethics of in business. Here is the procedure of determining the number of samples.

Table 3.1 The Number of Accounting Students in Ciputra University

| Accounting Students | | | |
|---------------------|----------|--------------------|---|
| Year | Academic | Number of Students | Number of Students Who have taken <i>business ethics course</i> |
| | 2013 | 29 | 27 |

| | | |
|--------------|------------|-----------|
| 2014 | 25 | 25 |
| 2015 | 33 | - |
| 2016 | 33 | - |
| Total | 120 | 52 |

Questionnaire was selected to be data collection technique. Descriptions of indicators for developing research instrument based on the theory proposed by Forsyth (1981), which describes the rules in understanding accountants' ethic code is presented in the following table:

Table 3.2 Description of the Research Variables

| Description of Variable | Indicator |
|--|--|
| <i>Idealism</i> in the teaching learning process by using <i>accounting active learning method</i> | <ol style="list-style-type: none"> 1. Behaving in accordance with the facts 2. Reporting the financial losses 3. Evaluating every business decision 4. Being professional in running the business 5. Self-introspection in business failures 6. Providing an appropriate assessment in running the business. |
| <i>Relativism</i> in the teaching learning process by using <i>accounting active learning method</i> | <ol style="list-style-type: none"> 1. Utilizing Ethical rules in behaving 2. Being subjectivity in decision making 3. Considering moral value in behaving |
| Perception on Accountants' Ethic Codes | <ol style="list-style-type: none"> 1. Being responsible 2. Having attention to the public Interest 3. Being objective 4. Being prudence in making decision 5. Being honest 6. Being professional |

Data analysis Technique

The hypotheses in this present research were analyzed by using multiple regression analysis. It was used to determine the effect of idealism and relativism in accounting active learning method on the student's perception accountants' ethics code. In order to test hypotheses, assumption test is necessary to be conducted. In this case, the researcher applied normality and multi collinearity test to fulfill assumption test. Moreover, the students' perception on accountants' ethic code is measured by the idealism and relativism variable in the teaching and learning process by using accounting active learning method is presented into the following equation:

$$Y = \beta_1 X_1 + X_2 + \beta_2 \text{ et (Silalahi 2009: 431),}$$

Wherein:

Y = the value of the perception of accountants' ethic code

β_1 = regression coefficient of idealism in accounting active learning

β_2 = regression coefficient of relativism in accounting active learning

X_1 = Value of idealism in accounting active learning

X_2 = Value of relativism in accounting active learning

Based on these equations, the description of the research equation is represented in the following figure

Figure 3.2 the description of the research equation

RESULTS AND DISCUSSION

Results of descriptive statistical analysis

Descriptive statistical analysis in this study is applied to present the data collected descriptively in terms of the average value, deviation standard and minimum and maximum value. There are 52 respondents in this research and it is presented in the following:

Table 4.1 Descriptive Statistics

| Variable | | Mini mum | Ma ximum | Me an | Deviati on Standard |
|---|---|-------------|-------------|-------------|------------------------|
| Idealism | 2 | 36 | 50 | 42. 6731 | 3.833 |
| Relativism | 2 | 14 | 44 | 32. 6538 | 6.492 |
| Perception on Accountants' Ethic code | 2 | 30 | 40 | 34. 5962 | 2.781 |

Table 4.1 depicts that the minimum score obtained from the respondents is 36, 14 and 30 for the idealism, relativism and perception on accountants' ethic code respectively. Then, the highest maximum score belong to idealism variable at 50 followed by relativism and perception on accountants' ethic code at 44 and 40

correspondingly. Also, it illustrates that the mean of each variable is greater than 30. It entails that accounting students relatively have high idealism and relativism in learning accounting. It can be seen that the mean value for idealism at 42.67321 considered higher than two other variables. Furthermore, the value for deviation standard for each variable considered small. It means that the score for deviation standard is lower than the mean score. Therefore, it can be concluded that there is no outlier in each variable.

The effect of internalization of idealism in the learning process by using accounting active learning method on students' perceptions of accountants' ethic code.

Before testing the first hypothesis, the result of questionnaire which were distributed to 52 respondents, normality and multicollinearity test were carried out. They are important to accomplish in order to determine the feasibility of the sample. The result of normality test for internalization of idealism variable is 0.951 and it considered higher than significant value 0.05. Therefore, it implied that the sample is normally distributed. Then, the result of multicollinearity of the test can be seen in the following table.

Table 4.2 The Result of Multicollinearity Test

| Independent Variable | VIF |
|---|-------|
| <i>Idealism in the teaching learning process by using accounting active learning method (X₁)</i> | 1,003 |

Referring to the table 4.2 above, it can be assumed that there is no multicollinearity in this research. Therefore, it is allowed to test the hypothesis since the data is fulfilled the assumption that there is no multicollinearity and it is normally distributed.

The result of statistical analysis showed that there is significant effect of internalization of idealism in the teaching and learning process by using accounting active learning method on students' perception of accountants' ethic code. The comprehensive result is as follows:

Table. 4.3 The Result of t_{test} 1

| Independent Variable | Coefficient | | | |
|---|-------------|-------|--------|--------|
| | A | Std B | t test | Sig. t |
| <i>Idealism in the teaching learning process by using accounting active learning method (X₁)</i> | 18.607 | 0.292 | 3.170 | 0.003 |

Table 4.3 demonstrates that the internalization of idealism in the teaching and learning process by using accounting active learning contributed significantly in building students' perception on accountants' ethic code. It showed that the value of t_{test} is 3.170 and the significant value is 0.003 (sig t < a probability value 0.05). It entailed that the internalization of idealism in the teaching and learning process by using accounting active learning influence students' perceptions on accountants' ethic code. Therefore, the structure of equation can be formed in the following:

$$Y = a + \beta_1 X_1 \text{ or } Y = 18.607 + 0.292 X_1 \dots\dots\dots(1)$$

The equation above also demonstrates empirically that there is positive correlation between idealism in accounting active learning and student perceptions at the value of 0.292. It is immediately clear that the higher of idealism which is internalized in the teaching and learning of accounting, the better their perception on comprehending accountants' ethic code.

Internalization is a part of learning that comprising the process of building a stimulus, raising awareness and making decision. Idealism aspect which is internalized in the learning process of accounting indirectly has an effect on their perception of comprehending the code of ethics of accountants. In addition, idealism in this study leads to the development of students' interdependence. The internalization process of learning accounting idealism through active learning has been able to form students' ability to understand, consider and assess the behavior of individuals in accordance with the principles and values set in accountants' ethic code. The process of idealism internalization in accounting learning active learning method can foster students' awareness of the importance of the accountants' ethic code in the future. Idealism value in understanding and implementing accountants' ethic code which is enhanced in the teaching and learning process by using accounting active learning method is in line with the research undertaken by Rini (2015) which found that the teaching and learning process by using cooperative learning is able to develop students' ability and awareness in accounting issues.

In achieving idealism which is comprising in several attitudes namely, responsible, apprehension in public interest, objective, truthful, confident, professional and honest has been in line with the Fallah's research (2006), which found that idealism as an ethic's predictor is able to positively influence the awareness. It implied that the rules in ethics outlined by idealism are able to influence the attitudes of accountants in making a decision. Internalization of idealism in accounting active learning method is as a measurement of successful accounting learning process in comprehending accountants' ethic code. A positive correlation indicates that a learning process by using accounting active learning method is able to build students' cognitive, affective and conative ability. This is in accordance with the constructivist learning theory that justify that the learning process should be able to develop awareness, independence, responsibility, and implement the knowledge to solve problems as well as make the decision.

The effect of internalization of relativism in the learning process by using accounting active learning method on students' perceptions of accountants' ethic code.

The result of normality test on the internalization of relativism in the learning process by using accounting active learning method which can be seen in the Kolmogorov-Smirnov table showed that the significance values greater than $\alpha = 0.05$ at 0.820. It implied that the data normally distributed. Then, the feasibility of samples are also seen by multicollinearity test which showed VIF <10.00 as described in the following table

Tabel 4.4 The Result of Multicollinearity Test

| Independent Variable | VIF |
|--|------------|
| Relativism in teaching learning process by using n <i>accounting active learning</i> method (X_2) | 1,003 |

Referring to the table 4.4 above, it can be concluded that there is no multicollinearity in this research. Also, based on the calculation, data is fulfilled the assumption that there is no multicollinearity and it is normally distributed. Internalization of relativism is a process for building students' attitude to the rejection of unethical rules of accountants' ethic code. The results of the effect of internalization of relativism in the learning process by using accounting active learning method on students' perceptions of the accountants' ethic code is explained through the following table.

Table 4.5 The Result of t_{test} 2

| Independent Variable | coefficients | | | Sig. t |
|---|--------------|------|------|----------|
| | A | S | T | |
| Relativism in teaching learning process by using <i>accounting active learning</i> method (X_2) | 18.607 | .109 | .000 | 0.051 |

Table 4.5 empirically showed that the second hypothesis (H2) in the study is rejected because the significance value is greater than 0.05 ($0.051 > 0.05$). Relativism in learning accounting cannot be applied universally to any student due to the contribution of their educational environment and commitment in shaping their perception. The results of this study are in line with the research conducted by Gabriel (2005) which explains that there is no significant correlation between students' perceptions of creative accounting and ethical orientation of each individual.

The internalization process of relativism in building the perception of accountants' ethic code in the teaching and learning by using accounting active learning method has not been able to assist students to understand the direction of learning in the broader senses. Relativism is considered an attitude that leads to the rejection of unethical behavior, consequently it required an effective method for teaching accounting that convey the students' experience and foster moral awareness in each individual. It can be promoted through integrating character education in the learning process of accounting active learning method as learning effort in building relativism as the candidate of accountants who behave based on ethic code. The learning process accounting active learning method should reflect on humanistic learning theory in which the participants are directed to achieve optimal self-actualization based on the awareness of the surrounding environment in the community (Budiningsih 2005, 78).

CONCLUSIONS, LIMITATIONS AND SUGGESTIONS

Conclusion

Internalization of idealism in the teaching and learning process by using accounting active learning has a significant effect on the student's perception of accountants' ethic code. Thus, idealism is capable of fostering ethical behavior of students through the process of understanding and implementation of the code of ethics of accountants. On the other hand, there is no significant effect of internalization of relativism in the learning process of accounting on the student's perception of the code accountants' ethic code.

The learning process of accounting is required to involve the students' experience as an effort to foster ethical behavior in accordance with accountants' ethic code. It must be outlined that perception of accountants' ethic code has a significant influence on the students' ethical behavior. As a result, the code of ethics must be integrated in a sustainable manner in the lesson plan of accounting subject.

Limitations

The researcher limit the area of research in terms of:

1. Independent variables employed in this research for describing students' perception of accountants' ethic code is still limited to the case of idealism and relativism.
2. This research has not been able to determine factors influencing students' ethical behavior. It is still limited to the functional level.
3. Researcher ignores external variables that may affect students' perceptions of accountants' ethic code.

Suggestion

Referring to those limitations above, the teaching and learning process by using accounting active learning is required to involve students' experiences that generate students to be more enthusiastic and directly take an advantage of the learning process. As a result, the learning objectives can be achieved optimally. As a final remark, the learning process by using accounting active learning should be able to integrate moral value into the teaching and learning process.

ABSTRACT

This study aimed to examine the effect of role conflict on the performance of auditors in Inspectorate Kendari. The population in this study was the Inspectorate of Kendari in functional positions as auditor. The number of samples was 23 respondents with census method. The data was taken by questionnaires that was distributed to all respondents and analysed using descriptive analysis simple regression. The results of this study indicated that the conflicting roles was positive and significant effect on the performance of auditors. R square (R²) was 49,5% showed the contribution of role conflict on the performance of auditors. While the remaining 50.5% was obtained from the contribution of other factors which is not measured in this study. Thus, the strength or the contribution of the conflicting roles of the auditor's performance is very meaningful.

Key Words: *Role conflict, Auditor's performance*

I. INTRODUCTION

Auditor's performance is a work achievement attained by auditors in carrying out their duties and responsibilities. This also becomes one of the requirements to determine the quality of work. The performance of auditors is the major concern both for the client or public in assessing the results from audits.

Government organization is concerned to be the main issue of work achievement which reflected to its employee. According to Mangkunegara (2005), the quality and quantity of work performance can be accomplished by any workers who are dedicated and responsible on their duties.

The role of internal auditor can create a challenge for those who are able to maintain their performances and ethical rules within the organization and community. Ahmad and Taylor (2009) agree that internal auditor has tendency role over conflict. According to Mohn and Puck (2003) role conflict is an idea, experience, or perception from the role incumbent; caused by the occurrence of various role expectations that simultaneously suggested on making a difficult situation for both roles.

Conflicts within the internal audience appear from audit and consultation services. In audit role, internal auditor should make a good progression without considering the object of inspection. However, in consulting role, internal auditor must work together and help the object of inspection.

The role conflict encountered by the internal auditor is related to internal position as part of its profession within the organization. Thus, the internal auditor who experienced the role conflict may be vulnerable toward the pressure from the object of inspection (Hutami, 2011). At this point, the conclusion approves that the role conflict can affect auditor's ability to make a good performance.

The role conflict inside the Inspectorate city of Kendari as happening at the moment, described the duty and function of Kendari's city inspectorate translation previously based on Regional Regulation No. 12, 2012. However, during restructuring and readjustment process appeared under new regulations included in Provincial Regulation, the addition of functional positions for auditor called Implementation Supervision of Regional Governance (P2UPD) in accordance with the data and facts given by labor inspections of Kendari including 14 auditors and 14 P2UPD, so the total number is 28 people. Auditors have the task to review the financial report,

financial audits and assets in order to accomplish the government duties in regional areas, reporting tasks, in written or spoken, as part of their responsibility to the inspector. Meanwhile, Supervisory officials of Regional Governance (PPUPD) have the duty to supervise the regional government affairs and cases/specialized in governance, social and community welfare and development.

Based on the description of the background above, the problem in this study is whether the conflicting roles are significant or not with the performance of auditors in Inspectorate Kendari. The purpose of this study is; to determine the role conflict influence to auditor performance in Kendari's City Inspectorate.

II. LITERATURE REVIEW

1. Role Theory (*Teori Peran*)

Role Theory is a combining theory of orientation and disciplinary subject. Aside from psychology, this theory originated from sociology and anthropology (Sarwono, 2002). The three subjects define the term "role" from the world of theater. In the theater, an actor must play as a particular character and as the character himself, he is expected to behave in a particular way. The position of the actors in the theater (drama) was then reflected or played as part of the society. Besides, the position of people in society is equal with the status of the actors in theater. However, they are not expected to make individual progress. Other characters also have different part of performance. From this perspective the role theory is revealed in structural schemes.

Kahn et al. (In Ahmad and Taylor, 2009) also introduce the role of theory in literature behavior of organization. They stated that an organization's environment can affect each individual expectation regarding their behavior. That expectation includes norms or pressure to act in a certain way. Individuals will receive the message, interpret, and respond in different ways.

Expectation of these roles can be derived from the role itself, controlling the individual, society, or other related roles. Every person has an authority for the role that can construct their own expectation. For Inspectorate, this expectation can be authorized by Deliberation of Regional Leaders (Muspida) consisted of: Head of Regional Government, Deputy of Regional Government, and Secretary of Regional Government or from co-workers who depend on Inspectorate work performance. Different individuals or parties can form a conflict of expectations of the stakeholders themselves. Therefore, every individual can occupy two different social roles and possibly cause the opposite roles over the requirements/expectation. These are known to be the role conflict (Ahmad dan Taylor, 2009).

Conflicts on each individual appeared because of there are two different roles happened at the same time. According to Kats and Kahn (quoted from Damajanti, 2003) that the individual will experience a conflict from within if two or more pressuring conditions occurring simultaneously which then directed back to the individuals.

Role theory also states that the expected behavior from each individual is inconsistent. Thus, people can experience stress, depression, dissatisfaction, and lack of competence that the expectation is not considered as a conflict. It can be said that role conflict is very affecting negatively toward person's way of thinking.

2. Role Conflict (*Konflik Peran*)

Role conflict is a conflict arising from bureaucratic control mechanism organization that does not comply with norms, rules, ethics, and professional independence. According to Khan (quoted from Astute, 2004) role conflict is an incompatibility between expectations associated from a single role which is quite extreme in such condition, the presence of two or more expectations or the pressure can be the opposite turn to avoid the progression on other roles. Role conflict appears because there are two distinct orders which accepted simultaneously and the execution of one command can fail the other commands said Wolfe and Snoke in Cahyono and Ghozali (2002: 140). Besides, role conflict can also bring the uncomfortable situation in work performance and the negative impact creates the opposite encouragement toward individual, such as emotional suspense over work, amount of displacement, and dissatisfactory that can decrease the overall performance of auditors (Fanani, 2007:7). Role conflict refers to the incompatible pressure of roles (Bamber, 1989).

Roles are associated with insistency in a function as particular roleso a person is able to run the organization. Role conflict creates expectations that may be difficult to fulfill (Robbins and Judge, 2009: 674).

Rahmawati (2008: 130), role conflict occurs when a person is under pressure to perform different tasks and inconsistent at the same time, for example, the role of government internal auditors should be responsible to the government and society to carry out their duties as service provider audits and consulting services.

Role conflict is generally viewed as a multi-dimensional event that is divided into three types of conflict (Mohr and Puck, 2003). Three types of conflict are inter role conflict, intra-role conflict and role conflict person. Ahmad and Taylor (2009) also describes that in carrying out their duties within the government, Inspectorate must be related to the individual parts or the others. This relationship is likely increasing the differences so it

will lead to conflict. Based on the conflict theory and internal auditing literature, conflicts which related to internal auditors are divided into three types, namely:

1. Inter role conflict occurs when a worker has two different roles which opposed to line up at in the same way. It appears that the elements are different from each individual role to another part. In this case, the internal auditors happen to run two roles in the party including audit's role and consulting service.
2. Intra-sender role conflict occurs when a person received an opposite message from different people. This happens because of the requested role is overwhelming, as the internal auditors can experience the conflict caused by a different order from the party along with rules of professional standards for internal audit.
3. Person role conflict occurs when the obligations of work and organizational values do not match the personal values. This also occurs if the expectation in which related with a role holder does not suit the needs, inspiration, and / or personal values of the individual. Internal auditors who experienced a personal role conflict is asked to take an action in inconsistent ways with their personal values or required to act against and report the violations of their own colleagues.

3. Auditor's Performance

Performance can be divided into two point, they are individual and organizational performance. Individual performance is the worker's performance in terms of both quality and quantity based on the standard of work that has been determined. While organizational performance is a combination of individual performance and group performance (Mangkunagara, 2005: 57).

Bernadin (2007) states that work performance is a record resulting from a particular job function or activity during one period.

Trisnahningsih (2007) suggests that work performance is an action or implementation task that has been completed by the auditor in a short time. Auditor's performance is an action or implementation task that has been accomplished by the auditor. According to Putri (2013), work performance is a result of work completed by an auditor in carrying out the tasks that have been given based on skills, experience and excellence the time measured, regarding the quality and timeliness as well.

Bernadin (2007) explains that person's work performance can be measured based on five (5) criteria resulting from the related work. These criteria are:

- a. Output Quality
Output quality is the grade to which the final result is nearly perfect in a way to achieve the goal expected by the agency. The result should be appropriate or almost equal to the predetermined standard of organization.
- b. Output Quantity
Output quantity shows the amount of work performance resulting from the number of products or services. It can be seen from the data point within a year. Number of meetings can also be found along with improvement recommendations and accomplishments.
- c. Output Punctuality
Output Punctuality is the grade of accomplished activities at the certain time. The vision and mission of the organization will be achieved when the work performed by the employees can be carried out in accordance with a predetermined time. In this case including; timeliness in completing the work and the work completed when needed are required. Also, time efficiency is related with the accomplishment work to achieve the goal.
- d. Workplace Attendance
Workplace attendance is the number of absences, tardiness, and the working period that already served by the employee. The presence in the workplace can be measured from the attendance, working hours, and punctuality when attending the meeting.
- e. Cooperation
Cooperation is namely the circumstances of each individual employee, either helping or hindering to the co-workers.

The characteristic that distinguishes the auditor's performance with the employees is producing the output. Employee performance generally is concrete, while the performance of auditors is abstract and complex (Mulyadi :2004).

4. Previous Studies

Hutami (2011) found that (1) the role conflict significantly had the negative impact on the independence of Inspectorate's commitment, (2) role ambiguity significantly had the negative impact on the independence of Inspectorate's commitment. Furthermore, Saraswati (2014) also found that (1) the insistency from the clients had negative impact and significant effect on the commitment of Inspectorate's independency, (2) role conflict had negative impact and significant effect on the commitment of inspectorate independency, (3)

role ambiguity showed a significant effect and negative impact on the commitment of Inspectorate's independency, (4) from client insistency, role conflict and role ambiguity simultaneously had significant effect on the commitment of Inspectorate's independency.

III. METHOD

Based on theoretical basis, research objectives, and the results of previous studies, as well as the formulation of the problem that has been raised, then as a basis for formulating hypotheses, the following are presented the framework outlined in the research model on the scheme. The framework shows the influence of role conflict toward auditor's performance. To facilitate the discussion and hypothesis testing, the analytical tools used in this study is a simple linear regression method with the aim that the expected results can be achieved.

Research Hypothesis

The hypothetical model used in this research is as follows:

H_a : role conflict is significantly affect the auditor's performance

The population in this study were all employees with functional positions consisting of auditors (14 people) and Implementation Supervision of Regional Governance or P2UPD (14 people) in the scope of Kendari's inspectorate which are 28 people in total. The sample determination of 28 people, the whole population sample of this research, using census method because of the small number of the existing population.

Data collection methods used in this research are: (1) The questionnaire which is distributed questions list to the respondent at Kendari's inspectorate made based on indicators from the previous research as well as adjust to the object of research. (2) Documentation which is taking the data that has been documented by Kendari's inspectorate related to the research. To determine the value of the answers to the questionnaire and each written statement which is used to obtain information from a statement filed with Likert's scale modification which has a score of 1 to 5. With a score of 5 (SS = Strongly Agree), 4 (S = Agree), 3 (N = Neutral), 2 (D = Disagree), and 1 (STS = Strongly Disagree). Data processing techniques used in this research are editing, coding, and tabulation.

Data analysis methods used in this research are descriptive analysis and inferential analysis methods. Descriptive analysis that is used is a percentage descriptive analysis with the criteria of questionnaire score interpretation, which are 0%-20% = Very Weak, 21%-40% = Weak, 41%-60% = Enough, 61%-80% = Strong, and 81%-100% = Very Strong (Riduwan, 2008). Furthermore, the hypothesis testing is to determine the influence of independent variable on the dependent variable which is to determine t_{table} value determined by 5% significant level, so: (1) If the t_{Count} value $> t_{Table}$ or significant value $< \alpha = 0.05$, it means that the independent variable has partial effect on the dependent variable, (2) If the t_{Count} value $> t_{Table}$ or significant value $> \alpha = 0.05$, it means that the independent variable has not partial effect on the dependent variable.

Because there is a connection between role conflict variable (X) and auditor's performance (Y), then it will use a simple linear regression analysis model as follows:

$$Y = a + bX + e$$

Legends:

Y = Auditor's Performance

a = Constant value

X = Role Conflict

b = Regression Coefficient for X

e = Epsilon Variable

The operational definition of each variable is as follows:

- 1). Role conflict is a psychological symptom experienced by an auditor who cause dissension or disagreement within itself which caused by when the auditor is carrying two opposite roles, receive opposite messages from different people, and the obligations of his job are not in accordance with personal values that can cause discomfort in working in Kendari's inspectorate office.
- 2). Auditor's performance is a implementation of inspection duty that has been completed by the Kendari's inspectorate auditors in certain period.

IV. DISCUSSION

4.1. Results

a. Description of Research Variables

Research variables description aims to interpret the frequency of respondent's responses in accordance with variables and indicators as well as statement items based on evenly distribution of percentage frequent from the respondent's responses. The measurement scale that is used is classified into five intervals based on the Likert's scale with a ranging value from one to five which are strongly disagree, disagree, neutral, agree, and strongly agree, respectively.

1) Conflict Role (X)

The answer score's propensity on variable statement of role conflict is 73%, interpretation criteria score of questionnaire if the percentage is 61-80% which categorized strong. It shows that the higher role conflict within the auditors, the higher their working's spirit.

2) Auditor's Performance(Y)

The answer score's propensity on variable statement of risk preference is 78%, interpretation criteria score of questionnaire if the percentage is 81-100% which categorized very strong. It shows that the quality of auditor inspection result is already good.

b. Validity and Realibility Test

1) Validity test is used to see how far the precision and accuracy in conducting the measuring instrument function. Instrument validity testing using Pearson Product Moment correlation with the criteria if the obtained r's value is more that 0.30 ($\geq 0,30$) at the trust level of 95%. After testing, it shows that all the instruments are qualified (valid) with the r's value ≥ 0.30 .

2) Uji Reliabilitas digunakan untuk mengukur sejauh mana suatu alat ukur dapat dipercaya atau dapat diandalkan. Reliabilitas instrumen akan diuji dengan menggunakan koefisien *Alpha Cronbach*. Jika dari hasil pengujian instrumen diperoleh nilai koefisiennya lebih besar dari 0,60 maka instrumen yang digunakan adalah reliabel. Berdasarkan hasil uji reliabilitas yang telah dilakukan, maka seluruh instrumen telah memenuhi syarat (reliabel).

c. Description of Multiple Linear Regression Analysis

Data of the results as described in the variable outline description, then it used a simple linear regression method which processed using IBM software Statistical Package for Social Sciencess (SPSS) Statistics version 21. It is done to determine whether there is a influence of role conflict variable to the auditor's performance variable. From the processing, it is obtained value as listed in the following table:

Table 1 Simple Linear Estimation Results of the Role Conflict toward Auditor's Performance

| Model | Unstandardized Coefficients | | Standardized Coefficients | | T | Sig. |
|-------|-----------------------------|------|---------------------------|------|-------|-------|
| | | B | Std. Error | Beta | | |
| x1 | (Constant) | 016 | ,152 | | ,000 | 1,000 |
| | KonflikPeran | ,703 | ,155 | ,703 | 4,535 | ,000 |

Based on the estimation results above, the connection between those variables can be described in the following equation:

$$Y = 0,016 + 0,703X + e$$

Where: (Y = auditor's performance), (a = 0,016), (b= 0,703), (X= role conflict), (e = Other variable that is not investigated).

1. The constant value is positive that is equal to 0.016 times. It means that if the role conflict variable has a constant value or equal to zero, then the auditor's performance will remain at 0.703 times.
2. The regression coefficient for the role conflict variable is 0.703 times which means that there is a positive connection between role conflict toward the resulting auditor's performance. Thus, it can be said also that if there is an one time increase on the role conflict variable and the role conflict variable with the constant assumption or equal to zero, the auditor's performance dependent variable will increase by 0.0703 times. It means that the most of the auditors perceived that role conflict is considered important in improving the auditor's performance.

D. HYPOTHESIS TEST

It is obtained t_{count} value is 4.535 with a positive direction or with t-significant level of $0.000 < 0.05$, then H_0 or accepts H_1 , which means that the role conflict has significant positive effect on the auditor's performance. This result can be proven by T-test of $4.535 > 0.495$ so $t_{count} > t_{table}$.

4.2. DISCUSSIONS

THE RESULT OF THIS RESEARCH EXPLAINS THE ROLE CONFLICT VARIABLE THAT AFFECT THE AUDITOR'S PERFORMANCE. BASED ON THE ANALYSIS RESULT, IT IS OBTAINED THAT THE ROLE CONFLICT HAS DIRECT INFLUENCE TOWARD AUDITOR'S PERFORMANCE WITH A POSITIVE AND SIGNIFICANT REGRESSION VALUE. THE POSITIVE REGRESSION VALUE INDICATES THAT THERE IS A DIRECT CONNECTION BETWEEN THE ROLE CONFLICT AND THE AUDITOR'S PERFORMANCE. IT MEANS THAT THE HYPOTHESIS TESTING RESULT IN THIS RESEARCH SHOWS THAT THE ROLE CONFLICT IS SIGNIFICANTLY AFFECT TO THE AUDITOR'S PERFORMANCE. THUS, THE AUDITOR'S PERFORMANCE IN KENDARI'S CITY INSPECTORATE IS CONSIDERED GOOD FOR THE ROLE CONFLICT WITHIN THE AUDITORS.

THE TEST RESULTS THAT CONFIRM THIS RESEARCH IS THE ROLE THEORY WHICH IS A COMBINATION OF THEORY, ORIENTATION, AND DISCIPLINE. IN ADDITION FROM A PSYCHOLOGICAL THEORY, IT STATES THAT THE ROLE THEORY IS ORIGINATED FROM SOCIOLOGY AND ANTHROPOLOGY (SARWONO, 2002). IN THOSE THREE SCIENCES, THE TERM "ROLE" IS TAKEN FROM THE THEATER WORLD. ROLE IS A SET OF BEHAVIOR WHICH ARE EXPECTED BY OTHER PEOPLE TO SOMEONE ACCORDING TO THE POSITION WITHIN A SYSTEM. FROM THIS PERSPECTIVE, THE ROLE THEORIES ARE STRUCTURED.

THIS RESEARCH'S RESULTS CONFIRM SARASWATI'S RESEARCH (2014) THAT SHOWS THE CLIENT PRESSURE, ROLE CONFLICT, AND ROLE AMBIGUITY ARE SIMULTANEOUSLY HAVE SIGNIFICANT EFFECT ON THE AUDITOR'S INDEPENDENCE COMMITMENT. FURTHERMORE, THIS RESEARCH IS ALSO IN LINE WITH SAFITRI'S RESEARCH (2015) WHICH STATES THAT ROLE AMBIGUITY AND MOTIVATION IS SIGNIFICANTLY AFFECT ON THE AUDITOR'S PERFORMANCE. IN PARTIAL, THE ROLE AMBIGUITY AND MOTIVATION IS SIGNIFICANTLY AFFECT ON THE AUDITOR'S PERFORMANCE AND THE ROLE AMBIGUITY IS THE GREATEST INFLUENCE FOR THE AUDITOR'S PERFORMANCE.

V. CONCLUSION

This research aims to determine the influence of role conflict toward auditor's performance in Kendari's City Inspectorate. From the obtained analysis results and discussions, it can be concluded that the role conflict that is reflected by three indicators of internal auditor which are inter-role, intra-sender, and personal role

conflicts. They have significant effect on the auditor's performance or in other words the higher role conflict within the auditors, the better auditor's performance on inspection process in Kendari's City Inspectorate. Because the people have a conflict, they may be able to control themselves so that they were able to exploit their potential optimally.

Based on the result of this research, the author is raising several suggestions as follows: (1) The variable which affects auditor's performance in this research is limited to internal factors only (role conflict). In future research, it is recommended to add the variables that affect the auditor's performance for instance audit structure, control system, and experience. (2) As information for Kendari's City Inspectorate specifically for the auditors who has a high role conflict, then the auditors may try to solve problems and produce a better performance.

ABSTRACT

The purpose of this research is to find out the influence of locus of control and professional commitment toward auditor's behavior in conflict situations. A sample of this research used functional staff of the Regional Inspectorate in Kolaka Local Government. Data that applied for this research was primary data from questionnaire instrument. Using doubled linear regression analysis method showed that locus of control and professional commitment significantly influenced auditor's behavior in conflict situation simultaneously. It means that by having a high level of internal locus of control and professional commitment, it can help the auditor to choose the best decision when the conflict situation occurs. Then, partly, the result indicated that locus of control has a significant influence on auditor's behavior in conflict situation by 0.001 significant level. This number indicated that auditor with a dominant internal locus of control would be able to manage the auditing work in conflict situations. The result also partially stated that professional commitment significantly influences auditor's behavior in conflict situation by 0.039 significant level. The auditor can behave more independently in conflict situations by having the high professional commitment.

Key Words: Locus of Control, Professional Commitment, Auditor Behavior, Conflict Situation

INTRODUCTION

The need for transparency and accountability in organization is needed to create good governance. Good governance is a material subject to enhancing organizational performance. Good governance is only "a feigned dreams" if there is no a powerful willingness to reach its existence. Shiravastava (2009) explained that good governance will be achieved if three objectives are met. The first is there should be equality of law and effective implementation of laws. Secondly, there should be opportunity for every individual to realize his full human potential and thirdly there should be effective productivity and no waste in any sector. Hence, demand of transparency in government and non-government agencies are needed for people to assess and criticize if there was a deviation or things that are not considered normal. One of means as a solution is required a good oversight by people as well as government supervision agency both internal and external from the central and regional governments. From the perspective of internal control, The Institute of Internal Auditors expresses that the importance of internal audit comes from the need of governing bodies and management who "rely on internal auditing for objective assurance and insight on the effectiveness and efficiency of governance, risk management, and internal control processes" (Tusek & Ivana, 2016).

According to the audit standard of Indonesian Government in the regulation of the Minister of State for Administrative Reform (PERMENPAN) No. PER/05/M.PAN/03/2008, the government's internal supervisor is an important management function in the governance. Through an internal supervision, it can be known whether a government agency has been doing activities in accordance with its duties and functions effectively and

efficiently, and also in accordance with established policy plans and provisions. As the Government Regulation No. 60 of 2008 on Government Internal Control System Article 49 paragraph 1, it states that government internal supervisor is a regency/city inspectorate. An inspectorate must in accordance with the regulation of the Minister of Home Affairs (PERMENDAGRI) No. 64 of 2007 in doing its duties and functions. Based on Government Regulation No. 60 of 2008, the implementation of internal audit in the government agencies done by the officials who have the task to carry out a supervision and have been qualified in competency skills as an auditor.

In doing its duty, an auditor is often faced with a dilemma situation. Dilemma situation in audit setting can occur when the auditor and the client does not agree to some aspects of the investigation functions and purposes. During an inspection, government supervisory unit of Kolaka's inspectorate sometimes faced with difficult choice related to independence to maintain professionalism. The first problem is when the supervisory units found that the people who investigated by them are their own family, either directly or indirectly, and sometimes those people are the family which is high-ranking officials who have power in decision or policy making. Second, when the supervisory units inspected Regional Work Units (SKPD) in which the SKPD is a place where they were before being placed in Kolaka's regional inspectorate. Those things can interfere professionalism of Government Internal Supervisory Unit (APIP).

To avoid somethings like that, it needs a personality variable that can influence and control those auditor's behaviors which is called locus of control. Some previous studies of locus of control with focused to auditor's behavior in conflict situation have found that there are relationship between locus of control and auditor's ability to resist management pressure (Tsui and Gul (1996); Srimindarti et al. (2015)). Locus of control refers to individuals' perception of the main causes of events in life which is divided into internal and external viewpoints (Igbeneghu & Popoola, 2011). Auditors with internal locus of control are called internals and auditors who have external locus of control are called externals.

Besides being able to control their behavior, auditor is expected to be professional by obeying the audit standard and rules of audit conduct that have been set. Professional in a profession refers to an individuals' belief concerning the value of profession as the prevailing standards. In the classical sociological theory, profession has a power and a prestige recognition by society on its bodies of knowledge (Aranya & Amernic, 1981). Furthermore, the term of "professional commitment" has been defined in a manner that parallels the conditions for commitment to the organization (Farmer, 1993). three dimensions of professional commitment in this research consist of the affective professional commitment (APC), continuance professional commitment (CPC), and normative professional commitment (NPC)

Based on the description of the background above, the main problems which can be formulated in this research are: (1) Is the Locus of Control partially affected to the auditor's behavior in conflict situation? (2) Is the professional commitment partially affected to the auditor's behavior in conflict situation? (3) Are the Locus of Control and professional commitment simultaneously affected to the auditor's behavior in conflict situation?. In accordance with the formulation of the problems, this research has the following objectives: (1) To determine the partial effect of Locus of Control to the auditor's behavior in conflict situation, (2) To determine the partial effect of professional commitment to the auditor's behavior in conflict situation, and (3) To determine the simultaneous effect of Locus of Control and professional commitment to the auditor's behavior in conflict situation.

2. Literature review

2.1. Public Sector Audit in Indonesia

Since regional autonomy era implemented in Indonesia, there are a number of legal instruments for financial audit assignment issued by Indonesian Government, among others are the laws of the Republic of Indonesia no. 15 of 2004 on the examination of financial state's management and responsibility; the regulation of the Minister of State for Administrative Reform No. PER/05/M.PAN/03/2008 on audit standards for Government Internal Supervisory Unit; and the regulation of the Board Audit of the Republic of Indonesia no. 1 of 2017 on state financial audit standards. The regulation becomes a pillar of financial accountability which can be evaluated with several audit procedures by government auditor.

Audit and Auditor refers to "jobs or activity" and "actors" in auditing context. According to the laws of the Republic of Indonesia no. 15 of 2004 article 1, audit is a process of problem identification, analysis, and evidence evaluation conducted Independently, Objectively, and professionally accordance with auditing standards to assess the truth, accuracy, credibility and reliable of information on management and responsibility of state finance. And auditor is an occupation that has the scope, duty, responsibility, and authority to conduct

internal audit in government agencies, institutions, or other parties in which there are the state's interests in accordance with the laws and regulations. It is occupied by civil servants with the rights and obligations fully granted by an authorized officer. Auditor can be divided into three kinds:

- a. Government auditor is an auditor who assigned to conduct a financial audit on government agencies. In Indonesia, government auditor can be divided into two general categories:
 - 1) Government External Auditor conducted by the Audit Board of the Republic of Indonesia (BPK) as the embodiment of article 23 paragraph 5 of 1945 constitution that reads to examine the responsibility about the state finances held by an Audit Board which its regulation stipulated by laws.
 - 2) Government Internal Auditor conducted by the Financial and Development Supervisory Agency (BPKP) and Government Internal Supervisory Unit (APIP).
- b. Internal auditor is the auditors who work at a company and have status as an employee of the company. Their main task is intended to assist the company's management where they work.
- c. Independent Auditor or Public Accountant is performing auditing function of the financial statements published by a company.

Three types of audit usually show key characteristics included in the audit definition that has been presented above. Those types of audit (Boyton et al., 2003) are:

- a. Financial Statement Audit. Basic assumption of a financial statement audit is that the report will be used by different groups for different purposes.
- b. Operational Audit. This type of audit aims to review the operation procedures and methods of an organization or to obtain and assess the operation efficiency and effectiveness in the achievement of company objectives.
- c. Compliance Audit. It is considering whether the auditee has followed certain procedures or rules that have been set.

More Specific, the audit scope in government include financial audit, performance audit and audit with a specific purpose.

2.2. Auditor's Behavior in Conflict Situation

Psychology is the science of mental processes and behavior (Aunger & Curtis, 2008). Behavioral studies are not only related to human behavior but also how they interact within a community according to their intellectual ability. Human conduct is better explained by the relational influence of observed and direct consequences than by either factor alone (Bandura, 1974). Several determinants of human behavior are located on three levels of culture, i.e.1) a people's notions of the way things ought to be; 2) their conceptions of the way their groups actually behave; 3) what does in fact occur, as objectively determined . . . (Kroeber and Kluckhohn 1952:162).

According to Ossorio (2006), behavior is describable as an attempt on the part of an individual to bring about some state of affairs – either to effect a change from one state of affairs to another, or to maintain a currently existing one. Furthermore, Bergner (2011) clearly defined behavioral concepts as essentially observable physical activity, such as a pigeon pecks a disk, a woman says “hello,” a student raises his hand, and so forth.

According to De Dreu and Gelfand (2008) in Hanggraeni (2011), conflict is a process that occurs when individuals or groups aware of their differences and disagreements between themselves and other individuals or groups with interests and resources, beliefs, values, actions, and so forth. According to the conflict theory, a conflict between auditor and client may cause ethical dilemma for the auditor (Thomas (1992) in Tsui & Gul (1996)).

Auditor's behavior in conflict situation is an ethical dilemma emerged as a consequence of audit conflict because the auditor is in a decision-making situation between ethical and unethical. These situations are formed because there are parties interested in the auditor's decision. Thus, the auditor confronted with the choice between ethical and unethical decisions (Lubis, 2010). The potential discord also happened between professional and organizational values which it is referred to as organizational-professional conflict (Shafer, 2009). In this situation, auditor could be under pressure so most studies have found it is associated with dysfunctional consequences such as reduced job satisfaction and higher turnover intentions (Shafer et al., 2002; Bamber and Iyer, 2002) which in turn will affect the auditor in making decisions (Nasution & Ostermark, 2012).

2.3. Locus of Control

In this study we consider that locus of control is one of variables that might potentially affect auditors' behavior in conflict situations. Based on attribution theory, attribution are specific causal explanation for events wherein causal analysis refers to the process of identifying the causes of an event or behavior (Martinko, 1995 in

Tiamiyu, 2010). For giving more description comprehensively, the following brief overview of the context of this theory that adopted from Tiamiyu's paper (2010).

Figure 1. Relationship Between Event and Future Behavior

Locus of control refers to the extent to which individuals attribute the events in their lives to actions or forces beyond their control (Nasution & Ostermark, 2012). Locus of control is a common belief of people about the amount of control they have on the personal life incidence (Wibowo, 2015). Individuals with more internal locus of control believe that their personal characteristics (such as motivation and competencies) particularly affect the life outcome. On the other side, people with more external locus of control believe that the events in their life mainly depends on fate, luck, or condition in the external environment.

Research about locus of control was pioneered by Rotter (1966) noted that:

- a. *Different people, given identical conditions for learning, learn different things.*
- b. *Some people respond predictably to reinforcement, others less so, and some respond unpredictably.*
- c. *Some people see a direct and strong connection between their behavior and the rewards and punishments received.*

A research conducted by Tsui & Gul (1996) on auditors' behaviour in an audit conflict situation with eighty auditors from big six and non-big six CPA firms in Hongkong as a sample has proved that locus of control provides a better explanation for differences in auditors' ethical decision making. Moreover, Srimindarti et al. (2015) have found that internal locus of control had negative effect on the acceptance of dysfunctional audit behaviors, whereas external locus of control had a positive influence on the acceptance of dysfunctional audit behaviors. Their study used auditors who work in Public Accounting Firms in Semarang, a city on the north coast of the island of Java, Indonesia.

2.4. Professional Commitment

Professional commitment is the attachment of individuals in the profession or, in the other words, to the strength of an individual's identification with a profession (Nasution and Ostermark, 2012). It also explains about individual's willingness to attempt the best effort for the sake of the organization and the desire to maintain membership of a profession. Professional commitment in audit refers to quality review programs of auditors to ensure adherence to professional standards, including the standard of independence (Farmer, 1993). Lee et al. (Khanifar et al., 2010) identified four reasons about the importance of understanding professional commitment.

- a. Someone's career is the main focus of life.
- b. Professional commitment affects people's retention in an organization. This commitment has important implications for human resource management.
- c. Work performance may have a relationship with a professional commitment because of professional skills are developed through work experience. For accountants, it is particularly relevant where their expertise developed from extensive experience and continuing education.
- d. Studies of professional commitment provide an understanding about how an individual develops and encounters various commitments both within and outside the organization.

The psychological bond between an employee and the focus of their commitment (organisation, profession, team) assumes three quite distinct forms. In this paper, all dimension of professional commitment measurements are adopted from Meyer et al. (1993) in Bagraim (2003), defined three distinct components of

professional commitment. These are affective professional commitment (APC), continuance professional commitment (CPC), and normative professional commitment (NPC).

Studies on the relationship between professional commitment and auditor's behavior have been conducted by several researchers. Some of them are Andreas (2016) and Paino et al. (2011). Andreas (2016) in his research has found that all dimensions of auditors' professional commitment significantly gives a positive effect on the underreporting time. While, Paino et al. (2011) in their research found that professional commitment was not a significant predictor of dysfunctional audit behavior.

3. Method

In implementing its duties, an auditor often face a dilemma situation in decision-making where the supervisory units found that people who inspected are their own family the supervisory units found that the people who investigated by them are their own family, either directly or indirectly, and sometimes those people are the family which is high-ranking officials who have power in decision or policy making. Also, when the supervisory units inspected Regional Work Units (SKPD) in which the SKPD is a place where they were. These things may interfere with Government Internal Supervisory Units (APIP) professionalism. In fact, we know that an audit is a profession that is based on society's trust that upholds integrity, objectivity, and independence.

Locus of control is a personality variable defined to what extent a person can control himself in performing his task or solving a problem. If an auditor in conflict situation receive an inspection and conducted based on the standard, the auditor's inspection is an internal locus of control. But if the auditor refuse or surrender in its process, then the auditor's inspection is an extrenal locus of control. Also when the auditors implementing their duties, they must consistent to their professional commitments. Thus, the inspection process in accordance with standards and code of ethics.

Based on the explanation above, we will see whether there is an influence of locus of control and professional commitment to the auditor's behavior in conflict situation. The analytical tool used in this research is multiple linear regression analysis with the aim that the expected results can be achieved. The following conceptual framework is presented.

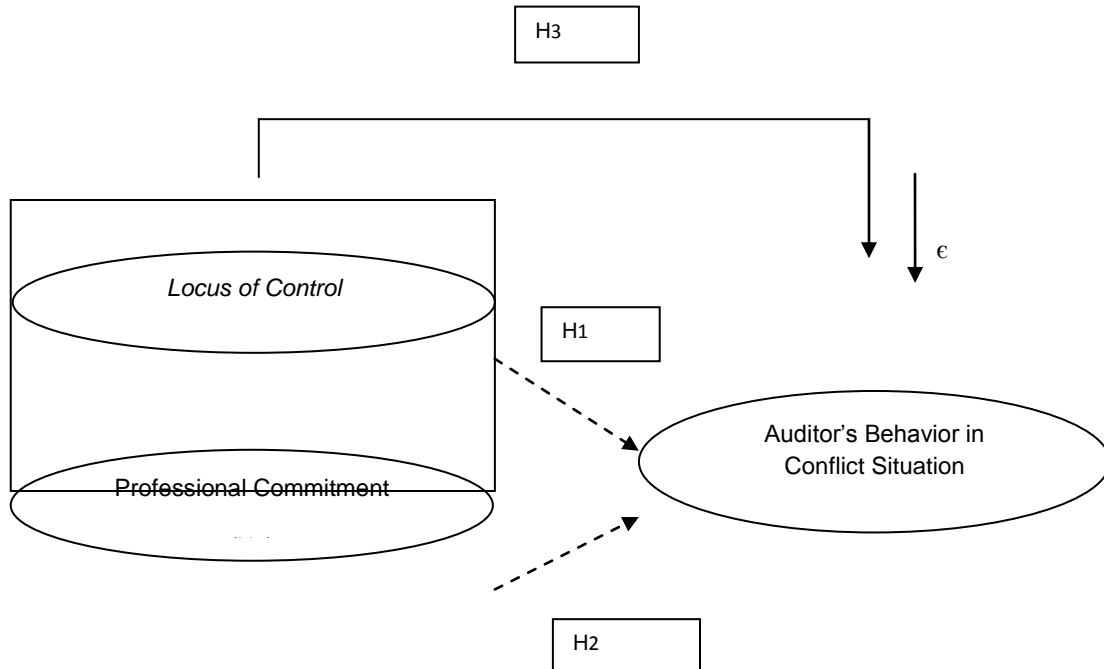

Figure 2. Research Paradigm

Research Hypothesis

The hypothetical model used in this study are as follows:

- H₁ : It is suspected that locus of control is partially affected the auditor's behavior in conflict situation.
H₂ : It is suspected that professional commitment is partially affected the auditor's behavior in conflict situation.
H₃ : It is suspected that locus of control and professional commitment are simultaneously affected the auditor's behavior in conflict situation.

The object of the research is the influence of locus of control and professional commitment toward auditor's behavior in conflict situation in Kolaka's inspectorate auditors which is located in Pemuda street No. 118.

The type of data in this research are divided into two types, namely: (1) Quantitative data in this research is the description of variable and research's object as well as statements in the questionnaire that would be classified into categories using a Likert scale. (2) Quantitative data in this research is the respondent's answers to the questionnaire which measured by using scoring from a Likert scale.

The source of data in this research are divided into two sources, namely: (1) Primary source in this research is sourced directly from the respondents related to the object of the research which are Internal Auditors at Kolaka's Inspectorate collected through questionnaires. (2) Secondary source in this research is taking data in Kolaka's Inspectorate which are the profile and history of Kolaka's Inspectorate.

The analytical methods used in this research are descriptive analysis and inferential analysis methods. The analytical tool used in this research is multiple linear regression analysis. The relationship between these variables can be described in the following equation:

$$Y = a + b_1 X_1 + b_2 X_2 + e$$

Legends:

| | |
|---------------------------------|---|
| Y | = Auditor's Behavior in Conflict Situation |
| a | = Constant Value |
| X ₁ | = <i>Locus of Control</i> |
| X ₂ | = Professional Commitment |
| b ₁ , b ₂ | = Regression coefficient of each variable |
| e (Epsilon) | = Other variables that are not investigated |

The operational definition of each variable is as follows:

- 1) *Locus of Control* (X₁) is an auditor's ability to control the events that happen to him. This variable is measured with The Work Locus of Control (TWLC) instrument developed by Spector (1998) in Mas'ud (2004:241).
- 2) Professional Commitment (X₂) is an auditor's ability in implementing its duties in accordance with its profession code of ethics based on education or science exploration. This variable is measured with an instrument developed by Mayer, Natalie, and Catherine (1993) in Mas'ud (2004:223).
- 3) Auditor's Behavior in Conflict Situation (Y) is an auditor's ability in making the right decision when the conflict situation occurs so as to avoid any doubt or dilemma in implementing its duties. The presented model as a material indicator for the auditor's behavior in conflict situation, that is: (a) integrity, (b) objectivity, and (c) independence.

4. Discussion

4.3. Results

a. Description of Research Variables

The independent variables in this research are (1) Locus of Control, this variable is formed from two indicators which are internal and external locus of control. Both indicators consist of 10 statement items. As for the distribution of responses for locus of control variable categorized strong and the percentage response propensity score is 68.58%. (2) Professional Commitment, this variable consists of three indicators which are affective, normative, and continuation. This variable consists of 11 statement items. As for the distribution of responses for professional commitment variable categorized very strong and percentage score of the answer is 84.00%. The dependent variable in this research is the auditor's behavior in Conflict Situation. This variable consists of integrity, objectivity, and independence. As for the distribution of responses for auditor's behavior in conflict situation categorized very strong and the percentage response propensity score is 84,35%. The frequency distribution of respondents each variable is presented in the following table:

Table 1. Recapitulation of the Frequency Distribution of Respondents

| No | Variable | Indicator | Total responses of Respondents | | | | | | | | | | Total Score | Average score | % |
|----|-------------------|---|--------------------------------|-------|-------|-------|--------|-------|--------|-------|---------|-------------|-------------|---------------|-------|
| | | | SS(5) | | S (4) | | KS (3) | | TS (2) | | STS (1) | | | | |
| | | | F | % | F | % | F | % | F | % | F | % | | | |
| 1. | (X ₁) | X1.1 | 45 | 37,50 | 61 | 50,83 | 14 | 11,67 | 0 | 0 | 0 | 0 | 511 | 4,36 | 85,17 |
| | | X1.2 | 8 | 6,67 | 23 | 19,17 | 19 | 15,83 | 53 | 44,17 | 17 | 14,17 | 312 | 2,60 | 52,00 |
| | | Average variable of Locus of Control (X₁) | | | | | | | | | | 823 | 3,43 | 68,58 | |
| 2. | (X ₂) | X2.1 | 34 | 47,22 | 31 | 43,06 | 7 | 9,72 | 0 | 0 | 0 | 0 | 315 | 4,38 | 87,60 |
| | | X2.2 | 20 | 16,67 | 90 | 75,00 | 10 | 8,33 | 0 | 0 | 0 | 0 | 490 | 4,08 | 81,60 |
| | | X2.3 | 24 | 33,33 | 39 | 54,17 | 9 | 12,50 | 0 | 0 | 0 | 0 | 303 | 4,21 | 84,20 |
| | | Average variable of Professional Commitment (X₂) | | | | | | | | | | 1108 | 4,20 | 84,00 | |
| 3. | (Y ₁) | Y1.1 | 41 | 56,94 | 30 | 41,67 | 1 | 1,39 | 0 | 0 | 0 | 0 | 328 | 4,56 | 91,11 |
| | | Y1.2 | 19 | 26,39 | 46 | 63,89 | 7 | 9,72 | 0 | 0 | 0 | 0 | 300 | 4,17 | 83,33 |
| | | Y1.3 | 16 | 22,22 | 42 | 58,33 | 8 | 11,11 | 5 | 6,94 | 1 | 1,39 | 283 | 3,93 | 78,61 |
| | | Average variable of Auditor's Behavior in Conflict Situation (Y₁) | | | | | | | | | | 911 | 4,22 | 84,35 | |

Next, data quality test conducted on questionnaires that was used, which is based on validity and reliability test results. It shows that the whole items and indicators from this research's variable indicate valid and reliable results. This decision was taken because of the Pearson's correlation value above 0.30 with a significance level of 0.05 and the correlation coefficient value of Cronbach's Alpha's result above 0.60.

Analysis factor's test result shows that the indicators in each variable significantly form these variables with significant value under 0.05. Factor analysis result for locus of control variable shows that the two indicators which are internal locus of control (X1.1) and external locus of control (X1.2) simultaneously form a variable with loading factor of 0.872. For the professional commitment variable, normative indicator (X2.2) is the most dominant factor form a variable with loading factor of 0.859. While, for the auditor's behavior in conflict situation variable, objectivity indicator (Y1.2) is the most dominant factor form a variable with loading factor of 0.923.

b. Hypothesis Testing

1. Partial Test (T-test)

Hypothesis testing can also be done by comparing t_{Count} with t_{Table} and $t\text{-sig}$'s value with $\alpha = 0,05$. If $t_{\text{Count}} > t_{\text{Table}}$ or $t\text{-sig} < \alpha = 0,05$, so it receives H1 or declines H0. Otherwise, if $t_{\text{Count}} < t_{\text{Table}}$ or $t\text{-sig} > \alpha = 0,05$, so it declines H1 or receives H0 by having 2,079 t_{Table} value.

Table 2. Partial Test Result

| Model | Unstandardized Coefficients | | Standardized Coefficients | | Sig. |
|--------------------------|-----------------------------|------------|---------------------------|-------|------|
| | B | Std. Error | Beta | | |
| (Constant) | 1,698 | ,451 | | 3,765 | ,001 |
| 1 LOC | ,354 | ,095 | ,580 | 3,729 | ,001 |
| Professional Commitment | ,309 | ,141 | ,342 | 2,200 | ,039 |
| R = ,846 ^a | | | | | |
| R Square = ,716 | | | | | |
| Adjusted R Square = ,689 | | | | | |

Table 2, it obtained that t_{Count} for locus of control is 3,729 > of the t_{table} which is 2,079 or with a significant level of 0.001 < of the $\alpha = 0,05$, then it declines H0 or receives H1, which means that locus of control is partially affect the auditor's behavior in conflict situation.

Table 2, it obtained that t_{Count} for professional commitment is 2,200 > of the t_{table} , which is 2,079 or with a significant level of 0.039 < of the $\alpha = 0,05$, then it declines H0 or receives H1, which means that professional commitment is partially affect the auditor's behavior in conflict situation.

2. Simultaneous Test(F-Test)

Hypothesis testing can also be done by comparing F_{Count} value with F_{Table} value with a significant level is $\alpha = 0,05$. If $F_{\text{Count}} >$ of the F_{table} or $F\text{-sig} <$ of the $\alpha = 0,05$, then it receives H1 or declines H0. Otherwise, if $F_{\text{Count}} <$ of the F_{table} or $F\text{-sig} >$ $\alpha = 0,05$, then it declines H1 or receives H0 by having 3.466 F_{table} value.

Table 3. Simultaneous Test Results

| Model | Sum of Squares | Df | Mean Square | F | Sig. |
|------------|----------------|----|-------------|--------|------------------|
| Regression | 2,434 | 2 | 1,217 | 26,516 | 000 ^b |
| 1 Residual | ,964 | 21 | ,046 | | |
| Total | 3,398 | 23 | | | |

Table 3, it obtained that F_{Count} value is 26,516 > of the F_{table} which is 3,466 or with a F significant level of 0,000 < of the $\alpha = 0,05$, then it can be concluded that all the independent variables simultaneously, either locus of control or professional commitment, is significantly affect the auditor's behavior in conflict situation.

3. Determination Coefficient (R^2)

Based on the table 2, it is known that R^2 (*R-Square*) value is 0,716. This shows that the direct effect of X_1 , X_2 71,6% or in other words, the contribution of locus of control (X_1) professional commitment (X_2) variables toward auditor's behavior in conflict situation (Y) is 71,6%. It means that there is another variable or epsilon variable (e) which is 28,4% that affect Y variable but it is not measured in this research.

4. Multiple Linear Regression Analysis

The results of the regression coefficients in Table 2 above, it can be obtained the following equation:

$$Y = 1,698 + 0,354X_1 + 0,309X_2 + e$$

- 1) Regression coefficient for Locus of Control is 0,354 times. It implies that there is a positive connection between Locus of Control toward auditor's behavior in conflict situation. Therefore, when the Locus of Control variable occurs an increase of 1 time and auditor's behavior in conflict situation independent variable assumed to be constant or equal to zero, then auditor's behavior in conflict situation dependent variable will increase by 35.4% times.
- 2) Regression coefficient for Professional Commitment variable is 0,309 times. It implies that there is a positive connection between Professional Commitment toward auditor's behavior in conflict situation. Therefore, when the Professional Commitment variable occurs an increase of 1 time and auditor's behavior in conflict situation independent variable assumed to be constant or equal to zero, then auditor's behavior in conflict situation dependent variable will increase by 30.9% times.

4.2. Discussions

a. The Influence of Locus of Control toward Auditor's Behavior in Conflict Situation

Hypothesis testing results show that the locus of control is partially significant affect on the auditor's behavior in conflict situation. It means that the better locus of control or control behaviors that are owned by Kolaka's Inspectorate auditor, it will be easier to overcome conflict situation.

According to the analysis results of respondent's responses to the locus of control, it shows that the internal locus of control has stronger influence than the external locus of control. This situation shows that the auditors' ability in Kolaka's Inspectorate when implementing their duties and responsibilities assigned to them even though it is in conflict situation. Despite the people who investigated are their own family, the auditors in Kolaka's Inspectorate remain professional and responsible while maintaining integrity, objectivity, and independence in implementing their duties which results in maximum and reliably inspection results.

It is in line with Tsui & Gul (1996) which states that there is significant influence of locus of control toward auditor's behavior in conflict situation which is that the more dominant internal character of the auditors, they will be more independent. On the contrary, the more dominant external character of the auditors, they are likely to receive pressure from their clients.

b. The Influence of Professional Commitment toward Auditor's Behavior in Conflict Situation

Hypothesis testing results show that the professional commitment is partially significant affect the auditor's behavior in conflict situation. It means that with the high dedication of professional commitment, it will be easier for Kolaka's Inspectorate auditors to handle conflict situation by complying to the valid standards and objectives of their professional which are implementing their duties with full responsibility and sincerely.

According to the analysis results of respondent's responses to the professional commitment, it shows excellent result. It states that Kolaka's Inspectorate auditors in implementing their inspection duties are always be done seriously, either it is done by a teamwork with colleagues or as individuals, and always active in every implementation of the tasks. Despite being in conflict situation, the auditors in implementing their duties will always comply their profession purposes, investing profession values, and profession loyalty and always comply by the rules and obedient in implementing their duties in accordance with professional ethics. This is also shown by the auditors' behavior who always feel guilty if being late to work, feel loss if their job is not done, and always maintain their membership in the profession. Therefore, Kolaka's Inspectorate auditors in implementing their duties may maintain integrity, objectivity, and independence as well as professional working.

It is in line with Andreas (2016) research which states that there is an influence of professional commitment toward auditor's behavior which is that the better of professional commitment, the better of auditor's behavior in audit conflict situation. Or auditors who have the better professional commitment tend to avoid dysfunctional behavior and will increase their capabilities, independence and professionalism in the implementation of the audit program.

c. The Influence of Locus of Control and Profession Commitment toward Auditor's Behavior in Conflict Situation

Hypothesis testing results show that the locus of control and professional commitment simultaneously significant affect the auditor's behavior in conflict situation which means that it indicates a good locus of control or behavior control and uphold the professional commitment may help Kolaka's Inspectorate auditors to handle conflict situation.

In inspection process with their professional responsibilities, Kolaka's Inspectorate auditors have a good locus of control will do their work with full confidence. With their capabilities and skills, it will be easier to handel the events that occur thus producing an accountable result according to the profession standard even though they are in conflict situation. Then, the auditors who are fully committed to their profession by implementing duties in a professional manner and in accordance with the rules and their profession values which have been agreed upon so they can handle the conflict situation.

It shows that Kolaka's Inspectorate auditors, whilst implementing their duties when there is a conflict situation, can maintain their integrity honestly and forthright within confidentiality limits of inspection object and maintain objectivity with honesty intellectually and free from conflicts of interest and maintain its independence while maintaining the integrity and objectivity principles in every process. Therefore, there is a significant effect of locus of control and professional commitment toward auditor's behavior in conflict situation. Hence, in dealing with Kolaka's Inspectorate auditors' behavior in conflict situation, it requires not only locus of control but also professional commitment so that the resulting performance is more optimal and reliable so that their integrity, objectivity, and independence are maintained.

5. Conclusion

Based on the previous research results and discussions, it can be concluded as follows: (1) From the partial test results, it is obtained that Locus of Control is significantly affect the auditor's behavior in conflict situation. (2). From the partial test result, it is obtained that Professional Commitment is significantly affect the auditor's behavior in conflict situation. (3) From simultaneous test result, it is obtained that Locus of Control and Professional Commitment are significantly affect the auditor's behavior in conflict situation.

Based on the conclusion presented earlier, it can be suggested that: (1) The author's suggestion for Kolaka's Inspectorate auditors who have external locus of control to further improve their attitude's control in implementing their duties especially when they are in conflict situation by giving some kind of training or education so that their independence can be maintained and professionally working. (2) For Kolaka's Inspectorate auditors who have a high internal locus of control and professional commitment, it is expected to maintain them or even maximize them in order to create a maximum and reliable result. (3) Basically there are only two variables in this research, so it is expected that in other research to be able to measure another variables which are related to auditor's behavior in conflict situation like ethical awareness and self-efficacy variables which have an influence toward auditor's behavior in conflict situation.

The Kebon Rojo Incident on 3 October 1945 in Pekalongan

Lidya Dwi Jayanti

The Kebon Rojo Incident on 3 October 1945 in Pekalongan

Lidya Dwi Jayanti¹

1 Sebelas Maret University, liyadwi.dwijayanti2@gmail.com

ABSTRACTS

The Kebon Rojo incident was the Pekalongan society power take over from the Japan authority. Kebon Rojo is a place where the society come together to attend the conference between Japan and the Pekalongan society in 3 October 1945. Pekalongan people during the Japanese occupation experienced poverty and torture. After Indonesia was independent, people consolidated power by establishing KNID Pekalongan, BKR and BPKKP, and youth's power. The Kebon Rojo incident occurred during the negotiation on 3 October 1945, in which the Japanese refused to leave the area of Pekalongan and were unwilling to submit the weapons because they maintained the status quo with the Allies. At the time of negotiation, a burst of gunfire was heard, made by the Japanese, making two young boys enter the resident office to lower the Japanese flag and hoist the red and white flag. At the end of the incident, Daidancho Iskandar Idris asked Daidancho Sudirmanin Purwokerto for help to contact Butaichoto withdraw the Japanese troops from Pekalongan Residency. On 7 October 1945, Pekalongan was free from the Japanese power. The incident resulted in a lot of victims; 37 people died and 12 people became disabled.

Key Words: *Kebon Rojo, 3 October 1945, Pekalongan, History*

A. Introduction

When Indonesia was colonized by Dutch, Japan has prepared to attract Indonesian people before being his slave. The propaganda becomes Japan's main weapon to attract Indonesian people so that they can influence other people with their beautiful slogan which is made to gain the purpose they decided (Aiko Kurasawa, 1997: 59).

The information about Japan's surrender had arrived on Pekalongan on August 14th 1945 about 9 p.m. A member of secret row who has involved on illegal meeting was in hurry to get into a house on Gilitugel, Tegal to turn the radio on illegal frequency that has been news portal center during the war (Anton E. Lucas, 1989:87). The information about unconditionally Japan's surrender to the ally was immediately spread to Pekalongan on that night straight away.

The vacuum of Indonesia governance was used by Indonesian people to proclaim the Independence Day and arrange national and region governance. On August 17th 1945 morning, Soekarno read Independence Day statement in front of many people in the name of Indonesia. A national governance of Republic Indonesia was made in the end of August 1945.

By the spreading of the Independence Day information, does not make Indonesian people on the far place suddenly believe. On August 22nd 1945 finally Japan stated that they were surrender but on September 1945 Indonesian people who live far on isolated area just known the information. Some warriors on all over Indonesia area was determined to collect the energy to compete for the power from Japan who has complete weapon and to defend the *status quo*.

After the proclamation information spread on Pekalongan, the next step is to unite all people power that was spread around and not completely collected on the organization that enabled to do

transference of power from Japan to Indonesia. Therefore, they need consolidation. It is to unite the action to strengthen the unity to gain the victory.

The transference of power on Pekalongan was done by diplomatic way or negotiation with Japan on October 3rd 1945. The negotiation was watched by many people to give support to Indonesian contingent. Support from Indonesian people was seen by inundating Kebon Rojo field where is around the *kempeitai* office to witness their representatives in negotiation. However, Japan could not accept Indonesian eagerness because they need to keep the *status quo*. It caused the incident of red white flag waving and *kempeitai* attack to Pekalongan people that caused some people died.

Based on the background above, the writer interested in writing about Kebon Rojo October 3rd 1945 Tragedy on Pekalongan. This research discusses about Pekalongan condition before Independence Day, power consolidation on Pekalongan after Independence Day until Kebon Rojo Tragedy and the process of transference of power and weapon to Pekalongan people. The main of this research is about Kebon Rojo October 3rd 1945 Tragedy on Pekalongan was held is just because Indonesia revolution discussion was commonly focused on national scale. Besides, lack of information about many tragedies on regional area caused many people do not do the research on it. Therefore, by discussing the local history on Pekalongan, hopefully it adds the lack of information about history on Pekalongan area.

B. Research Method

The research use history research method. As Kontowijoyo said, there are five steps or ways of historical method such as topic decision, heuristic, verification, interpretation, and historiography (Kuntowidjoyo, 2005:90).

C. Result Analysis

1. Pekalongan city Geography

Pekalongan region consists of Pekalongan district with Pekalongan city, as the capital then go to the west there are Pemasang, Tegal, dan Brebes. Pekalongan is well known as one of the batik city on Indonesia. It is located on the north coast of Java with the height about 1 meter above the sea surface and 100 KMs from the capital city of Central Java, Semarang. The large is 45, 25 KM² that consist of four sub district or 46 villages (Nurdiyanto, 2004:11).

From the architecture, Pekalongan is an ancient city. We can see many buildings from colonial age such as resident building, post office building, *societet* building, market, mosque, jail, rail station, and many more. All of those characteristics are the characteristic of ancient city of Dutch era.

Pekalongan had been having good public transportation. The road was built by *rodi* (under Dutch control) on 19 century by leading of Governor General Daendels and the rail way was opened on the end of 19 century. This good traffic makes Pekalongan people being more open minded with the society and foreign culture such as China, Arab, and India. The spoken language of the people near the beach is more firm, simple and may harsh. Therefore, they more honest because there is no chit chat (Abrar Yusra and Ramadhan KH, 1993: 24).

2. Pekalongan Situation during Japan Colonial

a. Social-economic Condition

Since Japan colonization on Indonesia, Japan propaganda troop do not stop to do their action. On March 17th 1942 Japan arrived on Pekalongan (Anton E. Lucas, 1989:37). At first, the people welcomed Japan arrival because Japan said that they are Indonesian older brother. However, they did violence to the people. Colonization and exploitation made Indonesian people hated them.

Japan governance tried to apply many economy systems. Economy activity was led to war necessary. All natural resource potential was used to industrial need that support Japanese war machine. Every region (*syu*) in Java has to save the war material and equipment such as big tunnels that was digged by the native labor (Arifin Bay, 1987:40). Japan applied their political-economy policy to fulfill own need that based on decentralization system.

Japan territorial zone that was really large, caused Japan need more employee to build defense facility, emergency air port, bunker, road, and bridge. It made Pekalongan as a compulsive working project. The labors were gotten from the villages on Java with high population through a system called *Romusha* (Djawa Baroe, 1944: 3).

Beside the difficulty of food necessary, clothing problem was also worst. Pekalongan that is well-known as the batik producer also got the problem about the material for producing batik during Japan colonization. Governance policy caused fabric and dye for batik was empty or really expensive. Many batik factories were bankrupt (interview with Ms. Maemunah). To get people's sympathy, Japan made *Jawa Hokokai*. The people took advantage on this Japan organization. The most fundamental change was the opening of Indonesia-Japan trade. Then, they made *Jawa Hokokai* batik (Exky Ria Vivitari, 2006:65). This kind of batik was suit to be wore on that time as a *kimono* so that there would be no labor lost on Pekalongan.

b. Governance Condition

On August 1942, Japan military governance produced Constitution No. 27 about governance system change for all regions on Java and Madura. Those are divided into *syu*, *syi*, *ken*, *gun*, *son*, and *kun*. Pekalongan changed into Pekalongan-*syu* resident position (*syuchokan*) was held by Tokonami Tokogi and resident assistant was held by Japanese named Toshio Ota (Anton E. Lucas, 1989: 40).

Japan did their political strategy by establishing youngster movement called *Gerakan Tiga A* (Three A Movement), then made other movement to get people's sympathy. Effort they did is by offering mutual partnership with Indonesian leaders to make PUTERA (Sudiyo, 2009: 92). Because of the small possibility to fight non-cooperatively, finally many leaders tried to use the chance to make cooperative attack with the hope PUTERA would be the place where the consolidation exist.

3. Pekalongan Condition on the beginning of Independence Day

a. Situation after Japanese Surrender

Japanese surrender happened on August 14th 1945. At the moment Indonesia took this brilliant moment. The proclamation process had been started even though there was different opinion between young and old warrior (Sudiyo, 2002: 99).

Some youngsters forced Soekarno and Hatta to proclaim Independence Day immediately. Finally there was a conclusion on the meeting. The proclamation would be done on August 17th 1945 on Soekarno's house on Jalan Pegangsaan Timur no.56 Jakarta.

Indonesia had already braved to fight the colonialist because the people had counted the risk. If there is Japan attack they would also attack them. It happened because Indonesia had own the preparation to fight directly on the battle field. It was military education that had been given by Japan. Young, old, woman, and man were well trained in military field (interview with Mr. Tasbun).

b. Proclamation Information and Pekalongan People Reaction

Information about the proclamation was not really spread to the people on around Pekalongan. It was just because Japan governance kept the proclamation secret so that the situation on Pekalongan was just fine (interview with Mr. Fadholi).

On the beginning of Independence Day, red-white flag waving was strictly banned. Traditional elite group commanded to take the flag down because there was no instruction from Japan. Some people said that the transference of power would not have a happy ending just like Japan resident and official radio on Jakarta said. They also were afraid of the Japanese reaction if the revolutionary movement continued the campaign to take the Japan flag down and replace it with Red-White flag (Nurdiyanto, 2004: 31).

4. Pekalongan After Independence Day

a. KNI Pekalongan Establishment

On August 22nd 1945, PPKI hold the meeting that decided three main focuses. They are National Indonesia Committee (KNI) establishment, Indonesia National Party (PNI), and People Security Bureau (BKR). (National Secretary archive no. 155). On August 28th 1945 was formed Indonesia National Committee Pekalongan chapter with the each specific filed to help the region and to collect people's opinion so that all the action is well-planned. The arrangement of Indonesia National Committee and members are followed: Dr. Sumbadji as the chief, Dr. Ma'as as the vice chief, and the members are R. Suprpto, Kromo Lawi, A. Kadir Bakri, K.H Moch. Ilyas, Jauhar Arifin, S. Wignyo Suparto, and H. Siradj (Mochammad Aswan Tary, 1984: 6).

On Kebon Rojo tragedy, KNI Pekalongan had really important role in transferring of power by making executive institution to help region chief and to do the first negotiation with Japan to have transference of power on civil and military field. Furthermore, KNI could unite people's power to gain full of Independence Day from Japan. KNI Pekalongan always had the discussion with BPKKP and youngsters on Pekalongan (interview with Mr. Tasbun).

b. Warrior Group Establishment

1) Bureau of Rescuer for War Victim Family Group and People Security Bureau on Pekalongan

On August 22nd 1945 PPKI took the decision to make People Security Bureau (Badan Keamanan Rakyat/ BKR). BKR had duty as a public security keeper on the regions under KNI coordination. The precedent asked for the Ex-PETA and *Heiho*, also youngsters to be BKR member while waiting for national army establishment.

On August 22nd 1945, PPKI declared about the establishment of Bureau of Rescuer for War Victim Family Group that was officially including a People Security Bureau (BKR). BKR had an important role in finishing the transference of power from Japan after the failure negotiation on Kebon Rojo field. BKR asked to Japan to give their weapons to BKR. To solve the problem, Ex-*Daidancho* Iskandar Idris asking for help to Ex- *Daidancho* Sudirman on Purwokerto and proof it by taking all Japanese out to Purwokerto.

2) Young Warrior Group on Pekalongan

A youngster is a man with revolution spirit. After the proclamation on Semarang, it was established Young Generation (Angkatan Muda Republik Indonesia/ AMRI) to collect people's power to fight the colonialist. The establishment of Young Generation on Semarang were followed by other regions on Central Java included Pekalongan up to isolated village. The Young Generation was established and they took the important role in fighting the colonialist (interview with Mr. Fadholi).

AMRI members under A. Djunaed yelled the independence slogan along the street like a knight group. They also had important role in flag waving outside the governance building such as state court office (Anton E. Lucas, 1989: 102).

3) Other Warrior Group

These groups consist of train and national police group. On October 5th 1945, Train Labor Association on Pekalongan was established. They held the meeting of train labor and made brochure called *Suara Rakyat*. The brochure was to invite the people to fight for the weapon and Japan's institution. It was because Indonesia has proclaimed the Independence Day so the power had to be on the Indonesian people (Sudjarwo, 1981:30).

The police force was an institution that was actively involved on the transference of power process from Japan army even as the pioneer in taking Japanese flag down. Furthermore, police force also helped the youngster who joined the battle with colonist who needed a consultation.

5. The End of Kebon Rojo October 3rd 1945 Tragedy on Pekalongan

a. Transference of Power and Weapon from Japan to Pekalongan People

Daidancho Battalion PETA Pekalongan, Iskandar Idris, tried to call *Daidancho* Sudirman (Sudirman the Great Commander) on Pekalongan. Then, Iskandar Idris told about situation on Pekalongan and asked for his help in order to call *Butaicho* that supervised Japanese soldier all over banyumas and Pekalongan residen in order to attract them out from Pekalongan. Then, Sudirman was enabled to do so and would call Pekalongan representative next (Dewan Harian Cabang Angkatan, 1992:12).

On next two days on October 5th 1945 at 9 a.m. there was information that Purwokerto had succeed to call *Butaicho*. They asked Pekalongan youngsters to recall *Kempeitai* Pekalongan that had been blocker *Butaicho* could give instruction directly to Japanese employee on Pekalongan. The negotiation among *Kempeitai* Iskandar Idris Garnisun Pekalongan commandant, Captai Toshio Oka, and many others was succeeded on the midnight October 6th

1945 (Anton E. Lucas, 1989: 126-127). Japanese employee went from Pekalongan at 04.30 a.m. to Purwokerto through Tegal by BKR truck so that on October 7th 1945 Pekalongan was free from Japanese domination. Impact of Kebon Rojo Tragedy on Pekalongan.

b. Impact of Kebon Rojo Tragedy on Pekalongan

1) For Pekalongan People

There were many people died on Kebon Rojo tragedy. Pekalongan people became massacre victims because of Japanese shot. Many people died instantly and many others were injured then injured people ran away and hospitalized on Kraton hospital. Some victims had physical defect even some victims were just laying on the Kebon Rojo field for two days. There were 37 Pekalongan people passed away and 12 else had physical defect.

This Kebon Rojo tragedy was head to transference of power and slip off the weapon on *Kempeitai* Pekalongan building. Based on information, it was known that ally would come soon to colonize back to Indonesia and slip off the Japanese weapon. They need to prepare the weapon to face the Dutch troop if they came back to Indonesia. The youngsters had to use the special tactic or violence action to fight for the Japanese weapon.

Because of the good diplomat skill of Sudirman, PETA *Daidancho* soldier, with the Japanese commandant, they gained many weapons to complete thousand of youngsters to join on the national army. Because of those weapons, Collonel Sudirman led the battle against Britain Army around Ambarawa on October 1945 (Rosihan Anwar, 2009: 231).

2) For Pekalongan Governance

After Kebon Rojo tragedy, there were social revolution on Pemasang, Tegl, and Brebes. One of negotiation result between *Daidancho* Sudirman and *Kempeitai* stated that the governance was transferred to Indonesian officer without ceremonial session. It caused many communists to establish revolutionary governance by killing the person they think they are part of the Dutch loyalist. Then battle against the Japan to slip off the weapon on *Kempeitai* office Pekalongan was the first step of the rebel called Gerakan Tiga Daerah (Three Regions Movement) to carry out the transference of power (Abrar Yusra and Ramadhan KH, 1993: 128).

Impact of this Kebon Rojo tragedy is that all Japan weapons left was given to *Daidancho* Pekalongan to against ally and to help Semarang on five days battle on Semarang. This battle happened on October 15th -20th 1945. The report about the battle on Semarang attracted the youngsters were nearby to come to Semarang to against Japan and one of the youngsters group was from Pekalongan.

D. Conclusion

Pekalongan is one of the region on north coast of Java that is known as one of the batik city on Indonesia. On March 17th 1945, Japan came to Pekalongan. At first Pekalongan people welcomed their arrival on Pekalongan because they thought that Japan is Indonesian older brother. However, colonization and exploitation by Japan made Indonesian hate them.

On August 22nd 1945, PPKI held back the meeting that was decided three main problems. They are establishment of Indonesia National Committee (Komite Nasional Indonesia/ KNI), Indonesia National

Party (Partai Nasional Indonesia/ PNI), and People Secure Federation (Badan Keamanan Rakyat/ BKR). After being established on August 28th 1945, KNI was established to do transference of civil and military governance from Japan. On Pekalongan, there were three powers that support the transference of power. They were KNI Pekalongan, BPKKP group, and youngster warrior group on Pekalongan.

The negotiation was decided on October 3rd 1945 at 10 a.m. on *Kempeitai* office. Next couple seconds, suddenly there was shot sound from outside. The situation was getting really crowded because of the sound. The people on the field became target of *Kempeitai* weapon. Many of them became victims on this tragedy. The brave Rahayu and Bismo were trying to get the Japanese flag down and replacing with Indonesia Red-White flag to the roof top of *Kempeitai* office.

Kebon Rojo tragedy on October 3rd 1945 was made many people died. Pekalongan people were passed away because of Japanese military shot. There were 37 Pekalongan people died and 12 else had physical defect. Ex *Daidancho* Battalion PETA Pekalongan, Iskandar Idris, try to call ex *Daidancho* Sudirman (Sudirman the Great Commandant) on Purwokerto. Iskandar Idris then, taold about the situation on Pekalongan and asked for the help so that they could call *Butaicho* that supervised all Japanese army on Pekalongan and Banyumas to take all Japanese out from Pekalongan. Therefore, on October 7th 1945 Pekalongan was free from Japanese domination.

ABSTRACT

Living abroad to continue studying offers some advantages for students because they can further develop their knowledge and networking. Study abroad does not only bring benefits for the students but also for the country providing the opportunity. The existence of international students can provide prestige for a country and add intercultural knowledge particularly for the educational institutions. However, the benefits gained by the institution from having international students do not guarantee them giving excellent experience for the international students. This research examined how international students dealing with the challenges during study in the biggest public university in Surabaya. Those various difficulties include language and subject problems, stereotype problems, and cultural and interaction problems. It does not only affect their learning activity in class and grades, but also their interaction with friends and lecturers. This study also provided recommendations for the educational institutions on how to better accommodate the international students in order to give them better studying and living experience as well as maintaining their and the country's reputation.

Key Words: International students, study abroad, intercultural communication, multicultural education

INTRODUCTION

Study abroad has not been a new phenomenon in the world. While scholars have done it before the era of globalization, it was not until 1950s cross-border education has expanded in multiple forms, allowing more to have the opportunity to participate in various study abroad programs each year (Kinging, 2009, p. 7).

Many countries around the world have made it easier for students looking for an international experience for their education. There are benefits that the students can gain from studying abroad, including learning new language, higher quality education, personal development, and many more. International education does not only bring benefits to the students but also to the country providing the opportunity. The existence of international students can bring a kind of prestige for a country and add more intercultural knowledge particularly for the educational institutions. It can also be said that some factors considered for quality of education are international research collaboration in journal publication and the number of international students studying in certain institution. The presence of the foreign students can also give a country positive economic impact. Furthermore, providing opportunities for international students to study in the country will be able to widen educational institutions' perspective towards more global view of education including the cultural element.

The international students studying in a foreign country have to learn and interact directly with the foreign culture in order to smoothly adapt in the country, study well, and blend with the locals. Various problems in relation to the new environment or culture are possible to exist and how they manage that is important for them to have positive experience of studying and living abroad.

In helping the students to adapt to the new place, basic knowledge about the local life and culture is considered necessary, aside from learning new language, especially if English is not used as the delivery language. However, the preparation does not only go one way, the destination country for studying should also

make effort to ensure they successfully provide the best possible education experience for the international students.

LITERATURE REVIEW

Intercultural Communication

Intercultural communication happens when people interacting come from different countries and/or cultural background. Liliweri (2002, p. 15) argued that intercultural communication begins with the assumption that: (1) there is a difference between perception of the people communicating, (2) there is content and interpersonal relationship in intercultural communication, (3) personal style affects interpersonal communication, (4) the intercultural communications aim to reduce uncertainty, (5) communications based on culture.

Different culture may have different styles of communicating (Urley and Amason, 2001, p. 450) thus problems in intercultural communication can happen. Nevertheless, effectiveness in intercultural communication is the goal and it is important to know how to do so. Besides understanding the language spoken or using English as a global language, being culturally sensitive is crucial for effective communication to happen. A study by Urley and Amason (2001, p. 458) stated that positive correlation was found between cultural sensitivity and effective intercultural communication. Being culturally sensitive means being aware of the cultural difference and willing to accommodate the difference to achieve the objective of communication. Murray (2003, cited in Ruddock and Turner, 2007, p. 362) argued that to be culturally sensitive, there needs to be openness, respect, and understanding of the cultural difference itself.

Mulyana (2010) and Liliweri (2003) described elements of culture as followed:

- a. Social Identity: characteristic formed by people's behavior or communication action based on their socio-cultural origin such as religion, tribes, education, and knowledge. For example, people use a language to represent their social identity.
- b. Perception: the internal process to choose, evaluate, and organize the external stimulus. It is one's way of perceiving something from social objects to factual events. There are several elements affecting one's perception, namely belief, value, attitude, and worldview. It is usually personal and subjective.
- c. Verbal process: it is not only about how people talk with others, but also internal thinking activities and the developing meaning of the words. It includes verbal language and mindset, which is related to perception and meaning. Verbal language is a cultural instrument used to channel people's beliefs, opinions, and value, as well as an instrument to interact and think. Mindset shows how culture decides a decision. Culture also influences logical thinking system, the truth and wisdom on top of builds mindset and perception to nature, interpersonal relations, etc.
- d. Nonverbal process: a part of communication process through facial expression, sign, sound, or eye contact. Cultural background may affect one's nonverbal process and meaning.
- e. The concept about time: people's point of view about the time is rooted in culture. For example relating to how time being used or perception about time, in which culturally different people have various perception.

Overseas Higher Education

The challenge of globalization and the opportunities provided from it causes people to actively seek quality higher education or the global experience. One way to achieve that is by looking for opportunity to study abroad. By studying abroad, it will provide students with added values and benefits they could not get when studying in their own country. Different students have their own perspective in their decision for furthering their study. However, it can be said that studying abroad has various benefits for their personal and professional development, given that the students are willing to learn and make effort to complete the study well.

Dwyer and Peters (2004) mentioned about various benefits of studying abroad like personal development, academic commitment, intercultural development, and career development. Besides getting to be responsible on their own studying life and experience, international students also have to adapt to the culture of the country they study at. How they adapt to the local life will affect their experience in that country. Understanding the cultural difference will be crucial. Before deciding on studying abroad, there are some considerations the students would make. Besides the quality of the institution, the cultural difference might be one of them.

For the countries providing opportunities for international students to study there, it will also give them positive impacts. According to World Education Services (WES) (2015), cited in Global Affairs Canada (2016),

the institutions providing the services will gain from international experience and global perspective as well as the creation of graduates that are globally competitive. Moreover, there is also the financial benefit brought from the international students.

The educational institutions accepting international students have to prepare the institutions so that they can leave positive impression to them. Furthermore, how to accommodate those students to help them with their study experience should be thought out carefully as well.

Communication Accommodation

Communication Accommodation is a theory focusing on roles of verbal and nonverbal communication in conversation, based on the belief that people from different cultural community will adapt their communication to accommodate others. Accommodation here is defined as the ability to adapt, modify, or manage someone's behavior in response to others. This theory focuses on interactions and understanding individuals from different groups by examining the language, non-verbal attitudes, and individual paralinguistic use. Through this concept, the understanding between people from various groups becomes an important part in achieving the purpose of communication (Turner and West, 2008, p. 217).

The accommodation theory mentioned that in conversations, people have choices. These choices will then be labeled as convergence, divergence, and over accommodation. Convergence is a strategy where an individual adapts to communication attitude towards the other. People will adapt to their talking speed, break, smile, eye contact, and other verbal and nonverbal behaviors. Convergence depends on the perception on other people's speech and attitude. Convergence is also based on interest.

Divergence is a strategy used to highlight the difference between verbal and nonverbal behavior on people who communicate (Turner and West, 2008, p. 222). It happens when there is no effort to show any similarity between the talkers and when they want to defend their social identity, hence the relation to power and role difference in the interaction. Divergence often happens during conversation when there is a distinct role gap and when a person considers another person they talk to possess unpleasant attitudes or look. The last one, over accommodation is labeled to an individual who is considered to accommodate or engage too much to the conversation that it becomes condescending. There are three forms of over accommodation: sensory, dependency, and intergroup over accommodation (Turner and West, 2008, pp. 225-228).

RESEARCH METHODS

The method in this research is a case study with descriptive research design. The study was done in the biggest public university in Surabaya. According to Yin (2003), case study is used to explain the subject of study as well as how and why certain happenings occur. Case studies can provide a more comprehensive explanation related to various aspects of a person, group, organization, program, or social situation. Purposive technique was chosen to determine the informants, in which specific criteria or considerations were used. The informant criteria specifications are: 1. International students who are no longer learning in language class; the students must be in the regular class according to their subject and has direct interaction with Indonesian students and lecturers, 2. The international students must come from outside Southeast Asia, thus the complexity of different culture and geographical location will generate more diverse data.

The origin and basic information of the informants are:

1. Senegal: second semester student in Master of Literature and Cultural Studies, Faculty of Humanities Airlangga University. She had been in Indonesia before for Dharmasiswa Scholarship Program.
2. Madagascar students of Bachelor and Master Program.
 - a. Bachelor Degree First Semester, Faculty of Fisheries and Marine Resources Airlangga University. She had been in Indonesia before for Dharmasiswa Scholarship Program
 - b. Master Degree: Second semester student of International Relations that has been here before for Dharmasiswa Scholarship Program
 - c. Master Degree: Third semester student of Media and Communication, Faculty of Social and Political Science of Airlangga University
3. Pakistan: first semester student Master of Nursing, Faculty of Nursing Airlangga University.
4. Afghanistan: a second semester student Master of International Relations, Faculty of Social and Political Science Airlangga University.
5. Palestine: a second semester student Doctoral degree of Social Science, Faculty of Social and Political Science Airlangga University.

The data were collected directly from interviews conducted with the informants. Additionally, direct observation was also done to study the behavior and activities. The researcher conducted the observations in class, when doing activities outside with the informant, during the interview, and also from the informants' social media usage. Triangulation technique (of source and theory) was used for the validity and reliability of the data analysis in this research. It helps to assist the assessment process of the data found from various ways and times, thus the process and the result of this research become valid.

Data classification was done according to the specific theme and interpreted using the theoretical framework in the data analysis process. In the data classification process, the background of the informants must be considered. The analysis process was done by first transcribing interview according to the criteria that has been categorized, then selecting the data obtained to select the suitable information for the research purpose, displaying and analyzing the chosen data with the help of related, relevant theories, and lastly concluding the finding of the research.

FINDINGS AND DISCUSSION

Studying and living abroad provide people with the chance to improve their social and cultural knowledge by experiencing the local culture and lifestyle in general. By blending and interacting with the locals, foreigners can learn about the way the locals live and interact with each other.

Besides having to meet and make friends with people from different country with different culture, international students also have to learn the local language, particularly if the teaching is not done in English. That could pose as a problem for them, especially because it relates directly to their learning experience.

Based on the interview with international students, it was found that there are various difficulties during their study. Those difficulties do not only affect their study activity in class, but also their interaction with friends and lecturers. Various difficulties faced by international students during their study include Language and Subject Problems, Stereotype Problems and Interaction Problems. Each one of the problems is described below supported by some selected comments from international students.

Dealing with language difference

Communication happens when messages are exchanged from one person to another. Thus, none of them is being isolated from social relations as well as information obtained through the exchange of messages. Based on the finding, language becomes the main problem during learning activity due to the nonexistence of international class with English delivery. Various responses collected when the informants were asked about the use of language in the class:

- **Why we learn bahasa while in class we know nothing what they're talking about.**

This kind of response was given by foreign students after they finished the bahasa class and starting the new semester in their regular class. They feel that bahasa class seems useless because in fact they still cannot understand what the lecturer said during teaching. As the two representative students said below:

"I feel 'why they use bahasa' everyday... maybe i can understand some but you really need to understand more. The problem with my class when they do presentation I cannot understand at all because they speak fast. But the dosen (lecturer) explain it very slowly, that's why I can understand." (Afghanistan student)

"I spent three hours in the class suffering. Because they're talking in bahasa Indonesia, sometimes I understand sometimes I don't. I'm not Indonesian. Ok no problem". (Palestinian student)

- **I don't understand what lecturer said and what jokes they made.**

As explained above, bahasa is the main difficulty among International students. It affects them in class and during their study. All the international students said that they do not understand what the lecturer said, but as they are the only international student in class so anything they do not understand they just pretend they understand by giving nonverbal expressions like a gesture.

A Madagascar student used a head gesture because he has to keep the class quiet so he will not distract his classmates:

“I don’t like to talk directly, even if i don’t understand and the lecturer look at me I will nod my head as if I understood what was being taught/said (Nodding as in trying to show that he understand what lecturer taught).”

Female international student from Pakistan describes how she feels language barrier is a big problem for her to understand the subject:

“Sometimes we are so angry inside and so annoyed because we want to understand what they’re teaching. And then we just stay silent and then we just give an expression like body language if we don’t understand... sometimes they understand. We give expression like (brows furrowed). ... Sometimes they ask us “do you understand “then I said ya I don’t understand this and this. Because if there is one thing you don’t understand then it may change the meaning of the whole thing, so you won’t be able to understand it fully”

- **Because of the language I got bad grades**

Not all professors are open-minded by giving international students excuse to use English for their daily language conversation in class. Some of them insist for the international students to use bahasa in their class while they still have difficulties with it. As a result, it affects their grades. A doctoral student from Palestine explained angrily that he got bad grades because of the language.

“A lecturer in the class gave me C. Why? Because I don’t speak Bahasa Indonesia. He examined me not in the subject, but because of the language”.

Another student from Madagascar said that the language made him got D for the social research methods because he does not understand the language and he just kept silent in the class during the semester.

“This is my problem with the Social Research Methods subject at the beginning. I didn’t understand bahasa, so I feel like a zombie just listening and spending time in class without understanding a thing. After that I got D hehehe (laughing)...”

- **Learning bahasa is not enough**

Language is an element of culture that has been learnt from generation to generation and it takes time for the learners to adjust. Learning a language should be done in practice instead of only in theory. Unfortunately this is what happened with the international students in this research.

A Senegalese student who has lived in Indonesia before this said language is still the main problem. She said what she got from bahasa class and what she faces in real life is totally different. It becomes a problem because the lecturer and classmates talk so fast.

“Even though I’ve already spent time in Jakarta first for 10 months and here (Surabaya) around 6 or 8 months, that is not enough. For example when we are doing our master class, the lecturer does not think about us. There is a foreign student here but will they talk slowly? NO. They explain so fast and sometimes they use Javanese so it’s quite difficult for me”.

Undergraduate student from Madagascar also explained how Javanese language used by the lecturer becomes another disadvantage for her because she has to understand two different languages at the same time which is difficult to handle.

“Everything is ok, but i have a little problem with the lecturer. Because the lecturer explained in Javanese. I’m not Indonesian, my bahasa is not perfect. Javanese language is even more difficult for me. One time our vice dean was teaching us and he used Javanese. Then he said ‘our friend from Madagascar does not understand, right?’ then everyone laughed.. He then also said ‘later you just ask your friends ok.’ so I just stayed quiet.”

The presented data above showed that language is the main barrier in communication, especially between two communicators with different socio-cultural background. Language should be the instrument of communication agreed by the users. According to Koordinasi Perguruan Tinggi Swasta (Kopertis) (2013), Indonesian language (bahasa) should be learned by international students in order to communicate with people around them. Thus for the international students wishing to study in Indonesia but do not have the capability in bahasa, they have to take intensive bahasa class through BIPA Program (Indonesian language skills learning program) that has been held by language center in universities in Indonesia. Unfortunately in this research, the international students, either students that has been in Indonesia for Dharmasiswa scholarship or students that came for the first time said that bahasa usage in the class is difficult. It is even more troublesome because Javanese language sometimes is used. Bahasa usage as the main language in the class definitely is the opposite

of what the international students predicted for their study. This finding also supported the research finding by Nubar Gorbanova, an Afghanistan master degree student, in 2014 about social adaptation and intercultural experience of international master degree students in Universitas Airlangga.

The researchers' point of view divided language difficulty into two factors. First is internal factor, the unwillingness and motivation to adjust and use Bahasa as the main language in class. International students still believe that English should be used all over the world. That attitude makes them think that learning bahasa is useless because they will not use it anymore once they go back to their country. That view showed that international students only see it as a short term investment and not consider the experience as a new social and cultural knowledge. Second is situational factor. The international students think the lecturer teaches and speaks too fast and the use of Javanese language generally by the classmates and the lectures, which is meant to make the class more interactive and cheerful ended up making the international students in class felt forgotten, obviously because they are still learning bahasa and they do not understand Javanese language. Therefore, they sometimes feel helpless and would just nod or stay silent.

Dealing with Stereotype and Cultural Ignorance

Dealing with the language and cultural difference are not the only things experienced by the students. Some cases of insensitivity and ignorance by the local students were also present as gathered from the student participants.

Below are some responses:

- **Friends comparing me with animals**

An undergraduate student from Madagascar explained how she's really offended by the joke and comments from her classmate:

"... Friends said "there are people in Madagascar? I thought it's just a land occupied by the apes". I was not angry. I decided not to talk and kept myself silent. Because if I talk I feel like I will say something bad, so I thought better go away. After that another classmate said "what ?? you're from Madagascar? You're African.. Why aren't you black? Why is your hair like that? ... I was a bit angry and ended up uttering a bad word (grinned). He then shut his mouth. I didn't know what else to say. I don't like that he belittled my country, my race, and my personality, I think that was rude. Furthermore, he was speaking loudly so people were looking. So that upsets me a lot. Until now there are some guys like that too."

She also added:

"I'm not angry; I'm just shocked because in my previous college in Surabaya there are a lot of Ambonese students. ... My classmate said that Indonesians are good but not Papua people. Then I told my classmate if Papua people are Indonesians too, I have a lot of Papua friends but they aren't bad at all... Then my classmate turned quiet. I was so angry. She might think that I am rude but I just wanted her to change her mind, because it's not good ... we cannot divide it to good and bad just because they're black/dark skinned. It's not the skin color that defines the personality. I said that to her directly."

Additionally, an Afghanistan student commented on the issue he thinks happened in Indonesia.

"Well it's not the country, but the mentality of the people. The way they discriminate, if they know you come from Africa and you have dark skin it's different, they will look at you differently look like you are someone bad. We come from place where everybody is equal. That made me disappointed. I have fair skinned friends and others seem consider them special like give some value to the white friends. That is the worst thing here."

Indonesians generally consider it normal that everyone have a perception about one's origin, including citizenship, religion, birthplace, and other identity. Social identity then is formed as a result of the membership in one's culture group and after the process of searching and educating themselves. Such group includes age, religion, social class, and place of origin (Liliweri, 2002, p. 68, 96). In intercultural communication, social identity leads to social category, which can show certain communication pattern. The consequence from the socio-cultural identity includes place, ethnocentrism, stereotype, presumption, and discrimination (Liliweri, 2002, p. 91).

In this study, cases of stereotyping as well as cultural ignorance and insensitivity existed in the environment around the international students. The fact that some students made fun of the international students' look, culture, and place of origin showed ignorance and insensitivity towards others. The local students see Africans with certain look in their mind and that black skinned people are bad, which is stereotypical and discriminating. That perception was learned from the stereotype in their own culture, which

stems from ethnocentrism. It was made worse when the local students cannot acknowledge the cultural difference properly and did not educate themselves on cultural sensitivity. Ruddock and Turner (2007, p. 368) stated that acknowledging the differences in culture can grow cultural sensitivity. However, that is not the case here. As a result, they carelessly threw negative, discrimination remarks to the international students without considering their feeling.

Beckum and Zimney (1991, cited in Korn and Burszkyn 2002, p. 20) stressed that the educational process cannot be separated from the community or societal norms of which they are apart. The common norms, values, and beliefs held in a community form the dominant, mainstream culture, which could cause students from another cultural background got sidelined due to them not being able to relate. That is what happened in this case. The local students as a community appeared to share the common view of the international students from Africa or those with dark skin in particular. The international students feel judged because they came from another ethnicity and they do not feel accepted.

Brabeck, et al. (2000, p. 120) mentioned about intolerance act towards others from different race background and how it affects those people. The international students feel that such treatment caused them to feel upset since they realize they will always be seen as different and that people have negative perception on them. Furthermore, they did not feel happy at all when people think lowly of their race or culture. They feel like everyone should be treated equally, no matter how they look and where they come from.

In this case, the local students were not able to understand the cultural gap thus offending the international students with their remarks. Overall knowledge and education on cultural sensitivity is very important to avoid such thing happens again. Ethnocentrism, however, can make it difficult to happen. As explained above, the society formed certain beliefs in the community which influences people's view. In this research, it is mostly about stereotype. Some of the international students bothered to explain and educate their friends about the problem, but some just got angry and left thus not really solving the problem.

Dealing with the local's daily habits and socializing

International students living abroad have to adjust to the differences in the daily habits in Surabaya, which sometimes annoy them. Several local's daily habits as pointed by them are elaborated below.

- **Indonesians love to come late**

A Madagascar student was surprised how Indonesian people like to come late and ignore the class time:

"oh ya, the lateness culture is a bad habit. You know when I was in my country we have 5 minutes late tolerance and when we have traffic they give us 10 minutes. If you come to class more than 10 minutes late, the door would be locked, you cannot come in and you have to go back home. But here you can come anytime you want to come and smile to your lecturer if you come late. But not only in the classroom, when you make an appointment with Indonesian people, they will usually come late".

- **Indonesian friends need to be more serious**

International students thought that Indonesian students need to be more serious to develop their knowledge and not waste the time when it comes to discussion.

As explained by an Afghanistan student:

"Indonesia should develop further. Indonesian youths are too busy with two things. First is pacaran (being in a relationship). Honestly, educated or not they always think about it. I just wonder why people are like that. The second is sitting in warung eating nasi goreng, drink coffee until midnight or morning. I mean it's my view to them they need to be serious to develop and stand their country by Indonesian People".

A Pakistani student shared about how different her classmates' habit is with hers:

"Actually one thing, when we have a meeting they talk so much. Not only about the topic but the other things also. So i think it wastes the time so much. And then ya sometimes, most of the time, they talk in Bahasa Indonesia so I don't understand. So I prefer to go back right after we finish class. But sometimes they'd ask us 'you can sit here, maybe we can talk, why you want to go back to dorm already? you want to go sleep or what?'. They're just curious I think. Every time I'd just stay shortly and then go back. So i said if you talk in Bahasa Indonesia I can't understand so what is interesting then?. Also in my habit, we don't stay too long in the class. We want to quickly go back and just relax at home after that. Here is where the culture is also different, they (Indonesians) sometimes stay at the campus til late night".

- **Private questions are annoying**

The first impression, which gives positive impact, is desired when one meets another for the first time. There are also rules of something you should and should not talk according to the culture. The international students responded on their dislike of the questions frequently asked by their Indonesian friends.

A Pakistani student explained:

“Friend here in the first time meeting us asked if I am married or single and then ask about my age. Even boys, We (foreign students) feel like, why are they asking?. In my country when we meet with someone we don’t ask this if you’re not close. If the girls ya it’s ok, but if it’s boys I was just ‘thinking why you ask?’ ‘Are you interested or what?’ because in my country if some guys ask if you’re single and you said you are single then it means “ok i am here” like implying that he’s interested to form a relationship. So I don’t think it’s necessary to ask.”

Another student from Afghanistan also explained that he has a problem with the place of origin and religion questions.

“yah here sometimes makes me argue with the people in Indonesia. ya it’s not in campus, it’s outside, they often directly ask ‘dari mana’ oh my God! At least Assalamualaikum or greetings first and I said ‘ini bukan urusan kamu’ i say just go, go away from me. ... The second is they ask me ‘are you muslim’ I felt really ashamed of this question. Because the point is we are humans. We all are the same, no matter what religion, as long as we’re all humans. Even one time it happened to me at faculty of economy the lecturer ask me ‘are you muslim’ oh my God you are a professor how can you ask me like that.. But I said ‘ya alhamdulillah’”.

- **I don’t really have any Indonesian Friend**

Palestinian student admit that he does not have any Indonesian friend. The only one close friend that he has is the fellow from Palestine.

“I have one close friend, he’s like a brother to me, he’s Palestinian also. And because we are the Palestinians, so ya.. He’s studying dentistry. This man can speak bahasa fluently. He has been in Indonesia one year before me. so yea he can’t speak bahasa Indonesia fluently, but he is busy”.

Pakistani Student chose to befriend international students only, rather than making friend with Indonesian. She claimed that that most Indonesian friends are only good at the first time meeting, after that they would ignore the international student.

“At first they were so sweet and so good to you, but after that they changed like they don’t know you. Maybe they will just pass by, they will act like they’ve never met you. So this one is strange for me and one my friend (who is also a foreign student). It happened before too. So we decided when we go to the class no need to be close with them. ... So when we go there, we keep the distance. ... Only if we have group assignment it’s ok. ... But no need to become close otherwise you will get hurt.”

From the various responses, the students found noticeable differences in the daily habits between them and the local students such as lateness and lack of seriousness. They found it annoying. Another issue is that they are not used to stay late on campus, they would rather come back to their dorm right after class, which is how it goes in their country, different with the local students who like to hang out. That could be the case of culture shock, which happens when someone reacts to differences in daily activities or habits in different culture or place. How one responds and deals with it may affect how they adapt to the different environment. Winkelman (1994, p. 125) summarized that one can deal with it by adjusting, adapting, and recognizing how the differences affect them or give them difficulties and act accordingly. Furthermore, awareness of the cultural differences is valuable. As stated in Ruddock and Turner (2007, p. 366), openness and flexibility are considered influential in relation to embracing cultural difference and cultural adaptation. The international students could use the experience to help them learn and immerse into the local culture. They need to familiarize themselves with how the locals do things and recognize it as the cultural difference. By accepting the difference and willing to try new things out of their comfort zone could possibly be the key to find comfort and blend better in the community.

How the Indonesian students are unaware of the fact that the international students do not like being asked private questions, or that if such questions should not be asked openly at all, is also another case of cultural difference. The local students consider it normal everyday questions they can ask to someone new or who they just met. The problem developed when the international students consider it a sensitive subject matter for them and thus should not be asked by someone who is not close with them. Chaney and Martin (2011) said that cultural differences in communication manifest through conversation topics. People from several countries

are more sensitive with topics about religion, political views, salary, and weight. From the interview, it was found that the international students are sensitive about place of origin, relationship status, age, and religion related questions. They also do not expect relationship question to come up unless someone asking is genuinely interested in them. Furthermore, they do not think that country of origin and religion are something others need to know. They are not interested in others' private information and they expect the local students to not pry with theirs too. However, it is obvious that local students are not aware about it, thus the problem happened. As stated in Moran, Abramson, and Moran (2014, p. 37), misunderstanding is likely to occur when someone is unaware towards the other's cultural background and values, which are different from their own.

Last but not least, socializing also troubled the international students. They experienced problem in making new friends because the local students did not seem like they wanted to befriend them by ignoring them after the initial meeting. The informants did not mention if they knew the reason of the behavior change from the local students. However, they were obviously affected by it since they decided not to get close with the Indonesian friends rather than getting hurt later on. Moran, Abramson, and Moran (2014, p. 37) mentioned about how similarity affects communication preference and openness. People having seen more similarities in others would be more comfortable and communicate effectively with each other. In this study, the Indonesians likely are not comfortable interacting with the foreigners because they could not find similarity in them, although there could be other reasons behind it.

This finding concluded that the international students deal with various problems, from language to different habits during their study. They reacted differently and had their own thoughts about it. Based on the accommodation theory above, some students were more open minded and willing to adjust their behavior to blend with the locals, meaning they implement convergence, while some others reacted differently, putting them in the divergence category. Berry (1997, p. 9) offered several acculturation strategies: assimilation, separation, integration, and marginalization. In this case, the international students used assimilation when trying to participate or interact with the locals while at the same time maintaining their own cultural integrity. Meanwhile those who chose to uphold their own culture and at the same time avoiding interaction with others belong to the separation category.

CONCLUSION AND RECOMMENDATIONS

The research found various challenges faced by the international students. First is language difference, which affects their understanding of the subject in class and also their grades. Second is stereotype and cultural ignorance, which affects their feeling and pride especially students from Africa because they were really offended if someone belittled their origin. The stereotype is that black-skinned people are bad and have certain physical look while cultural ignorance happens when someone is not educated properly on cultural differences across the world. Third is the local's daily habits and socializing.

The students deal with the challenges in various ways. For example by using facial expression, gestures like nodding their head, frowning their brows, and silent act. Most of the time international students choose to not say anything when they do not understand or if they disagree about something in class because of their incapability to express their feeling with bahasa. That silent act also means they do not want to be a part of the group and choose to be alone or only befriending the International students. For those willing to open up about the differences they can accept it and adapt with the habit of Indonesians, for example tolerating those who often come late, or will build a friendship with local students. However, some students chose to limit the interactions with local students and only befriend the international students because they do not feel accepted and like they could blend in, which means certain degree of convergence, divergence, as well as assimilation and separation in their attempt to adapt.

The researchers propose some recommendations based on the finding. First, for the educational institutions to better accommodate the international students' needs in order to give them better studying and living experience as well as maintaining their and the country's reputation. Moreover, they should be provided with not only the knowledge of Indonesian Language, but also the social and cultural life because they will interact directly with the local cultures. That will prepare them better in adjusting and understanding the cultural difference.

Secondly, the language training for international students should not just be theoretical learning, but add more practices because not all international students have the same experience in speaking bahasa and they still have difficulties understanding it. It may be easier for those who have been in Indonesia before but the first timers still need more training and mentoring.

Third is about educating local students on cultural difference and sensitivity. Aside from the international students, local ones should also be prepared with knowledge of dealing with students from different cultural backgrounds. When they are educated properly about it, they will grow a sense of respect and

thus will treat the international students better, which may lead the foreigners to gain the sense of belonging in the community and be motivated to adapt and blend in the community. It is important for them to feel accepted and comfortable and not feel like they are being left out.

ABSTRACT

International trade is one part of the economic activity that experiencing rapid growth of partnerships lately. These partnerships bring the interests of the state as a government in the international community, but many believe that this relationship does not bring the state as the protector of its citizens. As a result, the concept of human rights that continuously echoed for a long time are often considered excluded from the setting of international economic law. Human rights and international economic law in its recent development is ultimately a parallel thing through the frame of principle of non-discrimination. Therefore, this article tries to discuss how the principle of non-discrimination experienced a redefinition in the parallelism of human rights and international economic law, especially in South East Asia region. This issue will be explored through study about the application of human rights in the development of international economic law, then examine how international economic law integrate with human rights in redefining the principle of non-discrimination, and studying the extent of acceptance of the actors in the South East Asia community about it. By using qualitative research methods through reviewing literatures, journals, and reports of the international human rights bodies and state reports, the author found that human rights applied in international economic law by lifting the principle of non-discrimination which emphasizes common interests, due to human rights as a collective right. In the end, the principle of non-discrimination experienced redefinition because human rights are also a major agenda in the development of international economic law which the most prominent issue is collective interest. Some actors in the South East Asia region does not fully accept the redefinition of the principle of non-discrimination because its trend in favoring the developed countries, but it is something that cannot be avoided due to the growing world of international trade.

INTRODUCTION

International trade is one part of the economic activity or business activities that recently experiencing rapid growth. The phenomenon of globalization sowed the concept of liberalization of trade and led to various economic cooperation at regional and global level, either in the form of the World Trade Organization (hereinafter WTO) as a vital organization in the current world trade, as well as organizations with interests such as APEC (Asia Pacific Economic Cooperation), EC (European Community), NAFTA (North America Free Trade Area), ASEAN (Association of South East Asia Nation) as well as AFTA (ASEAN Free Trade Area), with the frame of international economic law. Relations of cooperation have brought the state's interests as a government in the international community, but many believe that this relationship does not bring the state as the protector of its citizens because of some factors such as intimidation by developed countries to developing countries and least-developed country, as well as the lack of involvement of a third world country in "Green Room Meeting"¹ negotiations. As a result, the concept of human rights that has been echoed for a long time are

¹ "Green Room Meeting" is a process of the WTO Doha Development Agenda negotiations conducted by the delegation of each member state without specifying a particular location, but the importance of the process to reach consensus on the various issues discussed

often considered excluded from the setting of international economic law, because the right of the people are increasingly depend on the regulation of certain actors or international forces.

Since the establishment of ASEAN as a regional organization in 1967, the member states have laid the economic cooperation as one of the main agenda to be developed. At the beginning, this economic cooperation is focused on programs providing trade preferences, joint ventures, and complementation scheme between the governments of the member states and private parties in the ASEAN region, such as the ASEAN Industrial Projects Plan (1976), Preferential Trading Arrangement (1977), the ASEAN Industrial Complementation scheme (1981), the ASEAN Industrial Joint-Ventures scheme (1983), and Enhanced Preferential Trading Arrangement (1987).² In the decade of the 80s and 90s, when countries around the world began to make efforts to remove obstacles to economic, member countries of ASEAN realize that the best way to work is to mutually open their economies, in order to create regional economic integration. 9th ASEAN Summit in Bali in 2003 agreed to establish the ASEAN Community and one of its pillars is the ASEAN Economic Community (AEC), and already passed its deadline on December 2015.³ AEC aims to create a single market and production characterized by free flow of goods, services, investment, skilled labor and capital movement of goods more freely. The summit also set the priority sectors to be integrated, namely: agricultural products, automotive, electronics, fisheries, products derived from rubber, textiles and garments, products derived from wood, air transport, e-ASEAN (ITC), health, and tourism. In its development, the logistics services sector becomes the 12th priority in 2006.⁴ With their Charter mentioning the recognition of human rights but demanding lots of cooperation forms, the challenges to this organization are becoming even more real.

The relationship between human rights and international economic law has become an important point in the discussions that developed in recent years, particularly in the WTO environment.⁵ The opening of national markets to international trade with a proper exception or adequate flexibility, are seen encouraging and assisting the sustainable development, promote prosperity, reducing poverty and building peace and stability, although it needs to be measured in advance what proportion of justice which balanced the developed, developing, and least developed countries. On the other hand, the human rights activists argue that the world trading system at this time did not describe true protection, with the non-compliance of national policies with international law in force or otherwise, because the WTO membership is not only dominated by the developed countries, but also developing countries which play an important role in the growth rate of world trade. This is not only because of their numbers, but because of the developing countries began to use trade as a means of major improvement in the structure of the country's development to face the era of globalization with the imposition of "*Special and Differential Treatment*"⁶ in international economic law. Due to the high fragmentation in international economic law, adjudicating bodies are applying different interpretations and standards with regard to "*less favourable treatment*", "*likeness*" and "*regulatory purpose*", in interpreting these "*treatment*". These interpretations are going to one principle in general, that is the Principle of Non-discrimination, which constitutes a corner-stone in different fields of international economic law, notably international trade in goods and services as well as intellectual property and investment protection. While its basic rationale appears to be straight forward, the application of the different elements which constitute a nondiscrimination obligation has proven to be most complicated. With their different treatment for developing countries and underdeveloped countries, the conception of "fair" that had been echoed by human rights activists now also has changed quite controversial in international economic law. Each country increasingly have the same rights in trade between countries. World trade rules are designed to allow the state to do what is called comparative advantage, namely their ability to produce goods or services that has a lower production cost than other countries. Given this comparative advantage, then trade barriers also potentially increase, which could lead to a competition that is not "fair".

The Strength of Human Rights As Individual Rights

Human rights are the rights of human beings because he was human. Every human being has rights and no one should be denied their human rights without fair legal decision. Only in certain limited circumstances a person can be deprived of their human rights.⁷ The conception of human rights makes differences in certain status such as race, gender, and religion, become irrelevant politically and legally and are demanding equal treatment regardless of whether the person concerned to meet obligations to the community. Equal treatment for everyone according to the concept of human rights is made into an individualistic concept, which is intended to convey that the human rights of every person should be given to the individual and not given to a group. Each individual will have the same rights, which should not be different from the people who are in the same group, as well as individuals who are in the other group. These things are statement about the law and principle, not a statement about the practice, because of the law, human rights possessed by everyone, although in reality it is not a concrete fact. State system in the 20th century and power from all political authorities motivate the fight for human rights of all citizens. Everyone is in a state authority, no person or group of people who are free from these authorities. This led to the ideal idea about the individual's right to be treated with dignity, equal to all other citizens, and in a way that ensures the autonomy to act, not only widespread among Western liberal societies, but also increasingly pervades other communities. Sociological picture of the late twentieth century shows human demands for privacy and the protection of the individual against the state, society, and even family.

The principle of human rights is derived from Western thought, when philosophers dealing with the rise of state power and the increasing individualization of citizens.⁸ Although in the twentieth century where economic, social, and cultural added to the original package of civil and political rights, which is partly a reaction to pressure the communist world, the core meaning of human rights remains liberal.⁹ The focus is on equal individual rights and inseparable from the individual. Countries that now protect human rights forced by the conditions of a liberal society, both in the West and in other regions. The conception of human rights which are universal, equal, and individually, was opposed by the group of radical capitalism, traditionalism, conservatism reactionary, left collectivism, and the Status Radicalism, by saying that the most important principle of human rights is self-determination and liberation from Western countries as well as multinational companies.¹⁰ There are also challenge views expressed through social groups such as feminist and defender of blacks, that rights can only be owned by the dominant status group and it is a principle which is not relevant to the subordinate group like them.

No system is perfect in an international community. Human rights, even considered as an individual right that protects dignity as human beings, have a weak point, especially when liberalism defined incorrectly. The biggest criticism against the principles of human rights that promotes liberal individual rights is still held by Karl Marx who think that equality is a "right to inequality".¹¹ Marx condemned the capitalist system as a result of liberalism for what is now by many so-called harsh violation of basic human rights, the living conditions of the workers were awful, the subjection of them to the tyranny of capitalists in the factory, and repression brutally by the state to the protestors of the working class. Even though, human rights still have its place in the development of International Law as common interest of all states in the world.

Human Rights As A Major Development of International Law

⁷ For example in Article 4 the International Covenant on Civil and Political Rights (ICCPR), stated that the state can make a derogation from this covenant when facing a situation of public emergency that threatens the life of a nation. Literally it can be interpreted that human rights can suffer limitations in terms of certain things. However, there are some human rights instruments which denies the existence of such derogation, for example the African Charter.

⁸ As stated by Baehr, a professor of the University of Leiden, saying "*in de eerste plaats het geen lijkt twijfel dat de gedachte van de Bescherming van het voor fundamentele mensenrechten eerst is neergelegd in westerse geschriften ...*" (no doubt, that the idea of human rights protection first formulated in the West). See P. R. Baehr., *Mensenrechten.*, in Prof. Dr. H. Muladi., SH, (ed.), *Human Rights: The nature, Concepts and Implications in the Perspective of Law and Society.*, Bandung: PT. Refika Aditama., 2005, p. 217

In the international world, human rights are at the top of the agenda of science and technology, because it is a common problem that touches all aspects of life. The historical fact reveals that since World War II has resulted in the destruction of human civilization, the main agenda of discussion of the history is about human rights, and became stronger after the cold war. Even Thomas Burgenthal concluded that perhaps there has never been a time in human history, discussed human rights issues as discussed in the present century.¹² This discussion emerged at least in six sightings of human rights in international relations. *First*, human rights have become the main agenda in international affairs, because it is considered as one of the few major achievements of modern philosophy. *Second*, the state has been required to implement the norms of human rights through international legal instruments concerning human rights which have been agreed.¹³ *Third*, individuals have a legal status to be protected from all forms of human rights violations, notably which was preceded by the decision of the International Tribunal for the Nurnberg and Tokyo International Tribunal, later became the basis of today's legal experts to determine the legality of the individual as a subject of international law. *Fourth*, the concept of state sovereignty is under increasing pressure and begin to experience the redefinition of the human rights, especially the emerging doctrine of Humanitarian Intervention, Some said, the concept of state sovereignty is traditionally more depressed through the concept of Relational Sovereignty, with application in the doctrine of Sovereignty as Responsibility. *Fifth*, the main actors in the promotion and enforcement of human rights is no longer a monopoly of the state, but also non-state actors, even multinational companies had already participated in this agenda.¹⁴ *Sixth*, there has been a change in perception and approach on human rights. Human rights issues are no longer focused on legal aspects alone, but all aspects of life associated with human rights. Therefore, human rights is always considered inherently in any public policy in many countries today, which was also done by the state. Likewise, it is done in the private sector.

These sightings, eventually becomes international debate about whether there should be certain law or at least legal terms to be used to describe human rights. Discussions on human rights by itself raises a so called International Human Rights Law. International Human Rights Law are rules of law which was formed through international conventions or international practice with regard to the protection and guarantee of basic human right so that individuals or groups can expect any claim against the implementation of these provisions. International Human Rights have the basic components of human rights which all decisions issued and established by the United Nations as well as the entry into force of the United Nations addressed to its members. The norms of International Human Rights shaped in form of resolutions, conventions, declarations, and basic principles, where conventions and declarations are the norm established by the agreement of the members of the General Assembly, and the basic principle is the norm established by the agreement of General Assembly member states and issued by agencies under the General Assembly.

At least there are four materials of human rights setting in international law :¹⁵

1. Human rights law regulated through international agreements that are mandatory and binding for the countries that participate in the agreement. The most important instrument in this case is United Nations Charter.
2. Various declarations, conventions, and resolutions, adopted by the United Nations, international organizations, and the states, about human rights, not legally binding, but produces a variety of standards that are recognized and implemented in various parts of the world. The most important instrument in this regard is the Universal Declaration of Human Rights.
3. Variety of decision, recommendation, either taken by the United Nations and underneath bodies, as well as other international organizations, supporting the enforcement of human rights. An example of this is the

¹² Thomas Burgenthal, *International Human Rights in A Nutshell*, 2nd Edition, *Edinburgh* : West Publishing Company, 1995.

¹³ For example China as a country that became the talk of the international community regarding the very restricted enforcement of their human rights. The resurrection of human rights in China was derived from the Democracy Wall Movement in 1978 - 1980, but the enforcement of human rights in the country experienced its heyday at the time of China's entry into the WTO, which resulted in various changes in the economic structure of the country, including the treatments of factory workers as well as attention to the economic rights of its people.

¹⁴ For example, some achievements of Amnesty International as stated in the their Impact Report 2012 - 2013 is their defense of the freedom of expression in Russia, maintain accountability of companies in Nigeria, protect and defend the rights of indigenous people in Ecuador, protecting the sexuality and reproductive rights in El Salvador, against the death penalty in Gambia, prevent the exploitation of migrant workers in Qatar, campaigned against the death penalty throughout the world, defend the displaced in Romania, promoting LGBTI (Lesbian, Gay, Bisexual, Transgender, and Intersex) in Europe, exposing the use of drones by the United States in Pakistan by the arbitrary tribunal, prevent torture in the Middle East and North Africa, and was instrumental in the signing of the Arms Trade Treaty (ATT) by the UN General Assembly.

Advisory Opinion of the International Court of Justice in 1971 of the Continued Presence of South Africa in Namibia (South West Africa).

4. Variety of national law, regulation, court decisions, administrative decisions, and policies taken by the state in order to support the enforcement of human rights.

Basically, all categories of human rights are universal, interdependent and interrelated. The international community should enforce the human rights fairly and in the same way, based on equality and equal emphasis. However, also important to recognize that human rights as outlined in various declarations and covenants that are often considered to be universal, is not something final and enforceable regardless of the aspects of space, time, ideals of the nation, the law, and the interests of the country concerned, resulting many declarations of the new human rights correcting previous declarations. However, reality shows that the application of universal human rights values turned out to have nothing in common and uniformity. The interpretation of right to life, for example, could be applied differently from one country to another. In interpreting this right, each country has a different interpretation of how far the state can guarantee the right to life, due to the application will be linked to the characteristics or special properties inherent in every country. The fact that there are no countries in the world who have similar aspects, including economic, social, political, and especially legal systems and cultures. Consequently, there is unevenness in implementation of human rights in the most tangible level in society. For this matter, at least there are four main causes of the difficulty of the states to enforce international agreements on human rights, even when they already become its followers, that is :¹⁶

1. The design and establishment of various international treaties on human rights are very deviated (biased) by the frame of mind of the designer.
2. The agreement formed with two constraints, such as idealistic thought and compromise basis. The agreement formed just by seeing ideal things thing without seeing the infrastructure to do it, also just a compromise formulation as a way out of differing views between developed, developing, and least developed countries.
3. Some international treaty on human rights was made rather for political purposes instead of lofty goals to respect human rights.
4. Many international treaties on human rights only followed halfheartedly by developing and least developed countries.

International treaties that promote respect for human rights, was not enough to improve human rights in developing and least developed countries. Various reasons for them to violate the fulfillment of its obligations to international treaties is not because of their desire to break what has been agreed upon, but rather because the conditions on countries that are unlikely to fulfill.

Parallelism of Human Rights And International Economic Law

Countries in the world will always be a major subject in the setting of international law. Their imbalance of equity due to various developments such as social structure, geography, history of the establishment, area, population, and so forth, resulted lots of discussions in international economic law sphere. But recently developing and least-developed countries have greater bargaining power in trade negotiations within the WTO by preferential treatment clause for them in the various agreements agreed by the member states.¹⁷ We can say that the purpose of such preferential treatment is to lead to the enforcement of human rights. This is due to the competitiveness of developing and least-developed countries which are not the same as the developed countries. These differences in competitiveness and certain ability to conduct trade relations may conflict with the national interests of the country, which is a collection of individuals - individuals who recognized the existence of human rights. Expectations to the protection of the state which has a weak bargaining position is an incarnation of the two parallel processes in the world of international economics, such as the democratization process that already underway in most developing countries, and the more prominent movement of human rights in the international community today. Undeniably, as a result of these two parallel processes, enforcement of human rights clearly produce many anti-trade bias instruments.

¹⁶ Hikmahanto Juwana., *Pemberdayaan Budaya Hukum Dalam Perlindungan HAM di Indonesia; HAM Dalam Perspektif Sistem Hukum Internasional.*, in Prof. Dr. H. Muladi., S.H., (ed.), *Hak Asasi Manusia : Hakekat, Konsep dan Implikasinya dalam Perspektif Hukum dan Masyarakat.*, Bandung : PT. Refika Aditama, 2005, p.71

¹⁷ For example Article 12 of the Agreement on Technical Barriers To Trade governing the Special and Differential Treatment for Developing Country Members. Derogation of international rules can also be found in Article 11 of the Agreement on Technical Barriers To Trade governing a country can rule out international standards set through the TBT Agreement if such standards are not in accordance with the development of trade and financial needs as well as their country. Even in Article 42 of the ILC's Draft Articles on State Responsibility, preferential treatment can be given to a country which is said to be "Injured States" in any application of certain agreements or at least influenced in particular. See Joost Pauwelyn A Typology of Multilateral Treaty Obligations: Are WTO Obligations Bilateral or Collective in Nature?, *EJIL Vol. 14 No. 5*, 2003.

Assessment of the impact and implications of human rights focuses on the governance of a country because they have the primary responsibility to implement them. But the development of human rights has now started contested to be no longer be the responsibility of governments, but also for international organizations. This is because the contents of the rights that has been fought through years still lacks clarity, especially when dealing with international political interests between countries, so the justification to it often dispensed. Indeed, in principle, it is the state which has the duty to keep the individuals as citizens under their jurisdiction comply with the obligations that concern them, so in the international forums state is obligated to take the interests of their citizens in the various negotiations. The greatest difficulty in the enforcement of human rights from the standpoint of this is the different interest of every country that must protect the interests of its citizens, resulting in a conflict of interest and the cessation of the ongoing negotiations.¹⁸ A discussion about this matter that can be proposed is about the need for a state to be treated fairly, no "less favourable" than the others, so that they could protect their citizens rights as same as other countries.

Ernst Ulrich Petersmann have long argued that the need for human rights revolution that developed within the scope of international law should also be an integral part in the realm of international economic law, especially in many agreements that were made in the WTO.¹⁹ Revolution of human rights needs to be preceded by a change of paradigm or worldview. Various constitutions in both the national and international level on human rights protection is indeed brought protection to life, liberty, property, and so forth. However, Petersman questioned whether the constitution can protect people from the political power and the restrictions on the right that appears in the formulation of international law collectively in international organizations is legitimate or not.²⁰ These efforts is indeed ambitious because it not only includes the protection of particular category of individuals, but has a broader goal of protecting and developing all rights for all people around the world. States is not only asked to respect the human rights but also to take concrete steps that all persons under its jurisdiction enjoy the those rights. Human rights in its development is understood by the experts as an interdependent process. In the implementation of its own, human rights are limited by the freedom of others, morals, safety, and order, because human rights is an attempt to translate beliefs about human dignity into legal language which is a concrete statement, so something that concrete cannot be seen from one viewpoint only. Human rights approach for the development of international law also requires the existence of a legal obligation of members of international treaties on human rights to develop cooperation, so the focus of the settlement has surpassed the upholding of human rights itself.

The vast variations in view of the economic angle, now also generate views on human rights, which is said to be also present in the form of economic rights, labor rights, cultural rights, civil and political rights, the right to a clean environment, and others. Apart from some general standards on human rights, economics does not really have a fixed package of regulations on human rights, because the rule of law on the world trade is not derived from the protection of human rights. Defining between human rights and international economic law will increasingly look alike but fled when confronted with terms such as "*economic liberty*", "*economic freedom*", "*market freedom*", "*fundamental rights*", and other terms that are listed in various studies of the expert. Difficulties in the differentiation of human rights and international economic law will be more clear when we cannot distinguish the certain fundamental rights set out in international human rights law and international economic law. Deeper issue is when it appears the assumption that international economic law had been to the protection of human rights. Contestation of this has resulted in blurred vision in the integration of human rights into international economic law.

A study conducted by the Organization for Economic Cooperation and Development (OECD) in 1996 identified six aspects of the current global system associated with the regulation of international trade that can be used legally to justify the trade arrangements for the benefit of human rights enforcement. These six aspects are
:²¹

¹⁸ One interesting example to be discussed about negotiation in international economic law is the Doha Development Agenda, which is a famous agenda with a never completed negotiations, due to a conflict of interest between countries that took the interests of its citizens, especially the issues of agriculture and food. See Susan C. Schwab, *After Doha, Rev The Negotiations Are Doomed and What We Should Do About It*, *Foreign Affairs Vol. 30 No. 3*, 2011.

¹⁹ Ernst Ulrich Petersmann, *Human Rights and International Economic Law in the 21st Century : The Need To Clarify Their Interrelationships*, *JIEL 3 – 39*, 2001. Revolution meant by Petersmann is to do "constitutionalization" of international law and foreign policy based on human rights and the principles of law, separation of powers and the limitations of government, social justice, "democratic peace", and the national constitutionalization. In his research, Petersmann also conveys the idea of constitutionalism with eight principles that must be synchronized with the six basic functions of human rights law.

²⁰ The example of this is the question of the justification of the report of the United Nations Commission on Human Rights, which considers that the WTO is a very real nightmare on certain sectors of humanity, especially for developing countries and women. See *Preliminary Report on "Globalization and Its Impact on the Full Enjoyment of Human Rights"*, Document of UN ECOSOC E/CN.4/Sub.2/2000/12, dated June 15th, 2000, paragraph 15.

²¹ Organization for Economic Cooperation and Development, 1996., *OECD Annual Report 1996.*, in Anthony E. Cassimatis., *Human Rights Related Trade Measures Under International Law.*, Leiden-Boston : Martinus Nijhoff Publishers., 2007., p. 117

1. Dumping rules and the treatment of the so-called "Social Dumping".
2. Rules on Subsidies and debate on "Social Subsidies".
3. Exception rules in the General Agreement on Tariffs and Trade 1994 (GATT 1994), particularly in Article XX.
4. Dispute settlement system based on Article XXIII of GATT 1994.
5. The refusal as well as the conditioning of the original text of Article XXXV of the GATT 1947, which is now regulated in Article XIII The Marrakesh Agreement on Establishing the World Trade Organization (WTO Agreement).
6. Trade Policy Review Mechanism that exist within the framework of the WTO Agreement.

There is also some release clause obligations set out in Article XI of the WTO Agreement, Agreement on Safeguards, and Technical Barriers to Trade Agreement (TBT Agreement), which can be used to say that there are rules of international trade are used for the purposes of enforcement of rights human. In addition, the OECD Annual Report 1996 also said that within the WTO Agreement there is a lot of regulations on the protection of human rights, which had been preceded by the International Trade Organization, an organization beginning in international trade which then fail to continue, through ITO Charter in 1948, especially in Article 7 of the Fair Labour Standard. This provision is called by the OECD as a "social clause" which has the objective to protect human rights.

Every provision contained in these agreements, basically have an element of "less favourable treatment" element, which has a correspondence idea of a need for a state to be treated fairly. The element provides a condition where every state has the same right in every area of cooperation, resulting a principle of non-discrimination as a basic provision in it.

Principle of Non Discrimination

The principle of non-discrimination has a longstanding history in international trade relations and it has turned into a central pillar of postmodern international economic law. Following this principle, the contracting parties shall not treat domestic market participants more favourably than foreign market participants (*National treatment*) or differentiate between foreign market participants from different origin (*Most Favoured Nation Treatment*). The basic underlying principle of the *National Treatment* obligation provides that a state must accord to imported goods and services the same treatment as to its domestic goods and services. Under the WTO, *National Treatment* was contained in Article III of the GATT, and applies, *inter alia*, to imported and locally produced goods, to foreign and domestic services as well as to foreign and local intellectual property rights, such as trademarks, copyrights and patents. *National Treatment* is the form of non-discrimination with the deepest impact on national regulatory autonomy, requiring sovereign states to adopt regulations in a way so as not to treat its citizens more favourably than foreigners. Whereas *National Treatment* is concerned with the relation between the regulatory country and a specific trading partner, the *Most Favoured Nation* treatment provides that a state shall not discriminate between its different trading partners, which has been regulated in Article I of the GATT. In other words, favourable trading conditions with regard to goods, services or the protection of intellectual property rights granted to one trading partner must be accorded at the same time to all other Members of the WTO.

Non-discrimination obligations are found in almost all sub-fields of international economic law, notably trade in goods and services, investment protection or the protection of intellectual property rights. They apply to all types of governmental trade obstacles, such as border measures (e.g. tariffs and quantitative restrictions) and internal regulations (e.g. taxes and product standards). In addition, it is well established that non-discrimination not only prohibits measures which differentiate directly – or *de jure* – on the basis of origin, but also indirect – or *de facto* – discriminatory measures. The obligation of non-discrimination constitutes a core principle in many different fields of domestic and international law, such as constitutional law, domestic trade law, human rights, public international law and international economic law. The significance of non-discrimination within the WTO framework is highlighted by the fact that it is embodied in the Preamble to the "Marrakesh Agreement Establishing the World Trade Organization", which names the "elimination of discriminatory treatment in international trade relations" as one of the principal means to achieve the objectives related to trade liberalization.²² This principle constitutes one of the main instruments of international economic law designed to

²² The Marrakesh Agreement on Establishing the World Trade Organization, paragraph 4, which as follows : "Being desirous of contributing to these objectives by entering into reciprocal and mutually advantageous arrangements directed to the substantial reduction of tariffs and other barriers to trade and to the elimination of discriminatory treatment in international trade relations." See https://www.wto.org/english/docs_e/legal_e/04-wto_e.htm.

secure trade liberalization and guarantee trade commitments. It prevents discriminatory protection of the domestic industry or of specific trading partners, thereby averting inefficient allocation of resources and market distortions. Thus, non-discrimination constitutes the core principle of international trade law and is embodied in virtually all trade agreements within and outside the WTO framework.²³

The principle of non-discrimination consists of two main elements which both are comparative in nature. First, the comparator clause calls for a comparison between the *market participants* subject to differential treatment. The second element requires a comparison between the *treatments* accorded to the market participants at issue in order to assess whether one is treated less favourably than the other.²⁴ Each element may be subject to different interpretations and standards, which considerably affects the reach of the non-discrimination obligation. The spectrum varies from a very lenient form of non-discrimination which only outlaws the most apparent and blatant discriminatory measures, to a very restrictive form which considerably restricts the contracting parties' regulatory autonomy to pursue domestic policy objectives.

The principle of non-discrimination is not limited to international economic law, but applies in many different areas, such as constitutional law as well as fundamental rights and human rights. In the case of fundamental and human rights, for instance, typical bases for differential treatment frowned upon are gender, race, age, language, religion, political or other opinion, national or social origin, association with a national minority, mental or physical condition, and so forth. Unlike discrimination in other legal disciplines, such as fundamental and human rights, discrimination in trade law is only concerned with "less favourable treatment" based on the difference in *origin* of the products or the services in question. In other words, origin is the only prohibited basis for differential treatment. So, the connectivity between human rights and international economic law is surely at the level of whether the principle of non discrimination is being implemented by a country to project their interest in the international community or not. In order to justify this, we need to assess whether human rights parallels with international economic law or not.

Principle of Non Discrimination In ASEAN

Respect for human rights can also be found in some of the agreements made within the framework of a regional organization but basically for economic cooperation between its members. One concrete example is the ASEAN, which is an organization of geo-politics and the economy of the countries in South East Asia. The organization aims to promote economic growth, social progress and cultural development of its member countries, to promote peace and stability at the regional level, as well as increasing the opportunity to discuss the differences between its members with peace. The regulation of human rights in ASEAN is contained in Chapter I Article 1 (1) ASEAN Charter, reads :

"To maintain and enhance peace, security and stability and further strengthen peace-oriented values in the region"

In the case of states maintain peace and human rights apply in a state of peace, Chapter IV, Article 14, paragraph 1 and 2 of ASEAN Charter reads :

"In conformity with the purposes and principles of the ASEAN Charter relating to the promotion and protection of human rights and fundamental freedoms, ASEAN shall establish an ASEAN human rights body."

"This ASEAN human rights body shall operate in accordance with the terms of reference to be determined by the ASEAN Foreign Ministers Meeting."

As discussed earlier, the concerned factor of Principle of Non Discrimination related to human rights was the "less favourable treatment" element, which elaborated in the National Treatment and Most Favoured Nation clause. The elaboration of these two clause had been applied by ASEAN in a so called ASEAN Comprehensive Investment Agreement. National Treatment clause is arranged in Article 5, which reads :

"1. Each Member State shall accord to investors of any other Member State treatment no less favourable than that it accords, in like circumstances, to its own investors with respect to the

²³ Nicolas Diebold, *"Non-Discrimination In International Trade in Services, 'Likeness; In WTO/GATS"*, New York : Cambridge University Press, 2010, p. 17.

²⁴ Nicolas Diebold, *Non-Discrimination And The Pillars of International Economic Law-Comparative Analysis and Building Coherency, SIEL Online Proceedings Working Paper No. 2010/24*, 2010, p. 2., available at <http://www.ssrn.com/link/SIEL-2010-Barcelona-Conference.html>

admission, establishment, acquisition, expansion, management, conduct, operation and sale or other disposition of investments in its territory.

2. Each Member State shall accord to investments of investors of any other Member State treatment no less favourable than that it accords, in like circumstances, to investments in its territory of its own investors with respect to the admission, establishment, acquisition, expansion, management, conduct, operation and sale or other disposition of investments.”

and Most Favoured Nation clauses is arranged in Article 6, which reads :

“1. Each Member State shall accord to investors of another Member State treatment no less favourable than that it accords, in like circumstances, to investors of any other Member State or a non-Member State with respect to the admission, establishment, acquisition, expansion, management, conduct, operation and sale or other disposition of investments.

2. Each Member State shall accord to investments of investors of another Member State treatment no less favourable than that it accords, in like circumstances, to investments in its territory of investors of any other Member State or a non-Member State with respect to the admission, establishment, acquisition, expansion, management, conduct, operation and sale or other disposition of investments.

3. Paragraphs 1 and 2 shall not be construed so as to oblige a Member State to extend to investors or investments of other Member States the benefit of any treatment, preference or privilege resulting from:

(a) any sub-regional arrangements between and among Member States; or

(b) any existing agreement notified by Member States to the AIA Council.”

The existence of a comprehensive list of reservations regarding National Treatment in ASEAN regional agreements represents a step forward in terms of opening up markets in the region to investment. Yet, the limitation to particular industries and the content of the reservations lists suggests that liberalisation across the economies is a fairly difficult task. In relation to this, ASEAN has a long time economic scheme that has already passed its deadline in December 2015 which called ASEAN Economic Community. The difficult task mentioned above, is implied in the development of this scheme, which implemented in its vision. The implementation of the vision of the ASEAN Economic Community (AEC) Blueprint is monitored by way of the AEC Scorecard. The 2012 Scorecard indicates a score of 65.9% on the creation of single market and production base. Particularly in relation to liberalisation of investment, the scorecard notes that Philippines, Malaysia and Cambodia achieve a very high liberalisation rate; Brunei, Laos, Myanmar, Singapore and Thailand achieve a high liberalisation rate while Indonesia and Vietnam have achieved a moderate liberalisation rate.²⁵ The difficulties are vary, ranging from the shifting balance of the economy of a state, challenges to the sovereignty of a state by using the principle of non interference, possibilities of environmental exploitation, and so much more. These difficulties are often described in form of restrictions on foreign entry to a state.

Restrictions on foreign entry can take various forms. The most common are limitations to foreign ownership, specifying a maximum level of equity that can be owned by foreigners. Limitation on ownership can also target some asset classes, such as land. Another form of limitation is the use of screening conditions such as licensing or various notification requirements. Finally, restrictions on operations or performance requirements can also be applied, such as specifying the use of local inputs or the employment of nationals. All these restrictions are present to some extent in ASEAN countries.²⁶ Under ASEAN Comprehensive Investment Agreement, some of these measures, such as performance requirements, are now explicitly prohibited. This is a good start, but monitoring will be necessary to ensure that regulations that amount to performance requirements are indeed not used. Other regulations that do not apply the national treatment principle, such as access to land rights, are not yet covered in the agreement. Additionally, because restrictions can take many forms or sometimes domestic regulations may have the unintended effect of restricting foreigners but not nationals, it is important to generate as much transparency as possible to all the measures that may affect foreign investment. The ASEAN

Investment Guidebook 2009 is an example of an effort to improve transparency on the regulatory environment surrounding investment.²⁷

Historically, ASEAN countries have had business practices that are not human rights-friendly, violating national regulations dealing with the use and treatment of land and labor. These have resulted in violations of labour rights, seizure of indigenous peoples' lands, environmental destruction, killings and arbitrary detentions. Indeed, the 2014 Human Rights Risk Atlas notes that in many low-cost labour markets (such as Southeast Asia), worker's rights are often compromised, and rural or indigenous communities are subject to land grabs and forced displacement. Without robust regulations in place, and especially with repressive government clamp down on human rights, companies are left to self-regulate. Without specifically putting rights language in place, the ASEAN Economic Community Blueprint essentially is leaving low-income labourers to fend for themselves. While the AEC Blueprint is promising equitable development through the Principle of Non Discrimination, experts argues that this regional integration, following old models of neoliberal thinking, is likely to worsen inequality in the region and may create new problems for the poor and marginalized. A single market will lead to unbalanced competition: those who have access to information, sufficient capacity and more resources will enjoy the greater benefit. On the other hand, those who are poor and marginalized will be seen as problems to be neglected or defeated. But the deadline of this scheme has passed, and the integration is inevitable. The growing world of international trade has now effect regionally, because of the need of supply and lots of demand. This is something that cannot be avoided.

CONCLUSION

Human rights derived from liberal thinking about individual. Human rights, even considered as an individual right that protects dignity as human beings, have a weak point, especially when liberalism defined incorrectly. As a major development of international law, human rights then becomes a collective action by the states and non-state actors. International organizations are now have a role in defining, projecting, and implementing human rights. In international economic law, human rights applied by lifting the principle of non-discrimination which emphasize common interests, due to human rights is considered as collective action. In the end, the principle of non-discrimination experienced redefinition because human rights are also a major agenda in the development of international economic law which the most prominent issue is collective interest. Some actors in the South East Asia region does not fully accept the redefinition of the principle of non-discrimination because of the use of principle of non-interference, and its trend in favoring the developed countries. Some countries contested the foreign entry to their state, but it is something that cannot be avoided due to their membership on ASEAN Comprehensive Investment Agreement which acknowledge the Principle of Non Discrimination. This matter brings us to the most clear understanding, that Principle of Non Discrimination has to be considered as a parallelism of human rights and international economic law.

“Cabotage” as the Final Stages of Open Sky Policy: Indonesia Challenges and Implementation in Asean Community Framework

Dadang Ilham K. Mujiono, S.Sos.,M.A.

ABSTRACT

ASEAN Open Sky Policy (AOSP) is a decision to open the air territory among ASEAN Countries in commercial purposes. This decision is consequence of air travel liberalization that signed by ASEAN countries in Bali Concord II that declared on ASEAN Summit 2003 and the declaration of WTO/GATS according to UU Number 7 1994.

AOSP has 13 stages that has to implemented with final aim is Single Aviation Market. Therefore OSP has many of challenges to ASEAN countries especially in Indonesia as a the biggest population in southeast asia. With implementation of OSP specifically in Cabotage stage (stage 8), it will make possibility that all national flight carrier are able to conduct domestic flight among ASEAN countries. Moreover if the decision fully implemented it will make sure that Southeast Asia will become a borderless region especially in air travel dimension. However in order to implement full stages, the advance preparation is mandatory in every sector (regulator, air travel and business). Therefore if Indonesia can manage the preparation in advance certainly Indonesia as a nation will become a success country in implementation of OSP in ASEAN and not become a country who just being a place as a market.

Furthermore in order to analyze these issue, researcher implement theory of protectionism and compliance where protectionism will focus on how Indonesia manage the market in Indonesia itself, does Indonesia will fully implement the final stage of AOSP or does Indonesia will open their domestic market to ? Moreover theory of compliance will deeply concern how Indonesia obey the regulation and all the decision of AOSP in order to complete the full stages.

The methodology of this study is descriptive analysis which will present and explain about how Indonesian air transport preparation and government in order to complete the implementation of full stages of AOSP. Another important think is the technique of this study, is field research where researcher went to Transportation ministry of Republic of Indonesia in getting the data through in-depth interview.

Finally, according the data and research found that Indonesia still consider to implement full stages of AOSP especially in cabotage stages. Moreover, as active member of ASEAN In regarding of this issue, Indonesia still on preparing all the aspect especially Indonesia air transport sector to support Indonesia participation in OSP so that after all the advance preparation, Indonesia can fully participate without any reason and consideration.

Key Words: ASEAN, Open Sky Policy, Air Transport.

INTRODUCTION

The essence of a border is to separate the “self” from “other”. As such, one of the major functions of a border is to act as barrier, “protecting” the “us insider” from the “them outsiders” (Oommen, 1995; Sibley, 1995). The concept about border became a main issue among country who experience conflict from long time ago, where there are a lot of third party tried to intervene these countries. Border area also became strategic decision among government where their country have a position bordered with a nation state from 3 dimensions, which are sea, land and air.

According Cambridge Dictionary, the definition of borderless in commerce and politics aspects are used to describe a situation which the border between countries is not important, usually in relation to the movement of goods, people ect. We are creating an increasingly borderless global economy. Free – flowing, borderless markets have made borrowing and capital raising easier. Politicians have been quick to capitalize on the opportunities of a borderless world.

Along 2 explanations above, we can see that, borderless and border have different point of view, where border basically protect insider from outsider. The theory of protectionism is very suitable in terms of border study, where much of country in this world are very strict in order to keep their national interest, especially their domestic market from expansion of develop country. Furthermore in borderless concept emphasis that border is

not important in some purposes, specifically in movement of goods and people in order to strengthen economic growth. However, borderless have a flaw, where if country decide to open widely their gate for people coming (include investment and expansion market) certainly it will make the sovereignty of country will decrease, because host country brought a big number of interest into the country that will invested.

In the other hand, if country decide to protect all their asset inside of these country, they hardly to receive investment from developed country. In this case for example, when Indonesia has just being independent country and Soekarno was lead Indonesia, this country strictly against western countries, even Indonesia made its own block. Famous called non-block alliance.

However since 2nd president of Indonesia was Soeharto, he face with difficult situation where Indonesia economic fail to deepest in history, and forced Indonesia to take initiative receiving a loan from International Monetary Fund (IMF) (IMFSURVEY 1998). Along the decision for receiving it, Indonesia must obey all the regulation that IMF had. Such as liberalization market, the ownership of national corporation stock, and make Indonesia market accessible to international investment.

After several years, Indonesia finally rose from deepest to good condition, even it took a long time, however economic expert realize that if country wants a great of economy, first think first they have to socialize with international people, in this case Indonesia has to open their market and have a thousand friend and zero enemy. This is the foreign policy decision under Indonesia 6th President Prof. Dr. H. Susilo Bambang Yudhoyono. In addition this is has to remember to all people, that even we decide to open the domestic market, people of the country also has to receive the consequences of labor movement too. Where in the recent time like today, movement not only happen by goods, but also people are movement. If people in country do not prepare for a good human resources and control our market, certainly it will make market of in country will controlled by outsider. That is why Border strongly define that border are "Protect" insider from outsider.

In recent time, we already knew that region become one of trend organization that much country are tried to become one of member in every region organization. Moreover, a region organization divided based on their geography location. We know that the most successful regional organization in this world is European Union. Where EU consist of 28 countries (EU 2016) along the European geography. Even EU in 21 century also experiencing turbulence, and even worst, British has decided to leave or exit the EU (Denis Macshane. 2016. P 16). In Latin America, we know with Latin America Free Trade (LAFTA), and in Southeast Asia famous called with Association of Southeast Asia Nation (ASEAN), and many more.

These region organization has a specific purposes or focus dimension. Like the writer said before, for EU become successful regional organization. The single currency also become a currency of EU, however in some countries still used their own. So that we can see that EU has many of aspect become of their important aspect of this regional organization, not only focus on economic cooperation, but also social, politics and culture (Ludlow. 1991) Where LAFTA focus on trade cooperation among Latin America countries. Then ASEAN focus on 3 aspects, where these 3 aspect famous known by 3 Pillars of ASEAN. Asean Economic Community, Asean Social Cultural Community and Asean Political Security Community.

In this paper will address focus on Asean Community. As organization, Asean consist of 10 countries and decide to create 3 pillars as their foundation to become a strongest regional organization in the world. Asean has a target that these 3 pillars have to implement in the end of 2015. Where all aspect in country expected easily to move among Asean member state. Form 3 pillar of Asean community, Asean Economic Community become the main important of this implementation. Professor Mohtar Masoed, expertise of international relations of Universitas Gadjah Mada, even giving his press when he was being a speaker on national seminar in Mulawarman University in november 2016, he said that : ***"Asean Community actually only focus on economic. Moreover Asean economic community will not exist if Indonesia is not become a member of Asean. Because of what? Because Indonesia is a huge market in Asean. That is why Asean Community formerly arranged will implemented in 2020, however some of countries in Asean looks like or attempt to make the Asean Community occur before 2020, then decide in the end of 2015"***

Asean Economic Community (AEC) (AEC Blueprint. 2007) has 11 priority sectors, one of them is air travel or called as Asean Open Sky Policy (AOSP) (Peter Forsyth. 2004). The ultimate aim of AOSP is liberalization in air travel sector among Asean member state (Asean OSP. 2010). This decision according the commitment of all head of government of Asean member state in Asean Summit 2003 and the ratification of international treaty WTO/GTAS in 1994 (WTO. 2010).

The stages of liberalization AOSP according the head of states of Asean member state in Asean head of states meeting in 1997 which declare Asean Vision 2020. 1998 Hanoi Plan of Action Program, 2003 Bali Concord II and in 2004 Vientiane Action Program, and in Bali Concord II resulted 3 pillars of Asean. In air travel sector itself, Indonesia and the rest of Asean member state has made a roadmap integration for air travel sectors. Air travel for passenger and cargo (hard right). Roadmap for liberalization of air transport ancillary services (soft right) toward Asean Single Aviation market in 2015 (WTO. 2010).

METHOD

A. Protectionism

The benefits of international trade to an economy (Neil Harris 2010), and to the business involved in it, depend on their country which decide to be specialization and complete freedom to international trade. In this case, the concept of protectionism will not exist in these country who adopt this implementation. Practically protectionism used in many of developing countries. This may to be avoid a heavy imbalance between their exports and their imports which would cause a large balance of payments deficit which would be hard for their financial condition. Certainly, if government is receiving loans from IMF or World Bank, a condition of receiving the funds will probably be that any balance of payments deficit is reduced (Neil Harris 2010).

Linked to this the fact such countries will normally operate very tight exchange controls. This means that possessions of foreign currencies is controlled by central bank and no foreign currencies may acquire or held without their permit. This is a very effective means of protectionism and also holds the value of the currency at an artificial level (normally higher) which is not related to its true value if the currency could be freely bought and sold in the forex market.

Another reason for protectionism policies is to boost domestic production and hence employment which, otherwise, could be adversely affected by an influx or cheaper or more attractive foreign product goods. This is particularly important for countries with very large population, such as India, China, where high unemployment can cause several social and political unrest. Small business are major creators of wealth yet can be wiped out by more efficient and larger foreign business which export to that country. However, the downside is that exports to the countries facing the protectionism policies may be restricted in retaliation losing across the whole economy, protectionism may actually reduce job opportunities (Neil Harris 2010).

Country which adopt this policy also has an ultimate aim that they use to control the trade between countries, especially in implementation of tariff into import goods, limitation of quota and some of regulations from government in restricted outsider goods come into domestic market (Neil Harris 2010).

This policy has an anti-globalization orientation and free trade where government strictly restricted and giving extra limitation domestic product exported and foreign goods come into domestic market. Moreover all domestic production tend to use by national needed (Krugman Paul 1987. P. 131 - 144).

B. Compliance

Compliance begin with commitment approach, where it become the most character of international issues. Uncertainly as the commitment of international effect and the cause of compliance become the same entities that together mortal. One of background history in international politics concern about the compliance caused by cold war that gave the predicate and the empiric policy that emphasis to more concern about the role of international law. Where international law become one of the basic rule and foundation in order to compliance to international treaty that has signed by the country or member state in regional organization or global scope.

The factors that explain the choices to create and adopt the international law, when the law is the tool of method to lead the interaction and how is it works? Does the implementation of international law made the differences point of view of state and international relations actor act? Therefore, these questions become the interesting part of international relations scholars and the decision makers more and more. The main problem is the impact of law and legalize that implemented to country, mostly recognized as compliance. The law and compliance related as concept because the implementation of law is to create the compliance with the rule that follow it. The rule of law decide the standard for measure the compliance.

The explanation about why and when the country will obey the international law will help explain the change to the law as the positive phenomena, however it will also serve the source of information to the decision makers to create new regulations. Which is this will lead to better perception followed with understanding the core problem of issues that the new regime or compliance will create if the previous regime is not survive or many of country did not adopt the regulation.

Compliance also define as the conformity of identity between actor behavioral and the rule that decide (Fisher, 1981:20; Mitchell, 1994:30). Some of the analyses make a differentiation of "compliance". In the meaning of "suitability" the instrumental reason such as avoiding the law, from "**obedience**" from define as the act or behavioral that lead from international norm (Koh, 1997; Kratchwil, 1989). For this purposes, however, scholars were unable to define and recognize the compliance according to motivation. Compliance as the concept in our definition is not taking care the "causalities". But mostly our main definition that compliance is the theory that influence of decision makers before they decide to implement in country. The political scholars usually did not make a different view of the law rule and no law or norm, or just realize that these different as the cause of "cause and effect" In the other hand, mostly scholars recognize that compliance is the commitment, that in law perception this decision is very flexible, which is the country who have signed the decision of this is also able to adopt or not the regulation. However in order to measure the compliance, usually if a country has

implement the regulation that has agreed and signed together in some of international meeting, it will lead to compliance.

DISCUSSION

As the biggest country in Asean, Indonesia, certainly has a huge of market that all country in Asean looking at Indonesia as a market target. Remembering Indonesia people tend to very consumptive. That mean, this very prospective to increase the economic growth of Asean member state. Especially in free trade. As mention before, that Asean member state, not all of them are ready for implementing the community. Because Asean is different with EU, where most of member state is developed country. However, in Asean, some of them are still developing country. Such as a Cambodia, Lao PDR, Myanmar. Moreover, some of them also emerging market such as Indonesia, Vietnam, Thailand, Philippines, and the rest of member state are developed country, such as Singapore, Malaysia and Brunei Darussalam. Relating this issues, it is lead Asean face in stabilized situation especially in order to implement the Asean community (Krugman Paul 1987. P. 131 - 144).

Related with AOSP, Indonesia actually facing a lot of problem in air travel condition among Indonesia airplanes. As we know, after experiencing the economic crisis and before 1999, Indonesia only have 2 national airplanes or flight carrier, was Garuda Indonesia Airways and Merpati Nusantara. So that all air travel transportation monopolized by both airlines. After that, the government of Indonesia realize that, in order to make prosperity and equal, Indonesia should open the market widely especially in air transport industry in order to and give an opportunity to private sector (Cetak Biru Transportasi Udara. 2005). Therefore, as result domestic airlines of Indonesia rose up dramatically, and it followed by total of domestic and international passengers. Since 1999 to 2000 number of passengers almost touch only 13,5 million, then in 2014 it grow up into approximately 90 million (Lalu Lintas. 2017).

The aviation industry in the Asia Pacific region has been growing rapidly in recent years. According to the International Air Transport Association (IATA), the Asia Pacific region has become the largest aviation market in 2009 with 647 million passengers, or 27% of all users of transportation services in the world. Meanwhile low growth rates in the Asia Pacific aviation sector is expected will continue to increase in the next 20 years with growth rates average 7.1 percent compounded annually from 2009 until 2029 (Prospektus . 2009)

Another potential for air travel is by air cargo transport sector. This sector is closely related to the flow of goods, both between regions within Indonesia or involve trading across borders. Transportation of cargo by air have been selected for their excellence in terms of speed of delivery at the same time the security during the trip.

Hereby will show the data of Indonesia passangers in air transportation sector.

Table 01
Passenger Improvement Target of 2017

| Air Travel Passenger | Total (people) | Percentage |
|----------------------|----------------|------------|
| International | 19,9 Million | 4,8% |
| Domestic | 95,9 Million | 6,1% |

Figure 04
The Statistic of International Flight Movement 2011 to 2017
 Source: *Ibid*

This statistic previous shows that Indonesia totally have a biggest potential in air travel transportation, because of the market. That is why, some of country in Asean such as Singapore and Malaysia though that Indonesia as the biggest market in Asean, even in around 2015 until 2016 there were significant drop total of passengers due the global economic condition. Related with the market, Singapore, becoming the country which very ambitions to expand their flight to Indonesia, remembering Singapore do not have domestic route. All Singapore airlines fleet are travel in international routes, because as we know Singapore only have small space of their country.

In the other, Indonesia also facing problem of air transport itself. For example some of Indonesia airlines decide to stop their bussiness because of financial problem. Such as Batavia Air, Merpati Nusantara Airlines and Mandala Airlines. For long time ago, these airlines became a star among Indonesia airlines, even Batavia Airlines expand their route until Jeddah, which is international route. However because of lack skill in

management, they are unable to manage the financial department. This turbulence situation support with rapidly the Indonesia airlines that many of them fail in the middle of competition. One of rising star airlines is implemented Low Cost Carrier (LCC) method.

LCC famous with terms of “no-frills, discount or budget” which mean an airlines in general adopt the concept of cheap price in once travel then will add some extra charge to passenger if they wish to choose several option that offer from an airline. Such as meal, selected seat, wheel chair, baggage, priority boarding and others. While in full service airline, this situation will not occur to passenger.

With LCC concept, sometimes passengers offered by an airline once travel from Balikpapan (Indonesia) to Kuala Lumpur (Malaysia) only with Rp 300.000. (USD 30) It is beyond of logic think. Remembering this is international flight, but sometimes, an airline can give very cheap price. Generally speaking, it is not a problem if airline offer very cheap price for once travel. However the most important think if airline only dealing with profit oriented and avoid the safety aspect, so that would be a huge deal of problem

Some of LCC airlines in Indonesia which always profit oriented was Adam Air. This airlines has grounded by government of Indonesia, in this case charge by Ministry of Transportation because of many of worst accident. Beside Adam Air, Lion air right now become the biggest private airlines in Indonesia which adopt LCC. Lion Air purchased very spectacular number of aircraft with total 18,4 billion euro (Lion Air Catat. 2012) also still experiencing the problem of safety regulation. The last cases of Lion Air that broadcast in national and international news, when Lion Air unable touch the runway in Ngurah Rai airport (Denpasar – Bali Indonesia) and landing in beach bank outside of runway location of Ngurah Rai airport, luckily, there was no dead victim (Lion Air Jatuh. 2013). Another embarrassing experience when some of passenger forced open the emergency window because of overheated and less of oxygen, when the aircraft still standby in apron while all the passenger are onboard (AC Tak Dingin. 2013). Hereby some of air travel problem data which caused by airlines.

1. “Pendodosan” (Turiman Sofyan. 2017. P. 12) or passengers’ luggage stolen inside the airplane, it happen in Lion Air by November 16th 2016 and January 4th 2017, and both of criminal act conducted by some irresponsible staff of lion Air in Soekarno – Hatta airport. This case involve some of irresponsible staff especially in ground handling staff.
2. Fake flight approval by Airfast Indonesia (Turiman Sofyan. 2017. P. 14) (one of Freeport subcompany) with 7 fake flight approval. This case become the most danger case in Indonesia air travel. The government of Indonesia, said that: *“if there is crash in one of these 7 flight of air fast Indonesia, this airline or even passenger’s will unable to claim the assurance. Because this is basically fraud by an airline by making the fake flight approval”*
3. The common problem that usually exist in Indonesia airlines is delay. The government of Indonesia has recorded from its final report annual and stated that there are 4 most Indonesia Airlines which always experience delay problem. First is Lion Air, (Bonny Dwifriansyah. 2017. P. 22) second All Star Aviation, third NAM Air and fourth Travel Express. However Delay problem actually not fully because of airlines, sometime it caused by natural disaster or also regulator or airport authority. For natural disaster for example, if there was volcano explosion, it will ruined all the airlines travel schedule. Moreover if runway was under reparation, it also caused of delay, and some of operational problem and such as switching the airlines crew. Nevertheless according the data shown that from all delay problem, mostly caused by airlines.
4. Some of accident happen in Indonesia air travel (Kecelakaan. 2017. P. 38) such as Over run in Juanda Airport by Lion Air (February 20th 2016), fall in Baya Biru Papua by AMU Aviation Indonesia Helicopter Bell206 and caused 4 dead (June 4th 2016), slip landing in Halim Perdana Kusuma Airport by Nusantara Air Charter Learjet type LJ31 (Sept, 25th 2016), hit the towing tractor in Halim Perdana Kusuma runway by Wingsair (One of Lion Air company) (Oct 21st) and still may of accident in Indonesia.

Here are some of investigated data shows about air travel accident in Indonesia since 2013 – 2016

Table 02
Air Travel Accident in Indonesia since 2013 - 2016

| Year | Investigate | Kind of accident | | Victim | | Recommendation |
|------|-------------|------------------|------------------|--------|---------|----------------|
| | | Accident | Serious Incident | Death | Injured | |
| 2013 | 34 | 9 | 25 | 2 | 8 | 81 |
| 2014 | 30 | 7 | 23 | 169 | 6 | 44 |
| 2015 | 28 | 11 | 17 | 65 | 10 | 57 |

| | | | | | | |
|------|----|----|----|---|----|----|
| 2016 | 41 | 15 | 26 | 5 | 57 | 12 |
|------|----|----|----|---|----|----|

Source : Data Investigasi Kecelakaan Penerbangan Tahun 2010 – 2016 Indonesia Aviation & Tourism Magazine. Tahun III Edisi 23 Januari 2017. Page 39.

5. Related immigration, (Turiman Sofyan. 2017. P. 24) in 2016, Lion air and Air Asia even have worst problem in Soekarno Hatta (Jakarta) and I Gusti Ngurah Rai Airport (Denpasar Bali). Where Lion Air has just landed from Singapore and carried international passengers. Unfortunately, the ground handling transported all them to domestic terminal, and living off the airport without immigration procedure. It was happen also with Air Asia in Ngurah Rai Airport. This case is totally will bring a huge damage for Indonesia territory. Because we do not know if one or some of passengers have a specific mission in Indonesua, such as terrorist, drugs selling and others. That is why the Immigration is become the most important gate before international tourist enter to a country. Sadly for what happen in Lion Air and Air Asia have lead Indonesia to unstable condition because of these problem.

According to the problem above, Indonesia face with some of consequence, one of them is Indonesia failure become member of Civil Aviation Organization for third category board 2016 – 2019 period. One of reason caused it because Indonesia does not receive enough vote from the member of ICAO. Indonesia only receive 96 voters. *“However many of source said that this failure caused of “feel of trust” of Indonesia in aviation industry that still lack of commitment into zero accident implementation. Even according to many news said that Indonesia has very strict regulation in aviation industry. Even the strictest regulation in the world. Because the more accident occur in Indonesia, the more national board of transportation committee improve the regulation. Chappy Hakim Said in Aviamagz”*

Furthermore, relating with these situation, Indonesia actually face with very dilemma situation. Where Indonesia experience with many of trouble in air transport sector, and in the other hand, Indonesia also have to implement the AOSP. One of solution that create by the government of Indonesia is implementing the “Zero Accident” campaign.

One of important reason Indonesia has to manage the condition of Indonesia Airplanes, because the we already know that there are a lot of famous airlines among Asean member state that will taking a great part in AOSP. Let say Singapore Airlines, (5 star airlines), Thai Airways (4star airlines), Philippines Airlines (3 Star airlines), Royal Brunei (3 Star Airlines). All of them become the main actor when AOSP is fully implemented. In Indonesia we know that there are a lot of domestic airlines, however if domestic airlines of Indonesia still experience with safety problem, certainly they will lose competition with international airline. Therefore, this is become the most crucial problem because if AOSP is fully impelemted, there will no broder among Asean member states, all the national flight career will able fly among domestic route in every state in Asean.

The decision of Indonesia in implementation AOSP

Hereby will explain about the stages of AOSP.

Figure 05

Freedom of the Air 1st Stage

International airline given the right to traverse a nation state (over flying rights)

Figure 06

2nd Stages International airlines were given the right to landing not for commercial purposes, but for Technical Landing or refueling

Figure 07

3rd stages International airline airlines were given the right to reduce passenger / goods in the country of origin of the partner country air.

Figure 08

Freedom stages 4th International airlines were given the right to raise passenger / goods from partner countries to the country of origin of the plane.

Figure 09

Freedom stages 5th International airlines were given the right to raise passenger / goods from partner countries and relegated to a third country and vice versa.

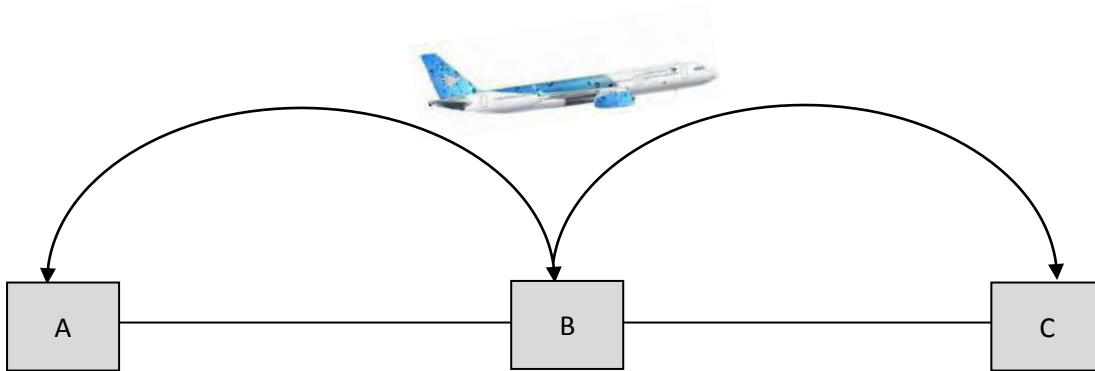

Figure 10

Freedom stage 6th International airlines were given the right to raise passenger / goods from partner countries of origin and transit in the country of the aircraft to be scaled back in a third country, and vice versa.

Figure 11

Freedom stages 7th Stand Alone Fifth Freedom

International airlines were given the right to raise passenger / goods from partner countries to be increased again third countries without returning to the country of origin of the plane.

Figure 12
Freedom stages 8th Cabotage
International airlines were given the right to conduct commercial air transport domestic partner countries and return to the country of origin of the plane.

According to these figures, the most important for implementing AOSP is the last stages, called “cabotage” stages. This last stage will make AOSP fully implemented in every domestic and international route among Asean member state. Indonesia as the biggest population in Asean certainly will face a lot of challenges if Indonesia implemented this final stage. Because as a nation, Indonesia has to consider the domestic airlines such as Lion Air, Citilink, Sriwijaya Air and others. As the biggest airline in Indonesia, Lion Air for example hires a lot of people of Indonesia, despite Lion Air sometimes tends to be always experiencing with a problem. One of the famous problems with Lion Air is delay on its schedule and safety problem.

Moreover, Indonesia as the biggest country in Asean, decided to not open all international airports in Indonesia in terms of implementing AOSP. According to the Transportation Minister, Indonesia has 27 international airports (International Airports. 2017). However, for AOSP, Indonesia has a strict policy that Indonesia will open 5 international airports for implementing AOSP. These 5 airports are:

Table 03
List of International Airports for AOSP Implementation

| No | Name of Airport | Location |
|----|--|-----------------|
| 1 | Soekarno – Hatta International Airport | Tangerang |
| 2 | Juanda International Airport | Surabaya |
| 3 | Kualanamu International Airport | Medan |
| 4 | I Gusti Ngurah Rai International Airport | Denpasar |
| 5 | Sultan Hasanuddin International Airport | Maros, Makassar |

Source : Berita Negara Republik Indonesia No. 1046, 2013. Kementerian Perhubungan. Kebandarudaraan. Nasional. Tatanan. Page 15

The decision to open 5 airports above (Berita Negara. 2013. P. 15) according to article 37, Point A, Minister of Transportation Regulations. Another important reason for this decision is because of the decision related to the location of airports in Minister of Transportation Regulation number 11 year of 2010 about National Order (Peraturan Menteri. 2010) of Airport stated that still valid. Moreover, behind the policy are first, international flight concentrated in these 5 airports, and almost all international flight through these airports. Secondly, these airports represent 3 parts of Indonesia territory. East, Center and West. Thirdly, the infrastructure facility belongs to these airports are well advanced and ready for serving international flights

service, in ground, air and inside of airport. Lastly, these airports located nearby the center of development area of Indonesia (Lima Bandara. 2015). Related with decision to chose 5 airports for AOSP, become the proof that Indonesia do not want to loose the market share that own by many of international airports in Indonesia, and the most important think that Indonesia protect their domestic market from international airlines among Asean member states.

Furthermore, Indonesia considering to implement full stages of AOSP. For Garuda Indonesia, for example, researcher believe that, the implementation of AOSP will not really disturb Garuda Indonesia market, because based on explanation above that Garuda already awarded 5star airlines, and receiving a lot of load factor every flight. Almost 75% (PT Garuda Indonesia 2016) every once flight. Which mean GA already have regular customer. The other most important reason that that has to consider by Indonesia government, is the rise of middle class people in Indonesia. According the data from ministry of finance of Republic of Indonesia, from total of Indonesia's population about 255 million there are nearly 56% of total population considered to be a middle class (Heru Widiatmanti. 2015). Moreover, this middle class people tend to spend much money to seconder needed. One of that necessity is the feed of safety travel and good services.

In accordance with the quote of former CEO of Garuda Indonesia Emirsyah Sattar as saying *"If you are running in service business, then the company should not be a profit-oriented, but should be service oriented. Because if we provide excellent service then the customer will come and continue to pay even have to spend quite deep. Because the core of service business is excellent service"*

Therefore if international airlines that researcher mention before, certainly they will prefer chose international airline for domestic route, because safety and time management reason. If Lion Air and any other LCC airlines still unable in order to manage the time management and quality of services, this domestic airlines certainly will fail compete with international airline who served and offer first class services with on time performance management and good quality of services. This is the problem that Indonesia face now.

Because of this condition that have been mentioned previously in 2015 is expected to $\frac{3}{4}$ aviation services provider mainly based on LCC should as soon as possible to improve services. So that the Indonesian people are not moved away from the domestic to the foreign products. It should be remembered and common concern, the Indonesian people also tend to prefer use foreign brand products rather than domestic products.

The next potential is closely related to the behavior of the domestic community abroad (Ritha F. 2009. P. 17). A study shows that the domestic flights to overseas communities dominated by low frequency business. Motivation abroad for business motives seem to be increased in line with globalization and the introduction of the free market. While the motivation to do the next flight out of the country is tourism, particularly shopping. In addition to free fiscal policy in Asean countries, the motivation could not be separated from the public behavior of the upper middle class that is more about psychological factors such as prestige. From the above description, both the motivation of shopping and business travel can be long-term spending so that it can be categorized as a comparative advantage Indonesian aviation industry from the consumer side.

From the above descpriton, therefore Indonesia also consider several of decision in order to implemented the AOSP. Some of the consideration according of the roadmap of Indonesia air relation. First of all, the decision of air foreign relationship based on the bilateral relation. The aspect that consider in making the bilateral treaty is National interest, the amount of air travel availability, the potential of partner countries, link and domestic air route. The principle of air bilateral relations also consist of Reciprocal basis and Equal opportunity.

After that, related with AOSP stages, there are 8 stages with final stages called as "Cabotage" According the roadmap of Indonesia air travel industry, Indonesia will only focus until 5th freedom of the air for passenger air travel and cargo, until the fifth principle that the exchange of freedom right will consider based on traffic cost of one route. Moreover, the chosen of kind of the air travel capacity according the frequency, seat capacity, and coefficient formula based on the economic cost consideration. Co-terminalization allowed on a limited basis throughout Indonesia also receiving the same right as the same value of traffic.

One think that interest from this roadmap, seems like there are two of different opinion of implementation of AOSP. In bilateral aspect, Indonesia respect all the country partner and will only adopt the AOSP until 5th stages of air freedom. However in Asean road map, Asean focus on "cabotage" stages in order to face Asean Single Aviation Market 2015. Indonesia as mention before has a huge number of population, in term of adopt the full liberalization of AOSP based on the road map will ratify the air travel treaty in Asean step by step (Keputusan Direktur. 2012).

Despite the decision to adopt protectionism, Indonesia as active member of Asean also preparing some of decision and strategy action in order to make Indonesia to be successs country in implementation of AOSP. Here are some strategy policy to make Indonesia air travel much better. In here, this is the evidence that Indonesia still obey the regulation and prepare all the aspect of air travel aspect as compliance describe.

1. The statistic of air travel moving almost touch 2000 in a day, increasing of Federal Aviation Administration (FAA) Indonesia from category II to I. This increasing of category reflected with the allowing of Indonesia airlines fly to United States. According the data found that Garuda Indonesia as the flight career of

Indonesia will fly to Los Angeles via Tokyo (Benny S. Butarbutar, 2016), and right now the progress still waiting from Tokyo authority in order to giving permission to use Tokyo Narita International airport as the transit place for Garuda Indonesia.

2. Indonesia already adopt 95% of regulation issued by ICAO related with air travel safety. As a country which focus on renewable energy and aware of energy problem, Indonesia in 2016, already become as a member of Environmental Protection Aviation committee and participate active in negotiation and campaign in emission gas c⁰² reduction.
3. Indonesia flight carrier Garuda Indonesia has awarded 5 star airline 16 December 2014 from skytrax and followed by prestigious award by skytrax too.²⁸ This achievement is very important, because there are only 9 airlines in the world awarded 5 star airlines (Certified, 2017), which are, All Nipon Airways (Japan), Asiana Airlines (South Korea), Cathay Pacific (Hongkong), Etihad Airways (UEA), Eva Air (Hongkong), Hainan Airlines (China), Qatar Airways (Qatar) and Singapore Airlines (Singapore).

Despite the improvement description and achievement that Indonesia receive, hereby will show significant improvement of Indonesia air transport sector done by Indonesia government.

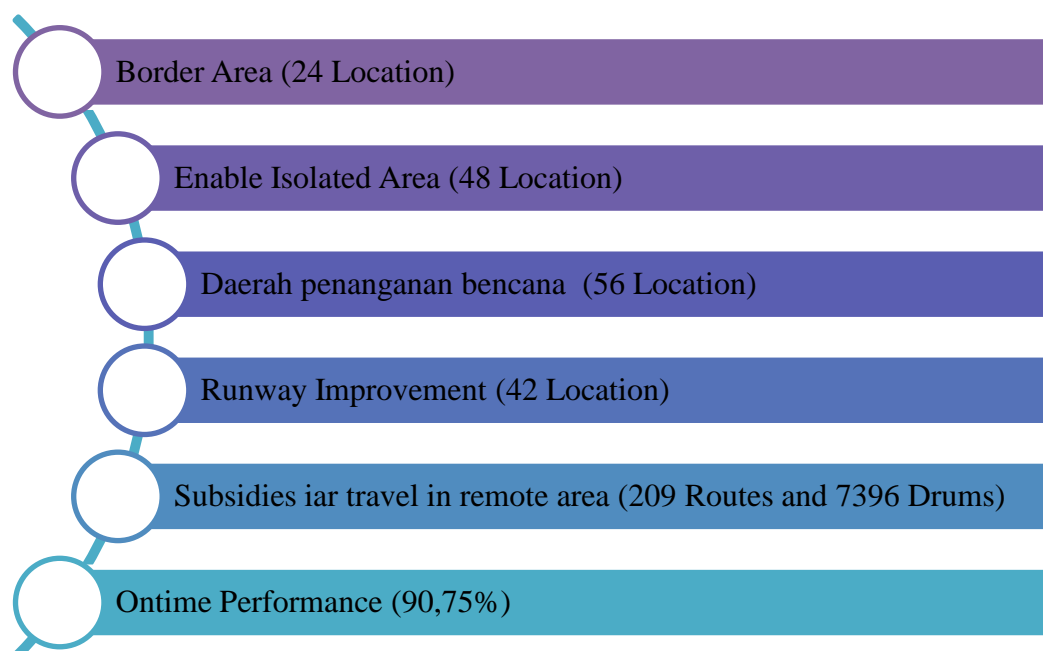

Figure 13
Improvement of developing airport

²⁸ Skytrax is a United Kingdom-based consultancy (originally known as Inflight Research Services), which runs an airline and airport review and ranking site. It conducts research for commercial airlines. It carries out international-traveller surveys to find the best cabin staff, airport, airline, airline lounge, in-flight entertainment, on-board catering, and several other elements of air travel. Apart from these surveys, Skytrax has an airline forum where passengers give other potential passengers the feel of an airline before choosing to fly with them. The website also has flight reviews, flight checks, and satisfaction surveys. Skytrax holds an annual World Airline Awards and World Airport Awards, as well as the ranking for airlines and airports.

CONCLUSION

According the explanation above, Indonesia as the biggest country in Asean will implement the AOSP. The stages that will implemented by Indonesia limited until the 5th freedom based on the roadmap of Indonesia air transport, where many of approaching have to be consider to implement the “cabotage” stage. The condition of geography and number of market in Indonesia become the main reason Indonesia will not adopt the final stage of Open Sky Policy which is “cabotage”. Moreover, Indonesia also very careful regarding making the decision of open sky policy. Therefore, Indonesia mostly always making the decision in liberalization sector based on bilateral agreement and relations. Furthermore Indonesia as a country will keep their national market from international competitor which is in this case is Asean member state airplane. As result, Indonesia will only grant access to 5 international airports in Indonesia for AOSP.

As a country which active in Asean, Indonesia is always support the implementation of AOSP. This support prove by signing the ratification of Asean Economic Community and the implementation of air sector liberalization, even it is not fully implementation. In the other hand as a country which own biggest number of population in Asean, Indonesia is aware that Indonesia has the biggest market in Asean. If Indonesia is unable to protect their national market, so that Indonesia market will controlled by international competitor. Another important reason Indonesia keep or protect their national market because the life style of Indonesia people mostly tend to use international brand rather than national brand, where if this bad habit still occur in Indonesia, it will lead to unstable condition. Lastly, Indonesia airlines exclude Garuda Indonesia still on progress to be a good airplane where it has to be rated and examine all the aspect of airplane, such as safety, inflight entertainment, cabin crew, aircraft, airport and others by international consultant of airlines called Skytrax.

Furthermore if Indonesia airlines has rated and recognize by the international consultant, so that, the government of Indonesia is confident to implement the whole stage of Open sky policy no matter Indonesia has to compete with 5star airline or as the biggest market in regional and global.

RECOMMENDATION

As country, Indonesia supposed to ready for implementing the full stage of AOSP, no matter the geography condition and the number of market potential. Many of previous experience associated with

liberalization, Indonesia is always tend to postpone all the liberalization in regional or global scope that has signed and agreed between two countries in bilateral mechanism or multilateral mechanism. As result, Indonesia will see as a country which lack of consistency by international society.

Therefore, the most important sector that need to upgrade is human resources of Indonesia especially in air travel sector in this case. Moreover, the consistency from government of Indonesia in create the policy that emphasis the good regulation, act and budget toward zero accident and service quality approaching.

For some problem such as delay, accident and incident, Indonesia has to decrease the number of these problem in order to receive as the representation member board of ICAO and many international organization which related with air transport sector. Therefore it will lead a positive impact for Indonesia air travel sector.

Furthermore, if all component in Indonesia can work together and consistent in order to create the good environment for every sector that lead Indonesia to be great nation, to be sure, Indonesia will be a country which will survive with all the liberalization and international challenges.

Digital Generation in the Indonesia Palm Oil Industry

Nopriadi Saputra

Digital Generation in the Indonesia Palm Oil Industry

Nopriadi Saputra

Bina Nusantara Univeristy, nopriadisaputra@yahoo.com

ABSTRACT

The development of technology has consequences for emerging and growing the digital generation in Indonesian palm oil industry. The characteristics of digital generation are not always in line with the nature of Indonesia palm-oil industry. Low interest to work and low employee engagement are the challenges for palm oil company to involve digital generation.

This paper is based on qualitative research involving 73 sub-unit manager and unit manager at PT SMART Tbk. The approach used is a written survey and focus group discussion with semi-structure patterns. The goal of this research are to get answers of this following questions: (1) what are the characteristics of the digital generation who work for the palm oil plantation company? (2) what are the distinctive jobs characteristics of the palm-oil industry compared to the other industries? (3) how are the best way to treat digital generation in the palm oil company to keep them interested and comfortable to work in palm-oil company?

From this study, it was concluded that the digital generation in Indonesia palm oil are: more needed internet access, more creative and innovative, tend not to appreciate the structure, individualistic and lack of social skills, and prefer to do indoor activities. While job characteristics of the palm oil industry are located in remote areas, routine and strictly standardized procedure, lots of physical outdoor activities, hierarchical structure and culture, merging of residence and work place, natural environment is relatively challenging, social conflicts often occur, and dealing with limited education community. The difference between the characteristics of the digital generation and work in palm oil industry require special consideration should be given to the digital generation to keep them interested and comfortable. There are four recommended treatment such as : ecological intelligence, equal and interactive communication, social skills development and improvement of the Internet access.

Key Word : *digital generation, millennial, palm oil industry*

INTRODUCTION

Human civilization has passed five era that starts from the hunter or gatherer era in which humans fulfil their needs from hunting or get it from natural forests. Then the civilization evolved into the agricultural era, industrial era and the information era. Finally today we are entering wisdom era where the economic sources

rely on the ability to acquire, manage and utilize information that gives human insight and wisdom for fulfilling their needs (Covey, 2004).

More specifically Pink(2005) argues that every century has a different civilization which is driven by the different ability of human resources. For example, the 18th century is agricultural era which driven by the landlords and farmers. The 19th century is industrial era which driven by industrialists and factory workers. The 20th century is information era which driven knowledge workers and now 21st century is conceptual era which driven by people who has different characteristics from people in the past. The 21st century is driven by the creators, empathizers, pattern recognizers, and meaning makers. People who work as artists, inventors, designers, storytellers, caregivers, consolers, big picture thinkers will play more impact in the conceptual era.

Schwab (2016) from World Economic Forum also explained that the world have experienced several industrial revolution which is affected by the discovery and mass utilization of certain technologies. Today the world has entered the fourth industrial revolution. Where the first industrial revolution occurred in 1784 which is marked by the discovery and utilization of the steam engine. The second industrial revolution occurred in 1870 which is marked by the discovery and utilization of electrical energy for industry, thus enabling the realization of mass production in the industry. The third industrial revolution occurred in 1969 which is marked by the discovery and utilization of electronic devices. It enables the implementation of the automation of production systems. And the fourth industrial revolution, which is marked by the invention and utilizing the internet or cyberspace in the industry that allows industrial activity can take place without the limitations of time and geography.

Lindgren, (2012) concluded simply that modern civilization of mankind today has gone through three eras, namely raw material era - before the year 1000 to 1700. The economy of raw material era is local, inter-regional trade, and economic colonization. Then evolved into the production era from 1300 until the 2100's. The growth of economy was based on production, information society and the scientific community. Finally today we are at thought era which started from 1800 onwards where economic form is thought-cell, thought-network, as well as the creation of a world that is fused or linked to each other (singularity).

Widespread use of technology not only have triggered changes in the economy and civilization, but also change the behaviour of how people interact, play, learn and work generationally. (Tapscott, 2009) explains that there are three generations work for the company. Those generation have a fundamentally different behaviour which is caused by differences technology used by each generation. Those generations are Baby Boom, Baby Bust and Echo Baby. Baby Boom generation or commonly also known as Baby Boomers was born after World War II ended. The behaviour of this generation are generally influenced by television. Television was in the living room and used by family for in-house entertainment. Baby Bust generation or also known as Generation X or Gen X were born during the world political situation was in a cold war. The behaviour of this generation was generally affected by computer. Personal computer is used for learning and working. And most recently the generation is Baby Echo which also known as Millennials or the Net Generation or Gen Y. This generation was born in a situation where US dominance is so strong and growing spirit of democracy throughout the world. Behaviour of this generation is influenced by the internet. Internet is widely used for many activity such as play, learn, socialize, work and do business.

On the other side, BAPPENAS (2016) reported that in the midst of the global economy is likely to decelerate, Indonesia actually managed to sustain economic growth. There is a growth in GDP of 5.1 per cent for 2016. GDP is the total value of all goods and services produced in a country within a year. GDP is derived from spending on household consumption, investment by businesses, government spending, and exports - imports involving other countries. Special trade with foreign countries, Indonesia's exports come from oil-gas and non oil-gas exports. Referring to Kemendag RI (2017) note that Indonesia's total exports in 2011 amounted to US \$ 203 billion, of which 80% came from non-oil (US \$ 162 billion). However, in 2015, exports decreased to US \$ 150 billion in which 83% (US \$ 146 billion) came from non-oil export. The rate of decline in total exports amounted to 6.59% annually, while the reduction in oil and gas exports by 16.6% annually. So that the contribution of non-oil exports become more significant for Indonesia exports. One mainstay of Indonesia's non-oil exports are palm oil or CPO. Palm oil is an important commodity for Indonesia. Based on RCA

competitiveness index, Indonesia palm oil or CPO is the second rank of top ten Indonesia products, which has the highest index since 2000 (Kemendag RI, 2013). Sipayung, (2016) used Table 1 to explain the contribution of CPO export toward non oil& gas export in the period 2008-2014. CPO export trends increasing while other non oil & gas export tends to increasingly deficit. So if no palm oil exports, then Indonesia's trade balance deficit. From this point of view, we can understand why the Indonesian palm oil industry is very important for the Indonesia economy.

Widjaya, Bangun, & Sinaga, (2013) stated several challenges of Indonesian palm oil industry in the future, namely: (1) negative stigma toward the progress of the palm oil industry in Indonesia. (2) low productivity of plantation crops. Average yield reached only 2.5 to 6 tonnes / ha / year, still far from the ideal potential 15-20 tonnes / ha / year, (3) derivative products is not developed seriously Indonesia, (4) increasing operational cost while CPO price are tends to decline, (5) insufficient availability of human resources who expert in modern agricultural practices.

Availability of human resource as one of the challenges faced by the Indonesian palm oil industry is in line with research conducted by Manuwoto, Gunawan, & Firdaus (2010). The declining interest of students for studying in the agricultural faculty. Digital generation is more interesting to study IT, business, and communication study. So that's why in 2005-2006 there are 40 agricultural faculty was closed (Saputra, 2011) This phenomena causes Indonesia palm oil industry experienced shortage or scarcity of agriculture graduate.

Table 1 Netto Export Palm Oil and Non-oil and gas exports

| Year | CPO Export | Non Oil & Gas without CPO Export | Non Oil & Gas Export |
|------|------------|----------------------------------|----------------------|
| 2008 | 13.8 | 1.3 | 15.1 |
| 2009 | 12.3 | 13.3 | 25.6 |
| 2010 | 16.3 | 11.1 | 27.4 |
| 2011 | 21.6 | 13.8 | 35.4 |
| 2012 | 21.3 | -7.7 | 13.6 |
| 2013 | 19.2 | -3.6 | 15.6 |
| 2014 | 21.1 | -9.9 | 11.2 |

Values in US\$ Billion

This paper takes perspective from PT. SMART Tbk. The company was established since 1962, and has become a public company. PT SMART Tbk produce industrial and consumer products. PT SMART Tbk is Indonesia's largest and fully integrated palm oil company. The company's main activity starting from land preparation and seedling, planting and up-keeping, harvesting and transporting, processing TBS into crude palm oil (CPO) and palm kernel oil (PKO), and refining CPO into industrial and consumer products. The plantation of PT SMART Tbk has spread widely in Sumatra, Kalimantan, Sulawesi and Papua. Products are widely known are Filma, Kunci Mas, and Palm Boom.

As the challenges faced by the Indonesian palm oil industry in general, PT SMART Tbk in its business also many problems associated with natural, social, and managerial. One of managerial problem is the scarcity of human resources particularly for Asisten Divisi position. In organizational structure of palm oil plantation, Asisten Divisi is a supervisor position that is responsible for operational activity about 500 hectare area. Asisten Divisi lead and manage mandor kebun (foremen), kerani kebun (administrative clerk), and buruh harian (labourer). Asisten Divisi has an educational background in agriculture graduate and have a good mastery on SAP and budgeting system. Asisten Divisi has direct report to Asisten Kepala (sub-unit manager) dan Manajer Kebun (unit manager). Manajer Kebun direct report to Regional Controller (regional manager). Regularly Asisten Divisi starts his activity from 6.00 am. The first thing to do is Lingkaran Pagi or morning briefing.

THEORITICAL BACKGROUND

This paper is based on Generational Theory, pioneered by sociologist Karl Mannheim through an essay entitled *The Problem of Generations* (1952). Other terms of the generation is the cohort, a concept discussed by many s anthropology, sociology and social psychology researcher (Becton, Walker, & Jones-Farmer, 2014). Generation is a cluster or group of people who were born and raised with the social and historical conditions are identical to the period of time (Yogamalar & Samuel, 2016), which further build the same culture as well (Campbell, Campbell, Siedor, & Twenge, 2015). Generation is a psychological variable absorption which means as a culture on one's upbringing in a certain period. Where each generation built by a different experience during a critical developmental period (Twenge & Campbell, 2008).

The study found many generational differences in terms of personality, attitude, mental health and behavior. Each generation was influenced by the great force that creates value system that distinguishes them from those who were born at different periods. That power gives the greatest influence on childhood to adulthood of these people.(Twenge, Campbell, Hoffman, & Lance, 2010).

In determining the limits of the period and the name of each generation, the scientists do not have the same agreement. Strauss and Howe (1997) defines a generation of Baby Boomers (born in 1943-1960); Gen X (born in 1961-1981), as well as Gen Y or Millennials (born in 1982-2004). Twenge et al. (2010) defines the following four generations: Silent Generation (born pada1925-1945), Baby Boomers (born in 1946- 964), Gen X (born in 1965-1981), Gen Me or Gen Y, Millennials, nGen, or iGen (born pada1982-1999). Becton et al. (2014) defines the generation following the Baby Boomers (born in 1945-1964), Generation X (born in 1965-1979), and Millennials (born in 1980 onwards). This paper define digital generation as Millenials or Gen Y or Net Generation or iGen or Gen Me or nGen ie people who were born in 1980 -2000.

According Yogamalar & Samuel (2016) digital generation has some characteristic or behavior patterns as follows: (1) fight for equality in the workplace, (2) quick learner, (3) tend to be impatient to wait, (4) need for autonomy and work -life balance, (5) tend to break the rules, (6) very confident, (7) expressive, (8) like cooperation or a good collaborator, (9) expect to recognition and personal attention. According to Ng & Johnson (2015), the digital generation have the following characteristics: (1) moare appreciate to higher education, (2) likes to question everything, (3) more egalitarian and more tolerance to minority groups, (4) higher self-esteem, (5) more satisfied with the current conditions, (6) easy to worry or neuroticism, (7) more confident about their own thoughts, (8) more positive outlook on themselves, (9) expect to extrinsic reward, and (10) have a strong desire to solve the world's problems or help others.

According Becton et al. (2014) has the following characteristics: (1) technology savvy, (2) most diverse race and ethnicity, (3) lack of trust to the organization, (4) seeking meaningful job, and (5) appreciate the difference and (6) expect more leisure time. According to Twenge et al. (2010) digital generation that: (1) individualistic and self-focused, (2) prefer informality, (3) technology-savvy, (4) quick learner, (5) requires supervision, and (6) more appreciate to diversity. Tapscott (2009) found out that there are eight typical behaviour of the digital generation, namely: (1) freedom, (2) customization, (3) scrutiny; (4) integrity, (5) collaboration, (6) entertainment, (7) speed and (8) innovation.

Based on the described characteristics from those scholars, this paper defines 22 characteristics of the digital generation, namely: (1) quick learner, (2) technology savvy, (3) impatient, (4) tend to questioning many things, (5) high self esteem or confidence, (6) tend to share personal things in public domain (narcism), (7) expect recognition and personal attention, (8)more appreciate to higher education, (9) easy upset or worry, (10) more demanding extrinsic reward, (11) searching meaning of work through helping others, (12) tend not to respect the structure, (13) more welcome to diversity or minority group, (14) individualistic and lack of social skill, (15) prefer informality, (16) likes to do scrutiny, (17) need more supervision, (18) prefer to customization,

(19) respect to integrity, (20) love to work collaboratively, (21) spending much time with games, and (22) creative and innovative

RESEARCH METHOD

This study aims to answer three main questions: (1) what are the characteristics of the digital generation who work for the palm oil plantation company? (2) what are the distinctive jobs characteristics of the palm-oil industry compared to the other industries? (3) how are the best way to treat digital generation in the palm oil company to keep them interested and comfortable to work in palm-oil company?

Survey and focus group discussions are used to answer those questions. Respondent of this research are 73 people. They are sub-unit and unit managers who have responsibility to manage palm oil plantation in Sumatra and Kalimantan. For gathering answer of first question, the researchers asked the participants individually to choose five from 22 characteristics or behaviour pattern. Focus group discussion is used to gather answer of the second and third questions. Focus group discussions took place in two meetings session in Jakarta at July 8, 2016 and July 10, 2016. Participants were divided into four major groups. Each group was asked to answer the second and third question.

RESULT & DISCUSSION

Profile of Respondents - The respondents consist of 68% sub-unit manager and 32% unit managers. The tenure of respondents are 7% less than 6 years, 51% from 6 to 10 years, and 42% more than 10 years. Respondents who work for PT SMART as the first company are 48%, and the longest tenure of their career are 37%. Respondents who had worked in other industries beside palm-oil industry are only 16%. Most of respondents (84%) have worked only in the palm oil industry. Half of respondents (51%) accessed internet every day. Half of respondents (58%) are digital generation when born in 1980 – 2000.

Characteristics of Digital Generation in Palm Oil Business - By using survey, the author gathered 12 characteristics that are frequently displayed by digital generation. Those are like shown in Table 2 such as (1) more needs internet access, (2) creative and full of innovation, (3) tend not to appreciate the structure, (4) individualistic and lack of social skills, (5) prefer indoor activity, (6) prefer informality, (7) spend much time with games, (8) easy to upset or worry, (9) tend to share personal things in public domain, (10) high self-esteem and confident, (11) more demanding extrinsic rewards, and (12) quick learner. If it is limited to only the characteristics chosen by more than 50% of respondents, we obtained five characteristics of digital generation such as: (1) more needs internet access, (2) creative and innovative (3) tend not to respect the structure, (4) individualistic and lack of skill, and (5) prefer indoor activity.

Table 2 Characteristics of Digital Generation in Palm Oil Industry

| No | Characteristics or Behavioral Pattern | Skor | Persen |
|----|--|------|--------|
| 24 | More needs internet access | 52 | 71% |
| 22 | Creative and innovation | 49 | 67% |
| 12 | Tend not to respect the sturcture | 46 | 63% |
| 14 | Individualistic and lack of social skills | 41 | 56% |
| 23 | Prefer to indoor-activity | 39 | 53% |
| 15 | Prefer to informality | 26 | 36% |
| 21 | Spending much time with games | 26 | 36% |
| 9 | Easy upset or worried | 25 | 34% |
| 6 | Tend to share personal things in public domain (Narcism) | 22 | 30% |
| 5 | High self esteem or confidence | 17 | 23% |
| 10 | More demanding extrinsic award | 12 | 16% |
| 1 | Quick Leaner | 10 | 14% |
| 13 | More welcome to diversity or minority group | 0 | 0% |
| 2 | Technology savvy | 0 | 0% |
| 4 | Tend to questioning many things | 0 | 0% |
| 3 | Impatient | 0 | 0% |
| 7 | Expect recognition and personal attention | 0 | 0% |
| 8 | More appreciative to higher education | 0 | 0% |
| 11 | Searching meaning of work through helping others | 0 | 0% |
| 16 | Likes to do scrutiny | 0 | 0% |
| 17 | Need more supervisory | 0 | 0% |
| 18 | Prefer to customization | 0 | 0% |
| 19 | Respect to integrity | 0 | 0% |
| 20 | Love to work collboratively | 0 | 0% |

Job Characteristics in Palm Oil Company - Based on the results of two focus group sessions were conducted in July 2016, the author obtained 15 characteristics of work in palm oil company, as shown in Table 3. From the 15 characteristics, only 8 characteristics are generic of the industry. The other 7 characteristics are related to PT SMART Tbk. Then 8 characteristics were sorted based on how essential are: (1) located in rural or remote areas, (2) routine with strict procedures work, (3) many physical outdoor activities, (4) Hierarchical structure and culture I (5) merging of residence and work location, (6) natural environment is relatively challenging, (7) social conflicts often occur, and (8) dealing with a limited education society

By combining Table 2 and Table 3, Table 4 describes effect of digital generation characteristics toward work characteristics in the palm oil plantation. Table 4 illustrated that the digital generation is more needs internet access, while location of plantation is the far away from the city and is not covered yet with internet access. This condition make the digital generation not interested in living and working in the plantation for a long. creative and innovative characteristics of Digital generation may be counterproductive to the characteristics of routines and hierarchical working climate.. But the challenging natural conditions in the plantations may be a trigger for the digital generation in utilizing their spirit of creativity and innovation to conquer the natural challenges.

The characteristics of digital generation that tend not to appreciate the structure will cause the generation of digital uncomfortable when it gets the pushing boss or team. Digital generation is more expecting the equality in terms of work communication and interaction. From the employer's perspective, digital generation is often judged as person who do not appreciate the boss, do not obey, even disrespectful. The merging of home and work place leads to a hierarchical culture in the workplace are also carried over into life in the residence. Where the employer family should be honored and privileged treatment compared to families where subordinates as obtained in the workplace. These conditions make the digital generation is not interested and does not like to work on plantations

Table 3 - Characteristics of Jobs in Oil Palm Plantation

| Job Characteristics | Company | Industry |
|---|---------|----------|
| Involved in many administrative activities | x | |
| Many physical outdoor activities | | 3 |
| Located in rural or remote areas | | 1 |
| Interacting with limited education community | | 8 |
| Lengthy administrative bureaucracy | x | |
| Clear and fair career opportunity | x | |
| Social conflicts often occur | | 7 |
| The natural environment is relatively challenging | | 6 |
| Merging of work and residence location | | 5 |
| Healthy competition, no vertical rivalry occur | x | |
| Standardized work procedures and clear | x | |
| Routines with strict work procedures | | 2 |
| Audit system is multilayered | x | |
| Hierarchical organizational structure and culture | | 4 |
| There are regular training opportunities | x | |

Table 4 - Characteristics of Generation Digital Impact on Jobs in Oil Palm Plantation

| Karakteristik Generasi Digital | Job Characteristics | | | | | | | |
|--|---------------------|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
| More needs internet access | | | | | | | | |
| Creative and innovation | | | | | | | | |
| Tend not to respect the structure | | | | | | | | |
| Individualistic and lack of social skill | | | | | | | | |
| Prefer indoor activities | | | | | | | | |

| Keterangan Karakteristik Pekerjaan : | |
|---|---|
| 1 = Located in rural or remote areas | 5 = Merging of work and residence location |
| 2 = Routines with strict work procedures | 6 = Natural environment is relatively challenging |
| 3 = Many physical outdoor activities | 7 = Social conflicts often occur |
| 4 = Hierarchical organizational structure and culture | 8 = Interacting with limited education community |

Individualistic and lack of social skills make digital generation find it difficult to deal with social conflict or when they have to interact with the foremen, labors and local communities who have low education. Patience and the ability to communicate effectively are a necessary development for digital generation. And the last is characteristic of those who prefer indoor activities will lead the digital generation tend to avoid supervision activities or walking around the plantation which they are responsible for..

Recommendations for the Treatment of Generation Digital - Based on the results of focus group discussion of two sessions conducted in July 2016, the author obtained a recommendation on how to treat digital generation in palm oil plantation companies as follows: (1) *Ecological Intelligence* – Beside considering the intellectual and sufficient knowledge of the technical plantation, then in recruiting Asisten Divisi should also consider the natural intelligence or ecological intelligence. When Asisten Divisi have high score in ecology intelligence, they may enjoy natural challenges as media for creativity and innovation, (2) *Equal and Interactive Communication* - develop a communication style that is dialogical, interactive and create an atmosphere of equality in relationships between superiors and subordinates, (3) *Room for Innovation* – provides opportunity for them to think creatively and develop innovation in their work. Digital generation can be involved in finding alternative solutions to operational problems, develop innovations related to field supervision which can be done from indoors (3) *Social Skill Development* - to help the digital generation to develop their social skills, especially when dealing with people who have the educational background lower., And (4) Internet Access

Improvement - gradually build, develop and complete the infrastructure and internet access that can be used for innovation activities and supervision of plantation operations.

CONCLUSION

The presence of the digital generation in oil palm plantations industrial are a particular challenge. There are five characteristics that most frequently appear in the digital generation of Indonesian palm oil business, namely: more needs to access internet, creative and innovative, tend not to appreciate the structure, individualistic and lack of social skills, and prefer indoor activities. Job characteristics of the palm oil industry are as follows: located in remote areas, routine with strict work procedures, many physical outdoor activity , hierarchical structure & culture, merging of residence and work place, the natural environment is relatively challenging , social conflicts often occur, and dealing with people with limited education. The difference between the characteristics of the digital generation and work in palm oil plantations require special consideration should be given to the digital generation to keep them interested and comfortable to work in oil palm plantations. There are four recommended treatment is ecological intelligence, equal and interactive communication, social skills development and improvement of the Internet access.

This research is a case study in one private plantation company a. In a written survey respondents did not give an opportunity to see the comparison between the digital generation and non-digital generation. Half of respondents (58%) is the digital generation, there is the possibility of bias in identifying characteristics the digital generation. And this paper is just a descriptive study using the simple statistical method with limited number of respondents.

This research can be developed with larger number of respondents. Not only in the plantation company, but with other industries. Research can use the comparison between the digital and non-digital. Generation. Research is also conducted in two perspectives, the perspectives of the digital generation itself and perspectives of non-digital generation. And research methods can also be used more quantitative and causal so that we can see how strong the influence of the of the digital generation characteristics, job characteristics and organizational performance.

Dynamic Cross-Cultural Competencies for Future Global Leader: A Systematic Literature Review

Nelly

Nelly, Bina Nusantara University, nelly@binus.edu

ABSTRACT

The increasing openness of the free market in some regions of the country, which means to increase employee diversity and development of technology and social technology makes a world without borders is a challenge for any organization to grow in the global market and maintain sustainability. It is also triggered by the global economic factors that make the level of competition is becoming increasingly complex and dynamic, so that it becomes a challenge for the company to immediately prepare and enhance the competence for global leaders in order to bring the company to compete and succeed in the global environment. For the one that is needed is a global leader equipped to prepare in order to have a cross-cultural competence because the culture has an impact on employee engagement and employee engagement impact on performance of the organization. Thus to improve the performance of the organization, the readiness of human capital, especially the leader of the organization is critical factor in the competitive global level. This research is expected to provide information about the cross-cultural competencies whatever is needed by the global leaders. So that the company can provide training for global leader to improve intrapersonal relationship with cross-cultural competencies in order to maintain the sustainability of the company on the level of global competitiveness

Key Words: *Dynamic cross-cultural, cross-cultural competencies, cross-cultural, global leader, systematic literature review*

1. INTRODUCTION

The impact of globalization occur in various sectors in addition to the economic sector, where the economic activity of a country can interact with each other because the market is integrated throughout the world, without the limitations and obstacles. Globalization encourages companies to change immediately and menyesuaikan global demands include changes in all functional activities they have, among others, marketing, finance, production, procurement, human resources management, etc., in order to survive, grow, develop and competitive in the market. Globalization makes economic relations between countries is getting stronger. It also affects the relationship between individuals and groups interact among countries. Improvement and development of technology and social technology to support the interaction between individuals, groups between countries becomes easier, more uptodate information and fast, so it is also easier for the mobilization of resources. Each state has a business culture that is different, this will affect the style and attitude of leadership in accordance with the implicit leadership theory about the characteristics of effective leadership, where people have implicit belief, and assumptions about the attributes and behaviors that help individuals distinguish the effectiveness of the leader, the moral of bad leaders as well as leaders and followers (Hanges, Braverman, & Rentsch, 1991). Base on this implicit leadership theory, leadership is in the eye of the beholder (Dorfman, Brodbeck, & Hanges, 2004). Global leaders need to develop five cross-cultural competencies (Adler & Bartholomew, 1992).

The concept of competence has evolved into a flexible framework for the selection, assessment and development of human talent in organizations throughout the world (Boyatzis, R E; Goleman, D; Rhee, K;, 2000) (Boyatzis, 2008) (Boyatzis, 2009) (Boyatzis & Ratti, 2009). Implementation of competency in global organizations continue to strengthen and further research needs to be done to ensure the validity and utility of this construct with diverse cultures and job roles (Emmerling & Boyatzis, 2012).

From the perspective of the above, it was felt necessary to develop the competence of cross-cultural to prepare global leaders, so it is expected from this study can be a guide for further research in helping global companies prepare competence of cross-cultural leaders as one of the strategies to survive in this era of globalization.

The purpose of this study was to review the scientific literature on cross-cultural competence, especially for global leaders :

1. Provide an overview of cross-cultural competence for global leader
2. Analyzing the trend of cross-cultural changes to global leaders
3. Describe the content analysis methodology
4. Review the available empirical research by focusing attention on cross-cultural competence
5. Recommend for further research
6. To identify signifinace of research

2. Method

2.1 Theories

2.1.1 Cross-cultural competence

Having cross-cultural competence means being able to communicate and work with people across cultures. Cross-cultural competence adalah bagaimana kemampuan karyawan untuk dapat berkomunikasi, berinteraksi serta bekerja sama secara efektif dengan people dari latar belakang budaya yang berbeda-beda.

Cross-cultural competence membuat orang saling mengerti memperlancar hubungan antar manusia untuk mencapai tujuan professional. Rasmussen, Sieck et all, mention 12 core aspects of cross-cultural competence were frequently found from experts in the thought process. (Rasmussen, Louise, 2016)

There is the list : Stay focused on your goals, Understand the culture within yourself, Manage your attitudes towards the culture, Direct your learning of the culture, Develop reliable information sources, Learn about the new culture efficiently, cope with culture surprises, Formulate cultural explanations of behaviour, Take a cultural perspective, Plan cross-cultural communication, control how you present yourself and Reflect and seek feedback.

2.1.2 Global Leadership behaviors

Global Leadership and Organizational Behavior Effectiveness (GLOBE) conducts research focused on leadership culture from 61 countries (House R. , Javidan, Hanges, & Dorfman, 2002). By doing research on hundreds of mid-level managers who are working in various industries such as food processing, finance and telecommunications industries so that the conclusion of the paper that global leadership behaviors identified six which could be used to characterize how different cultural groups view leadership: charismatic / value-based, team oriented, participative, humane-oriented, autonomous, and self-protective leadership (House & Javidan, 2004).

2.2 Content analysis

The order of the research process systematic review used in this paper starts from the identification of research questions, develop a protocol empirically set a location database of research results as the search area, the selection results of relevant research, select the results of quality research, extraction of Data from individual studies, analyze the results and present the results. SLR uses the approach proposed by Perry and Hammod,2002. (Perry & Hammond, 2002)

2.2.1 Search process

From the research questions, then do disbursement against supporting literature, where melting sources is done via EBSCO / Host databases. From the database have been used to all the papers in the group 'business premier source' and 'Regional Business News'

By using specific keywords to get the paper associated with adding Boolean operators such as: AND, OR, NOT. Literature search was performed on all paper containing a sentence (dynamic cross-cultural competencies' OR 'dynamic competencies' OR' cross-cultural leadership 'AND' global leader competencies' OR 'global leader'. All paper obtained selected papers focus on scholarly publication, including practitioner, because this topic is still too to establish cross-cultural competence for global technology leader with their intervention and social technology, so it is still necessary leadership sharing insights with practicing managers. Having obtained the paper of the search results in a way as mentioned above, the paper made a summary of all of this as an inclusion criteria. The next step is reading the paper title and sort out if there are topics that are not in accordance with the research question, followed by reading the abstract. Papers that are already downloaded the appropriate title and abstract to the research question.

2.2.2 Data extraction

From the search results above, obtained 213/578 paper of the group Business Source Premier and after the election, there were 42 papers related to the research question where its distribution as follows: there are 6 paper 1999-2000, 2001-2010 and 2011-2016, there were 14 paper there are 24 paper, paper that most found are from studies last 6 years, if deployed per year of her, it was found that the writing is mostly used in the year 2012 is 8 paper, followed by 2014 there are 5 paper and in 2013 there were 4 paper, while in 2015 2 and 2016 found only there was one paper. Of publications routinely obtained that research related to the topic of cross-cultural competencies for global leaders have done but did not show progress and new findings.

| Year | # Paper |
|-------------|--------------------|
| 1990-2000 | 6 |

4 Conclusion

From the search results that are related to research cross-cultural has been started since 1999, but the growth of its research can be said to be experiencing significant growth, as seen from the number of publications were acquired and registered in the database EBSCO. This research is expected to help scholars, researchers and even practitioners who are interested in the topic of cross-cultural competencies for global leader in preparing and proposing competencies need to be built and prepared for a global leader in the globalization era.

ABSTRACT

According to Permenpan 53/2014, performance agreement is a sheet / document containing the assignment of the leadership of a higher institution to institution head lower to implement the program / activity is accompanied by performance indicators. The performance agreement aims to : 1) make a commitment to improve the integrity, accountability, transparency, and performance Apparatus; 2). Creating benchmarks for evaluation of performance of the apparatus; 3). As a basis for the assessment of success or failure of achieving the goals and objectives of the organization as well as the basis of rewards and sanctions. The obligation to make performance agreements addressed to the leadership of government work units. According to Law No. 32 of 2004 as amended into Law 23 of 2014, districts (kecamatan) included as a working unit of local government.

This study aimed to obtain answers regarding the successful implementation of performance agreements to improve the quality of public services in the city of Bandung. This study used a qualitative method. Data were obtained from the data-primary or secondary data that can support and strengthen this study analysis.

The results of this study indicate that the realization of the Camat's performance agreement in Bandung have not quite optimal (related to the realization of the performance agreement in 2014, most of the districts performance assessment index per indicator is under the average score). there are some obstacles encountered in the implementation of districts performance agreement, The problems include delays in budget planning document which led to delays in the preparation of the performance agreement document, human resource capacity in the district are inadequate in performing the duties of administrative and complaints service, districts do not have standard operating procedures in each service activity, limited the material instruments and budget to implement the operational activities, also a problem of discipline and work ethic of the apparatus.

Key Words : Performance agreement, performance evaluation, quality of public service, Community satisfaction index

A. INTRODUCTION

Bureaucratic reform policy requires good governance implementation, as expected by society. As the government's commitment in implementing the good governance, issued a presidential decree to regulate the performance accountability system of government agencies. Government Performance Accountability System (SAKIP) is a systematic series of activities, tools, and procedures designed for the purpose of determination and measurement, data collecting, classifying, summarizing, and reporting on the performance of government agencies, in the framework of accountability and improved performance of government agencies.

Implementation of SAKIP include strategic planning, performance agreements, performance measurement, performance data management, performance reporting, and review and evaluation of performance. Based on Presidential Decree No. 29 of 2014 of each institution is required to prepare performance reports as a form of accountability for performance. Performance report is a manifestation of the obligations of a government agency to accountable for the success or failure of program implementation and achievement of the organization's mission. In compiling performance reports, the government work unit should make an performance agreement based on measurable performance targets that have been set.

Technical guidelines for the regulation of performance agreements stipulated in Permenpan 53/2014, according to these regulations, the performance agreements are sheets / documents containing the assignment of the head of the institution given to the lower leadership of the institution to implement the program / activity that is accompanied by performance indicators. Through performance agreements, expected realization 1) commitment to improve integrity, accountability, transparency, and performance Apparatus; 2). Create performance benchmarks for evaluation of performance of the apparatus; 3). As a basis for the assessment of success / failure to achieve the goals and objectives of the organization and as the basis of rewards and sanctions. District is one of the local government work units that have an obligation to make a performance agreement. The realization of the performance agreement are set forth in the report of the performance of government institutions (LKIP). In Bandung, the performance agreements has been started since 2014. The implementation of the performance agreement makes the performance and quality of service in the district of the city of Bandung to be more easily evaluated and measured.

B. THEORITICAL REVIEW

Definition of organizational performance by Yeremias T. Keban (2004 : 192) by quoting the opinion of Bernardin dan Russel (1993) defines performance as the record of outcomes produced on a specified job function or activity during a specified time period. While the definition of performance proposed by Bastian in Tangkilisan (2005 : 175) an overview of the level achievement of the implementation of tasks within an organization, in realizing the goals, objectives, mission and vision of the organization. While Prawirosentono (1999 : 2) defining performance as a result of work that can be achieved by a person or group of people within an organization, in accordance with the authority and responsibilities of each, in an effort to achieve the goals of the organization legally, in accordance with moral and ethical. Yeremias T. Keban (2004 : 193), also mentions that the performance can give you an idea of how far the organization achievement results when compared with achieving the objectives and targets set.

Keith Davis as quoted by Mangkunegara (2006: 13) There are several factors that may affect the achievement of performance that are the capability and motivation. Ability shows the intelligence of someone who could capture the knowledge and have the skills to be able to complete the job optimally. While the motivation includes someone working attitude towards work situations encountered. Work situations include working relationship, working facilities, working environment, and leadership. The conducive situation of work will encourage high employee motivation, Otherwise, someone who has a negative attitude towards the work situation will show a low work motivation.

Except Davis, Tangkilisan (2005: 180) found the performance of an organization influenced by the following factors: a. The organizational structure as internal relations related to the functions in implementing the organization's activities; b. Management policies, such as vision and mission of the organization; c. Human resources, which is associated with the quality of employees to work optimally; d. Management information system, which is associated with the preparation and use of data base in enhancing organizational performance. e. Facilities and infrastructure associated with the use of technology in any activity of the organization. Then, Yuwono, et.al in Tangkilisan (2005: 180) suggests that the dominant factors affecting the performance of an organization include the management's efforts to translate and align organizational goals, organizational culture, the quality of human resources of the organization and effective leadership.

Any performance of the organization should be given in a measured assessment. According to Larry D. Stout in Tangkilisan (2005: 174) argued that organizational performance measurement is the process of measuring the achievement of the implementation of activities in the mission accomplishment through the results displayed in the form of a product, service or process. Agree with Bastian (2001 : 330) that the performance assessment will encourage the achievement of organizational goals and will provide feedback for continuous improvement efforts. In detail, Bastian suggests the role of organizational performance measurement as follows:

- a. Ensure their understanding of the executive and an assessment of the measurable achievement,
- b. Ensure the achievement of agreed performance scheme,
- c. Monitor and evaluate the performance by comparing the schemes of work and its implementation,
- d. Reward or punishment objectively on accomplishments that have been achieved, according to the applicable measurement system,
- e. Make it as a means of communication between subordinates and leaders in efforts to improve organizational performance,
- f. Identifying whether customer satisfaction are met,
- g. Helping the process of organizational activities,
- h. Ensure that decision-making has been conducted objectively,
- i. Shows the efforts that need to be done to improve performance,
- j. Reveal all the problems occurred

The performance assessment is very important for the sustainability of the organization in achieving its goals. Therefore, it's necessary to have indicators to measure the performance of the organization as appropriate. Through performance assessment, it can be seen whether the plans, targets and goals set by an organization already achieved well.

C. RESEARCH METHOD

This study uses qualitative descriptive method in order to obtain the answers regarding the implementation of Camat's Performance Agreements to improving the quality of public services in city of Bandung. Data were obtained from the primary data and secondary that can support and strengthen research analysis. Data collected by observation, interview, and literature study and analysis of documentation and other secondary data that are relevant to the research topic. The data obtained are then processed through the following steps, that is categorization, selection, reduction, and interpretation. Data processing techniques are expected to maintain the quality and objective analysis. data analysis is on-going from beginning to end of the study

D. RESULT AND ANALYSIS

Districts is a subsystem of the government work unit of Bandung. Under the leadership of the mayor Ridwan Kamil, districts demanded to reorganize better performance in order to meet the public service and community aspirations, so as to realize good governance and accountable. Camat's Performance Agreement between the mayor is a form of government commitment Bandung for better governance, as city of champions (Bandung Juara). For that Bandung must implement good governance, even at the district level.

According to Bandung Regional Regulation No. 14 of 2007 concerning the formation and organizational structure districts in City of Bandung. District has a fundamental duty of government to implement part of the authority of Mayor that have delegated to Camat, to handle the affairs of regional autonomy. To carry out the basic tasks, District had its own function:

- a. coordinating the activities of community empowerment;
- b. coordinate the efforts of the implementation of peace and public order;
- c. coordinate the implementation and enforcement of laws and regulations;
- d. coordinating maintenance of infrastructure and public service facilities;

- e. coordinate governance at district level;
- f. fostering the Sub-district governance;
- g. implement the district administration services.

In carrying out the duties and obligations, districts are faced with development issues as follows:

- demands for improving the quality of public services
- demands for transparency and accountability in governance
- utilization of information technology in governance
- Enhancing of human resource capabilities

To fulfill the demands of the people of Bandung, districts are required to compile a performance agreement, There are two (2) goals in performance agreement, there are improving the public satisfaction on public services and improving the performance accountability. Objectives, targets and performance indicators in the agreement can be seen in the following matrix:

Table 1. Goals, Objectives and Key Indicators In Performance Agreements

| Goals | Target | Main Indicators |
|--|---|---|
| Improving public's satisfaction on public services | Improving public's satisfaction on public services | (1) Public Satisfaction Index (IKM) |
| | | (2) The percentage of complaints / society grievances that actionable |
| | | (3) Values compliance standards of public service ombudsman version |
| | Improving the performance of general tasks of district government | (4) Percentage of timely population administrative services |
| | | (5) Percentage of another administrative services timely |
| | | (6) Percentage of sub-district with good criteria |
| | | (7) Percentage of RW juara (neighborhood champion) |
| | | (8) The percentage of active community organizations |
| | | (9) The ratio of members of the public security guard (Linmas) |
| improving the performance accountability | improving the district performance accountability | (10) Score of district performance accountability |
| | | (11) Percentage of audit board findings that actionable |

There are 11 main indicators that measured in the realization of The Camat's Performance Agreement. Analysis of the indicators performance achievement on the realization of districts performance agreements in improving the quality of public services in the city of Bandung can be seen from tabel 2 and explanations below.

Table 2. The Achievement of Main Indicators of Camat's Performance Agreement

| NNO | Main Indicators | Percentage of Index Score | |
|-----|---|---------------------------|---------------|
| | | Below average | Above average |
| 1 | Public Satisfaction Index (IKM) | 53% | 47% |
| 2 | The percentage of complaints / society grievances that actionable | 100% | |
| 3 | Values compliance standards of public service ombudsman version | 53% | 47% |
| 4 | Percentage of timely population administrative services | 57% | 43% |
| 5 | Percentage of another administrative services timely | 53% | 47% |
| 6 | Percentage of sub-district with good criteria | 53% | 47% |
| 7 | Percentage of RW juara (neighborhood champion) | 60% | 40% |
| 8 | The percentage of active community organizations | 33,3% | 66,7% |
| 9 | The ratio of members of the public security guard (Linmas) | 37% | 63% |

| | | | |
|----|--|------|-----|
| 10 | Score of district performance accountability | 53% | 47% |
| 11 | Percentage of audit board findings that actionable | 100% | |

The Achievement of Main Indicator 1. Public's Satisfaction On Public Services (IKM)

Based on data base applications Accountability system at Bandung City Government Performance Reports. The following chart shows the percentage of public satisfaction index performance on service quality districts in the city of Bandung. The Barriers in the service that often be complained is the lack of supporting facilities and the information regarding the type and services procedure is less clear.

The Achievement of Main Indicator 2 : Number of Public Complaints Regarding The District Performance and Services

One of the main indicators that into the districts performance appraisal is the number of public complaints are followed up. This indicator is applied in connection with efforts to achieve the good governance and transparent, and accommodate all the aspirations in order to improve people's satisfaction with districts services quality. Data graph showing the number and type of complaints can be seen in the following charts and explanations.

Graph 2. The number of public complaints submitted through the app LAPOR

Source: www.lapor.go.id

Type of complaints about the districts performance that received from the public, are as follows:

- Complaints about the problem of population administration services (id card and family administration document)
- Problem of Standard Operating Procedure (SOP)
- Problem of apparatus discipline
- Illegal charges
- Problem of Trash Management
- Complaints about security and public order

- Complaints about the problem of drainage
- Complaints about the condition of road infrastructure
- Complaints about the Civic organization committee

The Achievement of Main Indicator 3 : Compliance Standards of Public Services (Versi Ombudsman)

Compliance standard of public services by ombudsman version is one indicator of the districts performance assessment. Result of indicators achievement on aspects of the compliance standards of districts service districts, are as follows:

The average value of the index on the compliance standards of districts public services is 881,67, based on the data above, it is only 47% of the total number of districts that the compliance standard index is above the average value. The values index of compliance standards of public service normally would not be much different from the value of community satisfaction index, because the indicators used to measure the performance is not much different. Generally, the obstacle for the districts in the achievement of service standards are :

- lack of quantity of human resources for the implementation of services.
- Limitations of services infrastructures, especially for people with special needs such as breast-feeding women and persons with disabilities.

The Achievement of Main Indicator 4. Timely Services of Population Administration

Population administration services is a very important aspect in evaluating districts performance and the target of districts service quality improvement in Bandung city. It is because the district is a business unit of government that closest to the community, therefore, the districts mentioned as the spearhead of governance. The main task is to serve the needs of the community very well, primarily related to the service of order in the administration of residence.

Based on the data above, most of the districts (57%) has not been able to realize the residence administrative services timely. The problem faced by the district related to provision of residence administrative services timely is as follows:

- The internet connection almost often disturbed so that the results are less than optimal, thus inhibiting the printing process of the Identity Card and Family document.
- The signing of a family document by the Head Office of Population and Civil Registration Bandung, often cause delays in service.
- A technical error such as a printing error and supporting documents that are submitted by the community is often incomplete. In this case, districts do reprinting and reprocess the supporting documents, So it is not timely in providing services.

The Achievement of Main Indicator 5. Other General Administration Services Timely

There are six types of other public services provided by the districts, namely:

1. Residence Legalisation
2. Leter of poverty
3. Leter of insufficiency
4. SKCK (Letter of Good Conduct)
5. Letter of company domicile
6. Institutional domicile certificate

The data related to other public services in the district, mostly categorized as below average. This means that not all districts were able to carry out tasks of other administrative services very well. It is seen from the graph that most districts (16 districts) are not able to carry out service to the public in a timely.

The Achievement of Main Indicator 6 : The Percentage of Village with Good Criteria

The target achievement of the villages which good criteria in Bandung are still low. This is because the population is still living in densely populated areas, utilizing the river's sediment for the settlement, so that in the regional management, the government face a problem that is not easily solved. Besides funding and human resources capacities in improving the village is still limited.

The Achievement of Main Indicator 7 : The Percentage of RW Champion (Best Neighborhood)

In terms of the realization of building a village and RW with good criteria, There are several obstacles faced by the districts, namely the weakness of administration at both the RW and villages. This is due to the lack of guidance for each RW and the apparatus related to the administrative activities and community empowerment in waste management participation, as well as the limitations of the operational costs to activities.

The Achievement of Main Indicator 8 : The Percentage of Active Community Institutions Per-Subdistrict

The majority of social institutions in the city of Bandung in the active category. This is due to the leadership of Ridwan Kamil who want to empower people in regional programs, through program PIPPK. The PIPPK funds managed stimulating community activities are more active and creative in building neighborhoods and social environment. They are guided by the sub-district officials to prepare plans for financing activities, as well as the absorption of the PIPPK funds are allocated properly according to community needs.

The Achievement of Main Indicator 9 : Members Ratio of *Linmas* (The Keepers of Public Order) per District

Most districts have a ratio of *Linmas* members above average, it shows the quality of the districts service which guarantees peace and order to society.

The Achievement of Main Indicator 10 : The Achievement of AKIP (Performance Accountability Of Public Institutions) Index Per District

There are still many districts that have AKIP index below the average value, showed that the districts apparatus still do not understand the indicators the criteria of assessment and do not understand how making a good reports of the districts performance. Conduct to the performance achievement, planning documents created districts generally refers to the goals and objectives that listed in RPJMD (regional development planning document) includes the programs formulation, activities, performance indicators, target group and indicative funding, but not yet equipped with measurable performance targets. Then in terms of realization, target achievement often did not correspond with planned performance. This shows that the understanding of the districts apparatus about the relationship of planning (Strategic planning, the annual work plan, and budget work plan (RKA/DPA), and annual report (LKIP) are still low.

There are several obstacles that explain this condition occurs because the placement of the apparatus is not in accordance with the educational background and specification of duties so that they do not understand the synergy between the goals and targets of the activities carried out with performance goals that should be achieved, in accordance with the agreed performance agreement between Camat with mayor, Ridwan Kamil. Besides incompatibility of competence, the districts apparatus also were not given the training about the technique of making strategic planning, the annual work plan, and performance report.

The Achievement of Main Indicator 11 : Prosentase Temuan BPK yang ditindaklanjuti

Graph 3. The BPK's findings that were followed up

Source: Bandung City Government, 2016 (processed data)

Of all the findings of The BPK, all successfully followed by districts. This shows, although districts are have some errors in the execution of its duties and functions, but districts remain responsible for the repair and follow up on the findings of the BPK. Type of BPK findings that were followed up by subdistricts, are:

1. Report of the scope of public administration and personnel which did not facilitate SKP (Employee Performance Goals)
2. Financial management: incompatibility of reporting documents with evidence of the use of budget (such as receipts and bill)
3. Management of assets and properties are not optimal
4. Lack of coordination among districts and villages related to the implementation of activities

In terms of improving the quality of public services, things that become an obstacle to the realization of the Camat's Performance Agreement are as follows:

- Incompatibility of competence And are not given training for personnel related to understanding the synergy between documents and technical of planning documents preparation, budget planning of activities, and performance report, so that this weakness causes most of the value of districts performance accountability is still low.
- Limitations of human capacity in carrying out administrative duties of service, service complaints, and documentation.
- Limitations material infrastructure and services reduce people's satisfaction ratings in assessing the quality of service.
- Not all districts have a SOP (Standard Operating Procedure) for each service activity
- Limitations ability and communication of the apparatus in regulating the people who live in slums and congested area to maintain the cleanliness and beauty of the area where they live

- In terms of maintaining peace and social order, the amount of “Linmas” (the security guards and order) are fluctuated because of the low budget to hire members of Linmas, so that districts have difficulty to foster and maintain for that members of linmas could survive to maintain the order and public security.
- Lack of empowerment and community participation to support the districts work program.

E. CONCLUSION

The results of this study indicate that the realization of Camat’s Performance Agreement in Bandung have not shown the optimal results (seen from the average achievements in 2015, most of the districts index values per indicator are below the average value). Camat’s Performance Agreement implementation in order to improve the quality of public services found some obstacles, including delays in budget planning document which causes delay performance agreement document preparation, limitations of aparatur capacity in districts to carry out administrative duties of service, complaint service, implementation of service activities not all of them refer to the SOP, the limited ability of the apparatus in mobilizing and empowering communities to maintain order, security, and environmental beauty, limitation of infrastructure materials and budget to implement the operational activities, and the problem of discipline and work ethic of the employees, budget management problems and and order of administration of government property.

For performance improvement that needs to be done in order reform is the following corrective actions:

Table 3. The District Performance Improvement Efforts

| o | Obstacles | Corrective Actions |
|---|---|--|
| | Documents of budget execution that delayed impact on the preparation of agreements performance on-time | Working synergy between districts with related SKPD (local government units) |
| | The weakness of human resource capacity | Capacity building through training on techniques of public services, planning capability, finansial management, and the establishment of organizational values in order to improve employee work ethic |
| | Obscurity of service flow | The determination of the amount of the minimum of SOP in every district |
| | Technical errors in charging civil registry documents and incomplete supporting documents making services is not timely | utilization of IT in every population administrative services (self service system in charging population data online) |
| | Limitations of material infrastructure and operational budgets | Improved infrastructure and budget according to the needs, increased ability to optimize budget |
| | Order issues, security, and beauty | Increased persuasive communication skills for districts’s personnel to increase empowerment and community participation in support of the districts work program and development |

Making Home in a New Space: The Birth of a Community

Aris Masruri Harahap

Making Home in a New Space: The Birth of a Community

Aris Masruri Harahap

Universitas Indonesia, Indonesia, aris.harahap@gmail.com / aris.masruri@ui.ac.id

ABSTRACT

Imagination is a very important aspect in building and maintaining a community. A community itself is usually established through a narration of sameness or things that can bind people in that community. Borrowing Benedict Anderson's term (1991), that kind of community can be called as 'imagined community'. It is through imagination; a community can arise and survive. This logic happens in such a way to a local-based community from Lampung who call themselves KALS (*Komunitas Anak Lampung Selatan*/Community of People from South Lampung). This community emerged in Jakarta as a form of unity for people from Lampung who now live in the big city. The idea of 'Jakarta dream' attracts these people to leave their hometown in Lampung to Jakarta, one of the biggest urban areas in South East Asia. Like other people from various regions in Indonesia, these people are willing to leave their loved ones behind just to fulfill their 'Jakarta dream'. However, the long distance from family and friends and the hard life in Jakarta are not trivial things for them. They miss what they leave behind. However, the place that they leave behind is not only filled with love and compassion, it also consists of stories of conflict and violence. The act of motorbike robbery or *begal* as widely known in Indonesia is often assumed done by Lampungers. This kind of criminal act has made the people felt very uncomfortable. From the stories shared this criminal act has become worse and worse in Lampung. This fact, however, raises questions why Lampung becomes a place to remember. Moreover, Lampung is always imagined as a home to go back. This paper tells stories from KALS to unpack and explore ideas about home and urbanized city's influence to their cultural identity.

Keywords: *home, 'Jakarta dream', migration, and imagined communities*

1. INTRODUCTION

A community is usually established through a narration of sameness or things that can bind people in that community. For example, the supporters of a Jakarta-based football club, Persija, have at least one thing in common which is their love for Persija. It is Persija that bind the supporters to be one community (and also make them feel like brothers and/or sisters) that is supporters of Persija or The Jak Mania as they call themselves. Borrowing Benedict Anderson's term (1991), this kind of community can also be called as 'imagined community'. It is through imagination; a community can arise and survive. In the case of The Jak Mania, they imagine themselves as one community just because they support the same football club. As a matter of fact, this logic happens in many communities not to mention Indonesia as a huge community consisting hundreds of million people which in a way helps Anderson to theorize the famous concept 'imagined communities'. The narration of sameness or imagination also arises in communities based on a smaller region. Characteristically, this kind of community uses specific region as a bond of its members. For example, Komunitas Anak Lampung Selatan (Community of People from South Lampung) or KALS for short is a local-based community that uses Lampung Selatan (South Lampung) as its bond. This community was established in Jakarta in 2010 by Deddy Iskandar who is a migrant from Lampung province. The name of KALS is taken from a region where Deddy was born and raised. In other words, Lampung Selatan is a place which Deddy brought into narration of the establishment of KALS. It is used as a place to imagine that he and other people from that region will think they have sameness. The sameness is that they are people from Lampung Selatan.

Katheryn Woodward (1997) theorized that identity works through system of classification. This system uses specific signs like skin colour, language spoken, and region where one is from that mark one's identity that is different from others. In the case of Deddy, Lampung Selatan for him has become a sign that marks his identity. Lampung Selatan where he comes from makes him different from people who are not from Lampung Selatan. It is part of his identity. For him, the region is his root. He feels he belongs to Lampung Selatan which is then used as a name for the community that he himself established. David Parkin in a foreword for Nadia Novell's book titled *Locality and Belonging* (1998) suggested that the sense belonging is one way to remember and construct memory of a place (x). The sense of belonging that Deddy has of Lampung Selatan has made him

to remember his times in Lampung with his beloved ones. In another way, it has also made him to reconstruct his memories back then in Lampung. The memories that Deddy has of Lampung are a conventional definition of home where home is often considered and associated with positive notions. Home in his case can be associated with 'stable physical centre of one's universe – a safe and still place to leave and return to (whether house, village, region or nation), a principal focus of one's concern and control' (Rapport and Dawson 1998: 6), 'associated with pleasant memories, intimate situations, a place of warmth and protective security amongst parents, brothers, and sisters, and loved people' (Sarup 1996: 2), and 'synonymous with consistency, stability, certainty and permanence' (Cangbai and Siu-lun 2007:182). However, the notions are not universally accepted. In other cases, home sometimes is an impossible place to return to after it is left behind. Sometimes, home is just an imaginary place where it exists only in the mind. The migration of people from one place to one or more places around the world has contributed to diverse definition of home for scholars. It is not to mention urbanization that takes place in Indonesia. The alluring city of Jakarta has attracted millions of people to come there. Millions of people believe in what I call Jakarta dream²⁹. These people believe that Jakarta can offer more than their origin city can offer. However, in process of pursuing Jakarta dream, these people, especially young people, must endure living far from their loved ones like family and friends in their hometown. Living in a new place can be difficult for some people as they need time to adapt. Furthermore, pursuing dream needs a lot of energy, patience, sacrifices. Without family and friends, this can be an uncomfortable experience. It is no wonder that at these times, people miss their loved ones and somehow they remember and reconstruct their memories back then in their hometown. This kind of thing is what I want to share in this paper. In this paper, I want to tell stories from KALS to unpack and explore ideas about home and urbanized city's influence to their cultural identity. Furthermore, their stories could also be seen as a starting point of the birth of the community, KALS.

2. DATA AND METHODOLOGY

This is a qualitative research that uses two methods of data collection which is ethnography and literature review. The technique in ethnography used here are direct interview, deep interview, non-directive interview, and direct observation done by researcher (participant observation). Literature review is conducted in order to get understanding in history, context, and theories related to topic being studied. In collecting the data, I conducted interviews with members of KALS (including founder and current chairman). Interviews were conducted direct face to face and also chat on social media, Facebook. This approach focuses on getting life stories from the subjects. In this case, people from KALS share their life stories and experiences when they are both in Lampung and Jakarta. Ann Gray (2003) explained that the research culture of the story is the most difficult thing to understand. However, if we are successful, these studies are very helpful in understanding the process of culture and meaning in a society (107). Realizing this, the study was expected to be a work that helps to understand the problem of "home" for a local-based community that emerged in the urban space like in Jakarta through a case study from KALS.

When I met these people to conduct interview, I asked them about their life story they have during their stay both in Lampung and in Jakarta. In the interviews, I used strategies used by Ann Gray in her research about women and VCR technology. In that study, she used story-telling method and tended to avoid the question and answer format which she said tended to limit the people in giving information (108). Method of story-telling in practice provides data that exceeds my expectations. The people that I had interview with in my case were pleased to tell me about things that I did not expect like experience of being a child born in a poor family, communal violence in Lampung which involve people in the vicinity, internal conflicts within KALS, and a variety of unpleasant experiences. When each interview was conducted, I asked permission to record the conversation that we were about to have. This is done to increase trust from subject to me. By honestly explaining the purpose of this research and what I was doing, including recording conversations, I was hoping that each informant realized that I did not have bad intentions with the information that I have about KALS. In addition, by doing that, I also hope that each of them is self-conscious and responsible for the information, including confidential and conflict stories, that are told to me related to KALS.

Data obtained through interviews then entered analysis stage which is done by trying to interpret the data. According to Atkinson (1993), in the process of analyzing the data, it can be started by dividing the text (transcript of the interview) into fragments and then regroup them by theme (in Gray 2003: 148). Using this method, the initial thing done is to make transcript of a taped interview. In other words, I listened to the tapes I had with each informant and then I wrote the things of the recording related to this research. After that, I regrouped the existing transcripts based on themes that emerged from the interview. The last is the stage of data

²⁹ The use of the term is inspired by the concept of 'American dream' in American culture. In so many ways, both terms have many similarities. By using this term, I want to give an illustration that Jakarta is a city that is believed to make certain dreams come true.

interpretation. Interpretation of the data itself is a theoretical reflection process which tries to explain the data obtained in order to get an understanding of it (*ibid* 147).

3. DISCUSSION

3.1. Leaving the home and the birth of KALS

KALS is a community founded in Jakarta by Deddy Iskandar who is a migrant from South Lampung and currently resides in Jakarta. His father is a Javanese from Kabumen, Central Java and his mother is a Sundanese from Ciamis, West Java who both migrated to Lampung in the 1970's following transmigration program run by Indonesia government. Deddy was born in South Lampung, Lampung province and finished his education there. Whilst so, the current chairman of KALS is Endi Syahputra, a descendant of a Javanese father who migrated to Lampung and a Lampungese mother. He now lives in Jakarta too. In other words, KALS is much related to transmigration program that took place back then in Lampung.

This community does not only exist in real world but it also presents itself in cyberspace through a group on social media, Facebook. Actually, it is through Facebook, KALS was firstly introduced to public. In September 2010, Deddy, created a group on Facebook with Komunitas Anak Lampung Selatan (KALS) as its name. However, the idea of making such community has had already in his mind long before the coming of Facebook. There were many occasions that he and other Lampungers meet in some casual events in Jakarta since his coming to Jakarta. According to his recognizance when I was interviewing him, he said that he was just *iseng* or playing around when he made the group. He is very humorous and never hesitates to give a sincere smile to warm our conversation. It was just that simple response when I asked him about the history of KALS. In fact, it is not that simple. When I tried to elaborate my questions to get more information from him, finally he wanted to share some stories which are related to the establishment of KALS.

So, our conversation continued with some stories much related to Lampung. There was some sort of longing for a home in Lampung in stories that are shared with me. First things first, he was wondering why Lampung could not be a place to visit by many Indonesians and why Lampung could not be one of the most important tourism site.

Lampung Selatan is a very beautiful place. There are many really beautiful spots there. But, why people are reluctant to visit it. It is all because of criminal acts there. (Me: Yeah, that is why. Well, we both know that the beaches there are beautiful). Yes, especially the beaches! If you take a ferry boat, yeah, from the boat you can easily notice the beauty. But, why can't Lampung become main destination for tourism site? We do have potentials. Really wonderful!

He understood really well the answer of each question he had. For him, the main reason of all of the problems is the Lampungers themselves. He continued that the Lampungers are just not nice people. From the information above, we can easily notice there is a problem in Deddy's story of Lampung, his hometown. Deddy himself admitted that although Lampung is a very beautiful place, it also has some sort of thing that always bothering him. It is the people there that bother him the most. However, it is always a place to remember for Deddy.

In 2002, Deddy decided to leave Lampung to find a job in Jakarta. According to what he said, the only reason for him is that he wanted to prove his worth. There was unfulfilling love with some girl that he experienced back then in Lampung. He said that the girl apparently was reluctant to him just because he was not born in a wealthy family. After having that experience, he asked his mother blessing as he already decided that he had to go to Jakarta in order to change his fate.

As a matter of fact, since the era of pre-colonial, Jakarta has always been seen as an important city. Long before the time of colonial, Jakarta was known as Sunda Kelapa. At that time, Sunda Kelapa which is located in the western coast of Java island was a very important port that connected the trade of world. Since it was very famous of its spices like pepper, traders from around the world especially Europeans were fighting to put its influence in the city. The Dutch, Portuguese, and English were contesting each other to have biggest influence in the city. However, the rise of Islam kingdom in Demak, Central Java, lead by Fatahillah in 16th century was the only power that was successfully grabbed the city. The event was marked by the change of the name Fatahillah gave to the city. He changed the name from Sunda Kelapa into Jayakarta from old Javanese language meaning 'a complete victory' or 'deeds of victory'. The coming of Jan Pieterszoon Coon, a hero for the Dutch, brought victory for the Dutch and VOC (a trading company owned by the Dutch). It was his coming to Jayakarta who then he renamed it to Batavia that marked the long colonization of the Dutch in Java island. From the time onwards, the Dutch were trying to build their landmarks to the city. They have built Batavia and made it into their capital city. The development that took place in Batavia has attracted many people from not only around the archipelago but also from China and Arab to come. Until the memorable day when Soekarno and M. Hatta read 'Proklamasi' text that marked the birth of new country, Jakarta was still seen as a very important space. If it was not important, it would not be chosen as a place to declare an end of colonization era

in the first place. Nowadays, I strongly believe that Jakarta is still a very important place to pursue. Like the Europeans who competed each other to own the city and like the soldiers of Demak kingdom who had to march a very long distance, there are many Indonesians who still believe that Jakarta is worth to pursue. It is worth to leave the loved ones behind just to come to Jakarta. This short and incomplete history of Jakarta that I gave is an attempt to illustrate the condition that Jakarta has now.

What Deddy hoped of Jakarta is actually what others might hope as well. Tomy, who Deddy described as the man who always supports him in KALS, shared his story when he decided to Lampung. According to his admittance, he was not born in a wealthy family just like Deddy.

I've always tried not to put more burdens to my parents. That's my principle. It was since I was starting my study in junior high. When I was in junior high, I no longer asked my parents to give me some money because I understood their condition. . . . When I wanted to buy new school uniforms, to buy books, I had to . . . actually it's not a must. . . . but, I just thought at time that I shouldn't put more burdens to my parents. I liked to find wood from coconut, you know that right? Mmm, I collected them and then I sold them. . . . the money that I got I used them to buy books, to buy some snacks. And then, I also washed cars . . . work. I got decent money from washing one car. Yeah, that's how I looked for money.

The story of Tomy's boyhood illustrates the condition of his family in Lampung. He even told me that his last education was the junior high. When he left Lampung, he said that he did not even finish the education. For him, education is a luxurious thing that he should have not got judging from his family condition. Working is a must for a young man like him at that time to help or at least to reduce his parents' burden. In the midst of 1990s, he left Lampung to work in north Jakarta along with a relative.

A much better story is from Huda, one of the youngest members in KALS. He is Tomy's brother in law. When he decided to leave Lampung, one of the reasons is to study in a university. Indeed, he succeeded to get a degree from one of private universities in Bekasi, a small city in the outskirts of Jakarta. His eldest brother owns a company that runs in culinary sector. His business is growing rapidly. He is the one reason why Huda relatively has a much better story than the two others. The brother's name is Bayu. As a matter of fact, the company that Bayu has helped not only Huda but also Tomy who has been working in the company since it was still struggling. Recently, Deddy has also joined the company. It seems like the company in some ways has made the dreams come true for all of them. Deddy got married in 2014 with one child and now he barely remembered the girl who became the reason for him to come to Jakarta. It seems that he succeeded to prove his worth. While Tomy, he succeeded to not put more burden to his parents. Even now, he could give them luxury that they never had before. It seems like their story of life will become a happy ending story. However, in reality it is not a story that is full of just happiness and laughter.

The temptation 'Jakarta dream' is by no means without problems. As migrants, they had to leave their home, family, and friends in Lampung in search of work in Jakarta. New life experience as migrants in the context of urbanization is also very likely to influence their perspective on identity of KALS' members. Space, in the case Jakarta and surrounding cities, is instrumental in shaping perceptions and life experiences for the subject.

In the thinking framework of Louis Wirth (1938) and Henri Lefebvre (1970), the space is not seen as something that is dead. However, space is a living being and can affect the lives of people who live in it. In his article titled "Urbanism as a way of life", Wirth discusses the phenomenon of urbanization that occurred in a city. The object of the research itself is a phenomenon that occurred in the city of Chicago, in the United States that underwent a drastic change both in the number of residents and urban space in the early of 20th century. He saw urbanization as a phenomenon that could affect the lives of people who live in an urban area.

In depth, Wirth discussed how the city has been defined in his era. A city as a core part of the process of urbanization was often defined as a space that had big population, dense, and became a permanent residence by heterogeneous society. However, Wirth saw that this definition was actually contained some problems. According to Wirth, urban does not fit when it was seen from the total population as on the above definition. Instead, it should be seen from how much influence that can be provided by a space in the lives of people who live in it. A city where economic, cultural, and political activities are done in it is able to attract people from a variety of places to get into the circle of its world. This is where the transformation takes place. The number of people living in relatively cramped space and heterogeneous population affect their 'urban mode of life'. In the context of Jakarta, the coming of people from other places has happened since centuries ago when it was known as Batavia. Nowadays, more and more people are attracted to come and then work in Jakarta. Not to mention, the Lampungers. The population is growing rapidly. The more people come, the less space the people has.

The number of people living in a small space makes the existence of one individual to another adjacent. Nevertheless, even though they live nearby, social relations cannot necessarily be well. It is as described by Wirth that "typically, our physical contacts are close but our social contacts are distant" (14). In addition, "the

contacts of the city may indeed be face to face, but they are nevertheless impersonal, superficial, transitory, and segmental” (12). This is where the process of alienation of people from their surroundings happens. Individuals who live in narrow spaces with different cultural backgrounds can cause various implications. At that time, the struggle for space can be between one individual to another individual who can certainly bring conflict between the two. This condition can happen to anybody not to mention Lampungers who now are members of KALS. When such a thing happens, a home can be one thing that someone really misses.

Migrants, yeah that's the term for those who left their homeland. Not easy being a migrant. When the sun rises, then that's when the fight started. Even when other people are fall asleep on the bed, we still have eyes opened to stay awake. Fatigue, pain, longing for relatives are those that they always feel. But they are not alone; there are so many migrants in the far land. Well, they are all brothers. Brother from his homeland, namely Lampung.

Above is a paragraph that I took from a thin book describing history of KALS written by Deddy and Endi, the current chairman of KALS. In this new space, namely Jakarta, they imagine the similarities which also occur in other migrants from Lampung. At that moment, the sense of ‘imagined communities’ appears among them. However, in the process of creating an identity for KALS, it becomes more fluid. Although the name of KALS itself stands for Lampung Selatan or South Lampung, the membership is not limited to just people from South Lampung. From the description above, instead of using South Lampung as its bond, it uses just the word ‘Lampung’. I see this as a process of negotiation among the founders of KALS as one of some ways in promoting KALS. Days by days, KALS successfully attracted people’s attention. Those people are not just people from South Lampung who later asked for membership in KALS. They love what Deddy and friends were doing and want to give some support by joining the community. By joining the community, they want to be involved in the activities done by KALS.

For Deddy, KALS might be a space for his nostalgia of the home in the first place. However, after years gone by, KALS might be seen as not only an attempt to reduce the tense of living in big city with its challenges. For other members of KALS, it might be seen some way differently. The fluidity of KALS somehow illustrate that KALS has not only one meaning. It has varied meaning given by its members. The next part of this paper is an attempt to illustrate the situation.

3.2 The bad image of Lampung

In some occasions, being Lampungers have become some kind of disadvantages for Deddy and his friends. Tomy once told me that it was because of the bad image of people from Lampung that some of Jakarta people have had in mind. This reminds me of Deddy’s story when he recalled his hometown. The only reason that makes beaches in Lampung could not be famous site to visit is just the high rate of criminality that happens in Lampung. The people of Lampung unfortunately are infamous of their criminal acts. Even, in the recent years, the act of stealing motorbike and *begal*³⁰ are often said done by criminals from Lampung. This fact however has put some pressures for the innocents. Nowadays, when the act of begal was happening somewhere the first assumption in people’s mind perhaps appeared to be done by Lampungers. How unfortunate and unfair assumption it is.

However, people in KALS are not totally against the assumption. Tomy, for example, although shows his dislike of the assumption, he admitted that it is fact that should be believed. It was a very long night when I had a conversation with him. He shared a lot of stories about him and also about Lampung. When we were talking about the act of begal, he shared one story that has just happened months before our conversation took place.

Well, the act of begal nowadays is getting worse and worse. The criminal now don’t care about the timing. It used to happen at night, now they are brave enough to do it in the afternoon. Last August, I went home. I arrived at 11 A.M. And, there was just an act of begal at 9.30 A.M and the victim was a middle age woman. It wasn’t dark, you know! It happened in front of her house. (Me: So, it was in neighborhood. Not in an empty road?) Yeah, that’s the fact. They are not afraid anymore. It’s as plain as day. It’s real. . . . there were many people actually. I don’t know how I could t happen. So, the neighbors helped her. Some even used helmet, anything, that can be used to hit the criminal. She’s safe somehow. But, you know it is the feeling of uncomfortable. Indeed, the criminal’s gone. But. . . . yeah. . . . it is just uncomfortable! And,

³⁰ It is a bit difficult to find good translation of the word begal in English. In Indonesia, this word is understood as a criminal act that usually happens at night in an empty street. The criminal intent is to rob the person’s motorbike. This act is often done by hurting the bike’s owner by using some kind of knife, gun, etc. In some cases, the act is done by stopping the bike’s owner to give the bike in peace. The word begal can also refer to the person who did the crime.

when my nephew went home by riding his new motorbike NMAX³¹, he's so afraid. He kept the bike all the time inside his house. It's getting worse.

The story above illustrates how begal has made the neighborhood as a not comfortable place. The image of begal that is so infamous for Lampungers has brought disadvantages for the innocent ones. In term of finding a decent job in Jakarta and surrounding cities, having an ID card with Lampung as the origin city has brought some problems as some of members in KALS recalled. This is a huge problem for those people because the main reason for most of them coming to Jakarta is to get a job. In an attempt to find the solution, the issue has been discussed in a great meeting attended by members of KALS in Jakarta and surrounding cities. One of the facts that came out from the discussion was that it was so difficult to get a trust from a candidate employer. In fact, the bad image of Lampungers is widely known and unfortunately it brings harm for those who never committed a crime.

The problem that arose from the image appeared to be fought by creating another image. Since the beginning of KALS, Deddy and his friends agreed to use 'TSP' as its motto which stands for Toleransi (tolerance), Sosialisasi (socialization), and Perdamaian (Peace). TSP in many ways signifies the aspirations from KALS or I should say especially Deddy and Tomy. The 'TSP' is the real opponent of what many assumed of Lampungers. By this, I can easily conclude that this is a war of image. However, in the implementation, it went further than that; there are lots of activities done by KALS to support the TSP which most of them are social works. When there was a fire in Jelambar around 2011, Jakarta, KALS went there to give some help. Furthermore, the social works were not only done in the Jakarta area which supposedly much more eligible to change people's perception of Lampungers. They also reached their own hometown. For example, they were trying to collect some money to be given to a man who lives in Lampung with tumor in his mouth. However, this good trait was stalled due to a conflict in KALS body. Tomy, who is considered as one member who has strong influence in KALS by many including Deddy, told me about conflict that took place in KALS in our first meeting.

It was the previous chairman who started the chaos in KALS. He acted and leaded as though KALS is a motorbike club. It's unacceptable. KALS is not that kind of club. You know what motorbike club is right? How's your opinion about it? (Looking at me) . . . Mmm . . . I already talk about this to Deddy. I don't want KALS to be seen like that. I don't want KALS to be considered like the kids³² in motorbike.

It is clear that Tomy does not want KALS to be like motorbike club. I thought I could understand what he was thinking. Motorbike club, or *klub motor* in Indonesian language, is often perceived negatively especially in the context of Indonesia. There are a lot of incidents, criminal acts, and other negative things done by members of klub motor. On the road, they are considered as rude; often riding their bike exceeding required maximum speed, overtaking selfishly and carelessly which also often evoking accidents and conflicts with other riders. These are traits that Tomy will never let to be put on KALS. In fact, there are a lot of KALS members who are in the same side as Tomy's. As Deddy admitted, they came to him to talk about the matter until he decided to call chairman at that time along with his followers to discuss about it. The meeting resulted that the majority of KALS members wanted the person in charge to step down from the position. The main reason that Tomy shared to me was that most of the members refused KALS to be like klub motor that society in Indonesia often see it negatively. They just do not want someone in their own community to ruin the hard works of building good image to KALS. In this respect, the war of image is undeniably happening.

4. CONCLUSION

The short discussion above is an attempt by me to show the complexity of the birth of the community. KALS as a local-based community that uses Lampung as its bond is an example of how a community can arise. It was started by someone who longed for a home when he was away from it. However, as the discussion shows, the home that is longed is very much full of problem. In fact, it is more than just begal, communal conflicts are events that unfortunately very closed with Lampungers. Their daily lives are sadly closed with violence. However, it is still seen as a place to remember as parents, brothers, sisters, friends, and the loved ones stay behind. For many, it is always a place to go back in lebaran day. Even, it is seen as a place to go back permanently. When asked about this, Deddy responded: "That is for sure. But, I don't know when. Someday, I will go back to Lampung". Huda in different occasion admitted that he is almost ready to go back to Lampung.

³¹ A new type of motorbike sold by Yamaha since 2016.

³² Kid is the literal translation of 'bocah' in Indonesian language that Tomy used in the the interview. Perhaps, Tomy wanted to stress that member of common motorbike club in Indonesia as immature and often act selfishly like a kid.

He said: "I already started some business for me and my future family in Lampung. Last month, I just checked how it run. One day, I will get married in Lampung and then stay there. The business is for my future."

For some other members of KALS like Tomy, it seems that they are reluctant to go back to Lampung. They prefer staying in Jakarta to going back to Lampung. A year before this research is conducted; Tomy has just bought a house in Bekasi. From this, we could see that he is planning his future in Jakarta not in Lampung. However it is, Lampung is always part of his life. By joining KALS, it signifies that deep down in his heart; Lampung is just not easily forgotten. He still wants to get in touch with activities under the name of Lampung to show that he is also a Lampung. In fact, he is one of those who strongly against the changing of KALS from a community that concentrate on social works into motorbike club. The image of motorbike club is just unacceptable for him. No matter what their decision of the future, both parties are now living in Jakarta. And, both parties are making home in Jakarta. The home that is made in the new space has given a birth to a new community, a family as the description in the thin book written by Deddy and Endi. This new family was born not because of blood but a bond that appeared after leaving the home in Lampung behind, the bond that appeared after migration took place in the new space.

ABSTRACT

This study investigates a knowledge-based dynamic capability to predict innovation in Indonesian SMEs. We presume that Indonesian SMEs gain their absorptive capacity through external knowledge acquisition and internal knowledge sharing practices. These knowledge-based capacities act as a basis for the Indonesian SMEs', which enhance their own innovation capabilities and performance in turn. We test the hypotheses on samples of Indonesian SMEs, using multivariate OLS regression analysis. The research shows that absorptive capacity practices were the best moderating variable for dynamic capability that have strong significant effects on the "Internationalization Capability" of Indonesian. Implications for owners/entrepreneurs of SMEs are discussed. This study will use literature review method and qualitative analysis study and is limited to Indonesian SMEs.

Key Words: *Absorptive Capacity, Dynamic Capability, Indonesian SMEs, Innovation Capability, Knowledge-based.*

INTRODUCTION

Indonesian SMEs need to seek different approaches for business growth and progress, especially if they want to survive. Knowledge based organization is an important factor that enable Indonesian SMEs to sustain and accelerate growth. Knowledge travels around the world quickly, as opposed to capital and all countries including all the firms that have access to the same pool of knowledge (Warsh, 2006). Indonesia SMEs need to consider becoming "Knowledge-Based Organization", whereas knowledge drives the firm's performance. Therefore, an appropriate framework is one of the most important requirements to encourage Indonesian SMEs to become the new service-based company and/or knowledge-based company. Tacit knowledge is undocumented information, it is more important than explicit knowledge. ICT is only able to handle a small part of total organizational knowledge. Hence ICT can handle only a small part of tacit knowledge processes, such as through e-groups, video conferencing, and voice recognition. ICT tends to distort the decision makers' attention away from what creates value for the firms.

The external knowledge is the key to innovations, it can improve the firm's capacity to assess the business innovative performance. That knowledge can help the firm to find out their adequate position in the marketplaces. In SMEs case, it needs to eliminate and solve the barrier by changing from conventional economies to knowledge-based economies. In SMEs, it is critical to recognize individuals and the organization. Individual skills are fundamental, yet not adequate, for organization capability. An abnormal state of firm capability obliges systems to encourage the transformation of individual, or tacit knowledge, into explicit organization knowledge

The significance of the external sources of competencies and knowledge must be borne at the top of the priority list, particularly on the SMEs account, which does not have the potential, size, and assets to become adequate. It is critical to building up the necessary systems to obtain new abilities and learning from outside sources. This is particularly important on SMEs account since, their attributes account (absence of assets, the absence of characterized administrative techniques), experienced issues in pondering advancement and Knowledge Management. The SMEs typically frame two sorts of essential inter organizational relationship; vertically, with providers and customers, and on horizontal, between themselves. The role of entrepreneurship is to, with regard to the mechanism, translates knowledge into innovative products.

Innovation and innovational performance grasp different measurements and shifts as per firms and their life-cycle stages. Innovation and its performance can be measured from numerous points of view, for example, with the turnover of new items, increments in profitability or declines underway cost as an aftereffect of presenting new procedures, and consumer loyalty with new items or administrations. Knowledge assets,

including both organization knowledge and human resources, serve as an important source of an SME's competitive advantage.

The resource-based view and agency theory are found to be particularly relevant in clarifying the decision of utilizing formal and casual KM practices in an SME setting. The strategy implementation perspective of contingency models of strategy underlines that firms with a competitive strategy engage in a wider range of KM practices than those with a simple survival strategy. This reveals that strategy is associated with management practices to improve the effectiveness of executing this strategy. This finding contributes to the understanding of strategy as an antecedent for organization practices, especially within SMEs. The procedure execution point of view of possibility models of methodology underlines that organization with a focused system take part in a more extensive scope of KM practices compared to those with a basic survival technique. This discovered methodology is connected with administration practices to enhance the adequacy of executing the system. This discovering adds to the comprehension of the system as a predecessor for association rehearses, particularly inside SMEs.

A firm's knowledge-based dynamic capabilities which treat KM practices as aspects of potential (vs. realized) knowledge capacities, underline the basis that KM practices create and reestablish the acknowledged knowledge capacities, thus anticipate firm's innovation orientation and performance. This method of reasoning is in accordance with the dynamic capacities point of view, which accentuates an association's capacities to recharge and to build up its organizational basic abilities for building and sustaining competitive advantage (Eisenhardt & Martin, 2000; Kogut & Zander, 1993; Nonaka & Takeuchi, 1995; D. Teece, Pisano, & Shuen, 1997).

The finding of the interceding part of development introduction between external knowledge acquisition and innovation performance gives support to a joined new and considered perspective of development technique. From one viewpoint, outside introduction to thoughts seems to upgrade learning and enthusiasm for vital reestablishment and advancement (i.e. new view). Then again, an uplifted innovation orientation is obviously identified with more noteworthy innovation performance amid a consequent period, supporting a considered perspective of procedure as arranged and in light of behavioral goals. This joined rising planned view must regard the perspective of procedure proposed by (Smith & Hitt, 2005). This finding likewise prompts to future research on a developing planned perspective of the technique by including a time-series basis. The examination of the determinants of firm growth gives a broad diagram of many known determinants from alternate points of view and teaches.

The purpose of the study is to find the elements that help the Indonesian SMEs to identify critical issues to deploy their dynamic capability in this turbulence market situation. This paper uses the dynamic capabilities theory of the company, creating future scenarios and as a case, it focuses to Indonesian SMEs upon 5-10 years after the AEC Implementation in the year 2022 - 2027. The combination of Absorptive Capacity & Development of dynamic capabilities used to figure out, in order to develop the most important areas of dynamic capabilities in the Indonesian SMEs. The method that was used in the study was quantitative research. Data collection was done from structure questionnaire & literature review

Resources-Based Theory

The resource-based view is a theoretical framework to understand company-level competitive advantage, and it views the resources and capabilities as the fundamental sources of company-level value creation from which company can create competitive advantages that may, in turn, improve their overall performance. The resource-based view specifies that the company must not only be organized in such a way as to encourage, promote, and facilitate their effective utilization but also must possess the capabilities to utilize them in the intended ways. Company's resource could be defined as the assets (tangible and intangible), which are tied semi-permanently to the company, for example, brand names, in-house knowledge of technology, employment of skilled personnel, trade contacts, machinery, efficient procedures, capital, etc. Company's resource perspective provides knowledge in the formulation of the strategy for the company's diversification.

The resource-based theory was introduced in 1991, which examines performance differences of organizations based on their resources, and it focuses on efficiency-based differences, instead of on other ways that could differentiate organizations, such as market power, collusion, or strategic behaviors (Peteraf & Barney, 2003). It makes an assumption that organizations within an industry may differ in their resources, and these resources may not be perfectly mobile across organizations, and therefore organizational differences in resources can be very long lasting (Barney, 1991). It desires to explain how organizations maintain unique and sustainable positions in competitive environments (Hoopes, Madsen, & Walker, 2003).

The company's competitive position compared to others is relatively based on its collection of unique resources and relationships (Rumelt, 1982), and it's called as competitive advantage when it uses a profitable, value-creating strategy that is not being used by competing organizations (Barney, 1991), and if the competing organizations are not able to learn about that strategy and copy it, then the company has a sustainable competitive advantage. Company's sustainable competitive advantage derives from the valuable, rare,

inimitable and non-substitutable resources and capabilities that company controls (Barney, 1991), which can lead to the sustained competitive advantage. Resources are valuable when they help the company create or implement strategies that improve its efficiency and effectiveness; rare resources happen when more companies want the resource than what is obtainable; inimitable and non-substitutable when they are immobile and expensive to imitate or replicate.

The competitive advantage of a firm is a function of its ability to find and maintain a superior industry position. Some industries are more structurally attractive than others, but the company can shape its performance by choice and application of superior competitive strategy. In term of competitive advantage, stems from resources internal to the firm is all assets, capabilities, organizational processes, firm attributes, information, knowledge, etc. that are controlled by the company, which enable the company to conceive and implement strategies that improves its efficiency and effectiveness (Daft, 2008), and heterogeneously distributed among companies and resist mobility, thus creating competitive differentiation.

Twenty years after it was first introduced, Resource-Based Theory becomes widely recognized as one of the most influential and powerful theories to explain, describe and predict the relationships within the organization. The theory has developed from the focus of establishing theory between resources availability and growth of sustained competitive advantage, to the matter of the source of resources. Wenerfelt insisted that the firm's current stock of resources creates an unbalanced and asymmetries in competition for new resources (Wernerfelt, 2012). Maritan and Peteraf paid a particular attention towards how the heterogeneous resource positions that lie at the core of RBT come into existence (Peteraf & Maritan, 2007). Simon, Hitt, Ireland, and Gilbert provided to the RBT literature by focusing on *resource orchestration* (Sirmon, Hitt, & Ireland, 2007). These three articles called attention to the essential and infrequently observed processes that underline the linkages posited RBT. As stated by Kraaijenbrink, the varied recognition of human capital is an important tool for firm capabilities, in terms of micro-foundation of RBT (Kraaijenbrink, Spender, & Groen, 2009). Foss stated that the current issue is what should be the dependence of the right micro-foundation of resources (Foss & Stieglitz, 2010). Meantime Coff and Kryscynski identified individual and firm components that interact to grant unique capabilities in attracting, retaining and motivating human capital to some firms (Campbell, Coff, & Kryscynski, 2012). Lastly, on micro foundation view, Garbuio, King, and Lovallo examined the psychological underpinnings that affect the basic resource management subprocesses of acquisition, accumulation, and divestment of a firm's resources (Garbuio, King, & Lovallo, 2011).

The Concept of Dynamic Capability

Dynamic Capability seems suitable to explain the condition of Indonesian SMEs in the current difficult (changing) environment. Aggressive competition from current competitors, as well as competition from a customer, has created a huge problem, in which this threat can not be avoided and is unpredictable. The challenge is how companies are able to manage their resources to adapt to the increasing global complexity and volatility. Only companies that continuously innovate their services and their products in the era of "VUCA World" will be able to win the competition. In the VUCA's business environment today, the company's ability to formulate strategic decisions seems to be important for the survival of the company.

Research on dynamic capabilities fundamentally concerns on how firms emerge, grow, develop, change and rejuvenate (Helfat & Peteraf, 2015). Thus dynamic capability theory has the ability to explain company growth under the change. DC was proposed by Teece et al who focused on how company coped with changes. In another word, the company has to sense opportunities and threats in their own environment by configuring their resources (D. Teece et al., 1997). The firm uses its sensing capabilities to identify opportunities then invests in these opportunities to improve its organizational capabilities. The firm then recombines or reconfigures its organizational capabilities that fit its environment. These new capabilities will give a firm new path, positions, and resources based, which can lead to a competitive advantage. It is important that DC consist of organizational processes made with company's resource position.

Therefore, unlike other Industrial Organization theory and Resource Based theory, the DC theory considered the change in the environment and focus on organizational capabilities. But on the other hand, the DC is difficult to use in practices. Teece confirmed that the micro-foundation of DC is still underdeveloped (D. J. Teece, 2012). Meanwhile, Ambrosini et al. said that it is difficult to use the DC to explain the company performance (Ambrosini, Bowman, & Collier, 2009).

The term 'dynamic' refers to the capacity to renew competencies, so as to achieve congruence with the changing business environment. Dynamic capabilities theory has been criticized for inappropriately characterizing the expression of "dynamic capacities." Critics have contended that there are numerous approaches to adjust to a quickly changing condition and that the development of dynamic capabilities is, however, one approach to doing as such. For instance, Winter & Wiley argued that it is workable for a firm to roll outfitting improvements to adjust to a quickly changing condition as necessities emerge, or utilize what he called an "ad hoc" (Winter & Wiley, 2003).

This study only explores the dynamic capabilities through the renewing capabilities and the regenerating capabilities as it is most commonly referred in the dynamic capability literature, notably by Teece, Pisano, and Shuen (1997) and Winter's (2003). These dynamic renewing capabilities are utilized to sustain the competitive advantages in changing environments; they refresh and renew the nature of the resources which belong to the companies. They are especially needed as resource-based advantages when the environments become turbulences. When there's a shift, firm's resource advantages can become disadvantages if there're no attempts made by the firm to refresh the resources. In fact, when the renewing capabilities are employed new resources are attained by the firm. The renewing capability would come up as the introduction of new product or service lines, or the extension of the new brand into a new product launching.

On the other hand, when current dynamic capabilities are perceived to be insufficient upon a firm's resource base, the firm needs to renew their own dynamic capabilities. Thus, the new action as a regenerating action categorized as the new regenerative dynamic capabilities of the firm. The regenerating capabilities allow the firm to move into new dynamic capabilities. These regenerative dynamic capabilities are likely to be deployed by firms when the environment is in the turbulent time, where external changes are non-linear and discontinuous, and as Brady and Davies also confirmed that the firms need to move towards the new suitable environment (Brady & Davies, 2004). As one unit or division in the company may have the extant dynamic capabilities of leveraging best practices; the regenerative dynamic capability would extend to encompass other units or other divisions within the company. Hence, these unit works indirectly by embedding new dynamic capabilities into the firm.

From Absorptive Capacity to Dynamic Capability in Indonesian SMEs

In the current dynamic capabilities framework, the absorptive capacity has become a substantial element. Some researchers have addressed absorptive limit as a dynamic ability, Zahra, and George in an augmentation of the original concept. The principles of absorptive capacity creation are proffered as knowledge acquisition, assimilation, transformation and exploitation (Zahra & George, 2002). This is maintained in perceiving of how the misuse of new knowledge through absorptive capacity encourages the adaptability expected to contend in dynamic and changing environments (Ambrosini et al., 2009).

The exploration ranges of absorptive capacity are connected to the dynamic capabilities point of view and open innovation theory. The dynamic capabilities point of view underlines that firm's abilities to recharge and build up its company's abilities to have the sustaining competitive advantage (Eisenhardt & Martin, 2000). Meanwhile, Henry Chesbrough - the father of Open Innovation - said that the key segments of "open-innovation" display posts are that basic manifestations that began from inside and the outside of the firm. Open innovation is obviously portrayed as "the use of inflows and outflows of information to energize the development and furthermore to develop the market". These considerations should be advanced using both the present marketable strategy and with update business models (Chesbrough, 2003).

To survive and overcome the globalization challenges and also learn and build up firms' capabilities, involvement in international businesses is an unavoidable connection. The prior reviews demonstrated that organizations are included in international businesses through two particular introductions, specifically outward and inward (Welch & Luostarinen, 1992). Strategic alliances are fitting apparatuses both for the outward and inward internationalization of firms (Sanchez and Heene, 2010). They are considered as powerful vehicles for SMEs — to get to, find or endeavor opportunities! (Reuer, Arino, & Mellewigt, 2004). Strategic alliances are likewise proper devices for adapting, especially test learning and acquiring capabilities, competencies and skills which can't be produced inside the organization (Inkpen, 1998)

Resource limitation is the most widely recognized issue for SMEs; thus, non-equity alliances are useful alternatives to get and repay complimentary resources. In this regard, numerous small enterprises could find methods to create diverse capacities while gaining innovation through licensing alliances with large partner firms. With many studies on dynamic capabilities, there is no accord among researchers on dynamic capability. Subsequently, different capabilities have been presented by different researchers as instances of dynamic capabilities. If there should be an occurrence of SMEs that need to survive and beat the dynamic environment, the presence of absorptive capability (e.g. ACAP) can be viewed as a basic asset for them (Muscio, 2007). Likewise, the presence of solid ACAP in the alliances' context setting permits the organization to better and all the more effectively acquire capabilities (Sanchez & Heene, 2015).

SMEs can beat their moderately limited competence base by entering cooperation with accomplices that have officially developed relevant competencies. SMEs normally need important embeddedness in worldwide informal communities of firms and depend on social contacts of its key individuals, which may not be adequate for the foundation of linkages with different firms that would apply significant impact on SMEs execution.

METHOD

This study uses the case study analysis, and the result will use multi layers data with a particular true objective to recognize the significant progress. The primary data is the survey ("poll") and for this circumstance, the examination instruments were offered particularly to the business performers subjectively. The questionnaires are standard; the respondents were asked the same inquiries in a comparable demand, and the results have a tendency to be enduring. It's straightforward and strong. The relative examination is used as the essential capacity to separate the data line by line to get the thoughts and the associations between all elements.

This study will assess the practices, especially on "innovation capability" of Indonesian SMEs. This study will analyze the present dynamic capabilities; regenerating capabilities and renewing capabilities together with the variables of science push absorptive and the variables of demand pull absorptive as the moderating variables. This study uses the moderating variables of Murovec and Prodan (2009) that are affected by the cumulative effects on innovation capabilities. Hence, this study adopted the general assumptions that two dynamic capabilities factors and absorptive capacities components have been embedded by Indonesian SMEs even though it is only a small portion. This study will survey the practices, particularly on "dynamic capability" of Indonesian SMEs, and will investigate the present of the variable "regenerating capabilities", "renewing capabilities" of dynamic capability tandem with two variables of "science push" and "demand pull" of absorptive capacity that have been obtained by Indonesian SMEs.

The models from Murovec and Prodan (2009) and Zahra and George (2002) are deployed into the hypotheses. Cohen and Levinthal expressed that the company needs to be ready to perceive, assimilate, and apply the external information to commercial ends (Cohen & Levinthal, 1990). The sample of the review is taken from the Indonesian SMEs that got the grant from the government, state own company (BUMN) affiliation, and also several Indonesian SMEs who have done a collaboration with a couple of universities/institution.

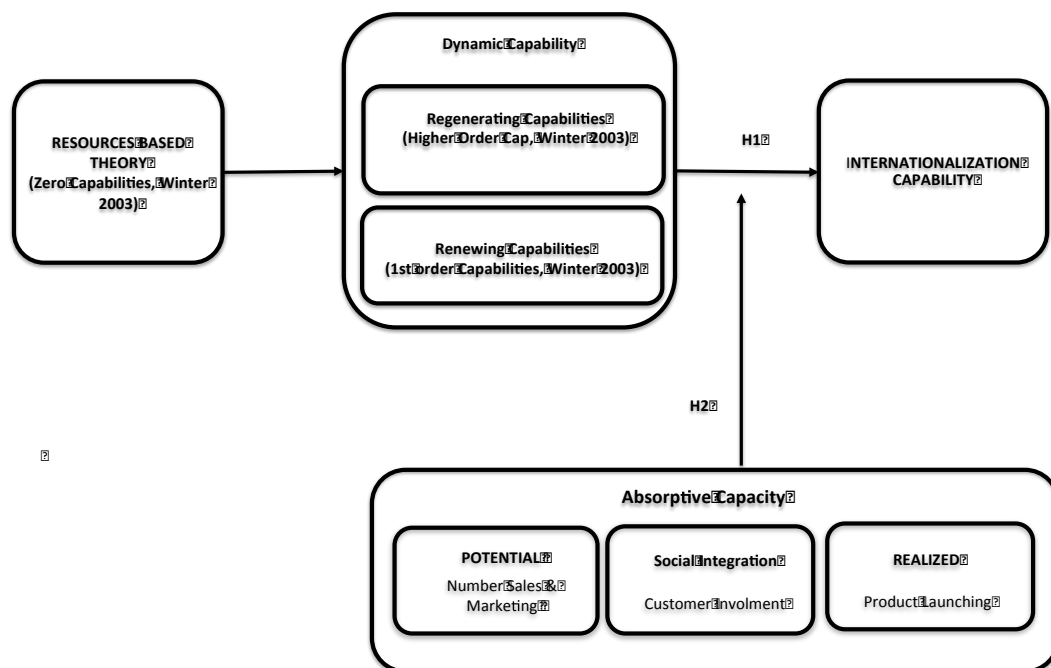

Figure 1: Theoretical framework, Modified; (Zahra & George, 2002), (Murovec & Prodan, 2009) & (Lawer, 2010).

Hypothetical models represent the relationship between these variables as follows:

- H1: The SMEs' Dynamic Capability has an influence on Internationalization Capability (wealth creation).
 H2: The SMEs' Absorptive Capacity is able to moderating the dynamic capability on Internationalization Capability (wealth creation).

The basic data on this study is increased through the close and open-ended questionnaires. The research samples are Indonesian SMEs that were recorded in the 'associations'. The samples are chosen according to the purposive sampling by criteria; 1) enlisted with training program and promotion subsidy from government, 2) incorporated into the criteria and attributes of SMEs as indicated by Government Regulation no.9/2008, and 3) the SME has been established and operated for at least two years before the review is taken. The samples were

taken from three events, which are in Kunming, Nanning, and Bandung. Those Indonesian SMEs are in training agenda and market exhibition under the association arrangement.

The total of 17 questionnaires was distributed, but only 12 Indonesian SMEs responded (respond rate 70.59%) at 24th China Kunming Import and Export Fair (Kunming Fair) 2016. Secondly, the total of 29 questionnaires was distributed to furniture and accessories organizations, but only 12 Indonesian SMEs responded (respond rate 41.38%) at the 13th China Asean Expo (CAEXPO) 2016 in Nanning, Guangxi at 11-14 September 2016. The last surveys were given among the Indonesian SMEs under the direction of PT. "T" that was done in Bandung, Indonesia. The total of 35 surveys was distributed and only 14 organizations responded (respond rate 40%).

The information in this study is comprised of quantitative data and under the assumption that all the dynamic capability and absorptive capacity practices in Indonesian SMEs need to recognize and actualize it.

DISCUSSION

This study investigated the dynamic capability and absorptive capability practices in Indonesian SMEs. Below are few obstacles faced by these SMEs to encourage them to spur their own innovation capability within their operation. The three biggest obstacles were limited budget or fund with 14,65%, followed by limited loan and resulting in a high cost of 13.13% and 11.62%. Meanwhile, most of them with the smallest percentage of 7.07% stated that they did not have any marketing staffs to do innovation practices.

Table 1: Obstacle for doing Innovation Practices

| No | Obstacle for Doing Innovation Practices | Mean | STD | Freq | %Frq |
|----|---|--------|--------|------|---------|
| 1 | Limited Budget or Fund | 1.5263 | 1.3098 | 58 | 14.65% |
| 2 | Limited Loan | 1.3684 | 1.2175 | 52 | 13.13% |
| 3 | Resulting in High Cost | 1.2105 | 1.2554 | 46 | 11.62% |
| 4 | High Risk on Innovation | 1.0526 | 1.1377 | 40 | 10.10% |
| 5 | Hard to Find Partner | 0.9737 | 1.0777 | 37 | 9.34% |
| 6 | Uncertainty Demand of Products | 0.9737 | 1.0777 | 37 | 9.34% |
| 7 | No Skilled Resources | 0.8684 | 1.0180 | 33 | 8.33% |
| 8 | Competitors Dominate the Market | 0.8684 | 0.9911 | 33 | 8.33% |
| 9 | No IT Technology | 0.8421 | 0.9733 | 32 | 8.08% |
| 10 | No Marketing Staff | 0.7368 | 0.8601 | 28 | 7.07% |
| | | | | 396 | 100.00% |

Value: 0=Null, 1=Low, 2=Medium & 3=High

The Figure.2 below is the innovation practices that Indonesian SMEs have been done for almost the last three years. The highest goal for Indonesian SMEs to have innovation in the last three years were done for 'increasing customer satisfaction' (21.95%) as same as highest for 'developing export market' (21.95%) and 'developing niche market for special client' (21.95%), followed by 'looking for market & new client' (20.12%) and 'develop export market' (14.02%). In this study, we investigate the 'export capability' as a representation for 'internationalization'.

Figure 2: Innovation Practices

In the absorptive capacity practices, the greatest number of “sources of innovation” from science-push components in Indonesian SMEs is the availability of an internal R&D (13.29%), followed by training (11.89%), market analysis (10.96) and external R&D or outsourcing (10.49%). On the other hand, “sources of innovation from demand-pull are market research, advertising, followed by purchase new machine, software or other equipment, copy other company’s innovation and purchase license with percent frequencies 12.35%, 12.35%, 11.42%, 8.86% and 8.39% as it’s shown in figure 3. The availability of Internal R&D is absolute needed for companies for their operation to develop new products and services. Cohen & Levinthal (1990), in the concept of “absorptive capacity”, saw that investigation in internal R&D is the main key to access and utilize the knowledge of external and technology.

Figure.3: Sources of Innovation

Meanwhile, the four sources of knowledge of the SMEs that have been investigated come from the Government, conference & exhibition, business’ association and the Internet. The highest source of knowledge for Indonesian SMEs is still hold by Conference & Exhibition, followed by Internet, Government and Business Associations.

Figure.4: source of knowledge

At a starting point, we are looking for relationships and correlation in an easy way to get a quick handle on the data set. Our overall regression demonstrates the direction of the impact of every object of the research. The regression is to investigate whether the dynamic capability has an effect for internationalization capability. Our regression claimed that the regression coefficient that has “No” positive sign signifies that five variables of innovation capabilities, which "renewing capabilities" and "regenerating capabilities" have the positive effects

on the internalization capability. The correspondence did not have any Adjusted R square and "Fvalue" value with "F0.01" and/or "F0.05" (0.01 or 0.05) significance level. The significance value less than "F0.01" and/or "F0.05" (1% or 5%) demonstrates that these outcomes have the ability to show that those five variables of "renewing capabilities ", and "regenerating capabilities" have the impact on "internationalization capabilities ".

| <i>New Innovation Factors</i> | <i>Coefficients</i> | <i>Standard Error</i> | <i>t Stat</i> | <i>P-value</i> |

Figure 5: Regression Result for Renewing & Regenerating Capabilities

The second step, we are looking for relationships and correlation for “renewing capabilities” of dynamic capability with the moderating of absorptive capacity practices. The model of capacity practices was taken from Zahra & George 2002. Our overall regression demonstrates that the dynamic capability with moderating absorptive capability variables have an effect for internationalization capability. Our regression at figure.5 shown that the regression coefficients that have very “strong” positive sign signify that one variable of innovation capabilities (i.e. new fabrication process innovation with three moderating variables of absorptive capacity "number sales & marketing", “new product launching capacity” and "customer involvement") have positive effects on the internalization capability. The correspondence did not have any Adjusted R square and "Fvalue" value with "F0.01" (0.01) significance level. The significance value of less than "F0.01" (1%) demonstrates that these outcomes have the ability to show that those four variables of "renewing capabilities" have an impact on "internationalization capabilities ".

| <i>New Fabrication Process</i> | <i>Coefficients</i> | <i>Standard Error</i> | <i>t Stat</i> | <i>P-value</i> |

Figure 6: New fabrication process of dynamic capability moderated by absorptive capability

The final step, we are looking for relationships and correlation for “regenerating capabilities” of dynamic capability with the moderating of absorptive capacity practices. At figure.6 below, the regression coefficient that has very “strong” positive sign signifies that one variable of innovation capabilities (i.e. new service innovation with three moderating variables of absorptive capacity "number sales & marketing”, “new product launching capacity” and "customer involvement") have positive effects on the internalization capability. The correspondence did not have any Adjusted R square and "Fvalue" value with "F0.01" (0.01) significance level. The significance value of less than "F0.01", “F0.05” and “F0.1” demonstrate that these outcomes have the ability to show that those four variables of "regenerating capabilities" have the impact on "internationalization capabilities ".

| <i>New Service Innovation</i> | <i>Coefficients</i> | <i>Standard Error</i> | <i>t-Stat</i> | <i>P-value</i> |

Figure 7: New service innovation of dynamic capability moderated by absorptive capability

This implication of moderating of three of variables of “absorptive capacity” has significant effect on new fabrication process and service innovation capabilities for Indonesian SMEs. Two components of absorptive capacity play a vital part in affecting the operation. The components were playing a pivotal role for the SMEs as an operator of change or important broker between the company and the markets. The greater part of them is giving the best guidance for the company to meet the clients' perceived value of the company's products or services. The vast majority of the information had been completely absorbed by the organization. In view of the empirical findings, this study found that these outcomes are partially consistent with research directed by Murovec and Prodan (2009) and Zahra and George (2002).

The results of the study can be summarized by three moderating variables of absorptive capacity; 1) “number sales & marketing”, 2) “product launching”, and 3) “customer involvement” have strong significant effects on “internationalization”. The results of testing the significance level are greater than the standard significance. Combine factors of “number sales & marketing”, “product launching”, and the “customer involvement” have significant effects on dynamic capability practices on “internationalization”.

CONCLUSION

The resource-based theory focuses on company level or business level of analysis, where resources and capabilities controlled by a company that triggers performance differences across organizations. Although the theory is widely used by many scholars, critics were also appearing. Priem & Butler 2001 stated that the resource-based theory is the lack of managerial implications and does not pay attention to contexts or company situations. The theory tells managers to obtain ‘valuable-rare-inimitable-no substitutable’ resources, but it does not tell managers how to do that (Conner, 2002; Miller, 2003).

The central idea in resource-based theory is that organizations compete against others on the basis of their resources and capabilities (Barney, 1991; Wernerfelt, 1984), and organization’s competitors can be identified by the similarity of their products, resources, capabilities, and substitutes (Peteraf & Bergen, 2003). A resource could be defined as anything that could be thought of as a strength for an organization (Wernerfelt, 1984).

In the context of the Indonesian SMEs, this paper tries to connect resource-based theory with dynamic capabilities and absorptive capabilities that will be implemented in SMEs. The entrepreneur has to know their owns resources and capability, it must be known whether they have already have sufficient resources and capability or not. By knowing the condition of the resources and capabilities of their owns resources, the SME is expected to create a program to develop resources, capabilities and have a strong competitive advantage in order to compete with other organization, and more importantly, can compete with the firms outside the country.

This study also assesses dynamic capabilities of “regenerating capabilities” and “renewing capabilities” as well as “science-push”, and “demand-pull” of the absorptive capacity of Indonesian SMEs due to the rapidly developing environment. The 'knowledge-based framework must be made by Indonesian SMEs for both dynamic and absorptive capabilities on a consistent based due to the present and future business environment scene. By keeping these both dynamic and absorptive capabilities of SMEs on innovation as a top priority, the innovation opportunity will be alive and better practice under AEC implementation. In another word, the Indonesia SMEs must upgrade their own particular innovation exercises, either as the new product, new service,

new process or new technology to fulfill their customers' demands. However, increasing the service innovation capabilities upon integration requires more resources that in the scale of economic will probably not suit (the domestic market's demand).

In the future, many factors that cause the emergence of new ICT into the organization innovation is caused by the advancing of ICT improvement. Meanwhile the AEC will push Indonesian SMEs to improve their performance, especially with the benefits of single market of AEC: 1) AEC will increase the business opportunities, 2) the competition for business will affect everyone include the Indonesian SMEs, 3) The tariffs and customs will diminish as well as minimum obstacles for trade.

RESEARCH LIMITATION

Another limitation is the context of both the dynamic and absorptive capabilities keys components that are available during the period of study. The ability to analyze dynamic and absorptive capabilities is not solely based on improving the potential dynamic and absorptive capabilities but also depend on the quality of external knowledge that fits in into the organization. The utilization of ICT needs to be explored deeply as tools for transforming the tacit knowledge within Indonesian SMEs. Tacit plays the pivotal role in Indonesian SMEs, and ICT need to mediate this tacit knowledge as a vehicle to spread this knowledge among the stakeholders.

Orientation and motivations differ from Indonesian SMEs to the others, it could be because the stakeholders have different educational, cultural and social backgrounds. The author realizes that to quantify the qualitative of "dynamic and absorptive capabilities" and "innovation capability" are very difficult concept. Therefore, the author believes that there are many possible variables that are cannot be traced on this study, especially the possibility of things that are common regarding the relationship between "regenerating capabilities", "renewing capabilities", "demand push", "science push", and "internationalization capability" and therefore, it cannot be counted or described statistically or quantitatively.

FUTURE RESEARCH

Indonesian SMEs need to seek different approaches to business growth and progress, especially if they really want to survive. The knowledge-based organization is an important factor that makes Indonesia SMEs enable to sustain and accelerate growth. The future study will still continue to explore a better framework for the absorptive capacity practices in Indonesian SMEs that is associated with a new round of free-trade developments. Future studies may incorporate with the knowledge-based organization. Knowledge travels around the world fairly quickly as opposite to capital, and all countries including all the companies have access to the same pool of knowledge (David Walsh, 2006). Indonesia SMEs need to consider to become "knowledge-based organization", whereas knowledge drives the firm' performance". Therefore, it is the most important requirements for encouraging Indonesian SMEs to become the new service-based and knowledge-based company.

A future researcher could pay more attention to how to acquire and assimilate the tacit knowledge to the company through ICT implementation, especially in current dynamics environment. Tacit knowledge is undocumented knowledge, and more important than explicit knowledge. ICT is only able to handle a small part of total organizational knowledge. Hence ICT can handle only a small part of tacit knowledge processes such as through e-groups, video conferencing, and voice recognition. ICT tends to distort the decision makers' attention away from what creates value for the companies.

ABSTRACT

Creative economy has become a generator of Indonesia's economy growth. The creative economy can contribute up to 645 million Rupiahs or 7.05% GDP (Gross Domestic Product). Based on Badan Ekonomi Kreatif Indonesia (BEKRAF), fashion is one from sixteen subsectors of the creative economy which becomes government's attention because of its growth. Today, Indonesia's fashion industry is increasing in popularity. There are so many fashion brands from Indonesia with a potential to compete in global market. For example Dian Pelangi, an Indonesian fashion designer who transforms Songket into fashion products such as dresses and ready to wear product. Songket is a traditional fabric from Palembang made from "tenun" or weaving technique. Songket is one of the Indonesian cultural heritages that already been recognized internationally.

The global taste or preference becomes an important factor in product design when planning to bring the local product to the global market. Since culture lifestyle, the design field, the link between culture and design becomes an interesting topic for further in-depth study. This study focuses on cultural implementation in product design in order to succeed globally. This paper aims to establish transformation process of cultural product design in relation to the global market for future references.

Key Words: *creative economy, culture, fashion, product design*

INTRODUCTION

ASEAN Economic Community (AEC) is economic integration which is offering opportunities in the form of a huge market of US\$ 2.6 trillion and over 622 million people. There's no border among countries so enable for countries to do free market. Indonesia becomes one of the country in the world which has the greatest economic growth. By 2015, Indonesia's Gross Domestic Products (GDP) reach 4.79%, it is higher than global economic growth which estimated only 2.4%. The positive climate is absolutely become the right moment for the government to strengthened economic foundation, especially in the real sector.

One of the real sector which worth to be a priority is the creative economy. The power of creative economy focuses on human resources. Artworks, architecture, books, technology innovation and animation come from a human creative idea. The Indonesian Government launched sixteen subsectors of the creative economy which is become government concern for further development. There are apps & game developer, architecture, interior design, visual communication design, product design, fashion, film, animation and video, photography, crafts, culinary, music, publishing, advertising, performing art, fine art, television, and radio.

Based on Badan Ekonomi Kreatif Indonesia (BEKRAF), the creative economy can contribute up to 645 million Rupiahs or 7.05% GDP (Gross Domestic Product). Fashion is one from sixteen subsectors of the creative economy which is become government's attention because of its growth. Today, Indonesia fashion industry growing rapidly. It's inseparable from the productivity of local fashion designer who innovative to make a design, and also the young generation who enthusiastic about the fashion industry. Indonesian people as target audience are smart and have a taste of fashion to choose what fashion fits with them. In the other hand, Indonesian local products have to face any problems. Local fashion brands always underestimated because import product still becomes a priority in the market, so local brands can't take place.

There are so many local fashion brands spread all over Indonesia. Some of those brands have go-international. One of fashion brand which is well known in the global market is Dian Pelangi. Dian Pelangi is Muslim fashion designer from Indonesia who can transform Songket into gorgeous dresses. Songket is traditionally woven from Palembang which made by hand-woven and patterned with gold or silver threads. Other brands which succeed in the global market are Niluh Djelantik, Bagteria, Sabbatha, Matoa, Sissae Qipao, etc.

Actually, Indonesia has so many potencies. It supported with the availability of the human resource, natural resource, and the most important is culture resource. The question is how to bring Indonesian local products into the global market, so they can success globally? And how the designer can use culture as a resource in product design and promote culture oriented product design? According to Lin (2012), culture plays an important role in product design. The link between culture and design becomes an interesting topic for further in-depth study. Culture can be implemented in product design not limited in fashion design only but also another design field. Designing local features into a product to be more important in a global market so they are can't lose the identity (Handa, 1999). Culture can be an added value in a product because it has uniqueness character that differs from the other. Culture value-adding creates the core of product value. Therefore, based on the explanation before, the main purpose of this paper is to build the transformation process of cultural product design.

CULTURE of INDONESIA

Indonesia is multicultural. The culture of Indonesia has been shaped by long interaction between original indigenous customs and multiple foreign influences. Indonesia is centrally-located along ancient trading routes between the Far East, South Asia, and the Middle East, resulting in many cultural practices being strongly influenced by a multitude of religions, including Hinduism, Buddhism, Confucianism, Islam, and Christianity, all strong in the major trading cities. The result is a complex cultural mixture very different from the original indigenous cultures.

Examples of the fusion of Islam with Hindu in Javanese Abangan belief, the fusion of Hinduism, Buddhism and animism in Bodha, and the fusion of Hinduism and animism in Kaharingan; others could be cited. Balinese dances have stories about ancient Buddhist and Hindu kingdoms, while Islamic art forms and architecture are present in Sumatra, especially in the Minangkabau and Aceh regions. Traditional art, music, and sport are combined in a martial art form called Pencak Silat.

The Western world has influenced Indonesia in science, technology and modern entertainment such as television shows, film, and music, as well as political system and issues. India has notably influenced Indonesian songs and movies. A popular type of song is the Indian-rhythmical dangdut, which is often mixed with Arab and Malay folk music.

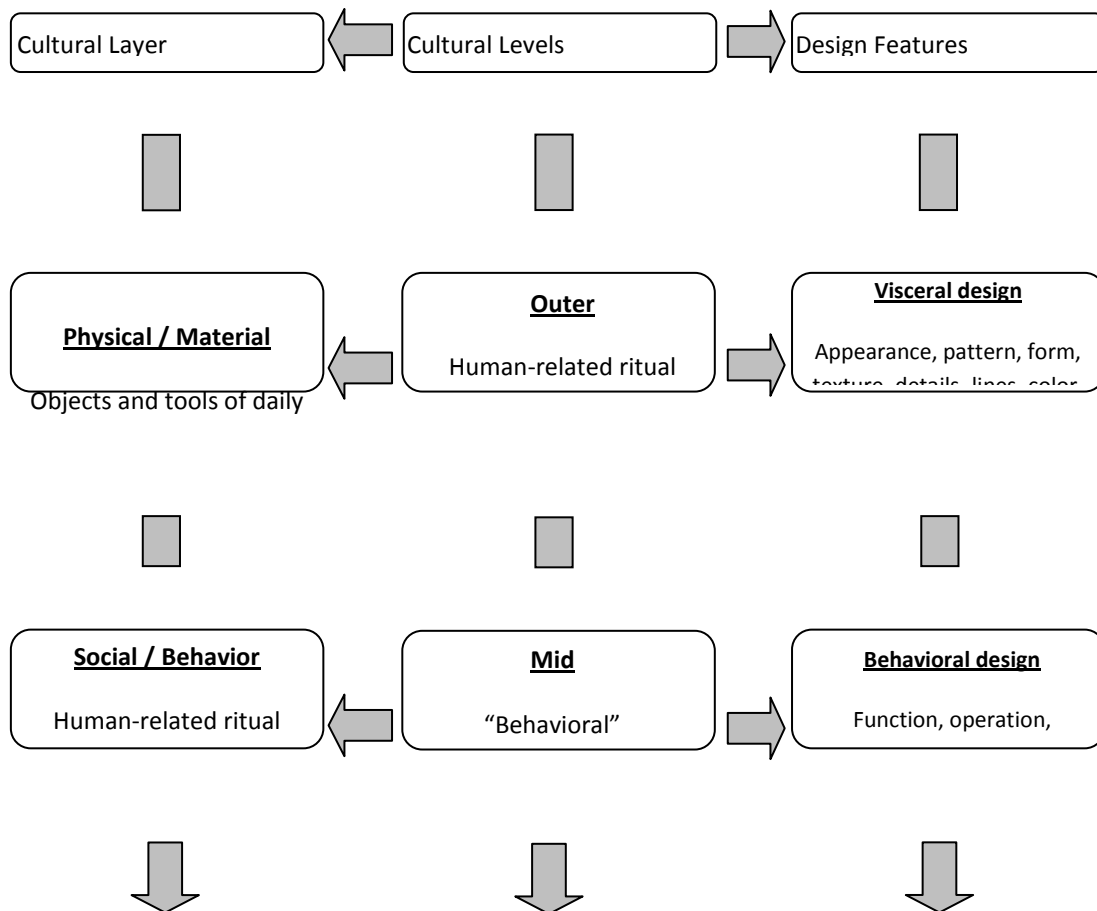

Despite the influences of foreign culture, some remote Indonesian regions still preserve uniquely indigenous culture. Indigenous ethnic groups Mentawai, Asmat, Dani, Dayak, Toraja and many others are still practicing their ethnic rituals, customs and wearing traditional clothes.

CULTURE ELEMENTS AND DESIGN

Culture as identity plays an important role in product design. By implementing cultural features into products design can improve life quality and the social level. The design is not only focused on function and appearance but also on the heritage and connection to the culture concerning problem in order to redefine people lifestyle (Hsu, 2012). In addition, designers need to make things that satisfy people’s needs, in terms of function, in terms of being understandable and usable, and in terms of their ability to deliver emotional satisfaction, pride, and delight. In other words, the design must be thought of as a total experience. (Norman, 2013)

Three Cultural Levels

Leong and Clark (2003) developed a framework for studying cultural objects distinguished by three cultural levels. There are the outer tangible, the mid behavioral level, and the inner intangible level. Based on previous studies, a framework for studying cultural object is summarized as shown in figure 1. Culture can be classified into three layers: (1). Physical or material culture, including food, garments, and transportation related object, (2). Social and behavioral culture, including human relationship and social organization, and (3). Spiritual or ideal culture, including art and religion. These three cultural layers can be fitted with Leong’s three cultural levels given above. Since cultural object can be incorporated into cultural design, three design features can be identified as follows: (1) the inner level containing special content such as stories, emotion and cultural features, (2) the medium level containing function, operational concerns, usability and safety, and (3) the outer level dealing with colours, texture, form, decoration, surface, pattern, line and details.

Figure 1. Three layers and levels of cultural objects and design features (Lin, 2006)

Cultural Resources of Malang, Indonesia

Malang is the second largest city in East Java, Indonesia. Malang has so many cultures such as Malang mask dance, walikan language, batik Malangan and many else. From those cultures, Malang mask dance is famous and become Malang's icon since the 70s (Pratamawati, 2015). Malang mask dance is inherited traditional theatrical art performance. Malang theatrical mask dance often performed in fragments the story of which are taken from Panji tales which are common traditional folklores that also found in many parts of Indonesia such as Java island, Lombok, and Bali.

What makes Malang mask dance interesting is all the dancers representing some characters who wear masks. The characters in Malang mask are sixty-four and they play the roles of sixty-four figures in Panji tales. The Malang mask (topeng Malang) has a special characteristic such as their thick wood or Randu wood which has a darker color with carving, fashioned with square bones and high cheek bones.

Figure 2. Malang mask character

The Malang mask has the uniqueness that differs from another mask in Indonesia. First, the nose shape. Malang mask is one character embodied in the form of a nose. A nose like 'pagot' (knife carver tool) small reflecting soft character. When pagot resembles a medium-size or reflects figures resemble the tip machete valiant. Average pug nose, small show devoted character, usually for a clown figure. Second, Eye mask shaped grain figures show honest, patient, gentle, agile, and officers. Shaped like soy beans figures show the

officer, agile, waspish, valiantly with many of the noble character. Big eye shape (widened) figures show that never retreat, valiant. When the mask with big eyes and glared shown gallant, cruel, and anger character. Third, Lips or mouth also shows characters – figures. The open lips shows valiant character, the wide lips shows the evil. And the last one is color. There are five typical colors used to decorate the masks. The red color symbolized courage, the black color symbolized ambitions, the yellow color symbolized wisdom, the white symbolized pure character, and the green one symbolized peace.

METHODS

The investigation of design method and cultural features is shown in several studies of the design field. Lin (2007) provided four steps to designing a cultural product. There are an investigation, interaction, development, and implementation using scenario and story-telling approach.

The common discussion of cultural applications to the product is the theory of product semantics. For example, Lin and Huang (2002) classify the logic of figurative designs whose forms are based on some reasonable visual connections. It defines visual connections such as metaphor, simile, allegory, metonymy, and analogy borrowed from linguistics, and then systematically analyses these elaborate relationships between products and the signs. In addition, Butter (1989) suggested that the design process can be seen as somewhat linear with clearly distinguishable phases and suggested eight steps for the systematic generation of semantically relevant design concepts. Based on this literature, an approach was to integrate the design theories and provide assistance for cultural product design.

THE DESIGN PRACTICE BY MALANG MASK

The application of cultural features is a powerful approach to product design. More products combined with local culture features to improve the identity. Today customer needs a product which is not only functional but also stimulates emotional pleasure. According to the Gobe (2010) by understanding people's emotional needs and desire is real, now more than ever, the key to success. The result of studying the Malang mask shown in table 1 demonstrated that cultural features implemented in product design in order to added value.

Table 1. Cultural feature of Malang mask

| | |
|---------------|---|
| Object | Malang mask Panji Asmorobangun |
| Tribe | Java |
| Type | Accessories / Ornament |
| Image |  |

| | |
|-------------------------|---|
| Material | Sengon wood |
| Colour | Green which symbolizes peace |
| Characteristic | Malang mask has unique characteristic than the other mask from Cirebon, Solo, and Bondowoso. The difference is the use of color. The color of Malang mask is more diverse. The ornament/carving of Malang Mask more detail, especially 'ksatria' or superhero character which has 'urna' symbolize human character, 'sinom' symbolize universe, and 'cula' symbolize superiority. In protagonist figure, Panji Asmorobangun is described as a handsome young man |
| Operation | It wear around face and sometimes it fold with rubber |
| Pattern | Each type of Malang mask character has a different name, sex, and personality |
| Form grammar | The order of arrangement followed special rules |
| Form construct | The shape of Malang mask is like a human face with green colour. The shape is symmetrical, and decorated with carving in yellow, pink, white and gold. Panji character has pointed nose, small eyes, mouth opened, thin moustache, and gold dot between his brows. |
| Formation | |
| Using scenario | The using Malang mask only be worn as dance property in traditional event |
| Cultural content | They would be used in traditional ceremony/maturity. Through this ceremony, children who adulthood introduced with the spirit of their ancestors more or less forms like mask they were seeing. The mask dance also used as a repellent disease. |

Based on Lin (2007), in a practical design process four steps are used to design a cultural product are investigation (set a scenario), interaction (tell a story), development (write a scripts), and implementation (design a product).

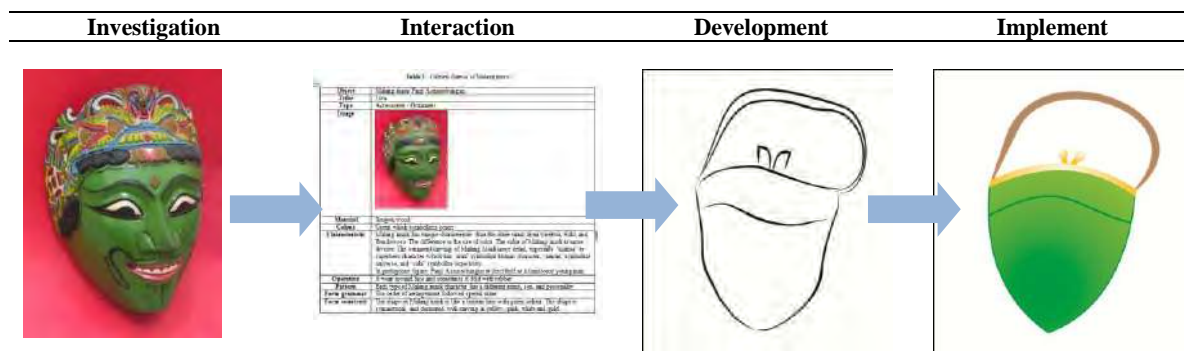

Figure 3. Products Design Process Sample

- 1) Investigation/set a scenario: in this step focused on understanding cultural product through discussion and recognizing the trend.
- 2) Interaction/tell a story: this step focuses on user based observation to explore the social culture environment in order to define a product with cultural meaning and style derived from the original cultural object. In this step, designer must be analyze the culture, to identify original culture as shown in Table 1. Describe product features and develop a product with cultural attribute.
- 3) Development/write a script: the purpose of this step is developed sketch. During this process, modification may occur in order to transform cultural meaning into cultural product.

- 4) Implement/design a product: in this step, designer developing the concepts and design realization by figurative product semantic in order to transform into cultural-oriented products. The last one is completing the design by examining the details and integrity of the cultural products.

Taking Malang mask as an example, Figure 4 shown the final culture oriented product designed from Malang mask culture. The scenario is that embed based on the scenario, the Malang mask transformed into a modern women handbag.

Figure 4. Culture-oriented products

CONCLUSION

In recent years, Indonesia dedicated itself to the promotion of creative industries. However, the design application, for now, is to transform mostly the concrete products of traditional life into creative application in industries. The design is not only suitable for customer's needs but also embed the cultural aspect in an aesthetic way through product design.

The Malang mask provides a good example of applying cultural features into product design while still retaining a meaningful cultural value. The design of culturally oriented design derived from Malang mask helps the consumer to experience both history and design when they use this product. This paper demonstrated how to transform cultural feature into a product which can fit the global market. The idea to transfer, transit and transform intangible cultural into a culture-oriented product can extend the heritage and traditional values of Indonesia.

ABSTRACT

The Association of Southeast Asia Nations or ASEAN has been being the most prominent and well-established regional association that put a huge contribution on the acknowledgement of the Southeast Asia Countries to the international community. ASEAN has also been moving into one of the most advance region that design its community into three dominance pillars that cover the whole development of its member states through the Economy, Social & Culture, and also Political and Security.

Due to the diversity of the cultures, tribes, norms, and the beliefs, ASEAN is legally binding the member states by promoting the non-Interference Principle to all member states in order to integrate all of ten nations in Southeast Asia. However, as the time goes by, the non-interference Principle that is being promoted and upheld by the ASEAN is somehow limiting the role of ASEAN itself in ensuring the integration that supposed to take part in all member states to foster the development of ASEAN as a whole.

The Non-Interference Principle is creating such a hardship in achieving the real integration of all aspects in ASEAN, especially in the socio-cultural aspect, as it tackles the process of harmonizing thousand cultures and identities in the region in various ways. One of the notions which proof that non-interference principle of ASEAN is hindering the integration is shown by the case of *Sama Bajau* people which is usually being known as the Sea Gypsies of Southeast Asia.

The *Sama Bajau* people is categorized as one of the indigenous people that live in the sea around Indonesia, Malaysia and Philippines' sea. As they are living in the sea, they are often being the victim of the pirates, instability of the climate, resources shortages, and so forth, yet not a single solution to address this issue has been settled, one of the cause is the existence of the non-interference principle of ASEAN. Therefore, the ASEAN non-interference principle can become an obstacle in surmounting the problem of indigenous tribes in the region, especially in the case of *Sama Bajau* people in dealing with the social integration.

Key Words: ASEAN, ASEAN's Non-Interference Principle, Indigenous People, Sama Bajau People

A. Introduction

Association of Southeast Asia Nations that is well known as ASEAN is the intergovernmental organization that operates in the regional area, to promote the establishment of the intergovernmental cooperation that facilitates the integration in the field of economy, social-cultural and also the political security amongst its member. ASEAN has also been established since 50 years ago, on 8 August 1967 by Indonesia, Malaysia, Philippines, Singapore and Thailand, and it has expanded its membership ten membership in total,

which also include Brunei Darussalam, Cambodia, Myanmar and also Vietnam.³³ ASEAN as an official entity operates in the region has the principal aims that include the acceleration on economic growth, social progress and sociocultural evolution among its members, that is also involved the promotion on the stability on region's political security and also the provision of its member the mechanism to resolve the differences peacefully.³⁴ As the time has been passing by, ASEAN, as an organization has been continually evolving itself into more inclusive and progressive organization that tries to accomplish the aims that have been stated since it is formed in a very diverse community, one of the way is by legally binding its member states in non-interference principle, as it is stated on its charter that are being ratified by its member on Bangkok Declaration and Kuala Lumpur Declaration.³⁵

However, the main principle that is legally binding its member states to accomplish the aims of ASEAN apparently is not applicable in all aspects. It might be applicable in the area of economy as well as political security of the region but it is seemingly needs to be re-considered in the field of socio-cultural progress. It is being proofed by the progressive accomplishment in terms of economy as it can be seen on the positive development on the ASEAN Free Trade Area (AFTA) and also the ASEAN Economic community as a whole. It is also features progressive accomplishment in terms of the stabilization political security as it might have been exemplified that in these past 50 years ASEAN, as a region has been remaining to grow in peace. The only problem that recently keeps appearing is in the terms of socio-cultural progress and evolution. Considering that ASEAN is highly consisted by several of tribes, races, religions, ethnics and it does need not only the non-interference but also the tolerance.

Keeping in mind that various background that happen to underlie the establishment of ASEAN as a single entity is a thing that somehow needs to be ensured and it does need the huge amount of tolerance towards each tribe, ethnic, religion, country to still be formed as one. In the other words, the rights and the obligation of each stakeholder involves has to be considered as one of the factors that lie in every decision that is being made. Prioritizing the main principle of ASEAN in conducting any decision is right, but somehow it sometimes contradicting some points on the charter of ASEAN, that basically have been ratified by all the member states, especially in the field of socio-cultural. One of notions to strengthen that statement is when it deals with some indigenous and stateless people who are living in the region. Those indigenous and stateless people that live within the region are mostly being the victim on the ignorance of human rights that supposed to be had by all of the people in the name of non-interference.

Taking the example on *Sama Bajau* People case, *Sama Bajau* is one of the indigenous tribe that lives within the region of ASEAN. The *Sama Bajau* community is a diverse group of people connected by the sea and the myths, rituals and dances that they carry beyond their ancestral homeland. For the *Sama Bajau*, the point of reference is the sea, the sea current, and the other seas beyond the horizon. Yet although scholars have argued that these groups of people are basically one from an historical perspective, a growing consciousness of political and economic boundaries is giving rise to a sense of separateness among the groups themselves that belies the evidence of a shared culture.³⁶

They are also mostly being known as the sea-gypsy of Asia as they continually living nomadically between those areas and still dependable on the nature and also the acceptance of the people which they are mostly close with that live in the land. As the time goes by, the *Sama Bajau* people have been developing into quite huge community that continually strive for their lives in dealing with nature as well as the community that could not accept them easily. They are also often the victim of the nature instability that causes them deaths. They also have to deal with some piracy that often threatened them and took away their boats so they have to find another place to live. Those thing are somehow has been being such a normal condition to them where the instability is all they have to deal with for the decades and they never receive enough assistance to fight for their rights.

³⁵ Ibid.

³⁶ Rodney C. Jubilado, "On cultural fluidity: The Sama-Bajau of the Sulu- Sulawesi Seas", University of Wollongong Australia (2010)

Therefore, in this article, the authors will discuss more on; (1) Describe on how is basically the mechanism on the conduct of the non-interference principle in ASEAN relations with its member states, (2) Explain on the existence of the *Sama Bajau* People as part of the Sea People that is living in ASEAN Region and its changes throughout the history, (3) Explore the behavior of *Sama Bajau* People in responding the internal and external factors to deal with the modernization and globalization (4) Analyze on the application of ASEAN Non-Interference Principle and how it has not been able to achieve the social integration in the region and it also have not been able to assist the practice of the human rights for all its people that live within the region. *Sama Bajau* People could be one of the concrete examples on how indigenous people are basically often being the object that are not being subjected by the equal human rights to at least being accepted in the region and being acknowledged as the entity that lives within the region that also have the rights to access their basic needs in the region, (4) Explain about the assistance that is being given by the government of certain countries in dealing with *Sama Bajau* People (5) Provide the potential solutions that might be able to be taken by ASEAN as the Intergovernmental Organization in Southeast Asian Region to address the problems with Indigenous people.

B. Association Of Southeast Asian Nations And Its Principle

The core foundation on the establishment of the Association of Southeast Asia Nations (ASEAN) is based on the Bangkok Declaration 1967 and it was reiterated on the Kuala Lumpur Declaration 1997.³⁷ ASEAN is having three major pillars in governing the region, which are ASEAN Economic Pillar, ASEAN Socio and Cultural Pillar and ASEAN Political and Security Pillar. Before the ASEAN legally being established by the Bangkok Declaration on August 8th 1967, actually it was firstly arranged by the Treaty of Amity and Cooperation in Southeast Asia (TAC) alongside with the fundamental principle that right now is being used by the ASEAN which involves;³⁸

1. Mutual respect for the independence, sovereignty, equality, territorial integrity a national identity of all nations,
2. The right of every State to lead its national existence free from external interference, subversion, and coercion
3. Non-interference in the internal affairs of members
4. Settlement of differences or disputes through peaceful means
5. Renunciation of threats or use of force
6. Effective cooperation among the members

Those six fundamental principles are later being used as the fundamental principle that is being used as the fundamental base on how ASEAN is being governed up until this moment. Then those principles are being completed by the establishment of the ASEAN Charter which is being adopted by the Member States on 13th of ASEAN Summit on 2008. The Charter gives ASEAN a legal personality, therefore, accountability; it clarifies common objectives and principles and defines its structure, mechanisms and operations. It codifies past agreements within ASEAN and reiterates the principles of cooperation and relationship contained in its basic documents such as the declarations agreements, conventions, concords, treaties and other instruments. The basic principles of ASEAN that is legally used right now are and it is basically being simplified from the principles that were being made in TAC, which are (1) sovereignty, (2) equality, (3) territorial integrity, (4) non-interference, (5) consensus and unity in diversity. ASEAN Charter des also called for the establishment of mechanisms to address regional issues on human rights, migrant workers, women and children.³⁹

³⁷ Keling, M. F., H. M. Som, M. N. Saludin, M. S. Shuib, And M. N. Ajis," The development of ASEAN from historical approach", *Asian Social Science* (2011)

³⁸ Jade Tessier, "Indigenous Peoples and ASEAN Integration", Asia Indigenous Peoples Pact (AIPP) Foundation, (2015)

³⁹ Loc.cit, "Indigenous Peoples and ASEAN Integration

The principle as well as the charter which have been mentioned above exist, yet they have not been optimally applied, especially in addressing several problems that related with human rights, women and children and also the migrant workers that mostly involve in the area of social and cultural pillar. It is due to the fact that ASEAN is beholding multiple cultures and identities that are coming from each of the nationality and it somehow stimulates the establishment of the polarization on each interest that is unable to be uniformed by the ASEAN, therefore, the ASEAN Non-Interference Principle exist to ensure that each of the interest would remain in ASEAN and it would not be intervened by the other interest, even though all of those interests are staying in the same umbrella of ASEAN. The value that is being constructed under the Non-Interference Principle is basically needed, yet somehow once it deals with such kind of issue that is involved in the area of shared humanity is supposed to be having the exception in the non-interference principle.

• ASEAN Non-Interference Principle and the limitation in Promoting Human Rights

ASEAN Non-Interference is one of the principle is one of the main principle that underlies the relations between the member-states in ASEAN as it prevents external interference in order to ensure domestic and regional stability.⁴⁰The Non-Interference principle ensures the states-sovereignty in dealing with the domestic issues without the intervention from any actor of ASEAN. The limitation that is being carried in the non-interference principle is basically important as ASEAN is formed with the huge diversity, each of the interest of the country that represents its own identity it has to be preserved and one of the way to preserve it is by holding the non-interference principle, as it is also being the common denominator that will unite each of the interest.

However, the Non-Interference principle does also limit the dispute settlement that happens between two nations or more in ASEAN unless the nations give the grant to the ASEAN to take part, as it has been growing as a rhetoric norm rather than concrete mechanism and it has never been absolute. It does also limit the role of ASEAN in ensuring and promoting the human right regardless their country, as they are not being granted or requested to assist. (e.g Indigenous Tribes, Rohingya Cases).

In terms of human rights, basically ASEAN has been adopting ASEAN Human Rights Declaration (AHRD) in 2002, at the 21st ASEAN Summit in Phnom Penh, Cambodia. The ASEAN Human Rights Declaration is being adopted accordance with our commitment to the Charter of the United Nations, the Universal Declaration of Human Rights, the Vienna Declaration and Program of Action, and other international human right, however the AHRD does not include the right of Indigenous People on it.⁴¹ And the non-interference principle is even limiting the way on how ASEAN shall be dealing with the indigeneous people once it is only dealing with a certain country as part of the memberstates. It leaves the country that is affected to deal with the human rights cases, especially in dealing with indigeneous people as the way the country want to deal with, and ASEAN as the intergovernmental organization could not uniform the action and also the action plan that is going to be done by each of the memberstates due to the limitation on non-interference principle.

Basically, the adoption of AHRD by the member states of ASEAN is supposed to be in allignment to the Paragraph 20 of the Vienna Declaration calls upon nations to take concerted positive steps to ensure "the full and free participation of indigenous people in all aspects of society" and also to "take concerted positive steps to ensure respect for all human rights and fundamental freedoms of Indigenous people, on the basis of equality and non-discrimination, and to recognize the value and diversity of their distinct identities, cultures and social organization."⁴² It is also supposed to be addrd by the 4's recognition that the rights of "vulnerable and marginalized groups are an inalienable, integral and indivisible part of human rights."⁴³ Additionally, in Bangkok Declaration on 1993, there is also the agreement that has been ratified by all of the memberstates that

⁴⁰ Abraham Alonzo, "Human Rights in ASEAN : Non-Interference Principle Impedes the Development", *Northwesten Journal of International Human Rights*,(2012)

⁴¹ Op.Cit "Indigenous Peoples and ASEAN Integration"

⁴² United Nations Office of High Commissioner, Vienna Declaration and Program of Action 1993, (<http://www.ohchr.org/EN/ProfessionalInterest/Pages/Vienna.aspx>) Accessed on March 7th 2015

⁴³ *ibid*

emphasize “the importance of guaranteeing the human rights and fundamental freedoms of vulnerable groups such as ethnic, national, racial, religious and linguistic minorities, migrant workers, disabled persons, indigenous peoples, refugees and displaced persons.”⁴⁴ In the ASEAN Charter, article 1 point 4 does also said that one of the purposes of ASEAN is “to ensure that the people of ASEAN live in peace with the world at large in a just democratic and harmonious environment”.⁴⁵ In the other words it means, all the people of ASEAN is having the right that need to be ensure by the ASEAN to live in peace, the indigeneous people that happens to live in ASEAN for centuries are also supposed to be reffered as the people of ASEAN and it supposed to be addressed in the AHRD. And the promotion of human rights has to be uphold in all of the memberstates, and ASEAN as the Intergovernmental suppose to have the right to establish the right mechanism to first-handedly touch the grassroots by directly working with each country, and uniform all the treatment in terms of the promotion of human rights in all member states of ASEAN. Yet, it could not be done easily as it is being limited by the existence of Non-Interference Principle, where ASEAN is unable to straightly go to its memberstates and tell them what to do, as it violates the sovereignty.

Therefore, the AHRD as the main declaration that is being reffered in dealing with the human rights cases in ASEAN, under the ASEAN Intergovernmental Comission in Human Rights is supposed to be accounted in promoting the people of ASEAN that involve all the human rights and fundamental freedoms of vulnerable groups such as ethnic, national, racial, religious and linguistic minorities, migrant workers, disabled persons, indigenous peoples, refugees and displaced persons. Then, the AHRD supposed to really be applied in each of the member states and it shall also be the prioritize document that will be used in addressing any human rights issues, however, ASEAN as the main intergovernmental organization of Southeast Asian Nations has to have the right to legally force and bind its memberstates with a certain mechanism regarding the humanity cases.

• Things which have been done by the Association of the Southeast Asian Nations in dealing with Indigenous People

In promoting the human rights for all the people of ASEAN, in allignment with the UN Universal Declaration on Human Rights, Vienna Declaration and the other international human rights declaration, then ASEAN as the intergovernmental organization in Southeast Asia is adopting the ASEAN Human Rights Declaration (AHRD). This AHRD is being applied in all the memberstates of ASEAN under the umberlla of ASEAN Intergovernmental Comission on Human Rights. As it has been being applied these past five years, it is initially being made to address specifically about the human rights cases in ASEAN, while infact it in the declaration has not even touched all parties in ASEAN, it does not address the rights of indigenous peoples in it, eventhough ASEAN is the homeland of an estimated 93 to 124 million of the world’s 370 self-identified indigenous peoples, and takes pride in claiming to be a region with one of the world’s most ethnic, cultural and linguistic diversity.⁴⁶

Up to this particular moment, there is no clear indication that the AICHR, as a human rights body, will start discussing and addressing the human rights situation of indigenous peoples in Southeast Asia in the near future. The declaration has also recieved widespread criticism for being flawed and for falling below international human rights standards.⁴⁷ However, AICHR is still promoting the way to legally bind the declaration to each of the memberstates in ASEAN, yet it takes a very slow progress due to the non interference principle that needs to be upheld by any stakeholder of ASEAN and still have not recognized the indigeneous people and their rights. It contradicts the ASEAN Member States’ commitment to the UNDRIP, and runs counter to their obligations under the human rights treaties they are parties to.⁴⁸ Some Member States have

⁴⁶ Op.Cit “Indigenous Peoples and ASEAN Integration”

⁴⁷ Ibid.

legislation and/or policies that recognize indigenous peoples and their rights, but most have none. In cases where there are laws recognizing indigenous peoples and their collective rights, these are also regularly violated. Some claim that there are no indigenous peoples in their country or that everyone is indigenous, or consider the recognition of ethnic diversity as subversive.

C. The *Sama Bajau* People

- **Background of the *Sama Bajau* People**

Sama Bajau are the indigenous people who are Nomadic, Stateless, sea-going tribe originating from Southern Philippines or off the coast of Malaysia and have migrated as far as Indonesia, some literatures also said that the *Sama Bajau* People are also living until Thailand. They are using the sea as the central of their life, even though some of them are living in coastal land but they basically are keep in moving in from one area into another area, therefore they are usually being called as the sea gypsies. Additionally, the usage of the sea as the central of their activities does also mean that even they are keep in migrating into one area into another area, they will always use sea as the place that can unite them. Referring to the explanation that is being said by the Donohue in 1996, the *Sama Bajau* refers collectively to a group of maritime people called *Sama* or *Bajau*.⁴⁹ They are also usually call themselves based on the place they are living, such a *Sama Davao*, *Sama Tuaran*, *Sama Sulawesi* and many more as basically they are being located scattered all around the international boundaries of Indonesia, Malaysia and Philippines. That is also indicating that their movement are beyond the political and geographical territories of three countries yet they does not really belong to any specific country and their origin are still remaining unclear. As they are located in scattered areas in the seas and in the coastal areas between Indonesia, Malaysia and Philippines, yet they are still beholding the same identity as *Sama* or *Bajau* people, and it stimulates the appearance of the questions on where they are originally coming from, and whether or not they are coming from the same origin, and how could they are basically being widespread all over the region.

In discussing the *Sama* history and identity, it might be started from the basic anthropological and demographic information about the *Sama Bajau* itself throughout the history. It has been long acknowledged that the existence of *Sama* people are being originated from Sulu, it is based on the linguistic studies that are being undergone by the Kem Palson.⁵⁰ There are also various number of the major groups of Muslim in Mindanao that are being acknowledged as the *Sama* People are also originally coming from Sulu. Additionally, based on the local legend that was being taught in the region for centuries, the *Sama* People are also being mentioned to have some correlations with the people in the lake of Borneo Royalty and also the “Tau Suluk” or “Tausug Sultanate”.⁵¹ On the other side, there is also the history that are being trusted by some writers that these Sea People are originally coming from Johore yet they were supporting the Sultanate Sulu as it was being the hegemonic race or nations that usually were also being called as the “Tau Suluk” or “Tausug Sultanate”. In simplifying the explanation, these Sea People, specifically was known as the *Sama Bajau* People was originally coming from Johore, at that time Johore was being ruled by the Brunei Kingship, the the Brunei Kingship was transferring the *Sama Bajau* People to Sulu Sultanate.⁵²

As the time goes by, the origin of these Sea People are no longer being the main issue that are being discussed, besides, the most important point that needs to be addressed in discussing about these indigenous people is about the real problem that are happening inside the community and how they can really be acknowledged as the community even though their location is being scattered all over nations and how they can also be embedded into the ASEAN as they are part of the ASEAN People who are living in the region, hence they also have to get their right to access their fundamental needs as they also have to do their obligation as the People of ASEAN. Yet, the fact that is happening in the ground right now is most of the thing that happen to

⁵¹ Quilling, Mucha-Shim Lahaman, *Our voices shall not perish* (2012)

⁵² Ibid

them in the seas has gone unnoticed by the public and they don't have the access as well as the knowledge on how they shall be asking such assistance.⁵³ Most of the issues that are happening to them both for the *Sama Bajau* People that are not living in sedimentary land as well as living in sedimentary land are they don't really understand how to deal with the external community, including local rulers, national governments and pirate groups.⁵⁴ They are usually does not really know what to do in dealing with external pressure and most of them end up giving up what the external pressure wants them to do, such as giving their boats to the pirates, being forbid to enter such area, social exclusion and social rejection by the neighboring communities, and also the poverty.

- **Current Situation and Activities of the *Sama Bajau* People**

Based on the recent statistic that is being done by the researcher in investigating the sea-dwelling communities by Sopher, the number of the *Sama Bajau* People that are located in Southeast Asian Countries are approximately less than 20,000 people.⁵⁵ These 20,000 souls that are labelled themselves as the sea-people or sea nomads that are being called as the *Sama* People, they are basically being divided into three major communities based on the location they are residing yet still being united by the sea as the central. Mainly, *Sama Bajau* does only refer to the Sea People that are residing in the Philippines, Borneo and Sabah and also Eastern Indonesia. There are also the other communities that are also part of the Sea People who are being called as the Moken, it is residing in the Maergui Archipelago and coastal area that belongs to Myanmar and Thailand. And the last one is the Sea People who are residing in the area of Thai-Malay Peninsula and Sumatra that called them as Orang Laut.⁵⁶ Despite the fragmentation that is exist within the group; basically all of the groups are also classified under the name of "Sea People" or "Sea Nomads" by the European Union. They are also being said to have such similarity with the Sea Gypsies of Europe, that is also living nomadically in the sea, living outside society, ignoring the laws and conventions, therefore they are both fragile and dangerous at the same time.⁵⁷

The nature of *Sama Bajau* People who are continually moving from one area to another area is basically being discouraged by the national governments as their movement is categorized as illegal movement, hence, it leads to the encouragement for the *Sama Bajau* People to transform their nomads living into the sedentary in the nearest land or in the coastal area, this is like what happening in Philippines and Sabah-Malaysia. In Sabah's offshore island is also providing some of the houses to the stateless *Sama Bajau* People who are coming, under the umbrella of the Malaysian Government, most of the *Sama Bajau* People who are coming are being recognized as undocumented Filipino Immigrants. Even though this *Sama Bajau* Community has been being given the place to live in the land, once they are not doing the work in the sea, they are still live exclusively within the stilt house and only interact with their own people. Besides, basically there are also still quite huge community of the *Sama Bajau* that are refused to have such a sedimentary living and stay in the land, and they still prefer to have the traditional "Boat Villages" living that will allow them to live nomadically, this is mostly taking place in Southern Thailand, Indonesia and some of Sabah offshore islands, these places are basically quite common to the tourist yet it has not being touched by the tourist stakeholder, so most of the tourist are just coming through and taking picture of the poor people.⁵⁸

The *Sama Bajau* Community is almost exclusively involved their occupation directly in touch to the sea, such as being the boat-builders, traders in sea products, personnel on private ships, and also being the fisherman. Recently, in some islands of Sabah, there are also being recognized a few groups of the community have been

⁵³ Boomgaard P In a state of flux: water as deadly and a life-giving force in Southeast Asia. In:

Leiden, p 1–23(2007)

⁵⁸ Hope S, Outcasts of the islands: the sea gypsies of Southeast Asia. Harper Collins, London. (2001) p145

engaged with the tourism development on their area, mostly in the traditional boat villages of Sabah. The *Sama Bajau* community that is still living in the traditional boats or those who are residing sedentary in the land has basically have a very huge dependency on the sea. It has been happening since the past, in the past most of them are just taking anything possible from the sea (fish, seaweeds, pearls) then just sell it to the community that are living in the land, where right now in this modern area, the *Sama Bajau* people are basically still doing the same occupancy in the past, just yet creating a little innovation on the things that they get in the sea. The example on the products that they are selling right now is varied, starting from the normal fish until those types of fish and seaweeds, crustaceans, sea urchins and jelly fish that have a very important nutritional diet. Then they are also innovating the things that they have gotten from the sea before it is being sold by making it into the dried fish, tortoise eggs, dried seas cucumber, and many more.⁵⁹ They are also selling special handcraft that is being taken from the seas component such as from pearl, black coral, tortoise shell, nacre and many more.⁶⁰ Then *Sama Bajau* People will sell the products that they have had to the nearest local market in the neighboring community, while their special handcraft from the seas component is also being sold until the Chinese Market.⁶¹

One of the main reasons why *Sama Bajau* people is highly depending their occupation on the sea, that is due to the fact that they have a very limited access on the natural resources, even for making the boat and also the stilt house for them to make a living they really are depending on the logs that are being drifted downstream.⁶² Furthermore, they are also do not have the ability and the knowledge on how they can process the natural resources into something valuable that can give them an opportunity to make a better living. They are not getting used to the sedentary living that has the ability to directly manage and process any possible resources around them to make a living. As they mostly living exclusively only within their community and does not want to incorporate the cultures from the sedentary and land-based community, they are also do not have the ability to use the technological innovations, thus it is making the to keep their indigenous way of living based on what has been taught by their older generation.⁶³ Therefore, many of them who are being offered to settle down and transform their nomadic living into sedentary living, most of them will reject the offer due to the difference on the culture that they have and the neighboring community that is being suggested as the community for them to incorporate with is not that easy to accept them as well. Moreover, as there is existing the absence of the regulations that can rule these stateless people and also the neighboring community around these people is somehow does also creating such a hardship for the country that try to give such kind of assistance to these sea people to make a better living.

According to the data of from the Department of Social Welfare and the Development of the Philippines, most of *Sama Bajau* People earn a living via vending or fishing. The vending that they are doing, are also being based from the materials that are being gained from the sea. In undergoing that kind of work, their incomes are basically very low at below USD 3, or even USD 2 per day.⁶⁴ They are also not having the access on the good education and also the health facilities due to their acknowledgement that has not been clear yet, most of them are still categorized as the stateless person. In terms of social integration on the nearest region or country, the local community see *Sama Bajau* People as a threat and they often discriminate and does not want to accept them. They do not have a broad right to choose the work they are trying to do due to the social acceptance. Once the *Sama Bajau* people try to reside with the local they have often violated the local norms because they have never known it before and they have limitation to pursue the information. It makes them live exclusively in the coastal area that are quite far from the local community.

Hawaii Press, Honolulu (2008)

⁶⁴ Department of Social and Welfare Development, Summary of Finding on Sama Bajau People, Phillipines (2014)

Considering lot of factors that have been happening to these sea people, specifically *Sama Bajau* People, their nomads and isolate habits is basically has to be transformed. As the time is continually moving, the change on the environment, global warming, modernization and globalization is significantly complex issues that these sea people have to deal with. Their illegal status as the stateless people that does not behold any reference and preference of countries would eventually leave them with multiple confusion on how to overcome those issues. According to the law, they practically are not allowed in moving from one area to another area across the nation boundaries without legal documentation. They are also could not forever have the mobile lifestyle due to the environmental challenge that potentially harm them, they are also could not deal with the piracy as it has been being the external threats that they have not been able to find a way to deal with other than they just give them whatever they want. The high intensity of nomad habits that they have would not also allow them to have the good access on the education, health care as well as the landownership. The growing number of *Bajau* families does also serves as an impetus for responsive local actions that seek to improve the lives of *Bajau* families, as many of them are living under vulnerable conditions.

On the other side, the idea of the sea people has to transform into the sedimentary community is also being the dilemma as well, this is due to the situation once they are trying to find a way and integrate with the neighboring community, they would not be that easy to be accepted as they are not being acknowledged as the people that belongs to that region, and the local community might also see them as the threat. Moreover, their status as the stateless people are also do not allow them to ask for any assistance on the government to help them in dealing with their situation unless the government of the nearby locations is the one who offers the assistance, just like what is being done in Philippines and Malaysia.

D. ASEAN's Non-Interference Principle As An Obstacle In Surmounting The Problem Of *Sama Bajau* People

The *Sama Bajau* is one of minorities that are part of the Sea People that happens to be indigenous tribe that are living in the ASEAN region. They have been living in Southeast Asian before the 13th Century where the nation-state has not been being formed yet, and the kingdom and sultanate were the one that was ruling the region. At that time they were being acknowledged as the freeman and slave that belong to certain kingdom and sultanate. As the kingdom and sultanate era had ended, the legality and the acknowledgement of *Sama Bajau* People as a part of entity is getting blurred, they are only recognized as the Indigenous People that are living in the region of ASEAN and generally labeled as the Sea People, in the other words it does mean that until this moment, they are basically never been legally acknowledged as a part of any nation in ASEAN region, unless the nation is just giving the assistance as they have been living sedimentary in certain area of a country for years, just like what happen in Philippines and Malaysia.

The action that is going to be given by the country in addressing the same issue might be varied and it might lead to the appearance of another conflict due to the polarization of the interest that might create the domino effect. For instance, country A is not accepting the *Sama Bajau* people due to the incapability of the *Bajau* to integrate with the local community, then *Bajau* People might be looking for another region to stay in country B. While country B is basically not accepting the indigenous people, nor do they neglect the existence of this people yet *Sama Bajau* People as their culture is not easily mingle with the local community, so the *Sama Bajau* people might not be accepted as well while in fact, they need the place to stay and reside. Worse come to worst, if this issue is not receiving the right concern to be solved, it might potentially be the problem of all the region just like what happen to Rohingya cases, as basically this sea people is not only happening in Malaysia, Indonesia and Philippines. There are also some of the sea people that are living in Thailand as well as in Myanmar, and due to their high nomads habit, these Sea People is basically could reach any places.

ASEAN as the main intergovernmental organization in the region is basically need to address the human right issues more specifically. The non-interference principle is basically having a very great value to preserve the peace and harmonious living in the region, yet it seems not working optimally in the area of shared humanity. Citing on the purpose of the ASEAN in the article one point 4 that they are basically having the purpose to

promote the live of all people and all member-states of ASEAN to live in peace, then ASEAN does trully have to take the action in realizing its purpose. Yet most of the times, ASEAN is unable to do that due to the inability to touch the nation's domestic interest even though it is in the area of shared humanity.

Hence, the ASEAN non-interference principle can become an obstacle in surmounting the problem of indigenous tribes in the region, especially in the case of *Sama Bajau* people it becomes such kind of obstacle towards the full integration of the region.

E. Solutions That Can Be Addressed In Dealing With The Rights Of Indigeneous People (E.G *Sama Bajau* People)

In accordance to the ASEAN Charter⁶⁵, article 1, point 4, it has briefly stated that ASEAN purpose is to ensure its people and its member to life in peace and harmony and in article 19, point 1 and two has also stated that ASEAN has the immunity and privileges to do its purpose, Therefore:

- The Non-Interference principle shall address more specifically in terms of human rights and in the concept of shared humanity.
- Enforce the establishment mechanism and framework under the non-interference principle that will have the legal privileges and mechanism to work across the countries when it deals with the humanity cases. ASEAN doses have the immunity privileges and it has to be maximize in the seek of assisting and promoting the human rights, especially to the minority and indigenous tribes
- To simplify the effort, the mechanism can legally bind into establishment of rule and regulations that specifically dealing with minority and indigenous people. For instance as the framework that is being established by the European Union to promote the Human Rights for the minority and indigenous people on the Rights of Minorities and Indigenous people in 2007.
- Additionally, through the ASEAN Human Rights Bodies and ASEAN Coordinating Bodies, ASEAN shall also be building closer partnership with the most affected countries to formulate the right mechanism to give the assistance to the indigenous tribes that is in need of protection. The mechanism does have to include the settlement with the local citizens and also give the assistance in working compatibility.

New Actors on a Global Stage: Grassroots Responses to Globalisation in Myanmar

Johanna Garnett, PhD

University of New England (UNE) – Australia

jgarnett@myune.edu.au

ABSTRACT

Young adults from various ethnic groups and agrarian communities within Myanmar are experiencing the impact of globalisation on their local landscapes and communities. Primarily, globalised economics and mainstream development models are resulting in environmental degradation, food insecurity and the loss of livelihoods. This experience is shared by others from the grassroots and peasantry populations around the globe. Although youth in Myanmar do not have a common 'lived' reality with these 'others', they do share a 'common reality of thinking'. They are now part of a global community of practitioners seeking solutions to globalised issues at the local level; they are new actors on a global stage. With this role comes new opportunities, new hopes, but also new fears. They have the opportunity to re-create themselves, from local community members in a strictly traditional and hierarchical social world to global citizens. However, there is a dissonance between these globalised opportunities and national constraints. Their politics is confined within the framework of the nation state, tied to the ground, their communities and landscapes. Dependent on globalisation, their actions remain local. This paper is based on fieldwork conducted over a three year period, 2013 to 2016, within various bio-regions within Myanmar. It discusses the issues facing these young adults, focusing on the creative solutions being developed at the grassroots level. Of interest is how young adults are making meaning of their new agency and involvement in these global communities of interest.

Keywords: Globalisation, Myanmar, youth, grassroots

INTRODUCTION

Young adults from various ethnic groups and agrarian communities within Myanmar are experiencing the impact of globalisation on their local landscapes and communities. Primarily, globalised economics and mainstream development models are resulting in environmental degradation, food insecurity and loss of livelihoods, and high levels of youth migration. Traditional, everyday practices and culture are changing as villagers adjust to their rapidly changing world.

This experience, of globalising processes, is shared by others from the grassroots and peasantry populations around the globe, mainly in the less developed countries (LDCs) (see Choudry 2015). Although agrarian youth in Myanmar do not have a common 'lived' reality with these 'others', many do share a 'common reality of thinking'. Through their praxis they have joined a global community of practitioners seeking solutions to globalised issues at the local level; they are new actors on a global stage. With this role comes new opportunities, new hopes, but also new fears. These youth have the opportunity to re-create themselves, from local community members in a strictly traditional and hierarchical social world to global citizens. However, there is a dissonance between these globalised opportunities and national constraints. For their politics is confined, within the framework of a fragile nation state, tied to the ground, their communities and landscapes. Dependent on globalisation, their actions largely remain local but have global impact.

This paper is based on 7 months of fieldwork conducted over a three year period, 2013 to 2016, within various bio-regions within Myanmar. During this time I lived and worked in Myanmar teaching English and environmental politics whilst undertaking research for my PhD. This critical ethnography was conducted within the paradigm of 'activist research' and through an 'environmental peace' lens.

Environmental peace is a form of peacebuilding that actively sets out to improve the health of ecosystems, and our relationship with our natural environments and with each other. Peacebuilding recognises that relationships are the basis of both conflict and solutions, and central to peacebuilding is reconciliation - reconciling relationships (Lederach 1997, p. 27). Environmental peacebuilding involves addressing our

relationship with the environment (as advanced by Amster 2015). Within this contextual framework, the socio-economic and environmental situation in Myanmar looks bleak.

This paper provides an example of grassroots responses to globalisation within Myanmar. It discusses the issues facing these young adults, but focuses on the creative solutions being developed at the grassroots level. These include environmental and political education, alternative community development initiatives, horizontal networking, use of social media and technology, intra and inter-national collaboration and cross-cultural exchange. Of interest is how young adults are making meaning of their new agency, and involvement in the global communities of interest.

DISCUSSION

Environmental insecurity in Myanmar

Myanmar is home to around 54 million predominately Buddhist (89%) citizens, represented by 135 officially recognised ethnic groups falling under 8 major categories. Theravada Buddhism permeates the government and the majority of people's lives and values. Seventy per cent of the population is involved in or reliant on agriculture that currently accounts for the largest share of the economy, generating approximately 43% of GDP (UNDP 2014). Nearly 45% of the population is under 25; only 5% are over 65. The country is therefore home to a relatively young population traditionally based on the land.

Myanmar was once the wealthiest nation in South-East Asia but is now one of the world's least developed countries despite being rich in natural resources. It is ranked 148th out of 187 countries in the 2015 UN's Human Development Index concerning health, education and income. Myanmar is ranked 134th out of 170 countries on the Commonwealth Youth Development Index with regards to education, health and wellbeing, employment, and political and civic participation. It also came 156th out of 175 of the most corrupt countries in the world in Transparency International's annual Corruption Perceptions Index (2014), and globally is deemed to be one of the least peaceful countries, ranked 130th out of 162 on the Global Peace Index (IEP 2015, p. 9). Myanmar shares borders with India, Bangladesh and China to the north, and Laos and Thailand to the east. Due to this geographical location Myanmar has developed close trade relations with China, and Thailand, as well as joint resource development (Thant Myint U 2011, p. 134).

Myanmar is a nascent democracy currently governed by the National League for Democracy (NLD) under the leadership of the charismatic political activist, Aung San Suu Kyi. The NLD took power in April 2016 following a landslide victory in the national elections in November 2015. Aung San Suu Kyi is prevented from taking the role of President under the 2008 Constitution. She has, therefore, taken on the mantle of State Counsellor and, in this role, is effectively taking her country into the 21st century. Prior to the election, Myanmar had been governed for over fifty years by a military junta (in various guises), following a 1962 coup, fuelled by unrest that proceeded from colonial rule and WWII (see Holliday 2011, p.1; Thant Myint U 2011, p.20). Myanmar has a long history of conflict; between the state and citizens, between ethnic groups and between the people and the environment.

In 2011, political, economic and social reforms aimed at rejuvenating the economy were instigated by the quasi-civilian government held by the Union Solidarity Development Party (USDP), led by then President Thein Sein. Myanmar opened up to a plethora of investment and exploitative opportunities, INGOs, NGOs, civil society and global development institutions such as the World Bank Group, World Economic Forum and the United Nations Development Program, as well as a raft of trade and aid agreements. Though primarily well intended, benefits stemming from these reforms have been slow to reach the grassroots (Prasse-Freeman 2016; Turnell 2014, p. 369). For the vast majority of the Myanmar population, those on the land, livelihoods and land tenure are not secure (BEWG 2011, pp. 36-39; NEED 2013). Environmental degradation lack of public infrastructure, land grabs, food insecurity, a lack of food sovereignty and loss of livelihoods are resulting in the breakdown of traditional, long-established agrarian communities (BEWG 2011; Turnell 2014, p.380), as noted by this research participant:

There are no more young people in the villages due to migration, including my friends. My friends go to Thailand, Korea and Japan, sewing in factories. They get good money but the workers get tied into contracts and pay back costs with interest, so the companies win. They go for a few years, get money and come back. They borrow from others at interest – sometimes up to 20% - for travel costs. Some people sell their land for their children to travel. It has been like this for about 20 years

Globalising forces are compounding matters, in particular land grabbing for special economic zones, factories and agri-business, as described by two youth from different parts of the country:

Long time before, the farmers used very simple methods in agriculture. Nowadays, some greedy people are changing into new methods of industrial agriculture and grow one kind of crop on many acres of land: monoculture. By growing one kind of crop, they just try to produce more and more.

In 2010 a big company came to my village and it bought a lot of land and forests around my village, because they wanted to grow a lot of rubber plants. And then they were cutting down all of forest around my village and they burned it. After burning it, they started to grow rubber plants.

Land tenure and security is fundamental to the future of agrarian populations around the globe, and in Myanmar (GRAIN 2016). Land grabbing is becoming a global human rights issue (GRAIN 2016). Farmers must have land in order to maintain their traditional livelihoods or to adopt new ones, and to keep families and close-knit communities intact.

The situation for the grassroots in Myanmar is being exacerbated by a so called ‘green’ development project instigated by the state that has entered into a number of partnerships with powerful trans-national companies and non-democratic global funding institutions – such as the World Bank and the World Economic Forum. This is in line with the UN’s 2016, Sustainable Development Goals (SDGs). Foreign direct investment (FDI) has exploded, rising from \$330 million in 2009-1010 fiscal year to \$9.48 billion in 2015-16. Aung Sun Suu Kyi’s NLD-led government looks set to follow a modernisation program through its ‘people-centred’ economic policy; one that is focused on jobs and economic growth.

This development focus has serious implications for young people as a large percentage of employment will be in industrialised production, not the subsistence or smallholding agriculture that has been their heritage. Those not being dispossessed are going to be absorbed into this ‘green economy’. Farmers are being tied in to contracts with big business. Youth are viewed as cheap labour for the factories. Finally, as Myanmar opens up to the world, people have access to the internet, social media, television, radio and newspapers. Their world is rapidly changing.

An environmental peacebuilding initiative in Myanmar

There are, of course, a myriad responses to globalisation in Myanmar, which is affecting the varying strata and sections of society very differently. The post-authoritarian state in Myanmar is evolving rapidly and civil society actors are beginning to take advantage of the new political spaces (Borg 2013, online; BEWG 2011). The level and diversity of non-state actors involved in peacebuilding, and hence the development of community-led and participatory approaches, are growing (BEWG 2011, p. 17; Holliday 2011, p.169; Petrie & South 2014, p. 91).

This paper discusses how agrarian youth, who are concerned about the environment and their traditional communities, are responding. The environmental grassroots organisation that I identified and chose for my PhD study, the Network for Environment and Economic Development (NEED), is one such group that has mobilised with a particular focus on food security.

NEED was instigated in 2006 in Thailand by the Executive Director, Khaing Dhu Wan. In 2008, with funding from its ongoing and primary donor, Child’s Dream (www.childsdream.org), NEED was able to rent some farm land in Baan Bo Hi Village, Doi Suket, on the outskirts of Chiang Mai, build a school and dormitory and establish a model farm initiative (MFI) and residential educational facility. The structure of the NEED MFI in Thailand, and subsequently NEED’s eco-village foundation (EVF) and school in Myanmar, was heavily influenced by a Thai grassroots environmental organisation, Pun Pun, and its organic farm and educational facility in northern Thailand (see www.punpunthailand.org).

NEED, in the early 2000s, was part of an activist diaspora, a loosely knit group of political and environmental activists working for human and land rights in Myanmar, and who were primarily resident and active in the Myanmar/Thailand border region (see Simpson 2013 for a discussion). Between 2006 and 2014, students from Myanmar travelled across the Myanmar/Thailand border to take part in the educational program offered by NEED. However, the focus of NEED’s operation since October 2013 has been in Myanmar where NEED hopes to educate, train and empower the next generation of Myanmar civil society leaders in sustainable agriculture, environmental conservation and community-based economic development in order to protect the livelihood, interests, and human rights of all Myanmar people.

Khaing Dhu Wan says that “although indigenous people in Myanmar have crucial knowledge of traditional farming and management of their environment, they lack awareness or understanding of imposed

national laws and lack the power to protect their land, forests and natural resources” (2006, p.6). NEED’s training program was developed after discussions with members of agrarian communities. Khaing Dhu Wan believes that civil society in Myanmar, particularly farmers, possesses significant potential for contributing to the prosperity of their nation.

From the beginning, NEED has targeted the young generation of Burmese who are related to agriculture – particularly those from within the geographical and social periphery of Myanmar (Khaing Dhu Wan 2013, pers. comm. 28 October). NEED’s focus is on training ‘social mobilisers’ (young adults from varying ethnic groups, ages ranging from 18 to 30 years of age) in the belief that Myanmar civil society, particularly youth, must be strengthened and empowered at the grassroots level (Khaing Dhu Wan, 2009). The challenge NEED has set itself is to assist small holder farmers and agrarian communities in addressing localised environmental degradation and food security issues. The aim is to enhance traditional, cultural, practical skills and knowledge with new, more environmentally or ecologically sustainable, community-friendly agricultural techniques, practices and processes (NEED 2013, online).

NEED’s praxis aims to redress the issues facing agrarian communities in Myanmar, and to resist future environmentally degrading and exploitative mainstream development. NEED participants share the concerns of millions of others from agrarian communities round the globe who are in the throes of complex forms of transition to capitalism. NEED is influenced by, and shares the ideology and praxis of, the trans-national grassroots agrarian, eco-culture and food social movements. Its ideology is also aligned with Buddhist ethics and simple living. NEED has chosen young adults as its target audience, and environmental adult education (EAE) and permaculture as the tools and means of leverage through which to operationalise, at the local level, its ideology of a simple, ecologically-sustainable, and more peaceful way of living.

Environmental adult education (EAE) is a collective and social action that emerged out of Freirean popular education in 1975 as an aspect of the environmental movement and has developed over the past 40 years, as a response to local, and global, environmental problems (Clover & Hill 2013). EAE is differentiated from adult environmental education (AEE) which is defined as an environmental education for adults (rather than the environment). EAE generally occurs in non-formal and informal settings.

Permaculture is a consciously designed system of production embedded in organic agriculture that is mooted as a sustainable solution to poverty, food insecurity, soil erosion, biodiversity decline, and climate change (Holmgren 2007, p. 3). This is because, unlike industrial agriculture, organic agriculture sustains, rather than depletes, the health of soils, ecosystems and people. Further, by protecting and regenerating local systems, and the ecological services they provide for meeting human sustenance, shelter and energy needs, permaculture adopts a human ‘metabolic fit’ with nature (see Salleh 2010, p. 125). Centred on three key ethical principles: ‘care for the earth’, ‘care for people’ and ‘share the wealth’, permaculture is a less ecologically violent means of food production.

NEED has created a learning community; a space for new ecological voices and perspectives. The program at its school is very comprehensive, covering a broad range of subjects and offering many practical skills. As the Head Trainer, La Min told me (2014, pers. comm., 2 February):

In the future, there will be coming out many environmentalists who we supported and trained and can protect for their natural environment and many of the people will be aware about new land law and land rights, farmers’ rights. Most of the people will use organic fertilizer to produce food for all and will be fine in good health and can build very strong green community. That’s why this program is very valuable for the youth and community to make a green world in the future.

NEED’s program is pragmatic in nature. Its vision is “to promote the knowledge, education and critical thinking level of people and to strengthen youth and farmers’ capacity toward development and peace for a better society and (the) environment in Myanmar” (La Min 2014, pers. comm., 2 February).

The NEED school is part of the local community – this is pragmatic and enables the students to put some of their learning into practice, and is in line with NEED’s community development ethos. NEED works very closely with the local villagers, state school and monastery, in consensus with the village head and local authorities. NEED’s curriculum is informed by popular education and critical pedagogy. NEED’s eco-farm is an ecologically grounded political project envisioning and implementing alternative futures through empowerment and liberation. Curricula formulated along these lines need to include “an analysis of the political economic processes that have led to the marginalization of the community as well as an understanding of development models that are promulgated through industrially-oriented paradigms” (Meek, 2015). NEED’s curriculum is rooted in the everyday experiences and interests of ordinary people, is overtly political and critical of the status quo and committed to progressive social change.

NEED's work is grounded in local knowledge, skills and expertise, and teachers build on the students' vast wealth of intergenerational knowledge, encouraging locally-based research, and the documentation and utilisation of that knowledge. As much as possible, NEED's teaching process is student-centred, in that their issues and experiences are the focus of the lessons and activities. Through dialogue and brainstorming, students become aware of their body of knowledge and skills, and reach an understanding that they can produce their own solutions, without having to rely on too much on outside resources. In order to enlarge on the students' capabilities, and assist them in addressing specific issues, they are assisted in research, communication and writing skills, together with public speaking, public relations and networking skills. They are also taught proposal writing, budgeting, management and training skills, how to design workshops, and how to design permaculture projects.

Permaculture practices on the farm include soil conservation strategies, organic pest control, manual and biological weed control and seed saving. Permaculture is an integrated, evolving farming system that involves conscious design that is contextually prescribed (Mollison and Holmgren 1987, p.6). This particular notion of integrated systems is new in Myanmar, so the students are required to set up experiments and projects to test theories, and to consider how this system can be successfully applied in their specific geographical and societal contexts.

NEED's mission is to build a network of model organic, sustainable farms throughout Myanmar, developed by and with the students, to serve as learning centres for farmers and youth. NEED hosts a variety of forums at the eco-farm and representatives from NEED travel the country promoting the organisation, and attending conferences and forums. NEED has contacts around the world and hosts many foreign visitors. NEED's outreach program, horizontal style of networking and cross-cultural exchange with foreign teachers and visitors is impacting dozens of communities and thousands of people, not only in Myanmar, but globally. By 2016 over 200 students have completed NEED's permaculture program. Many of them are working at the village level, on the ground, implementing their new skills and knowledge.

As a result of this cross-cultural exchange and access to the internet and social media the young adults that attend NEED, together with their peers in other, similar grassroots organisations and non-governmental organisations (NGOs) are aware that they are part of a global community of environmentalists, educators and human rights activists with shared concerns and values. They share the conception of the need for informed rejection of globalisation from above. This is resulting in new identities and meanings.

New identities and making meaning

The experiences of agrarian youth in Myanmar are not unique. They are shared by billions of others from the grassroots and peasantry populations around the globe, mainly in the less developed countries (LDCs). Globalisation, as a socio-economic phenomenon, is having the profoundest social, cultural, economic and environmental implications we have seen since the first devastating impacts of industrialisation and colonialism (Choudry 2015, p. 21; Norberg-Hodge 2009). As noted above in reference to Myanmar, globalisation is aided by the 'development project' and, increasingly, by the 'green economy' and a contemporary 'green revolution' (Goodman & Salleh 2013; UNEP 2014), supported by the non-democratic institutions of the World Bank and its International Development Association (IDA), the International Monetary Fund (IMF), the World Trade Organisation (WTO) and World Economic Forum (WEF) (Choudry 2015, p. 21).

If we view globalisation as an objective process of structuring economy, societies, institutions and cultures (Castells 2006, p. 57) the question must be; who does this process really serve? "Great swathes of society have been left on the fringes by globalisation, while its beneficiaries have reaped vast rewards" (Castells 2006, p. 59). However, nation states continue to embrace globalisation in order to shape and benefit from the process. Very few communities in the world today can remain isolated from the influence of globalised politics, economics and cultural practices. We live in a world that has become both increasingly interconnected, and prone to severe and persistent crises. Those in the South are increasingly vulnerable, and women are much more likely to be affected due to "their subjugated social position, limited education and restricted economic freedom and social capital" (Goldsworthy 2010, p. 215). Further, as the sociologist Zygmunt Bauman tells us, "the fears, hopes and joys emanating from the instability of things are distributed highly unequally" (2001, p.2).

The youth that are involved with NEED and other grassroots organisations and environmental peacebuilding initiatives in Myanmar may not have a common 'lived' reality with others from around the globe who share their experiences and praxis. However, they do share a 'common reality of thinking'. Young people around the world today are more interdependent than any previous generation and an increasing number of them are promoting peace and nonviolence, creating educational opportunities or developing transnational cooperation, with a focus on engagement, interaction and democracy. The youth in Myanmar are part of a global community of practitioners seeking solutions to globalised issues at the local level.

Many agrarian youth in Myanmar dream of a different, or better way, and, have a sense of agency which is resulting in action. They identify as 'environmentalists', articulated in the following quotes:

We need to conserve our environment because it is degrading then rehabilitation. All of these problems are due to people. We should maintain our environment. If environmental problems happen all of us will face the same, so all of us have responsibility to maintain our environment. We have to maintain and protect responsibility for our environment because we are living on the environment. So we need to maintain and protect those forests for the generation. We are learning about environment. When we get knowledge about the environment we need to share other people. So we will give training to the villagers and other people.

Environmentalists tend to place more emphasis on non-materialism, but also collectivism, localisation, community, de-centralisation and the acknowledgement of alternative epistemologies as frameworks for social behaviour. The values of agrarian youth in Myanmar are embedded in community and they are motivated through loss and degradation valued places and communities. When a place that one has grown to love is under attack one's sense of place is disturbed through both the erosion of the sense of belonging (identity) and a feeling of distress (psychological desolation) about its transformation (Albrecht 2005, p. 45). As articulated by one of the NEED students:

When I am thinking about my village, I feel to becoming the lack of happiness. I think that why I am not happy to live in my village. When I was a child, I liked to live happily with my community in my village. My village had many natural resources. Now, they are becoming less and less.

However, through their education and interaction with like-minded others, they see themselves as 'powerful' as stated by this young woman:

I am ahead of many of the others that I work with. I don't think that I am powerful but other people feel that I am. Because of my skills I am able to help others. My goal is to be a leader. I now feel confident personally but not confident yet professionally. I think that I am successful because of my hard work at NEED.

The powerful in any society are the ones that not only hold the material wealth, but are the ones that argue that they have ownership of 'truth', or of the true way of being (Freire 1990, p.193). The ones in society who contest this power tend to deny that there is any one truth, and try to seek out possibilities instead. They refuse to give their consent to be ruled over, questioning the structural violence inherent in economic and political systems that seek to dominate people and the environment, and maintain the status quo. As a powerful 'voice from below', these youth constitute a serious counter-argument to the development project.

The students at NEED see themselves as educated and holders of knowledge as this young man said:

I want to share my knowledge with my villagers to empower them. I will set up training and a model organic farm and replant trees. So, I will give a gift to all generations by saving the environment.

Whilst their politics is confined within the framework of the nation state, tied to the ground, their communities and landscapes these environmental youth in Myanmar are part of a network society (see Castells 2010, p. 2737) which has no boundaries. Communities of interest provide opportunities for identity-builders to combine their individually experienced fears and anxieties and attachment to a group, or group identity, provides a sense of belonging and security, when all else is moving and shifting (Bauman 2001, p. 128). Digital networks facilitate the diffusion of knowledge and ideology and of a new social structure. In this case environmentalism is communicated by environmental peacebuilders through their networks. Traditional identities are merging with new, shaped by the cross-cultural exchange from foreign teachers and visitors, many who are seeking what the youth have: traditional ecological knowledge, and sense of community.

CONCLUSION

Globalising processes are experienced differently across the globe, within nations, within social groups. Inequities and injustices are resulting in communities of opposition and alternative possibilities. This paper has presented an example of a grassroots response to globalising inequitable, socially and ecologically damaging globalising forces in Myanmar. The Network for Environment and Economic Development (NEED) has mobilised with the goal of educating and enabling agrarian youth from various ethnic groups and communities throughout the country. NEED is providing them with the knowledge and skills to lead their communities into a more ecologically sound future. The result is a sense of agency and commitment to sustainable practices and processes by youth who are experiencing the impacts of globalisation on their local landscapes and traditional communities.

These youth in Myanmar are part of a growing global community of environmentalists, popular educators and peacebuilders. Whilst their activities are primarily local, their networking crosses borders and, through their collaboration with like-minded others, they are becoming aware of shared experiences, issues, values and hope for the future. One of the challenges of globalisation is to acknowledge and respond to these peripheral concerns.

ABSTRACT

The improvement of facilities and infrastructures, increasing population and changing consumption patterns will increase the volume, type and characteristics of waste. The increased volume and type of waste requires attention for waste management with hope that it will create clean and healthy environment. One of the current government efforts to address the garbage problem is to disseminate the program of waste sorting and recycling through waste bank program. Waste bank is one solution to perform effective and sustainable waste management at community level which can provide economic benefits to them. This research is a quantitative descriptive study that was aimed to identify the amount of compensation fund that are willing to be accepted by the community from the existence of Waste bank. The respondents were 40 customers of waste bank Lintas Winongo in Kalurahan Bumijo, Jetis District, and Waste bank Surolaras in Kalurahan Notoprajan, Ngampilan District of Yogyakarta City. The data used in this study are of primary and secondary ones. The primary data obtained from direct interviews with respondents, meanwhile the secondary ones were obtained from relevant governmental institutions and literature studies. The tools used for data collection were: stationeries, calculators, computers, questionnaire, and digital cameras. The Analysis of Willingness to Accept (WTA) employed Contingent Valuation Method approach by using Microsoft Excel 2007. The results show that the community's willingness to accept to the compensation is varied depends on the waste type that is deposited. The average amount of compensation fund that are willing to be accepted by the community is as follows: for plastic waste, IDR. 1,127.5/kg; for paper waste, IDR.1,605/kg; glass waste, IDR 475/kg; and metal waste, IDR. 2,145/kg. These results will support the related authorities a consideration of providing compensation to community in waste management effort with waste bank system.

Key words : waste, waste bank, willingness to accept/WTA.

1. INTRODUCTION

Waste problem is complex and has multi dimensional characteristic as it relates to some aspects such as social, economic, and several others. The increasing amount of waste each day over the years becomes a phenomenal problem and needs serious treatment, especially if it is related to the vision of Indonesia Waste Free in 2020. But the reality is: the people of Indonesia is not yet fully agree and has one frequency in realizing that vision. The increasing purchasing power to various kinds of staples and technology results and the increasing business or activities that support economic development in a region give major contribution to the quantity and quality of waste that is generated. Improved facilities and infrastructure, increasing population and changing consumption patterns will increase the volume, type and characteristics of the waste.

Waste management system is a complex, dynamic system, characterized by large number of stakeholders (therefore a society also), variety of types of waste generated (Costi et al., 2004, Bivainis & Podgaiskyte 2010). Inappropriate waste management is the most important factor in the formation of illegal landfills, breed of the parasites, and cause of unsanitary living conditions or contaminated drinking water, therefore disease breakthrough (Podgaiskyte, 2011). Properly organized and implemented waste management is important to make positive significant impact in general extent on natural environment, public health, and resource use. Nevertheless, changing lifestyles and consumption rates affect the development of waste management technologies and methods.

Based on the data of the Ministry of Environment and Forests, in 2016 waste generation for nation wide is estimated reached 200,000 tons/day, or equivalent to 73 million tons/year. The biggest challenge of waste management is the handling of waste plastics that is not environmentally friendly. Based on the results of studies conducted in several cities in 2012, the pattern of waste management in Indonesia is as follows: transported and dumped in landfill (69%), buried (10%), composted and recycled (7%), burned (5%), and the

rest (7 %) is not managed. Currently, more than 90 % of regencies/ cities in Indonesia are still using open dumping system or even burn the waste.

Scientists Morrissey and Browne (2010) stated the sustainable municipal waste management system must be economically affordable, environmentally friendly and socially acceptable. The concept of sustainable development is based on three dimensional aspects of economy, social aspect and ecology. The scientists discussed the needs for the other aspects. In this context, Costi et al. (2010), Balkema et al., (2002), and Finnveden et al. (2007b) provided discussions on additional aspects of technology, institutional, functional and normative. Technological aspect execution provides the information about the system efficiency, while the economic, environmental and social aspects provide information in relation to its effectiveness. If is not conducted properly, then it will have negative impact on health, environmental and socio economic. The system analyses the environment of human activity and its impact on the environment through the technical, economic systems, social and ecological interactions.

In accordance to Mandate Act No. 18 of 2008 on Waste Management, the paradigm of waste management should be shifted from get-haul waste into reduction in the sources and recycling of the waste. The approach of end of pipe is replaced with: the principles of 3Rs (reduce, reuse, recycle), the responsibility of the manufacturer or extended producer responsibility (EPR), recycled material (material recovery), recycled energy (energy recovery), use of waste (waste utilization), and the final processing of waste in the landfill environmentally. One of the current government efforts to address waste problem is disseminating the program of plastic waste sorting and recycling through waste bank Program.

Waste bank is one strategy to implement 3Rs (Reuse, Reduce, Recycle) in waste management at the source on community level. The implementation of waste bank in principle is a social engineering to urge people to sort their waste. Implementation of waste bank can also provide real output for community in the form of employment opportunities of the operational management and investment in the form of savings (Ministry of Environment, 2011). Waste bank activities is potential to improve the waste sorting at the sources and its presence can also bring economic benefits for the community. Based on data from the Environment Agency of Yogyakarta, until December 2015 there were a total of 405 waste banks with total customers as much as 16,563 households. The amount of waste that can be sorted in the waste bank reaches 5 ton/day. Every month, the inorganic waste are sold to collectors and the money are handed over to the owner of those waste.

With waste bank, there are some benefits to be gained at once, such as; first, it is one of the alternative solutions to manage household waste; second, it can play role as the media of effective environmental education for public about the importance of waste sorting and saving; third, it can increase local awareness of the importance of domestic waste management; fourth, it can create neighborhoods become healthy, clean and green; fifth, it reduce the volume of waste dumped in landfill, so they can save freight costs, extend the life of the landfill use and reduce air pollution around the landfill; and sixth, it can be a source of extra income for some people. Waste bank is potential to improve the sorting of waste at the sources and its existence can also provide economic benefits to the community.

People's dissatisfaction to the value of existing payment for environmental services is feared would encourage people to return to the pattern of economic activity that ignores environmental sustainability. Related with waste banks program that have been announced by the government of Yogyakarta, it is necessary to implement an economic instruments for approaching the value of people's willingness to accept the payment due to waste management efforts in the community. One of the approach is the Analysis Willingness to Accept (WTA) that is a measure of the concept of economic valuation of environmental goods. This measure provides information about the amount of compensation that is willing to be accepted by society on environmental degradation in the vicinity which is equivalent to the cost of the improvement of environmental quality. Assessment of the environmental goods in WTA questions what is the minimum amount of money a person is willing to be accepted by the (household) monthly or annually as compensation for environmental damage receipt. The purpose of this study was to determine the amount of compensation fund that is willing to be accepted by the community related with the existence of waste bank.

2. MATERIALS AND METHODS

This research was conducted at waste banks in Yogyakarta City area. The locations were determined intentionally (purposively) based on the consideration that the waste banks sample have highest number of customers compared to other areas in the city. The research involved 40 customers of two waste banks as the respondents, i.e. Lintas Winongo and Surolaras. The research was held in October 2016. The types of data collected in this study were primary and secondary ones. The primary data were obtained from direct interviews with respondents. To obtain the necessary data, the technique of data collection used was through interviews, questionnaires, documentation and observation.

The method to estimate the WTA of a community is by calculating the average of WTA value as well as calculating the WTA total (Hanley and Spash, 1993). CVM method uses direct approach which is essentially asking the community how much is the maximum of their willingness to pay (WTP) the additional benefits derived from the use, and or how much is their willingness to accept (WTA) the compensation of a decrease in the quality of environmental goods (Hanley and Spash, 1993)

a. Mean value of WTA

$$EWTA = \frac{\sum_{i=0}^n WTAx_i}{n}$$

EWTA = presumption value of WTA average

xi = number of individual data

n = number of respondent

i = respondents to-i who are willing to accept the compensation fund (i=1,2,...,k)

b. Total value of WTA

Summation data is a process where the middle value deals is converted to the population. After estimate the median value of WTA, the value of community's WTA can be estimated through formula (Hanley and Spash, 1993):

$$TWTA = \sum_{i=0}^n WTA_i n_i$$

3. DISCUSSION

3.1. Characteristics of Respondents

In this study, the respondents surveyed are bank customers of Surolaras waste bank in Kalurahan Notoprajan of Ngampilan District and customers of Lintas Winongo Waste Bank in Kalurahan Bumijo of Jetis District, both in Yogyakarta City. The study was conducted toward 40 respondents who are consisted of 6 (15 %) males and 34 (85 %) females. Based on their age group, the majority of customers who become the respondents is aged between 40-60 years i.e. 65% (26 people), and the other age groups are: 30-40 years 12.5% (5 people), aged over 60 years 22.5% (9 people). For education level, it can be said that the high percentage of waste bank's customers who become the respondents were graduated from senior high school, i.e. 52.5 % (21 people); mean while for other levels: elementary school, 12.5% (5 people); junior high school 15 % (6 people); and university 20% (8 poeple). Based on respondents' occupation types, it is known that the majority of waste bank customers is housewife, i.e. 57.5% (23 people). Respondents who worked as entrepreneur/self employed were 27.5 % (11 people), employee/civil servant/military personnel/policeman/pensionerwere 12.5% (5 people) and farmer/ workers were 2.5% (1 people). Those characteristics of respondents can be seen in Table 1.

Table 1. Characteristic of Respondents

| Variable | Frequency | Percentage |
|--------------------------|-----------|------------|
| Gender | | |
| Male | 6 | 15 % |
| Female | 34 | 85 % |
| Age-group (years) | | |
| 40-60 | 26 | 65 % |
| 30-40 | 5 | 12,5 % |
| > 60 | 9 | 22,5 % |

| >IDR.3000.000,- | 1 | 2,5 % |

Source : Primary data (2016)

3.2. The average value and the variation of WTA

WTA calculations can be done directly (direct method) by conducting a survey, and indirectly (indirect method) by calculating the value of the environmental degradation that occurs. In this study WTA calculation is conducted directly by means of survey and interview with waste bank customers in Kalurahan Bumijo and Notoprajan of Yogyakarta City. Before performing the analysis Willingness to Accept (WTA) it needs to identify the respondent's willingness to accept the payment value according to the scenario offered. There were 40 respondents whose opinions were asked about the willingness or unwillingness to accept the payment value according to the scenario offered. From the results, 100 % (40 respondents) stated willing to accept the payment value. The average value and the variation of the WTA that were counted were plastic waste, paper waste, glass waste and metal waste.

3.2.1 Mean value and variation of WTA of Plastic Waste

The average value and the variation of the WTA of Plastic Waste can be seen in Table 2.

Table 2 Respondents' WTA on Plastic Waste

| No | WTA Value (IDR/kg) | Frequency | WTA Value Average (IDR/kg) | WTA Value Total |
|--------|--------------------|-----------|----------------------------|-----------------|
| 1. | 1700 | 1 | 42,5 | 42,5 |
| 2. | 2000 | 8 | 400 | 3200 |
| 3. | 1000 | 9 | 225 | 2025 |
| 4. | 500 | 13 | 162,5 | 2112,5 |
| 5. | 600 | 1 | 15 | 15 |
| 6. | 700 | 1 | 17,5 | 17,5 |
| 7. | 1800 | 2 | 90 | 180 |
| 8. | 3000 | 3 | 225 | 675 |
| 9. | 2700 | 1 | 67,5 | 67,5 |
| 10. | 2500 | 1 | 62,5 | 62,5 |
| Amount | | 40 | 1127,5 | 8,397.5 |

Source : Primary data processed (2016)

From table 2, the results revealed that the magnitude of mean value of WTA of plastic waste is IDR. 1,127.5. The average amount of plastic waste generated by Lintas Winongo and Surolaras waste banks was 320.25 kg/month. The mean of total value of WTA for plastic waste is IDR.2,689,299.38/month.

The value of willingness to accept the compensation of plastic waste management is quite varied, for plastic waste, the lowest is IDR. 500/kg with frequency of the respondents is as many as 13 respondents (32.5 %); meanwhile the highest is IDR. 3,000/kg with 7.5 % respondents or 3 people. The highest frequency of WTA value is IDR. 500, -The percentage distribution about WTA value of plastic waste can be seen in Figure 1.

Figure 1: Mean Distribution of WTA of plastic waste

3.2.2 Mean value and variation of WTA of Paper Waste

The average value and the variation of the WTA of Paper Waste can be seen in Table 3.

Table 3 Respondents' WTA on Paper Waste

| No | WTA Value (IDR/kg) | Frequency | WTA Value Average (IDR/kg) | WTA Value Total |
|--------|--------------------|-----------|----------------------------|-----------------|
| 1. | 1700 | 3 | 127,5 | 382,5 |
| 2. | 2000 | 7 | 350 | 2450 |
| 3. | 5000 | 1 | 125 | 125 |
| 4. | 3000 | 1 | 75 | 75 |
| 5. | 4000 | 2 | 200 | 400 |
| 6. | 1500 | 10 | 375 | 3750 |
| 7. | 1300 | 1 | 32,5 | 32,5 |

| 9. | 1000 | 5 | 125 | 625 |
| 10. | 700 | 6 | 105 | 630 |
| 11. | 500 | 2 | 25 | 50 |
| 12. | 800 | 1 | 20 | 20 |
| Amount | | 40 | 1,605 | 8,585 |

Source : Primary data processed (2016)

Based on the data that has been obtained from respondents and from the calculation, the magnitude of the mean value of WTA of waste paper is IDR. 1,605,-. The average amount of paper waste that is generated by Lintas Winongo and Surolaras Waste bank was 736,615 kg/month. The mean of total value of WTA for paper waste is IDR. 6,323,839.78/month.

The value of willingness to accept the compensation of paper waste management starts from the lowest IDR. 500/kg stated by 2 respondents (5%), to the highest that is IDR. 5,000/kg stated by 1 respondents (2.5%). The highest frequency of WTA value is IDR. 1,500,- with as many as 10 respondents (25%) who declared it. The percentage distribution about WTA value of paper waste can be seen in Figure 2.

Figure 2 : Mean Distribution of WTA of paper waste

3.2.3 Mean value and variation of WTA of Glass Waste

The average value and the variation of the WTA of glass waste can be seen in Table 4.

Table 4 Respondents' WTA on Glass Waste

| No | WTA Value (IDR/kg) | Frequency | WTA Value Average (IDR/kg) | WTA Value Total |
|--------|--------------------|-----------|----------------------------|-----------------|
| 1. | 100 | 5 | 12,5 | 62,5 |
| 2. | 1200 | 1 | 30 | 30 |
| 3. | 500 | 14 | 175 | 2450 |
| 4. | 1000 | 1 | 25 | 25 |
| 5. | 200 | 10 | 50 | 500 |
| 6. | 250 | 6 | 37,5 | 225 |
| 7. | 2000 | 2 | 100 | 200 |
| 8. | 1800 | 1 | 45 | 45 |
| Amount | | 40 | 475 | 3,537,5 |

Source : Primary data processed (2016)

From Table 4, we note that the magnitude of mean value of WTA of glass waste is IDR. 475,-. The average amount of glass waste generated by Lintas Winongo and Surolaras waste banks is 108,555 kg/month. The mean of total value of WTA for glass waste is IDR.384,013.312/month. WTA value with the highest frequency is IDR.500,- i.e.14 respondents (35 %).

The value of willingness to accept the compensation for waste management of glass starts from IDR. 100/kg by the number of respondents as many as five people (12.5%), to the highest IDR. 2,000/kg by the number of 2 respondents (5%). WTA value with the highest frequency is IDR. 500,- with a total of 14 respondents (35%). The percentage distribution about WTA value of glass waste can be seen in Figure 3.

Figure 3 : Mean Distribution of WTA of Glass waste

3.2.4 Mean value and variation of WTA of Metal Waste

The magnitude of mean value of WTA of metal waste is IDR. 2,145,-. The average amount of metal waste generated by Lintas Winongo and Surolaras waste banks is 85 kg/month. The mean of total value of WTA for metal waste is IDR.910,775,- /month. The average WTA amount of metal waste can be seen in table 5

Table 5 Respondents' WTA on Metal Waste

| No | WTA Value (IDR/kg) | Frequency | WTA Value Average (IDR/kg) | WTA Value Total |
|---------------|--------------------|-----------|----------------------------|-----------------|
| 1. | 1700 | 3 | 127,5 | 382,5 |
| 2. | 1800 | 4 | 180 | 720 |
| 3. | 5000 | 2 | 250 | 500 |
| 4. | 3000 | 5 | 375 | 1875 |
| 5. | 2500 | 6 | 375 | 2250 |
| 6. | 4000 | 2 | 200 | 400 |
| 7. | 2000 | 3 | 150 | 450 |
| 8. | 1600 | 10 | 400 | 4000 |
| 9. | 600 | 1 | 15 | 15 |
| 10. | 200 | 1 | 5 | 5 |
| 11. | 1000 | 2 | 50 | 100 |
| 12. | 700 | 1 | 17,5 | 17,5 |
| Amount | | | 2,145 | 10,715 |

Source : Primary data processed (2016)

The value of willingness to accept the compensation for waste management of metal waste starts from IDR. 200/kg stated by the 1 respondents (2.5%), to the highest that is IDR. 5,000/kg with 2 respondents (5%). WTA value with the highest frequency is IDR. 1,600, - with as many as 10 people who stated it (25%). The percentage distribution of the value of WTA for metal waste can be seen in Figure 4.

Figure 4 : Mean Distribution of WTA of metal waste

The amount of the payment for environmental services of waste management that is willing to be accepted by the customers of Lintas Winongo and Surolaras Waste Bank varies depending on the type of waste that is deposited. When compared with the prevailing prices in the waste bank, i.e. plastic waste at IDR 800, -

/kg, paper waste at IDR. 1,300, -/kg, glass waste at IDR 200, -/kg, and metal waste at IDR.1,800, -/kg, the value of the willingness to accept (WTA) the compensation fund by community is slightly higher. This is reasonable because the price of the needs that must be fulfilled by community is also increase. Most of the respondents have income less than IDR 1,000,000/month (50%), thus this is lower than the minimum wage of the City (MSEs) in Yogyakarta in 2016 which is amounted to IDR. 1.452.400/month.

The significant positive effect of income, level of education and age on WTA corresponds with the previous related findings by Goldar and Misra. For female respondents who were found to have positive relationship with WTA, they show more concern to the management of domestic waste compared with their male counterparts. Such conditions cause people cannot meet their needs for living properly, so they tend to look for other additional income. This findings fit well with the results of a research conducted by Ramadhan that the higher the income of the respondents, the smaller their WTA value. This is because high income respondents feel they are quite well-off to spend the expense for overcoming the negative impact of presence waste, so that the expected value of the compensation fund is not high. Conversely, people with lower incomes tend to expect greater compensation value.

CONCLUSION

Municipal waste management is a complex issue with impact on economic, environment and social living. Municipal waste management system must be economically affordable, environmentally friendly and socially acceptable. Based on the results and discussion of this research, it can be concluded that the amount of respondents' WTA toward waste management of waste bank program is varied depends on the type of waste that is deposited. The mean value of compensation fund that are willing to be accepted by the community (WTA) for plastic waste is IDR. 1127.5/kg, for paper waste is IDR.1605/ kg, for glass waste is IDR 475/kg, and for metal waste is IDR. 2,145/kg. These results will help the related authorities a material for the consideration of providing compensation to community in the effort of waste management with waste bank system.

Governments' Responses in Facing The Disbandment of Stephen Tong's Revival Worship in Bandung as The Test of City Tolerance

Fanny S Alam, Bhinneka Nusantara Foundation, fannyplum@gmail.com

ABSTRACT

6 December 2016, public in Bandung were shocked with the issue of disbandment of Stephen Tong's Revival Worship at Sabuga ITB. The event was protested by PAS, Penegak Ahlul Sunnah, one of communities, when continued up to the evening regarding the worship for the adults group.

The community's objection to the event emerged in accordance with The Joint Ministerial Decree of Ministry of Religion Affairs and Ministry of Internal Affairs no 9/2006 and no 8/2006, underlining that such activities are supposed to be conducted in churches as well as pointed the incompleteness of administration and legal permission. To respond such a situation, the committee responded through the release of police's recommendation no STTP/YANMIN/59/XI/2016/DITINTELKAM .

Both the mayor and governor shared their different responses addressing the worship disbandment. The mayor confirmed his objections to the community's action to disband the worship; meanwhile the governor mentioned it as a minor incident not to be exaggerated.

Through a direct observation of news in various media added with an exploration of significant regulations in diversity issues, the author underlines the significance of government's response to face the worship disbandment. It is important to view the responses since Bandung has been stated as a city of human rights. It brings some logical consequences to eliminate any practice of intolerance and discrimination to any minority group.

Keywords: government, tolerance, diversity

INTRODUCTION

As a part of diverse nations, Indonesia becomes a house of different society with different backgrounds of ethnics, races, and beliefs. The state attempts maximally for accommodating any difference emerging in the perspective of democracy, yet some issues addressing diversity escalate in the period when most society in Indonesia are far better for their living. While gradually, issues of diversity escalate in major cities in where people never predict they will not occur there due to some factors, for example moderate and open minded leaders, better levels of education, and higher scales of economy. Some of cities in Indonesia which are considered plural and tolerant nowadays have altered to be intolerant due to some emerging disruptive cases addressing the issues of religion freedom. Bandung is one of the cities in where some of top universities are located and more diverse in accommodating different interests of ethnics, races, and beliefs. The city has been celebrating diversity and differences for quite a long time without any significant disturbances for most of society in different beliefs. On behalf of Bandung Messages, or Dasasila Bandung, declared in Non Alignment Movement Conference in 1955 in the same city, the city mayor, Ridwan Kamil declared Bandung as The

Human Right City, pointing out that the declaration was addressing the respect for fundamental human rights and for purposes and principles of the charter of the United Nations. The principle of Bandung as The Human Right City is elaborated in a charter, conscientiously arranged in conjunction with the center of law and human rights advisory of Padjadjaran University and International Human Rights Reporting Standards. It is obvious that the charter is formulated on the basis of transparency, accountability, and participation of citizens.

A disconcertion develops when some cases of diversity issues in Bandung take place uncontrollably. A year passes by after the declaration of Bandung as the human right city and the society discover some human right violations in their city. The society seem to be skeptic , yet most of them understand the motives of the violation due to two factors as follows, the issue of religion principle misuses and allegations of administration process outlaws behind any religious festive or event.

The second factor is considered the principal source since it is complicated to prevent a religious event well-guarded without any disproportionate interruption, which frequently comes from the party claiming as the side of majority religion. This occurrence dominantly arises, particularly to minority religion groups. As occurring on last December 6, 2016 when Stephen Tong's Revival Worship conducted in Sabuga ITB Convention Hall was abruptly interrupted by one religious community, namely Penegak Ahlul Sunnah (PAS) and eventually adjourned for the evening's worship instead of being successful for conducting the afternoon's worship for children and youth. At the first the community was objected to the event in which they thought it was illegal to continue due to an incomplete administration procedure. They conducted a public oration in front of the convention hall and on the street while some of them were seen to sweep the activity inside the hall. The existing authority, representing police corps, did not manage to restrain the community to conduct further actions so as to adjourn the worship.

The situation called for an immediate attention from the local government, represented by the city and province government representatives. Both had a significant responsibility in addressing this occurrence. In contradict, both of them unfortunately showed different perspectives for overcoming it, viewed from their statements in regards to elaborating their positions to respond this without causing more tensions among the society who had already triggered emotionally due to this case. Using an intense overview of both of the government representatives' responses and literatures examination, the author attempts to unveil the truth behind the disbandment of the revival worship and the government's' responses impact for this occurrence. It reveals the significance of the government in terms of anticipating such a case while providing the security certainty for the society of different religions backgrounds for conducting their religious events without any interruptions of irresponsible parties who claim their actions on behalf of their beliefs. The situation eventually is another test of tolerance in Bandung as the city of human rights.

METHODS OF RESEARCH

The paper reveals the issues behind the governments' responses towards the disbandment of Stephen Tong's Revival Worship by applying descriptive method through the collection of actual information in terms of describing the existing phenomenon so as to identify the issues or to examine existing practices while to figure out the planning of solutions of this case. It is significant to discuss some of Indonesia's Law in terms of bridging any case of diversity which currently has been escalating in worse stages. At the same time, the paper consists of some theoretical backgrounds addressing the issues of national and society diversity, while particularly for this case, it is drawing the background of human right perspectives of the city as the occurrence violates the principles of human rights and the country's principal in general. Besides the descriptive method, theoretical backgrounds, and observation to some of the country's law in terms of diversity issues, all the information about the governments' responses toward the disbandment is supported through intense observation to various media publication in a regard of viewing the steps of the occurrence up to the solution of the case published in public.

DISCUSSION

Since its independence in 1945, Indonesia has been in a very diverse condition, particularly in races, ethnics, and beliefs. Diversity is an ordinary term in the country, historically proven at the early stage through The Pledge of Youth in 1928 when a group of youth from various ethnics declared the statement of unity. It raised more awareness of most educated people to figure out the future of the nation which was still under the Dutch settlement. The awareness invited people without seeing their ethnic and belief backgrounds as the purpose at that time was to set free from the colonization.

After the independence of Indonesia, the first President, Soekarno, envisaged the condition of the country with numerous significant aspects, particularly in multicultural dimensions due to his overview of the country's history. The dimension became the principal assets considering the cultural aspects to encourage developmental nationalism. During the early phase of Indonesia's government under Soekarno's rule, the above-mentioned principle represented an attempt to accommodate various elements of Indonesia's elite's interest and to overcome the following differences among them.⁶⁶

Pancasila, the state's principle, underlines that no single religion becomes the foundation for conducting the government and the state implementation. However, it states that Indonesia holds the principle of godly nationalism. It is an imagined community bound by a common orthodox theism and mobilized through the state corporation with religious organizations in society.⁶⁷ All the above mentioned explicitly underlines that the government of Indonesia is running based on no religion principles despite the state's implementation through godly nationalism. It eventually encourages freedom of beliefs and expression for all Indonesians.

It is precise that the state's principal is translated to the state's constitution following its derivatives for lower level regions. In a correspondence with the freedom of beliefs and expression, the state released Regulation of Law no 12/2005. This regulation is a ratification of International Covenant on Civil and Political Rights (ICCPR). Act 18 states that every person has their rights in exploring their thoughts and having their own beliefs, both personal and groups. This covers the right to interpret their beliefs in their rituals or other religious activities both in close and open spaces while nobody could be constrained to stop their activities, consequently, it might prevent an interruption of freedom to select and to conduct any belief according to their own personal options.

Act 27 comprehensibly underlines the undisputed rights of minority groups based on their origins, beliefs, or languages in terms of their freedom to undergo their cultural and religious practices, and communicative practices with their own languages.

The implementation of Regulation of Law no 12/2015 is in line with what Kymlica (2006) suggests that multicultural policies actually might encourage positive impacts on civil liberties, employment equality, and solidarity⁶⁸. The law protects all Indonesians to conduct their religious and cultural activities without any pressures from those who claim as a part of majority. It shows for both majority and minority to be capable of conducting what they believe as long as they do not outlaw in general.

Case of Stephen Tong's Revival Worship disbandment drew public attention since it occurred in Bandung, declared as the City of Human Right by the Mayor, Ridwan Kamil. It shows that a sharp controversy emerged. The incident shows that the representing apparatus through police corps did not manage to dismiss the protesters, from Penegak Ahlul Sunnah. Having complained about the event's lack of administration procedure, Penegak Ahlul Sunnah swept and ordered the participants to leave the convention hall. Despite the protest, they let the children and youth participants conduct the worship up to the end in the afternoon. Becoming a major

⁶⁸ Harell, Allison, and Stoile, Dietlind, *Diversity and Democratic Politics: An Introduction*, *Canadian Journal of Political Science*, June 2010.

question is why the religious community on behalf of religion values tends to own a privilege to interrupt and to adjourn any other religious event, particularly from minority religion groups, in this case Christian.

The circumstance required an immediate response, principally from the government represented by the governor and city mayor. Not only in general does the circumstance require the prompt anticipation of the government, but also requires the solid coordination of the government's apparatus when any incident in regards of intolerance practices take place. A statement of the City Mayor, Ridwan Kamil, underlined his profound conscience due to the worship disbandment. As well he stated that the disbandment was encouraged as a result of incoordination between the event's committee and the apparatus in terms of securing the event. As a consequence of this, he disposed the coordination to the Agency of National Unity Politics and Public Protection to be their authority. Regardless of the coordination issue, he emphasized that the worship was the province-level event in accordance with recommendation memo released by the West Java's Ministry of Religion Affairs⁶⁹.

Contradiction arose when the West Java's governor, Ahmad Heryawan, mentioned different statement against Ridwan Kamil's one. According to him, all details about the event were comprehensively acknowledged principally by the city municipality and the Agency of National Unity Politics and Public Protection as well as Bandung National Police Force and Bandung's Indonesia Ulema Council. More controversy appeared as he stated that it was a minor incident, therefore it was not significant to be exaggerated because it would not distract anything.

Having viewed media with a lot of pro and contra due to the incident leading society to the making of public opinion which dominantly blamed the event committee for their lack of administrative procedure, the committee eventually clarified the controversy about the disbandment by sharing the release of police's recommendation no STTP/YANMIN/59/XI/2016/DITINTELKAM. It was released so as to stop more controversy among public in Bandung.⁷⁰

Furthermore, by the initiative of the City Mayor, the city municipality would facilitate the worship event in another time at the same location, estimated on the date of 20 December. He declared that every citizen had the same right for conducting prayers and any religious event in spite of some requirements to meet in terms of event implementation in public spaces. The requirements he emphasized are the committee's note of event implementation to be acknowledged by the police and other authorities, and it is purposed for any religion and belief.⁷¹

Two different perspectives of the local government representatives in West Java and Bandung view not only incoordination, but also defined responses in anticipating such an incident. Despite the issue of righteous authority to handle this, both the city mayor and governor must be affirmative. In general, both of them do not show a sound affirmation to most of diversity issues in the city, consequently, it tends to unveil a lot of misleading for society and lead them to intensify public opinion, dominated by negative tendency about the issues, particularly the disbandment of worship. The negativity to the committee and the event kept arising with no acknowledgement from the public about the real occurrence, even after the city mayor released his objection to the disbandment and the provoking community publicly. In addition, both public's positive and negative reactions emerged more after the city mayor planned to conduct the same event on the same place for them, while no response from the governor appeared in terms of the surrogating event. Indisputably, the significance of both the city mayor and governor as the part of high-level authorities has a major role to anticipate the incident, while at the same time leading the public of the city to be more considerate in generating public's opinion. However, it is unexpected to elaborate the governor's response as if this incident of disbandment would not have brought significant effects in general as he had said previously when commenting about it. It is such a disappointment to see such a response, particularly from the governor as the highest level of government in the

⁶⁹ m.cnnindonesia.com/nasional/2016207142242-177970/aher-dan-emil-saling-lempar-tanggung-jawab-pembubaran-kkr/

⁷⁰ Detiknews, 07 December 2016, *Begini Penjelasan Panitia Kebaktian Atas Insiden di Sabuga Bandung*

⁷¹ <https://mdetikcom/news/berita/d-3367743/pemkot-bandung-fasilitasi-kebaktian-pengganti-di-sabuga>

province. The governor is unquestionably supposed to be a representative of the society considered as an ideal role model, as a consequence it is significantly a major responsibility for him to behave and share his ideas addressing the rights and duties of the society without an explicit tendency of discrimination or undermining minority groups.

As the governor's skeptical reaction to the worship disbandment appeared, it shows the tendency that the provincial government did not act strictly to anticipate the outlaw issue in this case. Instead, he tended to overturn the issue to be a part of the city municipality's responsibility, in which actually this issue should be addressing both of the local government representative's' responsibility. Inevitably, the above-mentioned response is considered to draw negativity about the event predominantly and to generate the tension of the majority and minority groups of religions, in this case particularly Moslems and Christians. The situation was intensified by interminable releases and opinions in media, specifically social media.

CONCLUSION AND RECOMMENDATION

The disbandment of Stephen Tong's Revival Worship by Penegak Ahlul Sunnah reveals that issues of diversity have not been anticipated with comprehensive awareness from the society, apparatus, and government's representatives. The existence of Bandung as The Human Rights City is re-questioned due to some emerging cases of intolerance practices. In addition, it is significant to review the response of the West Java's governor which did not perform sensitivity to the incident. Despite the city mayor's responses which eventually led to some visible attempts so as to revive conducive circumstance among all religious groups, the governor does not apparently attempt to show the response for reducing the tense of society who had been triggered emotionally due to interminable incoming news and information through various media.

The significance of both of the government's representatives' responses is considered a principal matter recognizing that all parts of society in Bandung are looking forward to seeing the visible anticipation to overcome the incident, as a consequence the solution is expected to lead to the peace and conducive circumstances for all without considering different backgrounds of the society. As the city of human rights, it is such a major obstacle for Bandung, principally for its government, to promote the city which is supposed to maintain its inclusiveness for its society. The government's representatives and apparatus' perspective of human rights is in a considerable requirement so as to encourage the society's one as well in general. Having both same perspectives of human rights, the government's representatives and apparatus are expected to develop and to implement the regional law corresponding the society's human rights in the city according to the international human rights covenants which settle as the basic of the regional law composition.

The absence of human rights perspective comprehension leads the government's representatives and apparatus including the society to the inattentiveness for every issue of human rights, particularly in diversity, which eventually encourages more intolerant, yet discriminative practices. On the other hand, the attention of the city municipality about human rights perspectives development has elevated, as a consequence, the city mayor attempted to summarize those perspectives in Bandung's Charter of Human Rights⁷².

However, the socialization and implementation of the charter are still in a contradictory with the expectation. Confirmed with some emerging human rights violation cases, predominantly in issues of diversity, it provides a lot of disconcertion leading to a question if only the title human rights city for Bandung is merely nonsense. The last case of the revival worship disbandment is the exact failure of human rights perspectives implementation, which can be viewed from government's and society's responses.

The tension among different groups of religions heightens quite radically and the case of disbandment segregates majority and minority religion groups which have always been attempting to reach peace under various circumstances. Suspiciousness escalates and the attempt for peace is interrupted once again. It is

⁷² <https://m.tempo.co/read/news/2015/12/11/058727005/kota-bandung-jadi-kota-ramah-ham>

important to cease or to reduce the tension as well as the radicalism while to improve a betterment in diversity. One of the ways for this issue, for instance, is to integrate inclusiveness principles to education system. The introduction of inclusiveness in education comes from principles of multicultural components in terms of corresponding issues of differences and diversity, particularly from the side of multicultural Islam components. It elaborates the principles of tolerance when viewing the diverse conditions in this country, consisting of multicultural society. It is moderately contradicting the principle of exclusiveness in religion education typically, when it introduces the system emphasizing the view of one religion to others and inferring the tendency of the belief through its exclusive point of view, as a consequence, it conveys the message of fanaticism and radicalism among most of students in any level of education.⁷³ (Baidhaw, Zakiyuddin, Building Harmony and Peace through Multiculturalist Theology -based Religious Education: An Alternative for Contemporary Indonesia, Muhammadiyah University of Surakarta, Indonesia, British Journal Of Religious Education, Vol 29 no 1, January 2007, pp 15-30)

Besides improving the education system to be more accommodating for viewing more differences in multicultural society in Indonesia, the perspectives of human rights and anti-discrimination as well as anti-intolerance are in urgency to be developed. The human rights declaration of Bandung is supposed not only to be merely a jargon, but also to redefine as an exact implementation. The biggest question now lies on how comprehensive the government's representatives in West Java and Bandung understand the perspectives. This disconcertion might be visible when they attempt to handle cases regarding diversity issues. Their positions, their statements reflect their acknowledgement of human right perspectives as seen from, for example, the disbandment of Stephen Tong's Revival Worship in Sabuga, Bandung last December 2016. It is unfortunate to read the statement of the West Java's governor which has a tendency to underestimate the above-mentioned issue, on the contrary, the city Mayor attempted to accommodate this more attentively. It could be observed through his statement and his following action in post-period of the disbandment. The difference of both of the representatives' in conveying their statements might lead the society of Bandung to determine their minds and actions in terms of this issue and other relevant ones in the future. Government of any state and province are the milestone for their society due to their regulation establishment in a purpose to accommodate all's rights and duty, while they are supposed to represent the position of society. As the result, it is imperative that any representative of government apply their power to provide protection and accommodation to the society without viewing their backgrounds of social strata and religions. The case of Stephen Tong's Revival Worship disbandment becomes a particular note in which it escalates the tension among the society, mostly for Moslems and Christians in Bandung, furthermore it challenges the government's representatives to release supporting statement and to establish accommodating regulations which protect the freedom of society's religions activities without seeing majority or minority congregations in the city, obviously through the enactment of regulations in accordance with human rights perspectives as a profound reminder of Bandung as The city of human rights.

ABSTRACT

Southeast Asia has been considered as a fertile land compared to other regions for terrorism breeding in the world outside Middle East region as the basis of its operation. The Muslim population in Southeast Asia contributes to the vast development of terrorism in the region, specifically ISIS (Islamic State of Iraq and Syria) as the widest terrorist network. Indonesia, in this context, becomes the common target of the group's expansion due to its large Muslim population as well as its strategic location. However, though ISIS has been infiltrating the country for years and influenced some people with its radical perspective to run *jihād* for establishing global Islamic State, a relatively constant movement has taken place without making any significant progress of recruitment and social leverage. This essay will elaborate the reason why ISIS, though rapidly developed within the country, but can not create an apparent progress for the group regarding the expansion of its extreme ideology to the society. In line with this argument, we found two distinct factors that strain the group's radical teachings, which are leadership and ideological barriers. Leadership lies on the Jokowi's unequivocal policies on counterterrorism which enable the country, and region to some extent, to resist the external threat of ISIS. On the other hand, the group can not deal with the plural Muslim community within the country due to its different ideological perspective on Islam, precisely on *jihād*.

Keywords: ISIS, radicalism, counterterrorism, Indonesia

Indonesia as Muslim-majority country in the world has committed to combat terrorism and suppress the flow of foreign terrorist fighters, especially extreme Islamist groups in Iraq and Syria, as a consequence of signing United Nations Security Council Resolution 2170 (Fenton & Price, 2015). For this phenomenon, Indonesia sees ISIS (or Islamic State) as a current major threat in which the world agreed upon the point that this menace should be combatted together. As this threat becomes a terrifying menace of all people, the global trend then shows the negative sentiment toward Muslims as the religion which then becomes the source of the conflict nowadays. Muslims are perceived to have a connection with the ISIS since the group claims the religious reasons to justify their existence and insurgency to seize the world from the order of the unbelievers with its human-made governmental system such democracy and change with the Islamic-based religious order. Therefore, it begins to be a critical situation for Indonesia as this country is majorly populated by Muslims whose among them are moderates and possibly undetected extremists as well as its status as the most democratic country in Southeast Asia.

Zachary Abuza, an expert on Southeast Asian militant groups, estimates around 800-1000 Southeast Asian have travelled to Iraq and Syria as both combatants and family members of fighters (Kurlantzick, 2016: 227). By the other side, governments have no certain numbers on how many of their people travelling to Iraq and Syria, but it is evident that some of the people are publicly pledging their allegiance to the ISIS. This state of affairs requires Indonesian government to quickly react to mitigate any further catastrophic effects that the group may possess. For Indonesia, the dangerous of this group is obvious and undeniable. Some of its people travel to Iraq and Syria as the form of their allegiance and supportive manner of world Caliphate establishments. Interestingly, the government believes that the number of individuals supporting ISIS either by travelling to its base or financially assisting the group is increasing. Additionally, the group also had successfully waking up the sleeping extremist groups within the country by giving inspiration to them to fight against apostasy which their government has performed. Analysts believe that Jakarta attacks, especially Sarinah attacks, though not linked directly to ISIS but were a product of ISIS-inspired attacks that later will raise the Southeast Asian extremist attention to proclaiming war against their legitimate countries (Kurlantzick, 2016: 227).

On the other hand, Kurlantzick (2016: 227) finds that many experts had noticed that ISIS had created a special brigade of fighters to Indonesia and Malaysia in the past three years. It shows that Indonesia is one of the primary targets of the group since the country is a leading Muslims country with the western style of government which the group later noticed as 'apostasy'. For this issue, then the Indonesian government has formulated several counterterrorism policies and strategies to combat ISIS members internally and impede the external threat. However, among those all, there are two interesting themes of counterterrorism strategies that this essay considers as necessary. National ideology and leadership of the president become the two most important effective ways to tackle terrorism, to some extent, to its roots. These two distinct strategies work differently from each other where national ideology as a non-coercive strategy to resist radical thoughts including extreme Islamic dogma and leadership of the president as the coercive and tangible manifesto of the state to combat terrorism.

This article will develop the argument that ISIS as the largest terrorist group will not easily enter Indonesia by constructing both leadership and ideological institution within the country as barriers for the group to spread its radical values. It is true that ISIS has performed an outrageously vile terror around the world including Indonesia. However, this essay believes that this group fails to exploit the country to raise its fighters and supporters as the two most important factors that the group needs. Fighters as for those who have brave to fight unbelievers and apostates in the battlefield and supporters are those who bolster the network with financial and any means considered as essentials. Since ISIS is the widest and prominent Islamic terrorist group in the world, some may believe that the group can get more from Indonesia as this country is widely known as the common target of a terrorist group for its fertile land breed jihadists. In contrary, this point will be proven wrong with the argument that national ideology and Jokowi's unequivocal policies are significant to combat terrorism.

Jokowi's leadership and eloquent performance become an attractive element of counterterrorism policy in Indonesia in the sense that his soft appearance could generate decisive policies on counterterrorism. On the other hand, ideological factor determines the grass root way of thinking in Islam and its peaceful thoughts. It is related to the presence of *Nahdlatul Ulama* and *Muhammadiyah* as the two largest Islamic organisations in Indonesia that has significantly nurture plurality and tolerance among Indonesians with its nationalistic-religious reciprocal dogma, including upholding *Pancasila*, and has supported the government to shape national identity (Ramage, 1997). The spread of this teaching rooted to the very bottom of the society through various techniques. For instance, schools as the fundamental institution in delivering the teaching to all of the organisations' members.

Joko Widodo on Counterterror Strategy: Soft Approach and Firm Policies

Radicalism development in Indonesia concerning post-ISIS establishment could be differentiated into two types. The first one is the radical group who wanted to implement Islamic value with the establishment of the Islamic state in Indonesia. The second one is the radical group who want to implement Islamic value without establishing an Islamic state. As a Muslim-majority country with the population approaching 250 million, Indonesia is relatively under the threat of radical terrorist group affiliated with the Islamic State of Iraq and Syria. The historical record of Indonesia in the post 9/11 attack showing severe terrorist attacks. Noted in that there was more than 20 deadly terrorist attack in Indonesia since 9/11. One of the most notable attacks would be the Bali bombing attack in 2002, whose members were linked with *Jamaah Islamiyah* (JI), killed nearly 202 people (BBC, 2012). The Indonesian government have been realised by the real threat of terrorism. Both Indonesian government and people are more aware of the risk of terrorism.

Terrorism is an act of crime which is popular among the people in Indonesia. Sometimes it could be separated with the ordinary "crime" or "violence". Because terrorism is a crime against humanity and a threat to human security and peace. An act of terror never look on how many the casualties during the operation. According to Paul Wilkinson, terrorism is 'a coercive political intimidation that systematically kills, destroys and threatens individuals, communities, and government' (Harrison, 2009: 16). The objective of terrorism itself according to Thomas Koten, is 'to destroy and to destabilize power structure of state and nation in order to replace it with the new system' (Putri, 2012). Hence, terrorism could mean a part of the insurgency, war, state terror, or propaganda (Crelinsten, 2009). Considering that terrorism is directly touching one of the core needs of state survival on legitimacy, the role of the government in dealing with terrorism will be inevitable.

This research aims to examine the significance of the current Indonesian leadership factor as the barrier on ISIS in advancing its movement in Indonesia. Understanding the transformation of a radical movement in Indonesia is important to know the development on how Indonesian government response to terrorism. During the Soeharto's regime in *New Order Era*, the radical's movement did not occur in Indonesia because of the robust government implementation on Subversion Act UU No.11/PNPS/1963 (Putri, 2012). But it does not mean that Indonesia was clear from any terrorist attacks during Soeharto's era. It is found there were several religious-affiliated bombings 1980's until the end of New Order regime. One of the most notable terrorist act during Soeharto's regime was the Garuda Indonesia flight 206 hijacked by Commando Jihad in 1981 and the Borobudur stupa's bombing by Husin Ali al Habysie in 1985 (Perdani, 2015). Most of the terrorist attack during Soeharto's era were neutralised by the Indonesian Police and Military Forces.

The democratisation process in Reformation era finally ended the New Order regime. At this point, the idea to established Indonesia as Islam country started to emerge by the radical movements such as Islamic Defender Front (FPI), *Hizbut-tahrir* (HT), *Ikhwanul Muslimin* (IM) and *Majelis Mujahidin Indonesia* (Putri, 2012). Somehow the idea to change Indonesian political system into an Islamic state is not popular among Indonesian. It could be seen from the position of the two largest Muslim organisation in Indonesia which are represented by *Nahdlatul Ulama* (NU) and *Muhammadiyah* that accept *Pancasila* and UUD 1945 as the state principal (Driessen, 2014: 211).

One of the prominent events which relate to counterterrorism began when Megawati Soekarnoputri stepped into the office and responded the 9/11 attack in the United States. The United States started the global war on terrorism campaign. It could be seen that the US perceive the 9/11 attack as the war declaration from Al-Qaeda and Osama Bin Laden as he was accused by the US as the mastermind behind 9/11 attack. Hence, the US asked its allies and all another state to joins the "global war on terrorism".

Megawati was the first Muslim-majority country leader to visits President George Bush Jr. after the 9/11 attack (Phillips, 2009: 139). The world noticed the visit as an expression of solidarity from Indonesia with the United States after the deadly terror attack. At first, the United States asked Indonesia to joins the global war on terrorism. But the symbolic support from Megawati to joins the global war on terror coming up after the Bali bombing terrorist attack in 2002. With the casualties reaching more than 200 people and most of them were foreigners. The Bali bombing finally showed that Indonesia became one of the operational bases of *Jamaah Islamiyah*, a US listed terrorist organisation linked with Al-Qaeda (Holt, 2005). As the terrorist threat increased dramatically, the Coordinator Minister for Political and Security Affairs, Susilo Bambang Yudhoyono, formed the Combatting Terrorism Coordinating Desk in 2002. In the near end of Megawati presidential term, the anti-terror special detachment 88 finally formed in response to counter the threat of terrorism in Indonesia.

One of the interesting developments happened as the Coordinator Minister for Political and Security Affairs during Megawati's era, Susilo Bambang Yudhoyono, decided to resign from his position in the cabinet. As a former minister in the security area, Yudhoyono aware about the detail on combatting terrorism. Later on, Yudhoyono ran as the presidential candidate and won the election by 61% vote in 2004. As a former four-star general, Yudhoyono expected to have a better approach to security in relation with counter-terrorism. Indeed there were several terrorist attacks occurred during Yudhoyono presidential term. But there was no further terrorist attack against Western symbol after the 2009 hotel bombings in JW Marriot and Ritz Jakarta (Aspinall, Mietzner & Tomsa, 2015: 151). In 2010, Susilo Bambang Yudhoyono established National Counter-Terrorism

Agency (BNPT). The main role and objective from BNPT could be found in the Presidential Decree No 46/2010. It explains how BNPT will execute the counter-terrorism policy and protect the Indonesian citizen from any terrorist threat within the country. The very basic objective is to prevent and to halt the development of terrorism network within the country. There are two different approaches in counter-terrorism strategy. First, the violent approach conducted by the *Densus 88 Anti-Terror*. Second, the soft approach which use deradicalisation process. It is directed to guide and assist the transformation of the radical group into a non-radical group.

The current ISIS stronghold in Syria and Iraq has been weakened in 2016 (AFP, 2016), concurrently, the ISIS influence will expand geographically. The reasons why the ISIS could reach Southeast Asia region as a potential area for expansion is particularly because Indonesia is because there is a radical terrorist movement that has already existed in Indonesia and openly use violence to terrorise people. The primary objective from ISIS in Southeast Asia is the establishment of Islamic State in the region (Hunt, 2016). The threat from ISIS in Indonesia was started when ISIS militants decided to attack Jakarta and killed four civilians during the daylight operation. According to Indonesian Police Chief, Tito Karnavian, says that ISIS threat is real and dangerous when we talk about Indonesia because ISIS assumes Indonesia is not an Islamic country or a *Daulah Islamiyah* (Watson, 2016). Showing that even Indonesia considered as the largest populous country in the world doesn't mean Indonesia will be invincible from ISIS threats.

The Indonesian government's response toward the terrorist attack in January 2016 under President Joko Widodo stresses on the claim that the situation was under control and things have returned to normal. Even such act of aggression toward non-combatant will disrupt the public security and peace in the society, but Joko Widodo seems to be calm and firm to tell everyone that the government knows what to do. Hence, the role of the state anti-terror authorities forces will be a vital part to make the situation under control. The terrorist action is not expected by the perpetrator as an effort to achieve its political goal but tried to influence the target audience and change the people behaviour in a way that will serve the interest of the terrorist (Victoroff, 2005). President Joko Widodo describes that the terrorist objective is to terrorise the majority population. It means if the majority population think that they are not safe anymore then one of the terrorist goals has been accomplished.

Unlike what was happened in France, when ISIS could successfully strike Paris with more than 100 casualties. Shortly after the Paris attack, French President, Francois Hollande clearly confirm that "France is at war" (Friedman, 2016). In the other hand, Joko Widodo seems unalarmed with the attack. He did not declare war with the Islamic State. Indeed the number of victims is very different between Jakarta and Paris attack. But the way Joko Widodo acted in public gives a strong confidence that the government is reliable enough in the Indonesia people perception. It is proved by the trending Twitter in Indonesia flooded with "We are not afraid" hashtag.

President Joko Widodo possesses a different style of political communication compared to the previous presidents. Joko Widodo first year presidential term faced a tough challenge from *Koalisi Merah Putih* (the coalition of opposition parties) in the legislative. Somehow, President Joko Widodo managed the situation and using his communication strategy to reshape the relationship with the antagonist. Joko Widodo proved that he is an implicit man with an effective communication with non-governmental parties gives him a tougher bargaining position (Heryanto, 2017). This kind of communication strategy also being implemented to counter the threat of terrorism. It could be seen from his stance that Jokowi prefers to use "soft" religious and cultural approach to fighting terrorism compared to a "hard" security approach (Parlina & Susanto, 2015). At the beginning of Joko Widodo presidency, he asked both *Nahdlatul Ulama* and *Muhammadiyah* to join his efforts to combat terrorism and extremism in Indonesia (NU, 2014). Both NU and *Muhammadiyah* are considered as moderate Muslim organisations and also became two largest religious movements in Indonesia. The involvement of two largest Indonesian moderate religious Muslim organisations is because most of the terrorist groups in Indonesia are driven by religious motives. Hence, the religious clerics from both NU and *Muhammadiyah* could engage directly in a dialogue with radical movements in Indonesia. In the other word, the dialogue will give a proper understanding about Islamic religious teaching that suits well with the condition of Indonesia.

The main idea of President Joko Widodo counterterrorism strategy is by combining Indonesian military might with a "soft" approach to Islamist extremism that emphasised on religious and cultural value (Friedman, 2016). In the other word, dealing with radicalism is not only about countering with violence but also understanding with dialogue and political decision. One of the political agenda from Joko Widodo is to turn Indonesia into maritime nexus that allowing the world economic activities utilise Indonesian ports and sea routes. Apart from the economic motives that Indonesia will gain within the political agenda, it also gives a significant implication on how Indonesia security would be. In relation with transnational terrorist, it is estimated that around 200 Indonesians have travelled to the Middle East and join ISIS. In addition, a survey conducted at the end of 2015 showed that 96% of Indonesian are strongly opposed to the ISIS ideology (Ryacudu, 2016). The problem clearly lies in the 4% of the population. The Indonesian maritime security urges a more serious involvement of Indonesian Military Forces (TNI) in national defence. At this point, it shows that

President Joko Widodo needs assistance from national army to achieve his goal of national security (Calistro, 2015).

The Indonesian government under President Joko Widodo is trying to revise the counterterrorism law. The basic idea is to give a more serious role in the national army in combating terrorism. The current Coordinating Minister for Political, Legal and Security Affairs, Luhut Pandjaitan, emphasised that the government shouldn't rely only on *Densus 88 anti-terror*. Based on 2004 Law of TNI stating that the national army force could be involved in several non-military operations, which including anti-terror operations (Sapiee, 2016). This idea clearly opposed to the view from human right activists as the Army could abuse its power with the new role. Apart from the fact that the revision of TNI involvement on anti-terrorism operation law still in the process in the legislative, it showed that Joko Widodo is firm both on his effort to fight back terrorism by any means necessary and prevent the radicalism in the society through "soft" approach.

Ideology as Counterterrorism Strategy

Unlike Al-Qaeda which dedicated themselves solely to terror operations instead of inspiring political movement (Nester, 2010: 81), ISIS tends to influence broader society to raise their solidarity and brotherhood to fight against West and infidels by spreading the act of terror and inspire other to do so by communicating through Youtube, global propaganda and bombing attacks (Asal, 2009). Nester (2010: 81) observes that terror has 'no end' except the terror itself and it seems that this 'new-terrorism' has an elusive purpose and generate a more ideological war which is intangible and subjective, rather than the 'old-terrorism' as it only seeks revolution and deems political changes. Therefore, to win the current war, states must protect their citizen primarily from ideological clashes between national ideology and radical dogma.

Ideology as an essential material in forming and defending the state from external and internal threats may generate an efficient strategy to counterterrorism in the context that ideology could filter any misleading and contradictory thoughts to nationalism. Indonesia with its *Pancasila* as a national ideology could become the most powerful instrument to obstruct radical and extreme thoughts that potentially endanger state. The ideology encompasses whole factors that matter in life from religious belief until social justice for all people. With *Pancasila*, society believes that nationalism can walk simultaneously with religious values because of religion is part of *Pancasila* itself, but the ideology separates religious activities from tolerance and coexistence. Drawing the idea that *Pancasila* assures the freedom of faith of all believers from various religions and demand people to worship in one and only God as religion is a social infrastructure that can shape a civilised society. However, practices of believers must be addressed as communal activities which must not disrespect others and threaten nationhood.

Pancasila as ideology stresses nationalism as a common goal by adapting religious values into its principle. van der Veer (2013) denotes several typologies of the nexus between nationalism and religion, one fits to Indonesia that religions are embedded within the spirit of nationalism of the country. It is because religions shape the national character of Indonesian and transform them into a civilized society which generates common national identity (Kuntowijoyo, 2004: 55).

Unlike many countries which institutionalise religions to states or authorises government with a secular ideology, Indonesia performs unique system that separate religion and political affairs in the government, yet a secular state. Instead, the ideology engenders a mixture of nationalism and religious values. This model obtained during the era of colonisation and independence which required Muslims in Indonesia to repel foreign influences; thus Islam reinforced nationalism (Vandenbosch, 1952: 182). This uniqueness makes a barrier to the radical extremism thoughts, including the presence of ISIS radical views that spread amongst society. However, this essay does not deny that ISIS has truly successful in infiltrating its ideology to certain numbers of people in Indonesia.

The spread of radical dogma within Indonesia is dominantly managed by Islamic terrorist network, including ISIS. Many theses mention that the proliferation of this teaching highly correlates with the economic posture of the host country. Hence, Indonesia becomes a strategic source of supports since the country categorised as 'lower-middle' income level though the GDP is among the 20 world's highest (World Bank). For this case, other social scientists believe that the recruitment process within the terrorist group has no relation to economic condition of the society they targeted because the group sought to apply strict processes of selection to fulfil their internal demand of high qualified fighters. Therefore, economic condition, personal pressure and despair do not motivate a person to involve in a terrorist network, it is personal intention driven by external inspiration including terrorist act and radical thoughts (Nester, 2010) that is considered as mis-leading teaching of *Jihad* concept in Islam (Abuza, 2003).

But this radical view unable to provoke majority Muslims within the country to participate in global jihad under ISIS commands. *Pancasila* as ideology mandates government and society to unite in an ethnically, economically and religiously diverse environment. The ideology demands society to precede nationalism over individual interests, including individual identity, through social cohesion. It leads the country to shape the

moderate national character and identity by mediating various partial thoughts on culture, politics, religions, social and economics (Amir, 2013). *Pancasila* assures every citizen receives an equal treatment and rights before the law as well as requires them to believe in God as the first *sila* mentions that the ideology must believe in the one and only God. Amir (2013) examines the effectiveness of *Pancasila* as a national ideology in determining national identity and character; he found that education is an appropriate institution to instil the ideology among younger generations. *Pancasila* has considered successful for more than 70 years defending Indonesia from extreme ideology, though in the earlier period Islamic fundamentalists had struggled for their claim on *Daulah Islamiyah* which later defeated by the government (Vandenbosch, 1952).

Pancasila as the foundation of living for Indonesians adopts Islamic values that appear on the first *sila* (principle) 'Believe in one and only God' which later interpreted as the unifying factor of diversity in Indonesia. It stresses on how to foster unity among different religions in Indonesia rather than questioning where is Islam in Indonesian constitution (Ramage 1997: 3-4). The strength of *Pancasila* lies on its pluralistic values that respect anyone and disagree with a specific system that benefits certain communities. Written in the history that *Darul Islam* revolt had failed to promote its Islamic order due Indonesian Muslim was mostly tolerant to other, incidentally it was a hierarchic order from *Ulama* (Ramage 1997). In this context, *Ulama* performs as 'models of behaviour' and take a leadership role in the society in a microscopic scope of social life (Lukens-Bull, 2005).

The integration of *Pancasila* into daily social life is absolutely a government duty. However, it is undeniable that some Islamic-based organisations in Indonesia have helped the government in forming the collective national character of *Pancasila*. *Nahdlatul Ulama* and *Muhammadiyah* are the two most significant and largest Islamic organisations in the country, NU is estimated to have followers ranging from quarter to more than a half of Indonesian Muslims, while *Muhammadiyah* is estimated below that number (Ali, 2017). Both are categorised as a religious-nationalistic institution which sought to educate society in religious basis as well as advocate them on social issues (health, education, etc.) despite their theological differences (Barton, 2014).

It is essential to explore these two Islamic organisations due to its uniqueness of cultures. Common perspective illustrates that homogeneity of the community will not sustain a harmonious life within a country (Levinson, 2005) because extremism and intolerant behaviour nurtured within exclusive groups. NU and *Muhammadiyah* as exclusive communities which manage a large number of followers are able to rebut this view by proving that they accept and perform *Pancasila* in their social life (Driessen, 2014). *Nahdlatul Ulama* as the largest Islamic organization contributes more in integrating *Pancasila* into social life due its believe on the idea of *hubbul wathon minal imaan* (love for the homeland is part of faith) as the foundation to nationalism within grass-root society (Lutfi et al., 2014), while *Muhammadiyah* seeks to transform *ummah* into a community that can engage with globalized world (Fuad, 2002: 139).

The identification of both organisations in supporting nationalism is represented by the strong indoctrination of *Ulama* (preachers) to share peace among Indonesians and defend the country by any means within the NU community, also delivering social services to strengthen Islamic values as well as involving in the political arena through political parties for *Muhammadiyah* community. These examples exhibit the loyalty to the nation instead of bringing radical ideology to oppressed unbelievers. To some points, NU declares themselves as the protector of Indonesia, in the sense that the community should be physically ready to defend the country from external threat including ideological clashes which threaten the existence of *Pancasila* and local wisdom (Lutfi et al., 2014).

In response to block radical ideology, such as ISIS propaganda, that potentially threatens national resilient, both Islamic-nationalist organisations established religious-based schools and learning methods. Education is believed as a tool to negotiate changes, and the presence of NU and *Muhammadiyah* are able to build a strong foundation to diversity in the lowest lever of society (Lukens-Bull, 2005: 91). It is obvious that these two organisations are exclusive and potentially bring intolerance because any collectivism of similarity would be profoundly anti-democratic (Levinson, 2005). It is unnecessary to debate on general public schools because its plurality and inclusiveness are evident. However, though religious-based schools nurture homogeneity among students, those schools under NU and *Muhammadiyah* still values diversity, equality and nationalism (Leirvik, 2004: 229).

Moreover, there has been no single fact that shows terrorists in Indonesia ever learnt from both educational institutions. On the contrary, other Islamic schools such *Az-Zaytun* and *Al-Mukmin*, led by *Darul Islam* and *Jamaah Islamiyah* respectively, has been widely known as breeding schools for young jihadists because they indoctrinate students with violent jihadist teaching who must proclaim war against unbeliever and insist Islamic state in Indonesia (Jones & Smith, 2012). It implies an assumption that schools under NU and *Muhammadiyah* inculcate *Pancasila* to students by emphasising on harmony between humankind (*hablum minannas*) in a diverse environment. This doctrine puts nationalism and unity before the individual or communal identity, make resistant toward contradicting ideology possible.

Therefore, *Pancasila* as a fundamental ideology for Indonesians could maintain its national interest and unity over individual or communal concerns. It demands society to respect diversity and nationalism for common identity as it allows each religious, ethnic or any groups to perform their beliefs and assures that their

rights are equal and must be protected from the other group's disrespect. This ideology hides power to guide society in living within diverse environment due to its accommodative capability to contain all differences and advance unity to produce tolerance and coexistence among communities. Including NU and *Muhammadiyah* as exclusive communities that agree on *Pancasila* as national ideology and believe that it would not ruin their faith, even these two organisations put more attention to *Pancasila* by establishing schools that nurture nationalism to block radical thoughts. Thus, *Pancasila* becomes the most fundamental counterterrorism strategy within the plural but Muslim-majority society.

Conclusion

Joko Widodo has a great start and is gradually becoming an influential leader in combatting terrorism. He succeeded to manage the state under control and not easily provoked by the terrorist attack from ISIS. Judging from the way he wanted to improve Indonesian capacity on coercive counter-terrorism using BNPT and Densus 88 Anti-Terror, the government proposed the idea of national military armies involvement in a counterterrorism operation. Moreover, the idea to make Indonesia as a maritime nexus will increase the national security. Joko Widodo is not only improving the strength of national police and military, he also cooperates with religious organisations due to its importance in combatting terrorism. The involvement from both NU and *Muhammadiyah* on deradicalisation process is expected to change the way of thinking of a radical group or people in Indonesia.

On the other hand, deradicalisation process in Indonesia must not be separated from the cultivation of *Pancasila* as state ideology which successfully consolidates society to build trust on nationalism and pledge loyalty to the state by ignoring contradicting values, including ISIS dogma. It is related to the ability of *Pancasila* to accommodate all backgrounds within a diverse society and brings common interests instead of individual or communal benefits. It becomes the counterterrorism strategy which comprehensively reaches the whole elements of society to the grass root level. *Nahdlatul Ulama* and *Muhammadiyah* help the state to promote *Pancasila* as state ideology through social advocacy and education, shaping Muslims in Indonesia to agree upon a common identity with other groups in their social life. Tolerance and coexistence are the two primary points that embedded within the diverse environment in a Muslim-majority country.

ABSTRACT

The Islamic Radicalism of often referred as Terrorism nowadays has been a plague for Muslim World. The rapid growing of Islamic Radicalization could not be separated by the presence of Globalisation. Through advanced internet technology, those Islamic Radicalism movements easily spread the ideology to another Muslim around the world. ISIS model recruitment is one of examples on how this matter is taking place. This condition is deteriorated by lack of understanding among Muslims about the true understanding of Islamic religious teaching which is taught by mainstream Muslims over the world, which is against the Terrosime model such as ISIS. Hence the Islamic Radicalism ideology spread rapidly over the world including in Indonesia. Therefore, to address this matter, needs an approach that not only law enforcement which is done by authority but also the Non-state actor. In terms of this context, Pesantren or Islamic Religious School in Indonesia has its role in order to face terrorism. The roles of Pesantren could not be separated by the natures of Pesantren that has different views to Islamic Radicalism which is made Pesantren as nature's enemy of Islamic Radicalism.

Key Words: *Indonesia; Salafy Jihadism; Negative Globalisation*

INTRODUCTION

In the contemporary era, the world is faced with the challenges the physical limits of the country not become the main obstacle in the displacement of many kinds of things. Rather, the world is becoming increasingly without borders or borderless. There is no limit in the contemporary world described by George Ritzer and Paul-Dean with the terminology of Solid and Liquid (George Ritzer & Paul Dean, 2015). Where the state that the first is a solid or solid has been a solid or melt. Melt in this context is the looseness of the originally solid becomes more lax. So the physical limits of the state in the present context also not be a major impediment to the transfer of information or items (flows) from one country to another.

The ease of moving information or goods from one country to the other, then also referred to as globalization. Where this process is not only to encourage the exchange of useful information positively to society. But also there is the exchange of information or goods that are negative. It then pushes George Ritzer and Paul-Dean made a special discussion in his book entitled "The Global Transformations Reader: An Introduction to the Globalization Debate-Polity" in Chapter 12 entitled "Global Flows And process Negative". Meanwhile, in the same book chapter explanation is not given particulars of the globalization positively. So in this case, the urgency of the discussion of negative globalization more emphasized in view of the implications which caused a major impact.

In globalization, the negative effects arise from a variety of sectors. Ritzer and Paul in his book highlights the discussion on imported materials harmful, disease, crime, and war. Even so, in the discussion of negative

globalization is not limited to that topic. Rather, various negative impacts of globalization. One of the many topics that are outside the limits described in Ritzer and Paul is Terrorism.

Terrorism is certainly a problem that arise because of the Globalization. The emergence of the ease of transfer of information, goods, objects from one place to the other place had sped up this process. Of course, in doing so, it is clear that terrorism is related to the existence of Globalization. In the journal entitled "Globalization, Terrorism, and Democracy: 9/11 and its Aftermath", Douglas Kellner explained that terrorism appear suddenly and is a form of globalization that emerged from the bottom. Which it is a form of resistance to the forces and institutions in the world hagemon (Douglas Kellner). Douglas explanation can be drawn from an a bow that there is a link between globalization and terrorism.

Today, the term terrorism has been constructed on an understanding on an action taken on the basis of a particular religion for political ends. This can be understood with the war against terrorism waged by the United States against Al-Qaeda. During its development, terrorism also refers to the group ISIS (Islamic State of Iraq and Syria). Where these groups also use religion as a basis for legitimacy in doing tindakanya. Inevitably, Islam's image was tarnished by the presence of groups that include the name of Islam in Indonesia, pesantren. Where BNPT issued a statement of some accused Pesantren list as a hotbed of terrorism (BeritaSatu, 2015). The statements made by BNPT about Pesantren terrorist course raises impressed equalize all pesantren in Indonesia. Although BNPT has issued a list of schools that has been blamed as a nest of terrorism, but again, this can lead to justification for sterotyping against all pesantren in Indonesia. Which of course it can be dangerous, because it can damage the image of the school and Islam.

In understanding the link between terrorism and Islam, of course, does not do justice to generalize all followers of Islam as a supporter of terrorism. The fact of the various schools or sects of Islam that each have different beliefs. In the context of jihad, which is often interpreted by the West as acts committed by Al-Qaeda and ISIS, of course, these two groups have a trust called the Salafist. Where this understanding has confidence that tend to encourage his followers to commit violence (Assaf Moghadam, 2008). This understanding is certainly not embraced by all Muslims in the world, including in Indonesia. In the Indonesian context, understanding Salafist also rejected by the largest Muslim organization in Indonesia, Nahdlatul Ulama (NU Online, 2015).

Literatures pesantren in Indonesia, of course follow Indonesia's largest Islamic affiliation. Which is one of two of the affiliate majority is Nahdlatul Ulama and Muhammadiyah. Where these two groups do not follow the basic understanding of the Salafist group.

So as a consequence, the number of Salafi Jihadists in Indonesia is not as much as the majority group. Therefore it is a wrong thing when it establishes that boarding school is a hotbed of terrorists, as this will create a bad image of the group that has the confidence Pesantren / different from the ideology or school of Salafist groups. In the expansion, pesantrens who have different beliefs with Salafist it also plays a role in preventing the entry of Salafist ideology in Indonesia. It is a natural thing, and even beliefs or religious values held by the majority of the group may be one way to counter the ideology against the infiltration of Salafist groups in Indonesia. Therefore, in this paper will explain the two how Pesantren role in facing the Salafist ideology in Indonesia. Where to prove that Pesantren in general has an important function and role in confronting this dangerous ideology.

METHOD

Globalisation

In explaining the definition of globalization there are various opinions were described by experts in this field. According to Ritzer and Paul-Dean in his book "The Global Transformations Reader: An Introduction to the Globalization Debate-Polity" Globalization is:

“Globalization is a transplanetary process or set of processes involving increasing liquidity and the growing multidirectional flows of people, object, places and information as well as the structures they encounter and create that are barriers to, or expedite, those flows” (George Ritzer & Paul Dean, 2015).

In the definition put forward by Paul Ritzer and can be pulled by four important points, namely; a.) Globalization is a process. b.) The process that occurs involving all entities that exist in the planet (transplanetary). c.) It involves an increase in liquidity "melting" than the current range of sectors, namely humans, objects, places and information. d.) As well as involving things or structures encountered as a resistor or as accelerate the flow rather than the things that have been mentioned earlier. In the definition given by Paul Ritzer and more emphasis on processes involving flow than many sectors and good or structure that inhibits the process.

Different definitions proposed by Robert Shuey in a book entitled “Globalization : Implications of U.S National Security”. Where Robert defines globalization in four definitions, namely; First, “The Integration of political, economic and cultural activities of geographically and/or nationally separated peoples,” (not new or irresistible, not a “policy option”). Second, “The increase of globalism with “is the state of the world involving networks or interdependence at multi-continental distances...through flows and influences of capital and goods, information and ideas, and people and forces, as well as environmentally and biologically relevant substances”. Third, “Rapid movement toward international economic integration; consensus on political values, processes, and principles; and the revolution in information and communication technologies”. Fourth “The defining international system based on “the inexorable integration of markes, nations-states and technologies” (Gary J. Wells, Robert Shuey, Ray Kiely, 2001).

In the definition described above can be four points, namely; a.) The integration rather than political activity, economic, cultural. b.) the increased interdependence through flows from the flow of funds, goods, information, ideas, man. c.) the increased movement of international economic, political consensus and progress of communication technology. d.) Mendefisinikan international system based on the integration of the inevitable market, nation states and technology.

Explanation of the definition of globalization given by Ritzer & Paul-Dean and Robert Muey get common ground on points. ie both agree that the displacement of the flow of goods, people, information that occurs between countries on the planet. Even so, the authors have some special terminology used. Ritzer & Paul uses the term in describing the outflow of liquidity flows. While Robert menggunakan term Integration, Interdependence, in explaining the flows of existing connectivity. Furthermore, Robert also specifically explain the existence of Globalization, namely the Global institutionalism in three areas of politics, economy and principles of (cultural) and the emphasis on a unified international system. Although there are some differences, nonetheless there are similarities rather than the substance of the definition given by Ritzer & Paul-Dean and Robert Shuey, namely the outflow of goods, information and people. where this equation is the substance of the definition, which is useful in explaining the concept further in this paper.

Negative Globalisation

Globalization has led to the current (flows) of various kinds of things move easily and quickly between the countries in the world. Nevertheless, not all the current beneficial than positively. But there are also negative impacts of globalization. In the book “*Demystifying Globalization*” C. Hay.D.Marsh explains that there are three position of Globalisation, which the second position, Harsh suggested that “*Globalization has negative effects both in economic and political sphere*” (C. Hay,D. Marsh, 2016). So clearly that in addition to bringing a positive impact in many areas of human life. Globalization also has negative impacts on human life, as well as to actors in international relations, including the state.

Furthermore Ritzer & Paul-Dean explaining that Negative Globalisastion is “*key point is that the issue of what is regarded as positive or negative about globalization often depends on one’s perspective and position*”.

Where in the explanation Ritzer and Paul explained that the negative view of a globalization often detracted from the tendency towards perspective or position. In the context of the country, of course, negative view of a phenomenon in terms of the country's stance. The discussion on terrorism in Indonesia of course is regarded as a negative thing. This is due to the attitude of Indonesia which firmly opposes terrorism in any form, including the name of religion (Vivanews, 2014)

Salafy Jihadism

Shiraz Maher in an article titled "What do Islamist Extremist Believe?" Explains that the development of anti-western in the Salafi-Jihadi starts and more intense after the 9/11 attacks. Even this group menganggap that all forms of systems such as Secularism, Nationalism, Communism and Socialism Bathisme is the value that violate Islamic values. In explaining the Salafi-Jihadi, Maher first explain the definition of Salafism, which is a movement that believes that religious practice must rely on what is done by the first three generations of Islam, where it is called as the Salaf as-saliheen. While violence is described by the term "Jihadists", where Maher in the same article describes it as "a novel doctrine of vicarious liability," which is an idea for Muslims to oppose other doctrines such as Democracy, which rejected the divine law. So that means militant / jihad can be taken as a consequence to fight the enemy, including Muslims themselves regarded as infidels. Ideology is easy in mengkafirkan fellow Muslims referred to as "Takfiri". Where in the "Institute for Policy Analysis of Conflict", entitled "The Evolution of ISIS in Indonesia", the researcher explains (2014: 2) that Takfiri ideology that is easy to judge other Muslims as infidels (non-Muslims). Concept of Salafy Jihadism figure depicted as I.

DISCUSSION

Challenges of Negative Globalization : Terrorism

The growing flow of Technology, Information and Communication have noticed that the world was entering a new phase, that of Globalization. The relationship between human beings to other human beings around the world today are not limited, to diibartkan world today has become one so that the world as if it has no distance. It was clear from the definition of Globalization derived from the "globe", which means worldwide. So we can conclude that globalization is a process that is global or globalizing.

According to Ritzer and Dean, globalization is a transplanetary process or set of process involving increasing liquidity nd the growing multidirectional flows of people, objects, places and information as well as the structures they encounter and create that are barriers to, or expedite, Reviews those flows. (Dean, 2015)

This clearly indicates that globalization does not only occur between countries in the world, even its "Transplanetary" or interplanetary, can be said to be a bit excessive, but basically it is like it is the case today. We also see that the world is currently in ibaratkan liquidity or liquids that are increasing, which can be seen from the increasing Flows or flow like a stream of people, objects, locations and Opera develops and structures faced by streams that there can be be an obstacle (barrier) and could even accelerate the pace of globalization.

The growing globalization offers vast opportunities for the development of the world, such as increased free trade, can access information quickly even included the development of an ideology of terrorism. In the discussion of globalization, all matters relating to the negative side of globalization rather than globalization is referred to as negative, including terrorism.

Basically understanding of terrorism until now could not be sure, but According to Ritzer and Dean, that terrorism is an act that causes death, serious injury and violence as the place and aim to intimidate the public. It is clear that globalization is a lot of terrorism that overlap, such as the Taliban (Al-Qaeda). (Dean, 2015) Terrorism is a crime that is structured means of terrorism or the Taliban get money to buy these weapons comes from trading narcotics or drugs, which according to the UN drug trade is in one operation mampu generate around \$ 400 billion, approximately 200 million consumers. (L.Rafferty, 2014)

In addition, prior to the ban in producing opium, Afghanistan Taliban earn \$ 40 million a year from heroin trafficking in that country and the Taliban also use the revenues from the drug trade to fund terrorist training Al - Qaeda in Afghanistan.

Terrorism and Salafy Jihadi

Discussion about the research related to religiously motivated extremism. In this context it is Islam is a religion that is used by the extremists as a source of legitimacy in the violence. Shiraz Maher in an article titled "What do Islamist Extremist Believe?" Explains that the development of anti-western in the Salafi-Jihadi starts and more intense after the 9/11 attacks. Even this group menganggap that all forms of systems such as Secularism, Nationalism, Communism and Socialism Bathisme is the value that violate Islamic values. In explaining the Salafi-Jihadi, Maher first explain the definition of Salafism, which is a movement that believes that religious practice must rely on what is done by the first three generations of Islam, where it is called as the Salaf as-saliheen. While violence is described by the term "Jihadists", where Maher in the same article describes it as "a novel doctrine of vicarious liability," which is an idea for Muslims to oppose other doctrines such as Democracy, which rejected the divine law. So that ways can be taken as a consequence militants to fight the enemy, including Muslims themselves regarded as infidels. Ideology is easy in mengkafirkan fellow Muslims referred to as "Takfiri". Where in the "Institute for Policy Analysis of Conflict", entitled "The Evolution of ISIS in Indonesia", the researcher explains (2014: 2) that Takfiri ideology that is easy to judge other Muslims as infidels (non-Muslims).

In explaining the rivalry ISIS and Al-Qaeda against the Salafist groups in Indonesia can not be separated with the influx of Salafi Jihadi groups in Southeast Asia. Salafist understand where the entry is not independent of the entry of the group Al-Qaeda in Southeast Asia as a pioneer of Islamic radicalism. Soeren Kern in the article entitled "Salafi-Jihadists: A Persistent Threat to Europe and America" to explain that Al-Qaeda included in the category of Salafi Jihadi groups. In a research report to US Congress entitled "Congressional Research Service: History of Terrorism in Southeast Asia". Researchers said that the influx of Islamic radical groups began in the early mid-1990s through the network of Al-Qaeda (2009: 2).

The Roles of Pesantren

Pesantren is an institution that is based on different Islamic and learning system was slightly different from the other madrassas. From the inception of this pesantren stand, growing up the countryside. Its existence is very thick with the characteristics possessed by Indonesia which has values that are said to be very strategic to developing communities in Indonesia. (A'la, 2006) and as the development of schools in Southeast Asia, pesantren in Indonesia is said to be the oldest boarding school in Southeast Asia, therefore, also pesantren in Indonesia became a center of learning and preaching. Even at the time of Dutch colonial schools that provide modern elements in pembelajaran not release provided by the learning system and proven pesantren Pesantren are still able to maintain a learning system implementation from inception to the present. (Turmudi, 2008) Currently, the role of Pesantren in Indonesia increasingly want to show keeksistensinya both in education and in spreading the teachings of Islam, some things are currently done some pesantren in Indonesia, namely:

Creating a Website

By creating a website, the site to find out the schools that you want to find out would be easier and more efficient, because the presence of the website will save energy and time to find out information about specific schools. With the website shows that boarding schools can compete with other modern schools. The website can also allow schools to disseminate the latest information contained in the pesantren. Pesantren also said to have a website, some of the reasons are:

Information can be obtained Pesantren With Easy Anywhere, Anytime, for schools that have activities that are so dense that the lay people who want to know the daily activities of schools will be more accessible on the website of his school.

Increase Credibility Pesantren in Public Eye, it is because that there are many people who still view schools eye. For those who lay it look crowded boarding activities that they consider education schools are outdated and also the mindset of people who think the graduates of the schools will be the seeds of terrorism. As Places To Outlines Accomplishments Already Ever Achieved By Pesantren, in some inter-school activities must have each of the schools will be won. And with the achievements of schools will add a plus for his school itself and it does not belong to the class of riya 'because it aims to as an attraction for people to be more interested to enter the boarding school.

As Pesantren Photo Gallery, several schools of course are abundant some photos on display, be it photographs of major events, followed by the boarding schools as well as photographs of his previous teachers. The goal is the proof that the boarding school is active in activities within and outside of the schools.

Reduce Negative Effects Of The use of the Internet, known as the Internet is an information tool that is considered the most strategic because the Internet has a wealth of information in it both positive and negative. But the man who has the curiosity of a very large, sometimes using the Internet with things that are negative. Therefore, the present Muslim generation to offset the negative things that the presence of this website. With the aim that the information will be more positive than negative information. (Restara, 2016).

Conducting Terrorism Prevention Conference

Pesantren very often seen as a school that can give birth to the seeds of terrorism, because most lay people who saw the existing activities at the school are very religious and tends to lag compared to other modern schools. But schools do not want to remain silent with the mindset of people towards schools. The scholars are trying to re-build hospitality faces boarding school established by his school itself, some of which are: Tawassuth (Impartial or Moderation), tawazun (Maintain Balance and Harmony), Tasammuh (Tolerance), Tasyawwur (Council), as well as Fair (Be Fair in the ACTION and ACTION). (Prof. Dr. Mujamil Qomar, 1996) By looking at the five values applied by schools of course is very much on the elements of terrorism as said ordinary people. Therefore, at this time boarding schools often hold meetings openly and often opened the conference with the purpose of the meeting, they will know the actual role of boarding schools.

Then the boarding school also serves to counteract the spread of ideology of Islamic radicalism by making a few things, such as: mendakan cadre of coaching students and the broader public, take back the mosques are not neglected over the years, through the publication of magazines, articles, journals and booklets give explanation of Islam adequately. Thus if a conference at the school will show how the role of the actual boarding and can also spread to the general public understand more that boarding schools are very far from ideology-ideology of radical Islam, because as described above was the role of the pesantren. (H.Ahmad Fahrur Rozi, 2015) It is helpful to eliminate the negative responses to the boarding. And also in the conference is often held discussions way to prevent terrorism and embracing community to combat terrorism together.

One of the next steps is performed to remove the pesantren community mindset towards schools that are often connected by terrorism, is participate in collaboration with the National Counter Terrorism Agency (BNPT). It aims to tackle the ideology-radicalism in order to reduce their seeds of terrorism in the future. Some schools in some cities has begun to participate in cooperation with BNPT, one of which is a boarding school in South Sulawesi have started co-signed the MoU with BNPT. The reason presented by the teachers at the school is that they are very much hope that the cooperation with BNPT could give insights to schools and other education such as schools and colleges in tackling the spread of radical. (Ahmad, 2016)

The other thing is some scary boarding the times that today can facilitate human needs. One of the fears is that the development of Internet technology. The board of this school had scary if this will facilitate the development of the Internet to spread the ideology of the terrorists-fahamnya via the internet and by doing so to make it easier for students to access it. This has been one of the tasks of the BNPT to overcome the spread of radical ideology is through the internet. Because as it is known is that the Internet is easily accessible by anyone and spread very fast. (Santama, 2016)

Restoration and Restribution

Strategies that can be done to fight terrorism can be done in two ways or approaches, namely: First, Levy that he who commit the crime, then he should be punished and held accountable for what they have done. This can be done by implementing a reward, violence or law enforcement 'Law Enforcement'. This levy can be done by various actors, ie such as the police. Second, the restoration of which all parties can participate on an offense that has been done by someone to be finished well and can anticipate the impact that will occur in the future. This can be done by improving or restoring human thought or ideology to the original condition that was previously lacking right be right back. In the case of this restoration can be done by berbagai actors, namely as religious leaders to cooperate Pesantren NU and Muhammadiyah (A. Greer & Z. Watson, 2016).

The concept of restoration that all parties can participate on an offense that has been done by someone to be finished well and can anticipate the impact that will occur in the future. This can be done by improving or restoring of thought or ideology and human behavior to the original condition that was previously lacking right be right back. In this case Pesantren in Indonesia, has two roles. First, as a boarding school that instills a love of

the homeland, it is contrary to the Salafist who think that the country is a country applying democracy ansorut. So that love of country is an unclean thing. Therefore a pesantrans mainstream owned by Islamic organizations such as NU and Muhammadiyah which teaches love to states to replace the understanding of those who believe that democracy is anti-Islam. Even some pesantren in Indonesia has also issued several Indonesian fiqh states that comply with Islamic law so that it can be a rebuttal to the proposition that mempecayai Salafist ideology. Second, Pesantren can prevent young people to engage in doctrinal process carried out by the Salafist through various media. With the direct teaching of the religious leaders who have extensive knowledge of Islamic law and the state. It will not be lured children to act contrary to negara.sehingga so it can replace or be counter to the group of Salafist ideology.

As Barrier of Liquidity

In the concept of globalization, the outflow can be prevented by the barrier which it can be created either by state or by non-state. In this case Pesantren in Indonesia, can be a barrier to the entry of Salafist understanding in Indonesia. Where through a few things, first as explained previously that the boarding school building websites operating in the internet. This is important considering the recruitment and also doktrinisasi carried out by Salafist groups took place in the internet media. So in accordance with the concept of Liquidity, the presence of websites boarding pro Homeland will be a separate barrier for the entry of Salafist understanding in Indonesia. Second, understanding the different owned by schools as opposed to understanding Salafist has become its own advantages for the group boarding. Make boarding as a party that has become a natural opponent for the Salafist group

CONCLUSSION

There are two schools role in preventing the entry Salafist ideology. Where this ideology promotes violence in Indonesia. First, that as restoration, ie schools that have values that conflict with Salafist groups can be the restoration of confidence members of Salafist that the action taken is the wrong thing. For example, is viewed democracy as anti-Islam, while such trust can be restored with schools who believe that it is wrong, but there is fiqh that combines religion and state. Second, that as a barrier, where schools make some websites and teaching that denied the presence of Salafi groups, including the Salafist. It also provides several websites that refute the arguments Salafi Jihad group. So the current liquidity Salafist group thinking can be inhibited by this.

Map Media History As A Means Of Independent Learning High School Students In Banyuasin

Imam Satria Kurniawan

Map Media History As A Means Of Independent Learning High School Students In Banyuasin

Imam Satria Kurniawan

Imam Satria Kurniawan, Universitas Sebelas Maret, imamsk69@gmail.com

ABSTRACT

This research produces a media to learn the maps of history as a means of independent study in teaching history. In general, this research includes (1) Pre-survey to identify on use the media and learning model who is running (2) development of a media, Based on the results of presurvey, doing a pre-survey which identified the current condition, The used model is *ADDIE*, and (3) validation media. Development media carried out to one by one trial, trial of small group, and the general tryout. The study's findings among others, media based learning macromedia historical maps were developed in compliance as a means to learn independently and effectively. Judging from his attitude towards the media, who get a positive response and enthusiastic to join the teaching and learning process. So that it can be concluded that media learning map history effective to a means of students independent study, increase attitude independent study, and achievement students on history subject SMA especially in Banyuasin.

INTRODUCTION

Communication in learning gonna be better if a teacher seen style a psychological mengelompokan sifat-sifat determine how an individual person feel interact, and mersepon emotionally in learning environment, there are three types of style learned person the visual, auditoriy, and kenestetik. Teachers effective aware of the need to learn different styles of the learner. The best ways to handle it is to give variety learning and sepesialis media (Sri, 2011: 97). Variation media learning that can be done one of the media map make history by use of programs macromedia flash made possible students more actively and independent in learning.

METHOD

This article refers to the development of media learning on the model of addie was (analysis, design, develop, implement, evaluate). The following are the stages in the design of development:

- 1) Analysis analysis identification is part of the gap, and identification of the needs of efforts being made at this stage is analyzing students, determine matter of learning, determine competency standard and media who have developed.
- 2) Design the stage is known with the term make a blueprint for. Pendesainan policy is based on what has been formulated in phases of analysis.
- 3) Development of the development is the process of manifesting design become a matter of fact, one of an important step in the development of evaluation of the program is to improve the system we are developing before in implementasikan.
- 4) Implementation at this stage the result of developing was ready to used, and hold pilot program by applying design or specification program that has been developed.
- 5) Evaluation (evaluation / feedback) evaluation is the stage to see if the result of developing being built successfully, in conformity with expectation the beginning or do not (Susanto, 2014: 23-24).

DISCUSSION

Helmut r .Lang in Romansyah , (2013) has suggested that individual study the term independent study () having few synonyms , namely independent learning , self regulated learning , seip directed study (or learning) , self teaching , dun individualized study .Strategy or method of independent study shaped the execution of a task read or research by students without guidance or teaching special .A method of ire can only be used when students able to decide how the goal and can obtain sources needed to achieve this aim .There are three things that must be considered with regard to the application of the strategy independent study .Three that would be as follows;

1. Independent study strategy should be used effectively.
2. Must be based learning resources and involve other media and resources diverse.
3. Use teknotogi instructions for promote learning students .

Technology applied in the form of enzymatic softwood (software) or hardware (hardware) have become more fused to human beings .In the field of a lesson , learning the presence of the media are already done a lot of help the educator to achieving the objective of learning (Munir , 2012: 121) .There are a lot of software that can be used to build learning multimedia , especially once by making use of the quality of sotware as well as support spsifikasi computer owned .Among software that had been familiar since 1994 in indonesia , which are often used in building animation is macromedia flash (Darmawan , 2012: 231) .

Learning to the media macromedia flash based in learning independent can be tested of two different perspective , but very berhuhungan .First , learning independent requires students to have knowledge and very particular .They should know and able to do certain hal-hal antarlain; take action , said , making decisions independent , creative thinking , critical , having consciousness , and could work .Both , learning independent requires students to perform hal-hal are , use knowledge and expertise in order for , one step logically follow the other .Meant knowledge and very particular is;

a) take action

Take action in direct involvement in learning to understand and care about new information , called also learn active are lessons learned that makes attached , search and develop information actively , and mengunakanya for some reason will save the information to memory.

b) asking questions

To be independent , good working itself as well as groups , anak-anak must to propose pertanyaan-pertanyaan interesting , make pilihan-pilihan that bertanggung said , reflect critical and creative , knowledgeable about yourself , and working . Independent and students to propose an interesting question questions sharp can improve beliefs and explain share scene to find meaning.

c) make a choice

Students choose participate in the work plan most in accordance with their interests personal and their talents , choose style learn most qualified for them .The students on the independent get information , for example , by way of observing , listening , read , or discuss .They did research by means of watch a , listening tapes , read a book , and lain-lain .With the help students learn to achieve excellence , make study to be fun and meaningful.

d) work cooperation

Cooperation can be removes obstacles mental due to limited experience and views of narrow .So it would be impossible to find strength and weakness themselves , learn to honor others , listened with an open mind , and

build mutual consent .By working together , members of small group will be able to overcome the many obstacles . Acting independent and with full responsibility , relying on talent group members , trusting others , issued opinion , and made a choice (Johnson , 2007: 154-164)

From test media history effectiveness map based macromedia flash as a means of students independent study on the: h_0 received if standard significance $> 0,25$. H_0 be refused if it is standard significance $< 0,25$, with hypothesis h_0 ; not adanya a positive and significant anantara class experiment and class control , and h_1 ; adanya a positive and significant anantara class experiment and class control .Obtained data significance independent study of 0,019 smaller than 0,5 thus hypothesis h_0 turned down and h_1 accepted , so the media maps history as a means of students independent study can be avail that is media can be used for students independent study , that could lead to students a) take action b) asking questions c) make a choice d) cooperation

CONCLUSION

From test media history effectiveness map based macromedia flash as a means of students independent study on the: h_0 received if standard significance $> 0,25$. H_0 be refused if it is standard significance $< 0,25$, with hypothesis h_0 ; not adanya a positive and significant anantara class experiment and class control , and H_1 ; differences in a positive and significant anantara class experiment and class control .Obtained data significance independent study of 0,019 smaller than 0,5 thus hypothesis h_0 turned down and h_1 accepted , so the media maps history as a means of students independent study can be avail that is media can be used for students independent study , that could lead to students a) take action b) asking questions c) make a choice d) cooperation.

The Use Of Learning Digital Media To Increase Interest And Learning Achievements History At High School Students

Agi Ma'ruf Wijaya

The Use Of Learning Digital Media To Increase Interest And Learning Achievements History At High School Students

Agi Ma'ruf Wijaya

Agi Ma'ruf Wijaya, Universitas Sebelas Maret, agimarufwijaya@yahoo.co.id

ABSTRACT

The use of digital media in teaching history important to apply in efforts to improve interest and learning achievements high school students. But, based on the research done based on learning which has been performed within this are still minimal in the use of media learning especially on the subjects of history. Based on it we need to developed a medium learning that can be interest and accomplishments studying the history of high school students. Methods used is quasi his experiments with a class control and a class experiment. Samples to be taken were students in one senior high school. This research test the effectiveness of interest learn get the result the calculation of the results as follows. ;rerata post-test of class experiment is 102,55 and rerata post-test class control is of 98,96, while the results of test t obtained value of 4,008 with the economic situation of significance 0,000 & lt; 0,025. Based on the results of statistical tests.

Keywords: digital media, interest learning, learning achievements.

INTRODUCTION

Learning is a process interplay between educators and school tuition in the process of learning. Learning be assessed as being successful when a large proportion of participants students actively involved , either physical, mental and socially in the process of learning .Learning can not be separated from said learning. Learning itself is defined by (Gagne, 1985), learning is the changes that occurred in the ability of humans which happened after learn in continuous, is not only caused by just by the process of growth. Or in the era of the world s central enriched that there are technology that had been deposited various the centre of life including in education world. Success or a setback a learning can be seen from the quality of education produced. The quality of education especially in learning that were lacking can be improved by ways to improve knowledge educator about how design methods learning more.

Based on the observation made, history educator in one of the high schools are still using conventional learning with the methods lectures in teaching students. The application of a method of lectures by educator in their experiences result in students still have less interest and attention to teaching history and so students tend to passive and less less had a passion in following learning. Media uses learning whatsoever are still considered to be less or scanty .Its impact interest learn school tuition against the history lesson classified as low. This was found based on an examination of school tuition at the time of learning lasting feel saturated and bored. The same thing mentioned by (Zaini, 2013) where the lack of media uses learning as one source of learning in addition to a guidebook learning described by teachers led students less motivated to accept the study .

Activity learn indicated school tuition above not have happened if educator can use variation a method of learning especially in the use of media learning. In almost all schools in the senior high school levels had a means of infrastructure device learning in the form of both computers and projector. So that it can be used educator a supporting in teaching history. Expected by applying media learning can grow interest learning and can impact the learning achievements students increase. The purpose of this is to interest school tuition in learning, educator are required to make learning of your class more innovative so that it can be encouraged participants students to learn optimally, good independent study and learning with visual aids or other media.

Of development of information technologies a few years it develops in really quickly. Technologies that could be developed rapidly this provides proves beneficial in the use of computer technology in learning and your (Suwarsito, 2011) could provide inovation new learning. The development of of the technology that rapidly the also has had an impact to education sector, where in the world education there is a processes of communication. Communication it can be delivered with various ways including by using media used to convey a message or material in learning. Benefits of technological development not only felt by the world education education, will but rather the to anticipate the system change learning in which will dating (Pathmantara, 2014). Media learning has an important role in learning. The importance of media uses learning as one source of learning can help.

Media election learning proper can help educator conveys messages to school tuition so the purpose that to be achieved can be done. Based on noted above it can be concluded if media learning have an important role as one of the component parts in learning. Media function according to Kemp and Dayton (in Arsyad , 1985) having three major function of: as the grantor intruksi, can presenting information, and motivate the interest and the act of. Based on it media facility for educator accomplish a purpose. It is contained in the media the information from a great variety of sources. It is also supported by the opinions (Heneich, Molenda, Russell & Smaldino, 2002) saying that the process for the delivery of material learning to school tuition is strongly influenced by the method of learning media, and equipment required students to study.

Educator in learning history can use the media learning to be implemented as part variation in learning model dikelas. Media election learning that appropriate by educator go well know when educator value, function, how to use, and benefits that can be obtained from the media. Using multimedia would be very benefit within facilitate learning (Anitah, 2009). Based on it expected media learning can help achieve a desired goal in learning.

The only way to interest learn school tuition will grow is by the use of learning digital media. The use of this media use the in computer with the program macromedia flash. Use of programs macromedia flash expected to improve learning activity in class, so can increase interest and learning achievements school tuition. In addition other purposes use of programs macromedia flash can provide rescript in the methods of learning that participants students not saturated by the look of presented and able to answer question that had prepared by right. Based on the above analysis researchers think that needs to be developed media learning that can help educator in given the lectures learning for the purpose can grow interest learning and as well as increase learning achievements school tuition.

By description above, this study attempts to; (1) develop digital media to raise interest and learning achievements history at high school students. (2) develop digital media in teaching history that meet the criteria whether.

METHOD

To research this uses the method quasi eksperiment, where in this research has objective to test digital media in interest and learning achievements history at high school students in jember. This research adopt design development education according to (Borg & Gall 1989) educational research and development is a process used to develop and validate educational product or are defined, which is a process used to develop and validating products. Object this research is the senior high school in Jember. This research take four classes to be elected with two classes as a class control and class his experiments with using a technique random class after conducted testing level equality to any clas. The subject of this research is high school students class xi in one senior high school in Jember. Student numbers that is used in class experiment is 30 students.

In this research there was a gap in treatment between the experimentation and the control group. To a group of design experiment worn learning with used by the digital media pembelajaran history, while the control group worn design learning by learning that still conventional. Based on this research plans there are three stages in this study that will be implemented to get the answers to holistically the previous problems: 1) an early stage of his experiments, 2) in the implementation stage experiments, 3) the final phase of the experiment .This research will be developed a device learning a device that is the plan of learning (lesson plans) and digital media. The necessary data in this research is the value of the average interest and student learning achievements. Value interest and student learning achievements measured in a test. The instrument used to obtain data on interest learn based on tests to the ability of affective while student learning achievements developed adapted to the level of the ability cognitive. The form of a test cognitive used is the test objective choice double (multiple choice items test) with one right answer a score 1 and wrong a score 0.

DISCUSSION

In the present the technology of computers, allow a person be processed and displays objects native media into a computer program so that the structure and its nature can be changed according to desire. Relation appreciation work of art, learning that media in the form of original objects/analog media tend to have the structure/the trait of being difficult to be changed and sometimes because it is will be less than effective. For that reason the media in the form of the noun native can be overcome with/change the nature of its structure into digital form shaped interactive multimedia.

In line in the technology has begin to be developed learning digital media. Learning digital media in this case provide learning things contextually, audio, and visual in interesting and interactive (in Umam, 2013) .An interactive medium is a combination various media of a computer, video, audio, images and text. Based on definition (Hofstener, 2001) multimedia interactive is of computer use to combine text, charts, audio, moving pictures (video and animation) into one whole with a link and tool precisely so enable the wearer multimedia be able to navigate, interact, create, and communicate. The purpose of the application of digital media is expected to improve interest and learning achievements history students. It was because interest having relation to

learning achievements because interest can be used as factors driving within school tuition to get learning achievements better.

Media learning according to the opinion of (Martin and Briggs, 1986), said that media is learning include all sources of required to do communication with the learning namely school tuition. In general the media of learning is the tools the teaching and learning process. Anything that can be used to stimulate the mind, a feeling of, attention and ability or skill so that it can encourage the occurrence of a learning process. While the digital media by ron rice defined as new media be a pleasant communications technology involving computer in it (either mainframe, pc and notebook) that facilitates the user to interact between among users with information or desired.

Products media learning this is media learning shaped digital technology operated through the laptop computers and that the wearer can do activities interaction in its use. In the formulation of the draft media, activity that is performed in this stage is identify and gather matter on material which is to be done at the time when learning digital media uses history, is about the process in and the development of the west in Indonesia. Next phase is researchers prepare and collected materials and the data used in making learning digital media history as media that can be used in the process of learning then arranged and strung together systematically and made in accordance with their needs school tuition so as to be a medium learning digital ready to be tried out.

Research now applied digital media to increase interest and learning achievements history at high school students and in test by test statistics. To know the effectiveness digital media, we must conducting a series of statistical tests, in this case researchers used assistance spss 20. Before undergone a the effectiveness, do first test equality for know whether class experimentation and class control comes from variant same. The results of test the effectiveness of shows that interest learn school tuition between grade experimentation and class control having the difference significant. Based on the results of statistical tests with the help of successor program spss 20, to test t obtained obtained value rerata post test class experiment of 102,55 dan class control of 98,96. While the results of test t obtained value of 4,008 with the economic situation of significance 0,000 & lt; 0,025, so can be concluded that there are differences rerata attitude between grade experimentation and class control.

Research conducted by (Suwarsito, 2011) with a headline development learning digital media lecture geography urban in increasing the motivation to study students. Based on the survey the results data where media learning digital developed able to increase the motivation to study college students to independent study expressed with by numbers 97,67%, while data increase study results obtained data where before media learning digital applied for points the average 52,88. After the application of learning digital media obtained to the average 59,29 or increased by 10,82 %.

Research conducted by paul mihalidis and james n cohen in publishing the open university journal display at the interactive media in education volume 2013 (1), [http:// doi.org/10.5334/2013-02](http://doi.org/10.5334/2013-02). The title research exploring curation the us of a core competency in digital and media literacy education. Research this explains where in the days of currently nearly all good guys young to adults used technology as a means of communication, good social media, online media, and various other application in the life of all day they. No exception in education sector, where educator can memanfaatkan technology for the purpose as a means of communication in pembelajaran for example by used technology of gadgets who dimiliki students for used as a source of learning. Expected through the development of media curation in the result of this research educator having an approach that is more dynamic of students and can help reduce reduce are illiterate and increase.

CONCLUSION

The application of digital media to for interest and accomplishments studied history has been running well , this based on the results of testing of the differences in the equality , increase and the effectiveness of interest and learning achievements that the results differences in from the test t:a. interest learning, (1) equality t test results obtained value of -698 with the economic situation of significance of 0,488 greater than 0.05 (0,488 & gt; 0.05) .(2) increasing the be seen that -thitung & lt; -ttabel, namely -14,068 & lt; -2,04, while value sig.& lt; 0.0, namely 0.00 & lt; 0.05, (3) the effectiveness of known t test results obtained value of 4,008 with the economic situation of significance 0,000 & lt; 0,025. B. learning achievement, (1) equality t test results obtained value of -0,896 with the economic situation of significance of 0,374 greater than 0.05 (0,374 & gt; 0.05), (2) increasing the be seen that -thitung & lt; -ttabel, namely -2,300 & lt; -2,048, while value sig. & lt; 0,029 , namely 0,029 & lt; 0.05.

The Influence of Dialogue towards English Speaking Ability for Eleventh Grade Senior High School at SMAN 3 Kota Serang

Hawa Asma Ul Husna S.Pd

Linguistics Department, University of Indonesia, hawaasmaulhusna@yahoo.co.id

ABSTRACT

The aim of this research is to find out the influence of using dialogues towards English speaking ability. This research was conducted in SMAN 3 Kota Serang on the first semester of academic year 2013/2014. The researcher conducted this research based on a research question of the research problem about “the influence of dialogues toward English speaking ability”. The researcher conducted this research by applying quantitative approach with true experimental as a method. In this research, all the students in the eleventh grade of SMAN 3 Kota Serang were taken as population. The population were 407 students. This research involved two classes of the ninth grade at SMAN 3 Kota Serang chosen based on random sampling. One class was chosen as an experimental group and other one as the control group. The sample were 70 students. The results of the research revealed a finding to the research question. It was showed by score of pretest and post-test. The mean score of pre-test in control group was 9,71. It became 14,7 at the post-test. Meanwhile, in experimental group the mean score of pre-test was 9,82 and it became 17,9 on post-test. The hypothesis test used independent *t*-test. The result of this research showed that $t\text{-test} > t\text{-table}$ ($11,85 > 2,03$) in control group and in experimental group $t\text{-test}$ also was higher than $t\text{-table}$ ($16,18 > 2,04$). It means that there was a significant influence between the group treated with dialogues and the group with three phase technique teaching. Based on the result of the research, the researcher concluded that dialogues was the effective techniques influencing students’ speaking skill in order to be active in learning speaking.

Key Words: *dialogues, speaking ability, teaching speaking, true experimental, language teaching*

1. INTRODUCTION

English consists of four skills. Those are speaking, listening, reading and writing. All of those skills relate to each other. Speaking is the easiest way to having communication in daily activity. According to Hybel and Weaver (2004:7), communication is defined as, “Interact with other to share information and beliefs, exchanges ideas and feelings, make plans, and solve problems”. Everyone can speak, so to get any information, speaking is the most useable skill to communicate. However, to some people who learn English as foreign language, skill in speaking is the most difficult to be showed up. People are afraid to speak because the environment does not support it, afraid of making mistakes, lack of vocabularies, unfamiliar with it, and etc. This commonly problem is experienced by English as foreign language learners.

Hetrakul (1995) explained that students use English more frequent only inside the class and less frequent outside the class. Whereas, they have a limited time to learn and practice English inside the class. The material which teachers bring to the class also does not meet the students need to be familiar with English and to be brave communicate in speech. While Nunan (1999: 233), mentions some reasons why learners are unmotivated in learning speaking English as foreign language. Those reasons are lack of perception of progress, uninspired teaching, boredom, lack of perceived relevance of materials, lack of knowledge about the goals of the instructional program and lack of appropriate feedback.

Based on the interview in SMAN 3 Kota Serang, the English teacher said that many students lost their confidence to speak English due to their pronunciation, vocabulary, grammar, exercise, unfamiliarity, and on their previous level study. One of English teachers in SMAN 3 Kota Serang, says “The students are afraid to show their ability in speaking since they do not have enough ability in vocabulary, pronunciation, grammar and other thing which can influence ability in speaking”. Moreover, according to the interview, this less confidence can be seen when the students did not want to come in front of the class if they were not called by the teacher. Even when they were asked to come forward, some of the students still felt shy to speak alone in front of the class whereas they were not as junior high school students anymore.

Those difficulties in mastering speaking ability are the major reasons why students are shy to speak up. They lack in many points of measurements in mastering speaking English. Therefore, this is so important for teachers to help the students to increase their speaking ability.

For all those facts, there are some ways to improve English speaking ability. One of them is using dialogues technique. It is about the students work in pairs to make a dialogue then perform it in front of the others. Dobson (1975:58), dialogue is a short conversation between two people, presented as a language model. Haryati (2011) said, dialogue helps the students practice in speech, pronunciation, intonation, stress and also improves vocabulary. So, the researcher assumes a dialogue can make students more confident to perform in front of the class since it will be performed in pairs, not alone. Moreover, dialogue can be prepared before students perform it in front of the class. Students can prepare and practice the vocabulary, the way to pronounce, intonation, pronunciation and the grammar.

While based on Suter, a consultant for social policy, states in his article, in a dialogue, the atmosphere is more exploratory, where participants express uncertainties as well as deeply held beliefs, and where the participants listen to, understand and gain insight from others. In a dialogue, new information comes to the surface. Also, the objections will be raised; disagreement based on non-negotiable convictions will still hold firm; but the tone is different. The goal is changed from conquering to growing; from silencing to knowing; from telling to asking. Therefore, the researcher wants to use dialogues technique in the classroom of eleventh grade in SMAN 3 Kota Serang. It will be used to find out whether it can make a significant influence in student’s ability in speaking English at that school or not.

Teaching Speaking

According to Nation and Newton (2009:4), speaking is the meaning focused output productive (output) skill in oral mode. Speaking belongs to productive skill, which need basic skill such as:

- 1.) Skill in receiving the information. Speaker should cover enough data or information need to be spoken.
- 2.) Pronunciation skill such as intonation, spelling and tone.
- 3.) Skill in thinking critically and logically. It involves skill of organizing memory and mind.
- 4.) Skill in building the material attitude such as confidence, leadership and humor.

So people need these basic skills in speaking. It would enable a person to verbalize the information as thought and ideas critically and logically in a good material attitude consisted. Besides, speaking also needs mastering of grammar, vocabularies, and expression skill in order to speaking accurately. In addition see Brown (2004:142), about micro- and macroskills in speaking.

According to Nation and Newton (2009: 1), speaking is included in Meaning- focused Output. Typical activity in this strand includes talking in conversation, giving a speech or lecture, telling story, and telling someone how to do something.

Harmer (2007:347) mentions some roles of the teachers in teaching speaking. Those are:

- 1.) Prompter
Students sometimes get lost, cannot think of what to say next or in some other way lose the fluency teachers expect of them. Teachers can leave them struggle out of such situations on their own, and indeed sometimes this may be the best option. However, teachers may be able to help them and the

activity to progress by offering discrete suggestions. If this can be done supportively, without disrupting the discussion or forcing students out of role, it will stop the sense of frustration that some students feel when they come to a dead end of language or ideas.

2.) Participant

Teachers should be good animators when asking students to produce language. Sometimes this can be achieved by setting up an activity clearly and with enthusiasm. At other times, however, teachers may want to participate in discussions or role-plays themselves. That way can prompt covertly, introduce new information to help the activity along, ensure continuing student engagement and generally maintain a creative atmosphere. However, in such circumstances they have to be careful that they do not participate too much, thus dominating the speaking and drawing all the attention to them.

3.) Feedback Provider

The vexed question of when and how to give feedback in speaking activities is answered by considering carefully the effect of possible different approaches. When students are in the middle of a speaking task, over-correction may inhibit them and take the communicativeness out of the activity. On the other hand, helpful and gentle correction may get students out of difficult misunderstanding and hesitations. Everything depends upon our tact and the appropriateness of the feedback teacher gives in particular situations.

A crucial part of the teacher's job when organizing speaking activities is to make sure that the students understand exactly what they are supposed to do. This involves giving clear instructions and, where appropriate, demonstrating the activity with a student or students so that no one is in any doubt about what they should be doing.

Simply, Murcia (1991: 126) said the goal of a speaking component in a language class should be to encourage the acquisition of communication skills and to foster real communication in and out of the classroom. Taylor (Cited in Murcia, 1991: 126) suggests that the teacher should present activities which are meaningful to student and which will motivate them to become committed to sustaining that communication to accomplish a specific goal. It follows then that the objectives for developing oral fluency will address this goal by setting forth specific content, activities, and methods which foster communication.

There are many activities can be done in the speaking class. Murcia (1991: 128) mentions those are: Linguistically Structured Activities, Performance Activities, Participation Activities, and Observation Activities. While according to Woods (2005: 46) in her book states that there are some activities of speaking such as Role-play, presentation, general conversation/ discussion, information-gap activities, and group discussion. But different teacher has different way of teaching, so she adds some more activities like Bank of questions, Role-play cards, Dice games, Memory games, the tray game, the hat game, student visits website, student look three or four pictures in a picture story, 'If I were' game, students script and record a guided tour to their school/ town and the balloon game.

According to Haryati (2011), there are several technique used by the teacher for teaching speaking. The first is debate and the second one is dialogue. He said debate is teaching way to improve verbal communication and teach critical thinking for students where they can be more active in every situation while dialogue is a communication tool that allows people to understand other views without interrupting.

However, to know how to assess students' speaking ability, the teacher should recognize the type of speaking. According to brown (2004:141), there are 5 types of speaking those are:

1.) Imitative

At one end of continuum of type of speaking performance is the ability to simply parrot back (imitate) a word or phrase or possibly a sentence.

2.) Intensive

A second type of speaking frequently employed in assessment contexts is the production of short stretches of oral language designed to demonstrate competence in a narrow band of grammatical,

phrasal, lexical or phonological relationship. The speaker must be aware of semantic properties in order to be able to respond, but interaction with an interlocutor test administrator is minimal at best.

3.) Responsive

It include interaction and test comprehension but at the somewhat limited level of very short conversations, standard greetings, and small talk, simple request, and comments, and the like.

4.) Interactive

The difference between responsive and interactive speaking is the length and complexity of the interaction, which sometimes includes multiple exchange or multiple participants.

5.) Extensive

Extensive oral production can become pragmatic speeches, oral presentation, and story-telling, during which opportunity for oral interaction from listeners is either highly limited or ruled out altogether. Language style is frequently more deliberative and formal for extensive task.

Those five types of speaking have different technique and assessment each type. Teachers determine the type of speaking based on the level of the students. So, students can receive the lesson well. They also can be measured well as same as its type.

Besides, Brown (2004: 143) also mentions three important issues as teachers set out to design speaking tasks:

- 1.) No speaking task is capable of isolating the single skill of oral production. Concurrent involvement of the additional performance of aural comprehension, and possibly reading, is usually necessary.
- 2.) Eliciting the specific criterion you have designated for a task can be tricky because beyond the word level, spoken language offers a number of productive options to test-takers. Make sure you elicitation prompt achieves its aims as closely as possible.
- 3.) Because of the above two characteristics of oral production assessment, it is important to carefully specify scoring procedures for a response so that ultimately you achieve as high a reliability index as possible.

Thus, the researcher assumes, there are many roles in teaching speaking. The teacher should know what kind of activity that should teacher do, what are the goals in teaching it, and also what is the type of the speaking that teacher want to present.

Dialogues

According to Dobson (1975:58), dialogue is a short conversation between two people, presented as a language model. While Mc.Cready (1975:51) explains that a dialogue is any oral interchange between two or more people. It may be questions and its answer.

In addition, Buber (1998:1) explains that dialogue is a process and particular quality of communication whereby parties achieve a 'connection' between participants allows for each party to potentially change the other or be changed by the other. When Dawes (2008:13) says that dialogues is talk in which everyone's ideas are openly shared, and discussed respectfully.

According to those experts, the researcher assumes that a dialogue is a short conversation between two or more people whereby those people have a connection or all of them have a n interchanges to discuss together.

Haryati (2011) adds, dialogue helps the students practice in speech, pronunciation, intonation, stress and also improves vocabulary. Dialogue brings people naturally sit down together and talk about important issues. Dialogue is not a problem solving process directly. It is instead a process that builds bridges of understanding between individual that helps to reduce misunderstanding.

Those what is happening in a dialogue practice can make a good outcome in speaking ability. For example participants prepare all, participants speak each other, and participants listen and gain insight to the beliefs.

Inside the class, dialogues can be one way to improve students' speaking ability. Teachers usually teach the students through dialogue which already showed in the textbook. However, Mc.Cready (1975:51) mentions the good teaching dialogue in the following:

1. Contains from three to ten exchanges.
2. Limits any one utterance to a length the student is capable of producing with fair success after hearing it twice. This maybe a few as five syllables per utterance for beginning students.
3. Adequately illustrates new grammar or vocabulary of the lessons but strictly controls the number of new items presented.
4. Represent a natural interchange which could take place between native speakers of English.
5. Takes into consideration, content and style, the age and interest of the students.

Dobson (1975: 51) also explains mentions several methods in teaching dialogues, those are:

1. Choose dialogues that are appropriate to your teaching situation.
2. Decide how much classroom time you can devote to a dialogue you intend to use.
3. Re-read the dialogue carefully before you present it to your class.
4. If the dialogue you have selected is not accompanied by pattern drills than prepare some short drills of your own.
5. Before the class begins you have to write the dialogue on the blackboard and cover it with a large piece of a paper or cloth.
6. When you first present the dialogue, read to you students and have them listen carefully.
7. Conduct a choral repetition drill in which the students repeat the dialogue after you, line by line.
8. After the first repetition you can explain any new words or structures in the dialogue.
9. Devote the next several minutes to helping the students memorize the dialogue.
 - a.) Repetition drill
 - b.) Presenting the written form of dialogue.
 - c.) Blackboard practice.
 - d.) Stick figures, puppets, and other visual aids.
 - e.) Shutting out extraneous matter.
10. After you have conducted the above memorization activities with your students, you should check to see how well they have learned the dialogue.
11. Assign the dialogue as homework.
12. Be sure to check students' mastery of the dialogue on the following day.
13. As soon as the students are thorough familiar with the dialogue, you can proceed with manipulation drills (substitution, transformation, etc.).
14. Review previously learned the dialogue.

In short, in teaching dialogue in speaking class has some roles and steps. Those roles and steps can make teachers have a good speaking class if the teacher follow the role well.

2. METHODOLOGY

2.1. Subjects

The number of population of this research was all of eleventh grade of SMAN 3 Kota Serang. The sample was choosen XI IPA 1 as an experimental group and XI IPA 5 as a control group. It used random sampling from 10 classes at eleventh grade of SMAN 3 Kota Serang. The researcher wrote down the code of each class on some pieces of rolled paper, 1st is for XI IPA 1, 2nd is for XI IPA 2, 3rd is for XI IPA 3 and so on. The lottery was chosen twice. First was for determine the two groups, and the second was to determine which group as an experimental group and which group as a control group.

2.2. Procedure

The description of the procedure of the research would be later on a guide doing the research. The researcher will use several steps. The procedure of the research as follow: 1. Formulating the problem; 2. Choosing the research method; 3. Designing the instrument for pretest and post test; 4. Conducting pre-test and

evaluation; 5. Conducting treatment; 6. Conducting post-test and evaluation; 7. Collecting data; 8. Analyzing and interpreting data; 9. Concluding data result

2.3. Instrument

Based on Sugiyono (2010:102), instrument refers to a measuring tool. In collecting the data of this research, the researcher will use spoken pre-test and post-test. To measure the score of the test, the researcher used rating sheet based on Harris (1969: p.84) as follow:

Table 1 Spoken English rating sheet

| NO | COMPONENT | SCORE |
|----|--|--|
| 1 | <p>Pronunciation</p> <ul style="list-style-type: none"> -Has few traces of foreign language, has very little mistake -Always intelligible, though one is conscious of a definite accent -Pronunciation problems necessitate concentrated listening and occasionally lead to misunderstanding -Very hard to understand because of pronunciation problem, must frequently be asked to repeat -Pronunciation problems so severe as to make speech virtually unintelligible. | <p>5</p> <p>4</p> <p>3</p> <p>2</p> <p>1</p> |
| 2 | <p>Grammar</p> <ul style="list-style-type: none"> -Makes few noticeable errors of grammar or word order. - Occasionally makes grammatical and/or word order errors which do not however, obscure meaning. -Makes frequent errors of grammar and word order which occasionally obscure meaning. -Grammar and word order errors make comprehension difficult. Must often rephrase sentence and/or restrict himself to basic pattern. -Errors in grammar and word order so severe as to make conversation virtually impossible. | <p>5</p> <p>4</p> <p>3</p> <p>2</p> <p>1</p> |
| 3 | <p>Vocabulary</p> <ul style="list-style-type: none"> -Use of vocabulary and idioms is virtually like a native speaker. -Sometimes uses inappropriate terms and/or must rephrase ideas because of lexical inadequacies. -Frequently uses the wrong word; conversation somewhat limited because of inadequate vocabulary. -Misuse of words and very limited vocabulary make comprehension quite difficult -Vocabulary limitation so extreme as to make conversation virtually impossible. | <p>5</p> <p>4</p> <p>3</p> <p>2</p> <p>1</p> |
| 4 | <p>Fluency</p> <ul style="list-style-type: none"> -Speech as fluent and effortless as that of a native speaker -Speed of speech seems to be slightly affected by language problems. -Speed and fluency are rather strongly affected by language problems. -Usually hesitant; often forced into silence of language | <p>5</p> <p>4</p> <p>3</p> <p>2</p> |

| | | |
|---|---|-----------------------|
| | limitations -Speech is so halting and fragmentary as to make conversation virtually impossible. | 1 |
| 5 | Comprehension -Appears to understand everything without difficulty. -Understand nearly everything at normal speed, although occasional repetition may be necessary. -Understand most of what is said at slower than normal speed with normal repetition. -Has great difficulty following what is said. Can comprehend only "social conversation" spoken slowly and with frequent repetitions. -Cannot be said to understand even simple conversational English. | 5 4 3 2 1 |

(Harris, 1969:84)

4.4. Data Analysis

The data of this research analyzed in quantitative analysis. Thus, the procedures of analyzing the data were as follows:

- 1.) Analyzing the test of normality distribution by using Kolmogorov-Smirnov test from SPSS version 16 program for windows with level of significance at 0.05. Test was taken from students' pre-test and post-test score in both groups.
- 2.) Analyzing test of homogeneity variance by using Levene's test from SPSS version 16 program for window with level of significance at 0.05. The test was taken from students' pre-test and post-test score in both groups.
- 3.) Analyzing students' pre-test and post-test score in both groups using *t-test* method in order to find out whether or alternative hypothesis was accepted or not.
- 4.) Interpreting the research finding in order to give the explanation about the result of the research.

3. DISCUSSION

In this research, the researcher conducted the research for three meetings. The first meeting, the researcher conducted pre-test to the both groups. It was conducted to know students' score before they got treatment. The second meeting, the researcher conducted treatment in the experimental group, meanwhile in control group, the researcher only did teaching based on lesson plan from the teacher there (feeling the worksheet). The last meeting, the researcher conducted post-test. It was conducted to know students' score after they got treatment.

The first meeting was conducted on August 23rd 2013. In this meeting, experimental group was conducted at 07.15- 08.45 A.M. While, the control group was conducted at 08.45-10.05 A.M. The researcher gave pre-test, the test was delivering their opinion one by one. After giving the test, the researcher analyzed the result of students' pre-test. Mean of the control group was 9,71 with ideal score 25 while mean in experiment group was 9,82 from ideal score 25. In analyzing the score, the researcher found that most of students in both groups had difficulties in delivering their opinion. The students afraid of making mistake, it seems because they were lacking of vocabulary, weak in grammar, and lacking of self-confidence (most of students had to be called).

The next meeting was conducted on August 24th2013. The researcher conducted the treatment in the experimental group. Taylors (1991) said the teacher should present activities which are meaningful to student and which will motivate them to become committed to sustaining that communication to accomplish a specific goal. In this meeting, the researcher applied the concept of teaching speaking based on Taylor's statement. The students try to understand dialogue as a technique that could be appropriate to help in giving opinion. Students listen carefully and repeat the 2 dialogues were shown by the researcher. Besides that, the students analyzed 2 dialogues which one asking or which one giving opinion expression. The dialogues that researcher gave was based on Mc.Cready's (1975). He said a dialogue is any oral interchange between two or more people. It may be

questions and its answer. He also said a good dialogue contains limits any one utterance to a length the student is capable of producing with fair success after hearing it, adequately illustrates new grammar or vocabulary of the lessons but strictly controls the number of new items presented, Represent a natural interchange which could take place between native speakers of English. Moreover, the steps were conducted based on Dobson's explanation about several methods in teaching dialogues. Dobson stated like dialogues appropriate to your teaching situation, read the dialogues to the students, conduct a repetition drill, and assign the dialogue to be analyzed. So that the students understand about how pronounce the words, what the meaning of the words, the structure of the sentences, the situation of the dialogues, and how to use the sentences.

The last meeting was conducted on August 26th 2013. The researcher did post-test. In this meeting, the post test showed the mean of the control group was 14,7 from ideal score 25 while the mean of experiment group was 17,9 from ideal score 25. It showed experimental group could be able to speak in front of the class well. They were more active in learning speaking by using dialogues.

Furthermore, the researcher did the statistical computation results by using SPSS 16.0 for windows. It was used to know the normality distribution test and homogeneity variance. The researcher did the computation of normality distribution test by using KolmogrovSmirnov, it was used to find out whether the test was normally distributed or not. Meanwhile, the computation of homogeneity variance was by using Lavene's test. It was used to know whether variance of the two groups were homogenous or not.

Statistical computation indicated that the distribution score of both groups were normal and the variances on their skills were equal. It was proven by the score of students' pre-test and post-test. In normality distribution result on pre-test and post-test score, the computation test showed that the pre-test score of experimental was higher than the level of significance ($0.171 > 0.05$) and also the pre-test score of control group was higher than the level of significance ($0.426 > 0.05$). It means that the score of both groups were normally distributed.

In addition, the computation test on post-test score of experimental group was higher than the level of significance ($0.693 > 0.05$) and the post test score of control group also was higher than the level of significance ($0.211 > 0.05$). So, the null hypothesis was accepted or the score of both groups were normally distributed.

Besides, in variance homogeneity result on pre-test and post-test score, the statistical computation showed that pre-test score of both groups were higher than the level of significance ($0.074 > 0.05$) and also the post-test of both groups were higher than the level of significance ($0.083 > 0.05$). It means that the variances of two groups were homogenous or the null hypothesis was accepted.

In analyzing students' pre-test and post-test, the researcher used *t*-test method. From the result of analyzing in control group showed that *t*-test was higher than *t*-table ($11,85 > 2,03$) and also the result of analyzing in experimental group showed that *t*-test was higher than *t*-table ($16,18 > 2,03$).

Finally, both of groups showed that the alternative hypothesis accepted. It means that there was any significant influence of using dialogues toward English speaking ability at the eleventh grade of SMAN 3 Kota Serang.

4. CONCLUSION

Based on the research about "the influence of dialogues toward english speaking ability at the ninth grade of SMAN 3 Kota Serang", the researcher concluded that there was significant influence toward students' speaking ability. It was proven by independent *t*-test on control group and experimental group. The results were 11,85 in control group and 16,18 in experimental group. Based on the distribution table with 0,05 level of significance, *t*-table was 2,04. It showed that the *t*-test results was higher than *t*-table. It means that there was a significant influence of dialogues toward english speaking ability. The mean score of pre-test in control group was 9,71. It becomes 14,7 at the post-test. Meanwhile, the mean score of pre-test in experimental group was 9,82. It becomes 17,9 at the post-test.

The Effectiveness of Word Wall Strategy on Students' Vocabulary Mastery

Farah Ainy

The Effectiveness of Word Wall Strategy on Students' Vocabulary Mastery

Farah Ainy

The University of Indonesia, Farahainy94@gmail.com

ABSTRACT

The purpose of this study was to get empirical evidence about the effectiveness of word wall strategy on students' vocabulary mastery at the first grade of Mts Manaratul Islam and to find out the effect size of word wall strategy on students' vocabulary mastery. By purposive sampling, the writer took the samples. The sample of this study is 60 students, which are 30 students as experimental class and 30 students as controlled class. The method used in this study was a quantitative method and the design used in this study was a quasi-experimental design. In collecting the data, the writer conducted pretest and posttest which consists of 30 multiple choice items for each test. In analyzing the data, the writer used t-test. The result of the calculation showed that in the significance degree (α) of 5% is $t_{\text{test}} (t_0) > t_{\text{table}} (t_t)$ or $(2.58 > 2.002)$. It means the null hypothesis (H_0) is rejected and alternative hypothesis (H_a) is accepted. Based on the criteria of the test, the result showed that there is a significant difference between the students' vocabulary mastery through word wall strategy and without word wall strategy. It can be seen that the average gained score of the experimental class is higher than those of control class. Therefore, it can be concluded that word wall strategy is effective on the students' vocabulary mastery in the seventh grade of Mts Manaratul Islam Jakarta and the effect size value obtained in this research is 0.683 or 68.3% which is categorized into moderate effect that means word wall strategy has moderate effect on the students' vocabulary mastery in the seventh grade of Mts Manaratul Islam Jakarta.

1. INTRODUCTION

Vocabulary plays an important role in language learning and teaching. We could not learn a language without vocabulary because vocabulary is one of the language elements that have direct contribution on the mastery of the four language skills; listening, speaking, reading, and writing. According to Richards and Renandya (2002), vocabulary is one prominent part of language learning that will become a basis so the students can speak, listen, read, and write well. Therefore, the students who have good vocabulary will be easier to master the language skills well. On the other hand, the students who are less in vocabulary will be difficult to understand the text, comprehend the message, and also speak and write in English. Clearly, one who masters enough vocabulary will find fewer difficulties in using the language in written and oral form than those who have fewer vocabularies.

Several authors proposed the importance of mastery the vocabulary. As stated by Allen (1997) in his book : "vocabulary is one of the important factors in all languages teaching, student must continually be learning words as they learn grammar and as they practice pronunciation" Moreover, McCharty (1990) states that vocabulary is the biggest part of any language course based on the experience of most language teachers. No matter how well the student learns grammar and the pronunciation are mastered, without vocabularies to convey a wide range of meanings, communication just cannot happen in any meaningful way. It means that mastering a large number of vocabularies will be helpful for language learner better than mastering language structures and sounds of language because by mastering vocabulary, language learners will be able to master the language too.

Furthermore, Wilkins (1972) in Scott Thornburry's book *How to Teach Vocabulary* emphasized the importance of vocabulary acquisition in learning language by stating that we could convey the idea without grammar but we could not convey the idea without vocabulary. He also said that your English will improve very much if you spend most of time studying vocabulary rather than grammar because you can say almost anything with words, but you can say very little with grammar. It means, people can express many ideas with vocabulary but they can express in a few thing with grammar. That's why vocabulary is very important.

Moreover, School based Curriculum in Indonesia states the same idea that learning vocabulary is very important for Indonesian language students. According to the 1984 curriculum, the objective of English teaching in Indonesia is the students are expected to develop English language skills by using 1000 words for junior high school students and 2500 words for senior high school students. The next curriculum, Competency-Based Curriculum (KBK) and the school-level curriculum (KTSP) which was established in 2004 and 2006, does not mention explicitly the total of words which should be mastered by the students in junior and senior high school.

However, based on Competency Standard- *Standar Kompetensi (SK)* and Basic Competency- *Kompetensi Dasar (KD)* mentioned in KTSP, the first grade students are expected to be able to express meaningful ideas in term of functional text and simple short essay in the form of descriptive and procedure text to interact with people in their nearest environment. Besides, Cahyono and Utami (2008) said that when the existing curriculum does not mention explicitly what word lists to teach, teacher required high sensitivity of what vocabulary the students might need. Hence, vocabulary is very important and should be taught to the English learners.

Regarding the importance of vocabulary, some Junior High School students in Indonesia still have some problems in the vocabulary learning. The example of those problems occurred in Mts. Manaratul Islam. Based on the writer's observation through her preliminary study during teaching learning English activity at the first grade of junior high school, the writer found that many students have low motivation in learning English vocabulary because they feel English vocabulary is very difficult. It can be seen from the score of vocabulary test is low as the average of the vocabulary test does not reach the minimum learning mastery standard (KKM). Besides, the students did not understand the vocabulary when the teacher used English in the class so they asked the teacher to translate into Bahasa, and they often use dictionary in doing the exercise given by the teacher so it is time consuming. Furthermore, based on the writer's interviews with the English teacher at the school, the students have difficulty in remembering new vocabularies. It may be because the differences between foreign words and Bahasa Indonesia words and the differences between written word and pronunciation. Moreover, the teachers often find that the students are not interested in learning English because the students do not have knowledge about the correlation between the subject matter and themselves. So, the new words that have been learnt are soon to be forgotten because the students do not learn the words in context. It is difficult for them to use the words in daily conversation. Besides, it seems the method that the teacher used needs to be varied in order to motivate the students in learning English. The probability that the students are bored in English classes could be because the technique used by the teacher is not varied in teaching English. The students were asked to memorize words and their meaning which are available. However, the students have some difficulties in mastering the new vocabularies because they have to memorize the vocabulary in individual way. These ways were not interesting and motivating in learning vocabulary.

Based on the problems above, it is suggested that the teacher vary their technique to make the students understand the vocabulary more easily and make the process of learning vocabulary be more interesting for students. As Nation (2003) said, the teachers should teach the learners useful words to make easier and help learners solve meanings on their own in vocabulary learning. From this statement, we can infer that the students should be taught the words which commonly used in their daily activities by using the strategies and games.

There are many techniques and strategies of language teaching that can be used for teaching vocabulary such as: puzzle, stick figure, card game, pictures, etc. Dejager (2007) said that seeing and using the vocabulary for which students are responsible is an effective strategy to build attention of their vocabulary. One type of the strategies that is appropriate is *word wall*. *Word wall* is collection of words which are displayed in large visible letters on a wall and bulletin board. The *word wall* is designed to be an interactive tool for students or others to use, and contains an array of words that can be used to improve the students' vocabulary mastery.

Several authors have defined the meaning of word wall. According to Dejager (2007), word wall is a systematically organized collection of words which is displayed on a wall and is used as a tool for learning. Furthermore, Brabham and Villaume (2001) states that a word wall is a collection of high-frequency sight words that are age appropriate, classified into groups or categories, and is located on the wall of a classroom for children to easily see and learn. From the definition above, it can be concluded that word wall is a word which is displayed on the wall that can be used as a tool for learning. By using word wall, students will get many advantages in learning vocabulary.

In reference to the explanation above and the strong desire of finding the solution of these problems, the writer did the research about improving students' vocabulary mastery through word wall. This study was an experimental research to know whether word wall strategy is effective on students' vocabulary mastery or not, and how effective word wall strategy on students' vocabulary mastery at first of Islamic Junior High School Manaratul Islam Gandaria Selatan in academic year 2014/2015.

2. METHOD

Research Method and Design

The method of this research was quantitative research. This research was categorized as an experimental research design. Experimental research is one of the best research methodologies that writer can use. The writer used experimental research design to identify the effectiveness of using word wall strategy on students' vocabulary achievement. Here the experimental group and the controlled group were selected. Both group took a pre-test and post-test, which only the experimental group receives the treatment.

The design of this research was classified as quasi experimental research. The writer used quasi experimental research because they compared the group using word wall strategy and the conventional group.

The conventional group means that the researcher will use the method that is usually used by the teacher. In this research, the writer focused on students' vocabulary mastery using word wall strategy.

Research Population and Sample

Population is all individuals from whom the data were collected. The research takes population is the first grade students of Mts. Manaratul Islam. The total numbers of the population were 200 students who are divided into 5 classes, A, B, C, D, and E.

Sample is a part of population representative. Creswell (2014) said, "Experiments include true experiments with the random assignment of subjects to treatment conditions and quasi experiments that use non randomized designs." Because this research is quasi experimental research, the sampling technique of the research was purposive sampling that the sample is not selected randomly from a population to create a sample but the sample is selected based on the judgment of the researcher. In this quasi experimental design, the group was not randomized but it was taken from a group that had been formed earlier. In this research, the writer took two classes as the sample from seven classes, the classes which were chosen for the sample in this research were VII-A as the experimental class and VII-E as the controlled class.

The research used nonequivalent control group design with pretest and posttest that the experimental and the control group were compared although the group was not chosen at random. In this design, two existing groups were given pretest to measure students' attitude. Next the teacher gave treatment then gave the posttest.

The Technique of Data Collecting

Collecting data is an important thing in this research that can be determined. They are two techniques that can be used to collect the data:

1. Observation

Observation is a way of gathering data. Researcher used observation as the preliminary data to complete the main data. In conducting observation, the researcher tried to understand an ongoing process, the problems occurred, and the characteristics of teacher and students during teaching and learning English activity in the classroom. Besides, the researcher also conducted the interview with the English teacher and the students informally to convince researcher's perspective and opinion about the classroom. It is conducted to know the situation of the classroom, the characteristics of the learners, the subject matter, and also the technique that can be used to teach English. The researcher also asked to the students about kinds of teaching and learning activities towards learning vocabulary, description of their classroom activities, and their knowledge about vocabulary.

2. Testing

After conducting the observation, the researcher conducted the test to get the main data. Test is the main technique used by the researcher in the study. To support the data obtained through the test, the researcher used the research instrument. The main instruments of this research were pretest and posttest. The function of pretest was to know how far the vocabulary mastery of the students is before they use *wordwall* while the function of posttest is to know the increasing of vocabulary mastery after they have used *wordwall*. Clearly, pretest and posttest are conducted to know the differences of the students' ability before and after the teacher use the method.

Research Instrument

There are two instruments that the researcher used to get a data:

1. Pretest in Multiple Choice Form

The writer gave pretest for the students in the first step of teaching. According to Creswell, a pretest provides a measure on some attribute or characteristic that you assess for participants in an experiment before they receive a treatment. By conducting pretest, the writer wanted to know the students' intelligent. The writer also wanted to know how far the students' achievement in understanding the vocabulary about describing people before the writer gave the treatment to students. The pretest for the students was carried out to get the score between control class and experimental class. The writer made the same question for pretest and posttest. The writer made 30 items multiple choices.

2. Posttest in Multiple Choice Form

The writer gave the posttest for the students after the treatment had been done. A posttest is a measure on some attribute or characteristic that is assessed for participants in an experiment after a treatment. Pretest is conducted to know the students' understanding of the material about describing people after the writer had given the material using word wall and using translation method. The writer also wanted to know is there any

significance different between using word wall and translation method as usual. The writer also made the same question for pretest and posttest but the option of every items were changed. The writer made 30 items multiple choices.

Data Analysis

The quantitative data obtained from the test was analyzed using descriptive statistical operation in the form of table and graphs. The data also was calculated using T-test formula by using SPSS to know whether word wall strategy can improve students' vocabulary mastery or not. Moreover, to know how effective word wall strategy on the students' vocabulary mastery, the data was calculated using *Cohen's d* formula.

3. RESULT AND DISCUSSION

Data Description

The data were collected from students pre-test and post-test of both classes. The data which is obtained is described into two tables. The table 4.1 showed the students' score and achievement in experiment class and the table 4.2 showed the students' score and achievement in control class. Each table has four columns; the first column showed the number of students, the second and the third column showed pre-test and post-test scores, and the last column showed the gain score from pre-test and post-test.

1. The Data of Experimental Class

Table 4.1
The Students' Scores of Experimental Class
(Using Word Wall)

| Students (N) | Nilai Pretest | Nilai Posttest | Gained Score |
|---------------------|----------------------|-----------------------|---------------------|
| 1 | 53 | 67 | 14 |
| 2 | 57 | 77 | 20 |
| 3 | 60 | 87 | 27 |
| 4 | 50 | 67 | 17 |
| 5 | 53 | 73 | 20 |
| 6 | 50 | 67 | 17 |
| 7 | 60 | 87 | 27 |
| 8 | 53 | 77 | 24 |
| 9 | 60 | 80 | 20 |
| 10 | 50 | 73 | 23 |
| 11 | 53 | 77 | 24 |
| 12 | 57 | 70 | 13 |
| 13 | 53 | 70 | 17 |
| 14 | 63 | 83 | 20 |
| 15 | 57 | 63 | 6 |
| 16 | 50 | 60 | 10 |
| 17 | 63 | 87 | 24 |
| 18 | 57 | 67 | 10 |
| 19 | 70 | 90 | 20 |
| 20 | 57 | 87 | 30 |
| 21 | 50 | 73 | 23 |
| 22 | 50 | 70 | 20 |
| 23 | 53 | 77 | 24 |
| 24 | 60 | 83 | 23 |

| | | | |
|---------|-------|-------|------------|
| 25 | 67 | 87 | 20 |
| 26 | 70 | 83 | 13 |
| 27 | 43 | 73 | 30 |
| 28 | 53 | 80 | 27 |
| 29 | 60 | 77 | 17 |
| 30 | 43 | 73 | 30 |
| Total | 1675 | 2285 | 610 |
| Average | 55.83 | 76.17 | 20.3333333 |

According to the result of pre-test and post-test from the experimental class, it shows that the lowest score of pre-test was 43 and the highest score was 70. Besides, the lowest score of post-test was 60 and the highest score was 90. The average of pre-test was 55.83 and post-test 76.17. After conducting pretest and posttest, the average of gained score that the teacher got was 20.33. The average of post-test after the students got treatment using word wall was higher than the average of pretest before the students got treatment.

2. The Data of Control Class

Table 4.2
The Students' Score of Control Class
(Without Word Wall)

| Students (N) | Nilai Pretest | Nilai Posttest | Gained Score |
|--------------|---------------|----------------|--------------|
| 1 | 53 | 67 | 14 |
| 2 | 57 | 70 | 13 |
| 3 | 53 | 76 | 23 |
| 4 | 73 | 80 | 7 |
| 5 | 53 | 77 | 24 |
| 6 | 53 | 80 | 27 |
| 7 | 43 | 70 | 27 |
| 8 | 67 | 70 | 3 |
| 9 | 53 | 77 | 24 |
| 10 | 47 | 73 | 26 |
| 11 | 60 | 60 | 0 |
| 12 | 50 | 70 | 20 |
| 13 | 53 | 73 | 20 |
| 14 | 57 | 73 | 16 |
| 15 | 50 | 73 | 23 |
| 16 | 50 | 67 | 17 |
| 17 | 63 | 83 | 20 |
| 18 | 53 | 70 | 17 |
| 19 | 60 | 63 | 3 |
| 20 | 63 | 77 | 14 |
| 21 | 53 | 70 | 17 |
| 22 | 57 | 73 | 16 |
| 23 | 50 | 70 | 20 |

| | | | |
|---------|-------|------|-------|
| 24 | 67 | 67 | 0 |
| 25 | 53 | 73 | 20 |
| 26 | 67 | 77 | 10 |
| 27 | 60 | 80 | 20 |
| 28 | 70 | 73 | 3 |
| 29 | 53 | 66 | 13 |
| 30 | 67 | 77 | 10 |
| Total | 1708 | 2175 | 467 |
| Average | 56.93 | 72.5 | 15.57 |

Based on the table 4.2 above, it shows that the lowest score in pre-test was 43 and the highest score was 73 with the average of pre-test score was 56.93. Furthermore, the highest score of post-test was 83 and the lowest score was 60 with the average score was 72.5. After pretest and posttest, the teacher got the average of the gained score was 15.57. It means the gained score of control class is lower than experimental class.

Moreover, the writer calculated the data to test the hypothesis that whether there is significant different between students' vocabulary mastery using word wall in experimental class and students' vocabulary mastery without word wall in control class. The writer calculated the data using T-test formula. Two classes were compared, the experiment class was X variable and the controlled class was Y variable.

The next table is statistical calculation of the gain score both experimental class using word wall media and control class without word wall media

Table 4.9
The Statistical Calculation of the Gain Score of Both
the Control and the Experimental Class

| Students | X | Y | x | y | x ² | y ² |
|----------|----|----|--------|--------|----------------|----------------|
| 1 | 14 | 14 | -6.33 | -1.57 | 40.0689 | 2.4649 |
| 2 | 20 | 13 | -0.33 | -2.57 | 0.1089 | 6.6049 |
| 3 | 27 | 23 | 6.67 | 7.43 | 44.4889 | 55.2049 |
| 4 | 17 | 7 | -3.33 | -8.57 | 11.0889 | 73.4449 |
| 5 | 20 | 24 | -0.33 | 8.43 | 0.1089 | 71.0649 |
| 6 | 17 | 27 | -3.33 | 11.43 | 11.0889 | 130.645 |
| 7 | 27 | 27 | 6.67 | 11.43 | 44.4889 | 130.645 |
| 8 | 24 | 3 | 3.67 | -12.57 | 13.4689 | 158.005 |
| 9 | 20 | 24 | -0.33 | 8.43 | 0.1089 | 71.0649 |
| 10 | 23 | 26 | 2.67 | 10.43 | 7.1289 | 108.785 |
| 11 | 24 | 0 | 3.67 | -15.57 | 13.4689 | 242.425 |
| 12 | 13 | 20 | -7.33 | 4.43 | 53.7289 | 19.6249 |
| 13 | 17 | 20 | -3.33 | 4.43 | 11.0889 | 19.6249 |
| 14 | 20 | 16 | -0.33 | 0.43 | 0.1089 | 0.1849 |
| 15 | 6 | 23 | -14.33 | 7.43 | 205.349 | 55.2049 |
| 16 | 10 | 17 | -10.33 | 1.43 | 106.709 | 2.0449 |
| 17 | 24 | 20 | 3.67 | 4.43 | 13.4689 | 19.6249 |
| 18 | 10 | 17 | -10.33 | 1.43 | 106.709 | 2.0449 |
| 19 | 20 | 3 | -0.33 | -12.57 | 0.1089 | 158.005 |
| 20 | 30 | 14 | 9.67 | -1.57 | 93.5089 | 2.4649 |
| 21 | 23 | 17 | 2.67 | 1.43 | 7.1289 | 2.0449 |

| | | | | | | |
|-------|-------|-------|---------|---------|---------|---------|
| 22 | 20 | 16 | -0.33 | 0.43 | 0.1089 | 0.1849 |
| 23 | 24 | 20 | 3.67 | 4.43 | 13.4689 | 19.6249 |
| 24 | 23 | 0 | 2.67 | -15.57 | 7.1289 | 242.425 |
| 25 | 20 | 20 | -0.33 | 4.43 | 0.1089 | 19.6249 |
| 26 | 13 | 10 | -7.33 | -5.57 | 53.7289 | 31.0249 |
| 27 | 30 | 20 | 9.67 | 4.43 | 93.5089 | 19.6249 |
| 28 | 27 | 3 | 6.67 | -12.57 | 44.4889 | 158.005 |
| 29 | 17 | 13 | -3.33 | -2.57 | 11.0889 | 6.6049 |
| 30 | 30 | 10 | 9.67 | -5.57 | 93.5089 | 31.0249 |
| Total | 610 | 467 | 0.1 | -0.1 | 1100.67 | 1859.37 |
| | 20.33 | 15.57 | 0.00333 | -0.0033 | 36.6889 | 61.9789 |

The table above described the result calculation of the gained score of the experimental class (X) and the control class (Y). Based on the table above, it can be concluded that the total score of the experimental class (Σx) is 610 and the control class (Σy) is 467. The mean score of experimental class is 20.33 and the mean score of control class is 15.57. It means the experimental class who get the treatment have higher score than the control class who did not get the treatment.

Chart 4.1

The Pre Test, the Post Test, and the Gained Scores of the Control Class and the Experimental Class

The diagram above describes the score of both classes in average level. It shows that the students' achievement in vocabulary learning by using word wall (experimental class) is higher than control class.

In addition, the writer also used SPSS to calculate the data. The result that the writer got can be seen on the table below:

Table 4. 10

| | Levene's Test for Equality of Variances | | t-test for Equality of Means | | | | | | |
|-----------------------------|---|------|------------------------------|--------|-----------------|-----------------|-----------------------|---|-------|
| | F | Sig. | t | df | Sig. (2-tailed) | Mean Difference | Std. Error Difference | 95% Confidence Interval of the Difference | |
| | | | | | | | | Lower | Upper |
| Metode | 2.361 | .128 | 2.584 | 58 | .012 | 4.767 | 1.845 | 1.074 | 8.459 |
| Equal variances assumed | | | 2.584 | 58 | .012 | 4.767 | 1.845 | 1.074 | 8.459 |
| Equal variances not assumed | | | 2.584 | 54.424 | .012 | 4.767 | 1.845 | 1.069 | 8.464 |

Based on the table, the writer found T_o is 2,584 with the significance 0.10 while T_{table} is 2,002. After comparing between T_o and T_{table} , the writer found T_o is higher than T_{table} . Therefore, it can be concluded that H_0 is rejected. It means there is difference score gain between students' vocabulary mastery using word wall and without word wall.

Meanwhile, the writer calculated the effect size to know how effective word wall strategy on the students' vocabulary mastery. The calculation as follows:

$$d = \frac{20,33 - 15,57}{\left(\frac{6,057 + 7,873}{2}\right)} = 0.683$$

The result of the calculation of *Cohen's d* formula to measure how effective word wall strategy on the students' vocabulary mastery showed that the effectiveness value obtained is 0.683. Based on the criteria of the effect size, it can be said that the effect size to know how effective word wall strategy on the students' vocabulary mastery is categorized into moderate effect.

Data Interpretation and Discussion

In the description of the data which was taken from 30 students of experimental class, the writer could explain briefly about the data got from the students before they were analyzed. The description of the experimental class has the mean of pre-test 55.83 before using word wall. It means the mean score is bad because it is lower than the standard minimum (KKM). After giving 4 times treatments for experimental class using word wall, the writer got the mean of post-test 76.17. So, the writer got the mean of gain score 20.33. It is good because the mean score has reached KKM. The smallest score in the pre-test was 43 and the highest score was 70. The data showed in post-test that the smallest score was 60 and the highest score was 90. It can be summarized that the lowest and the highest scores in posttest were higher than pre-test.

Meanwhile, from the description of score in controlled class which was the writer got the mean of pre-test 56.93. It means the mean score is bad because it is lower than KKM. In this class, the writer did not use word wall media, but the writer only asked the students to memorize the vocabulary. After giving 4 times treatments without word wall media, the writer got the mean of post-test 72.5. It is bad because the mean score is still lower than KKM. The writer got the mean of gain score was 15.57. It means that the gain score of experimental class was higher than controlled class. The smallest score in the pre-test was 43 and the highest score was 73. The data showed in post-test that the smallest score was 60 and the highest score was 83. It can be summarized that the lowest and the highest score in post-test were also higher than pre-test.

Before testing the hypothesis, the writer analyzed the normality and homogeneity of the data. The purpose of analyzing the normality was to see whether the data got in the research has been normally distributed or not. The result of normality can be seen by comparing the value of Significant Score to 0.05. Meanwhile, the purpose of analyzing the homogeneity was to see whether the data/sample in both experimental and controlled class were homogenous or heterogeneous.

In the analyzing the normality, the result showed that both the data of pre-test and post-test in controlled class were distributed normally. According to criteria of the test, it can be seen in the result that the significant score of pretest (0.166) and posttest (0.259) of experimental class was higher than 0.05 (0.166 and 0.259 > 0.05). Both the data of pretest and post-test in experimental class also showed that they were distributed normally. According to criteria of the test, it can be seen in the result that the significant score (pre-test and post-test) > 0.05 (0.052 and 0.510 > 0.05). It means that all the data in both pre-test and post-test of experimental and control class were distributed normally. The next result that the writer got was from the calculation of homogeneity. The result showed that $F < F_{\alpha}(n_1-1, n_2-2)$ (1.201 < 1.85). Based on the criteria, it can be conclude that H_0 is accepted. It means that the sample in experiment class and controlled class were homogenous.

The final calculation was testing the hypothesis. This was the main calculation to answer the problem formulation of this research that whether there is significant difference between students' vocabulary mastery using word wall and without word wall. The writer used T-test formula in the significance degree (α) of 5%. The result showed that $t_{test} > t_{table}$ (2.58 > 2.002). It means that t-test was higher than t-table. So, the null hypothesis (H_0) is rejected. It means that alternative hypothesis (H_a) is accepted that there is significant difference between students' vocabulary mastery using word wall and without word wall.

In addition, to measure how effective word wall strategy on the students' vocabulary mastery, the writer used *Cohen's d* formula. The result of the calculation of *Cohen's d* formula showed that the effectiveness value obtained is 0.683. Based on the criteria of the effect size, it can be said that the effect size to know how effective word wall strategy on the students' vocabulary mastery is categorized into moderate effect between 0.51 – 1.00. It means this strategy did not give the remarkable significant level because the value that the writer got less than 1.00. However, it nearly achieves the highest level of the effect size (strong effect). Also, this strategy had given the influences to students' vocabulary mastery. It is proved that students who are given the treatment using word wall strategy have higher score that the students who are not given the treatment using word wall strategy. Clearly, word wall strategy has moderate effect on students' vocabulary mastery after word wall strategy is used in the classroom.

4. CONCLUSION AND SUGGESTIONS

Based on the analysis result of this research, it showed that the result of T-test formula to test the hypothesis of this research in the significance degree (α) of 5% is t-test (t_0) > t-table (t_t) (2.58 > 2.002). It means the null hypothesis (H_0) is rejected and alternative hypothesis (H_a) is accepted. Therefore, it can be concluded

that the answer of research question was proven that there is effectiveness of word wall strategy on students' vocabulary mastery in the seventh grade of Manaratul Islam Jakarta in academic year 2014/2015 and the effectiveness size value obtained in this research is 0.683 or 68.3% which is categorized into moderate effect that means word wall strategy has moderate effect on students' vocabulary mastery.

After the writer carried out the research, she would like to offer some suggestions that may relate to the research findings and discussion. The result of this research showed that word wall strategy is effective to be applied in vocabulary teaching and learning. For English teacher, they should be creative in developing the teaching learning activities and strategies in classroom to make the class alive and the students do not get bored. Besides, English teachers should encourage the students to be active to participate in class learning activities so that the students will get more effective vocabulary learning and easier to understand the new vocabulary taught. English teacher also should motivate the students that learning English especially vocabulary is such an easy and interesting to learn. The use of instructional media should be encouraged.

Besides, she also offer some suggestion for students and also the next researcher. Students should always be active in the process of teaching and learning and not afraid or lazy in the English lesson, so the students should develop their motivation. Besides, the students should give more attention and keep their attitude when the teacher explained the lesson and teach them. The students also should study hard to reduce their difficulties in learning English. For the next researchers, they should develop the study using the media or strategies in vocabulary mastery to make the students interested and understand the material easily. For example: using card, song, picture, and word wall strategy.

ABSTRACT

The purposes of this study are: 1) assess the implementation of integrated science teaching in junior high school, 2) analyze the science textbook of Junior High School, 3) describe a strategy to create an integrated science themes, and 4) describe how to develop a textbook. Data obtained by distributing a questionnaire on the implementation of integrated science teaching to the 20 teachers in the District of Bandung. The questionnaire data were analyzed by quantification into the score, and then interpreted. The second data content analysis of science textbooks in junior high school. The result showed that the content of the material in integrated science textbook is not fully integrated yet, it still appears the differences between physics, biology, chemistry, and IPBA. From the analysis of both data, we can conclude that the cause of learning science which has not been integrated yet are 1) the teacher's difficulties in developing textbooks and 2) the absence of an integrated science book as the main reference. Therefore, it is trully necessary to develop an integrated science textbook which contains materials of integrated science. One of the way to combine content of materials is using the framework of Fogarty, started from making the theme of science teaching materials. So that, we can use the writing process model of science instructional materials by Sinaga to develop the teaching materials.

Key Words: theme, integrated science, fogarty framework, MPM2A,

1. INTRODUCTION

In the 1994 curriculum, there are two contents of science taught for junior high school, they are physics and biology with different teachers. While the content of chemical science will be taught at the high school level. Since the new competency-based curriculum (KBK) or 2006 curriculum is available, physics and biology are merged into an integrated science which consists of physics, biology, chemistry and earth science and space (IPBA) until now.

The integration into a science lesson is to respond the developments and changes in international education. Since 2000, Indonesia became one of the countries that joined the PISA (Programme for International Student the assessment). PISA is a program under the organization of the OECD (Organization for Economic Co-operation and Development). One of the PISA's programs is surveying the literacy skills of students aged 15. The literacy skills that will be evaluated are scientific, math, and reading literacy.

According to the results of PISA survey in 2015, Indonesia is in the 62nd rank of the 72 countries that participated in the PISA tests, with the average score of students' science literacy is 403 (OECD, 2016, p. 5). It means that Indonesian students have limited knowledge of science and reflects the general phenomenon of low achievement in learning science (Ekohariadi 2009, p. 30). Therefore, teachers are forced to improve the students scientific literacy better, so hopefully we can improve our country's rank in PISA.

The cause of low ratings PISA in our country could be due to the problems of science content taught to students. Implementation of integrated science teaching in the field recently was not really integrated. Beside that, science teaching is only focus on concepts and theory, so that students only understand the

knowledge and learn by rote without applying it in real life. In science literacy, science lesson is not only a knowledge, but also a basis when we face a problem in the field.

Teaching and learning process (PBM) in the class involves three components, namely teachers, students, and teaching materials. Students interact directly with teachers and teaching materials. Nwike (2013, p. 105) examined the effect of the use of teaching materials to students' cognitive achievement. The results showed that students who learn using teaching materials, get better cognitive achievement than those who doesn't. Chingos (2004, p. 5) states that the selection of textbooks in teaching also having the same effect, even greater than a qualified teacher. It occurs due to the interaction between students and teaching materials are longer than interaction between students and teachers. Teachers have shorter time at school than textbook, that can be read either at school or at home. The use of teaching materials gives students chance to see, feel, and touch them during they learn. This research shows that teaching materials are very important in teaching learning process. Teaching materials such as textbooks and others have role and very big influence in improving student achievement and skills. Therefore, to improve the quality of science integrated teaching, it can be started with the manufacture of science textbooks that are relevant with the curriculum and the demands of global world.

According to the statement above, it requires a solution of how to create or develop an integrated science textbook that actually integrates the contents of science. One of the ways is by making the science materials in the form of thematic in order to be effective and efficient when we convey the material thoroughly and more meaningful. Therefore, teachers are required to be able to construct or develop integrated science materials, and one of the way is using the *framework* of the Fogarty. Fogarty proposed ten ways to integrate subjects, and one of them that can be used to combine science content is connected, shared, integrated, and webbed model (Fogarty, 1991a). Having determined the theme and its integration patterns, further to develop textbook, we can use the writing process model of science teaching materials developed (MPM2A) by Sinaga (2016). Syntax MPM2A consists of 15 steps starting from: 1) Analyze the curriculum of science for Junior High School, 2) Determine the scope of the material, 3) Prepare a draft outline 1, 4) Make a concept map, 5) Create a revised outline, 6) Concepts representation, 7) Multi representations, 8) Translation between representation modes, 9) Multimodes representation, 10) Write a draft of teaching materials, 11) Make the Review, 12) Perform editing, 13) Make a second draft, 14) Test the readability or the main idea of discourse and test the quality of writing teaching materials. 15) final writing draft of teaching materials.

2. METHOD

The focus of this research is to answer the following questions: 1) how is the implementation of integrated science teaching in junior High school?, 2) how did the content of science textbooks use in the schools ?, 3) how to create an integrated IPA theme ?, and 4) how to develop an integrated science's teaching materials ?.

This research is a study case of the application of integrated science lessons was hold by 20 teachers in some of junior high school in Bandung district. The data source is the research questionnaire and the analysis of textbooks. The questionnaire was made in the form of Likert scale with four (4) possible answers; always, often, rarely and never. The questionnaire consisted of eleven (11) statements about the implementation of learning science in junior high school. The data were analyzed by means converted into a quantitative score value then be interpreted , after it has described descriptively. The second source of the data obtained from the analysis of some junior high school science textbook for class VII, VIII, and IX, by reviewing each chapter title IPA material for each grade level. Furthermore, the results were analyzed descriptively.

3. DISCUSSION

a. How is the implementation of an integrated science teaching in junior high school?

To answer this question, a research instrument of a questionnaire made in the form of Likert scale with four (4) possible answers; always, often, rarely and never. The questionnaire was distributed to 20 teachers of junior high school in Bandung regency. After the data were collected, they were analyzed by converting them into score and then interpreted. The results were as follows:

- 1) In learning process, the teachers use not only the available textbook, electronic school books (BSE) but also use the other textbooks. While students always use the source book, BSE.

- 2) In learning process, teachers rarely use teaching materials developed their own. They even rarely make and develop teaching materials independently or in cooperation with the same subject teachers. Therefore, teachers often find it difficult to prepare integrated science materials.
- 3) In science learning process, teachers always teach integrated science alone and never share the tasks with others. So that teachers often find it difficult to teach the material that is not in accordance with their educational background. The teachers who have S-1 Physics education background often find the difficulties when teaching biology content, otherwise for the teachers with the Biology background, have difficulties when teaching the physics' content.
- 4) Teachers never teach integrated science thematically, because they only use the teaching materials that already exist and provided by the government.

From the data analysis, we can conclude that learning science in junior high school using source book issued by the Education Ministry or BSE. Science is taught by a teacher with different background, so they found difficulties to teach science content. In teaching learning process, teachers find it difficult to create or develop an integrated science teaching materials independently or through consultation with subject teachers (MGMPs). So that the learning process has not yet implemented the integrated science, it is still separated clearly between physics, biology, chemistry, and the earth and space science (IPBA).

b. How is the content of integrated science textbooks used in the schools?

The second data source is obtained from the analysis of science textbook. The goal is to determine the content of the science textbook of students and teachers, whether it has been integrated or not? The analysis is implemented on several junior science textbooks class VII based on curriculum 2006 (KTSP) and 2013 (K-13), for both electronic school books (BSE) and other published textbooks. The analysis was conducted by reviewing the content of the science materials class VII from the title of each chapter. The books analyzed consist of three books with different authors.

From the analysis, the scope of junior high school science textbook for class VII as follows:

Table 1. The comparison of science content in curriculum 2006 and curriculum 2013

| No. Chapter | Curriculum 2006 | No. Chapter | Curriculum 2013 |
|-------------|--|-------------|---|
| 1 | Magnitude, units and measurement | 1 | Science objects and its observations |
| 2 | Acids, bases and salts | 2 | Classification of Creatures |
| 3 | Elements, compounds and composition | 3 | Classification of the material and its change |
| 4 | Substance and density | 4 | Temperature and its change |
| 5 | Temperature and expansion | 5 | Heat and its change |
| 6 | Heat | 6 | Energy in living systems |
| 7 | Material changes and separation of the composition | 7 | The system of organization of life |
| 8 | Chemical reaction | 8 | The interaction of creatures with the environment |
| 9 | Observation of natural phenomena | 9 | Environmental pollution |
| 10 | straight motion | 10 | Global warming |
| 11 | The characteristics of creatures | 11 | Layer of earth |
| 12 | The diversity of creatures | 12 | Solar system |
| 13 | Ecosystem | | |
| 14 | Population density and environmental pollution | | |

From the table 1, we can conclude that:

- 1) The science content of physics, biology, chemistry, and IPBA are still separated.
- 2) The integration of science materials in the science theme does not exist, yet. It means the presentation of the material has not been prepared in the form of thematic.
- 3) The science materials are still much, because the contents are still separated.

The analysis indicates that the source books used by teachers or students are still not fully integrated. There are two reasons of it. First, the teachers are not able to create and develop integrated science materials and second, the absence of integrated science textbooks in which already contain integrated science materials thematically published by the government. Therefore, as a solution of it, there are following steps:

- 1) Develop integrated science textbook and arranged thematically. The integration of science materials can be reached by using a model of integration of Fogarty.
- 2) Develop integrated science textbook using the writing process model of science teaching materials developed (MPM2A) by Sinaga.

c. How do we create an integrated science theme?

The principle of creating a theme must consider the following things, the theme made should be attractive, contemporary, familiar with daily life, and meaningful. The strategy of creating an integrated science theme can be done in two ways: 1) choose and select basic competence (KD) in Junior High School as it appears in the curriculum 2013, and then determine the themes which relate the basic competences, 2) determine the theme first, then choose the basic competence that fit with it. Things to avoid in making the theme is the basic competencies combined should be in the same grade.

1) Strategy 1

Curriculum 2013 has many changes from the previous curriculum. Even some basic competencies have been created by combining several science contents. The following is an alternative theme which you can develop using strategy 1.

Table 2. Integrated science alternative themes of strategy 1

| CLASS VII | | |
|-----------------------------|------------------------------------|----------|
| Integrated basic competence | Alternative themes | Semester |
| 3.1, 3.2, and 3.3 | The objects of science | 1 |
| 3.4 and 3, 5 | Energy of Life | 1 |
| 3.6, 3.7, and 3.8 | Preserving the Environment | 1 |
| 3.9 and 3:10 | Natural disasters | 2 |
| 3:11 | Exploring the solar system | 2 |
| class VIII | | |
| Integrated basic competence | Alternative themes | |
| 3.1, 3.2 and 3:10 | Transportation of life | 1 |
| 3.3 | Energy saving | 1 |
| 3.4 | Structure of design | 1 |
| 3.5 and 3.6 | Four of five perfectly healthy | 1 |
| 3.7, 3.8, and 3.9 | Pressure effects | 2 |
| 3:11 and 3:12 | Vibration effect | 2 |
| class IX | | |
| Integrated basic competence | Alternative themes | |
| 3.1, 3.2, and 3.3 | Quality seeds | 1 |
| 3.4 and 3.5, 3.6 | A true partner, electricity-magnet | 1 |
| 3.8 | The material properties | 2 |
| 3.9 | Underground life | 2 |
| 3.7 and 3:10 | Appropriate technology | 2 |

By creating a theme as above, science lesson in junior high school is divided into several themes only, but it is meaningful.

2) Strategy 2

Deciding an integrated science theme with strategy 2 is done by determining the theme first, then select the appropriate basic competencies. The theme chosen should be an important theme mastered by students. Here are some of the themes that can be made and basic competencies that can be selected in the 2013 curriculum for junior high school:

Table 3. The themes and the appropriate basic competencies

| Proposed themes | appropriate basic competencies | Class | Semester |
|-----------------|--------------------------------|-------|----------|
| My nature | 3.1, 3.2, 3.3 | VII | 1 |
| Rain | 3.3, 3.7, 3.8, 3.9 | VII | 2 |
| Global Warming | 3.8, 3.9 | VII | 2 |
| Motion in life | 3.1, 3.2 | VIII | 1 |
| Earthquake | 3.8, 3:11 | VIII | 2 |
| New generation | 3.1, 3.2, 3.3 | IX | 1 |
| Quality seeds | 3.7, 3.8 | IX | 2 |
| Weathering | 3.9, 3.10 | IX | |

The results of integrated themes are combined with the Fogarty framework which can be a type of connected, shared, webbed, or integrated. Connected model is integrated learning model that deliberately linking one concept to another, one topic to another, a skill with another, tasks done in a day with the tasks performed on the next day, even the ideas studied in one semester with ideas that will be studied in the next semester, in a field of study (Fogarty, 1991, p.14). The field is science and the integrated contents are physics, biology, chemistry and IPBA. Shared model is an integration of learning based on concepts or ideas in two or more subjects content. For example, physics can overlap with the learning of biology, chemistry or IPBA. Shared model almost the same as the Integrated model. The difference is that shared occurs in two subjects, while integrated occurs in more than two subjects content. Integrated model is an integrated learning model that uses an approach of the subjects content. This model which is an integration of field of studies conducted by setting curriculum priorities, and finding skills, concepts and attitudes which overlap in some science lesson contents (Fogarty, 1991, p.76). Webbed model is an integrated learning model that uses a thematic approach to integrate subject materials (Fogarty, 1991, p.54). The development of this approach started with determining a specific theme, which can be determined through communication not only teachers and students, but also among teachers. After the theme agreed, the sub-theme is developed based on the relation on the fields of study.

The four models of integration based on the framework of Fogarty can be illustrated by the following pictures:

(3)

(4)

(1)(1)
(2)

Figure 1. Illustration of integration models (1) connected, (2) shared, (3) integrated, (4) webbed

Figure 1 is a picture that shows how that can be taken to develop the integration of Science.

d. How do we develop integrated science textbook?

After themes and models of integration of science made, we can use several ways to develop a textbook. One of the ways that can be achieved is by using a model of the process of writing teaching materials (MPM2A) developed by Sinaga (2016). The steps of developing textbook with MPM2A models are as follows:

- 1) Analyzing curriculum of science for Junior High School. It is done by analyzing the core competencies (KI), basic competence (KD), and the graduation competency standards (SKL).
- 2) Determining the scope of the material. Based on the results of the analysis of curriculum and the purpose of writing formulated, the writer should select the material or content in order to fit with the demands of curriculum.
- 3) Preparing the draft outline 1
- 4) Making concept maps. It is someone's comprehension about a topic through concept mapping and relationship between concepts hierarchically, where concepts more common placed higher in the map and concepts in the same level grouped together (Novak and Gowin, 1984).
- 5) Creating a revised outline. The results of making the concept maps served as the basis for revising the first outline into a final outline that has been ordered from general to specific or from the specific to the general. So, the final outline will be a reference in the order of writing teaching materials.
- 6) Representing concept. To build understanding about science concept deeply, we need ability to use various modes of representation and use them alternately (from one mode to another).
- 7) Multi representation. Multi representation of the concept is to explain the same concept with different types of modes of representation (Ainsworth, 1999).
- 8) Translation of representation modes. It means to translate or transform a type of mode of representation to other types.
- 9) Multimodus representation is to combine two or more modes of representation, for example verbal representations in text form with one or more types of visualization (Ainsworth, 1999)
- 10) Writing draft of teaching material. After choosing concepts which will be explained using multiple representations, the next step is writing teaching materials in accordance with the perfected outline.
- 11) Conducting the Review
- 12) Conducting editing. The result of review is used as a basic by authors to edit the draft article
- 13) The second draft. The result of editing many things is being the final draft of writing teaching materials.
- 14) Testing the readability, main idea of discourse and the quality of writing teaching materials.
- 15) According to the obtained data, we then do improvements to the draft text with the obtained reference. The result of these improvements is the final draft of writing teaching materials.

4. CONCLUSION

a. Conclusion

The conclusions of this study are:

- 1) Learning science in junior high school is not implemented with integrated, yet. The contents of science are not integrated yet in a theme that involves physics, biology, chemistry, and the earth and space science.
- 2) The content of the integrated science materials in junior high school class VII used as source books by either teachers or students does not contain integrated science materials. The science contents are still separated, either in curriculum 2006 or curriculum 2013.
- 3) Developing an integrated science textbook can be done by creating a theme. Themes can be created by using two strategies; determine the basic competencies that would be combined, and then determine the theme that binds the basic competencies. Both started with a theme first, then define basic competencies related to the theme. To integrate science materials we can use the framework of Fogarty, which consists of models of connected, shared, Webbe, and integrate.
- 4) Developing science textbooks can use the writing process model of teaching material (MPM2A) developed by Sinaga (2016) with 15 steps syntax.

b. Recommendation

- 1) In this case, government and even the Ministry of National Education should provide an integrated science curriculum of Junior High School clearly that involves the integration of basic science

- competency. It means that the science curriculum should have been made with integrated basic competency and thematic. So that teachers develop it.
- 2) The government is expected to provide an integrated science resource book for teachers and students, which contains truly integrated science material.

The Multimodal Analysis in Printed Advertisement and Its Application in Language Teaching

Lukluk Argita Munif

The Multimodal Analysis in Printed Advertisement and Its Application in Language Teaching

Lukluk Argita Munif

Universitas Sebelas Maret, luklukargita94@gmail.com

ABSTRACT

This paper presents multimodal discourse analysis of the advertisement about the problems in society. It is to find out the rhetorical meaning behind the text and visual images in the advertisement as the media of communication that can be used in educational field. The data of the study is the advertisement that taken from www.humanesocietysil.org and www.hogarmujer.com. This research is a descriptive qualitative research. To gain the main goal of this study, the analysis of the obtained data is conducted using Kress and van Leeuwen's framework and Harisson's design. The writers use the representational, the interpersonal and the compositional metafunction also all of the elements that consists in each of the metafunctions to describe the relation between the text and visual images in the advertisement which creates meaning. Questions list from Harisson are used as a guide for the students to analyze the advertisements. The result of analysis shows that the advertisement can be used in learning process specifically for teaching critical thinking to the students.

Keywords: Multimodal Analysis, Printed Advertisement, Teaching

1. Introduction

Multimodal discourse analysis perceives text as one of the many kinds of communication available for social interaction. It provides the tools and techniques to analyze texts which employ more than one mode of discourse. Multimodality describes approaches that understand communication and representation to be more than about language, and which attend to full range of communicational forms people use – image, gesture, gaze, posture and so on – and the relationship between them (Jewitt, 2009: p.14). It analyzes how these different modes are distributed simultaneously in the process of meaning-making to deliver the intended meaning in social interaction.

Today's texts have developed very rapidly in using a great variety of modes, channels and media from print to electronic and web-based media. Advertising is an example of print-media forms which takes shape through a characteristic combination of minimally two semiotic resources; language and images. In fact, Cook stated that ads are multimodal, and can use pictures, music, and language, either singly or in combination, as the medium permits (2001: p.219).

Previous study conducted by Snyder (2013) provided the necessary framework for an investigation into the creation of visual information during face-to-face interaction, while Li Pan (2015) explored the impact of non-verbal modes on translating the verbal component in advertisement. This study aims to describe the values manifested in printed advertisement using Kress and Leeweun's theory about *visual* images to describe how the language in multisemiotic text works to make unified meanings via the verbal texts and visual images and their relationship. The printed advertisement will be deconstructed based upon their verbal and visual elements followed by discussion towards why and how they are produced in such a way.

The result of this analysis is useful for teaching English. Based on the English syllabus, there is a material dealing with multisemiotic text as discussed previously. The implementation of this kind of analysis in language teaching will bring an innovative teaching method contributing to an effective exercise and classroom activities. As the result, the students will not only understand the material but also unconsciously acquire the signification of multimodal construction, the functions of multi-modes and the relationships between modes in advertising used in public communication.

2. Literary Review

2.1 Multimodality

According to Baldry and Thibault (2006: p.21), multimodality refers to the diverse ways in which a number of distinct semiotic resource systems are both 'code-played' and co-contextualized in making meaning of a text – specific meaning. Multimodality describes approaches that understand communication and representation to be more than about language, and which attend to the full range of communicational forms people use - image, gesture, gaze, posture, and so on – and the relationships between them (Jewitt, 2009: p.14). Multimodality is a theory which looks at the many different modes that people use to communicate with each other and to express themselves. This theory is relevant as an increase in technology tools, and associated access to multimedia has led people for being able to easily use many modes in art, writing, music, and dance and every-day interactions with each other. Modes or semiotic resources or modality are generally defined as a communication channel that recognizes by the people.

Texts of all kinds are always related to other texts, at the same time, they incorporate with other linguistic features into their own internal organization. G. Rose also emphasizes the importance of intertextuality in texts: signs from one advertisement can relate to signs in other sources, for example, advertisements, the news, literature or cultural ideas. Rose in Linda (2005, p.8) stated that sometimes, such signs can make the text more convincing because they appeal to authority, for example, the law or cultural ideas. The relationship between images and text is also accentuated as a complementary one and believed that the text can act as a key to visual imageries and even is able to describe it (Leiss et al.1990).

2.2 Semiotic Analysis in Multimodality

Multimodality has relation with the social semiotic theory in modes of communication. In general, semiotics is described as a study of sign. While in semiotics, the sign is the basic unit of meaning (Kress et al, 2011). Halliday and Hasan (1985: p.4) stated that social semiotics sees the sign as being oriented towards social and social semiotics is a social system of meanings.

According to Bignell (2002: p.32), the first step when analyzing an advertisement is to know the different kind of signs that exist in the advertisement. It can be said that a sign is anything that exists and seems like to have a meaning for the readers in the advertisement. The signs that usually finds in advertisements are linguistic signs (words or texts), iconic signs (visual representation participants) and non-representational signs (graphics, etc). Kress and van Leeuwen (2006: p.41) stated that the visual signs, like other semiotic modes, has to provide several representational and communicational requirements in order to fulfill the function as a full system of communication. Signs also can be imported from one discourse to another, as is commonplace in advertising (Kress and van Leeuwen, 2001: p.55)

2.3 Advertisement as Discourse

Cambridge Advanced Learner's Dictionary (2003) defines an advertisement as “a picture, short film, song, etc. which tries to persuade people to buy a product or service”. In other words, advertising is perceived to be an attempt to convince individual consumers, organizations, and the society. Advertising has become increasingly pervasive in this modern societies, the extent to which advertisements can exceed genre boundaries has also become apparent. Semiotic or mode which exists in an advertisement is no longer language only, but it also used many kinds of colorful images and sounds. Cook stated that ads are multimodal, and can use pictures, music, and language, either singly or in combination, as the medium permits (2001: p.219). Advertisement is created by communicating verbal and visual language displayed in pictures, graphics, layouts, colors combined with sounds, words, phrases, clauses, sentences and other effects.

Print advertisements are ideal for exploring familiar visual texts with students as they develop understanding of the language of visual elements, the aesthetics of visual texts, and of the constructed nature of these texts as social products reflecting the dominant ideology of their time. Not all advertising is produced with the goal of selling a product or service, but also recruitment, promotion of public health and encouraging charity donations. Cook (2001) thus proposes that the defining feature of an advertisement as a discourse genre is that it seeks to change the behavior of those who view it, whether that change be to buy a new product, public ..., or apply for a new job. It is entirely possible that a single advertisement may simultaneously target more than one audience and promote more than one behavioral change. According to Esposito (2011: p.213), he stated that any analysis of advertisements presents vary challenges due to their ability to draw upon various genres usually at the same time, to convey their messages through a combination of language and imagery.

3. Methodology

3.1 Data Collection

Advertisements are used as the object of the study which is taken from <http://www.humanesocietysil.org> and www.hogarmujer.com. The writers chose those advertisements to be the object of the study because it shows us about the situation in our society and it also used as materials for the students to trigger their awareness on the society and to develop critically literate students. The procedures of analyzing the collected data are as follows: (1) looked for advertisements that can be used as teaching materials; (2) downloading the advertisements from its webpage; (3) the data was analyzed using the framework from Kress and van Leeuwen.

3.2 Analytical Framework

The writers use the three metafunctions from Kress and van Leeuwen. The first is representational metafunction. This metafunction is about the ability of semiotic systems (people, places and objects within an image) to represent objects and their relations in a world outside the representational system or in the semiotic system of culture. It consists of the structures of the picture and the process. The second is interpersonal metafunction which is about the actions among all the participants involved in the production and viewing of an advertisement (that is the creator, the representation participants and the viewer). The aspects that being viewed in this metafunction are the picture's act and gaze, the social distance and intimacy and the perspective derived from the picture. The last is compositional metafunction that focused on the composition or the lay-out of an advertisement that represent the visual syntax. It consists of information value, salience and modality.

4. Result and Discussion

4.1 Representational Metafunction

The advertisement in *figure 1* is used conceptual processes because there is only one represented participants (RP) and it is called the Carrier. It also categorized as suggestive symbolic process because there is no vectors that may established an action. Conceptual images do not involve action from the represented participants but represent participants in the term of their more generalized and timeless essence (Kress and van Leeuwen, 1996: 79). The reason why the directors only put one represented participants in the advertisements is because they want to emphasis the only RP in the ads that is a dog. As we know that a dog is one of animals that can be raised. It also can help us, human, in many other things like as a keeper, as a guide, even police department usually raise dogs to help them catch the criminals and detect drugs.

Unfortunately, nowadays, many dogs are dumped by their owners since baby or they have to leave because of the relocations. In the ads, the dog is showing us its sadness. It can be seen through the position of the dog which is laying its head on the floor with the hands beside it and its eyes are wide-awake. Cross (2014), the behaviorist, stated that when a dog is staring at you, it means that it is hoping that you will give it a treat with praise and affection, but some dogs consider that direct eye contact is frightening.

In *figure 2*, the advertisement is used narrative process. It can be seen in picture, there are some vectors which create actions by the represented participants that exist in the picture. The represented participants in the advertisement are the hands, the plastic and the globe. The vectors that happen in the picture are between the hand and the plastic and the plastic with the globe. All of the vectors are meet in the center of the picture which creates a powerful interaction between the represented participants. The two vectors here are in transactional structure. The first vector is between the hand and plastic which hand as the actor and plastic as the goal. In the second vectors between plastic and globe, plastic as the actor and globe as the goal.

The hand is represented the human who live in the world. Plastic is a container which usually used by people to bring something and the globe represented the world where we live. The narrative story behind the represented participants is we, mankind, most of us are using plastic when we bring something with us. For example, we use plastic when we go for shopping and we also use it as pedestal trash. The reason why we like to use plastic is because it is cheap, comfort and easy to get. But when there are advantages, disadvantages also following behind. Plastic is made of polythene which is the basic material to make it. Besides plastic that we usually use, polythene also used to make films, pipes, coat paper, water bottles, etc. Almost all of the things we used in daily life are made from polythene and when we do not need it anymore, we just throw the products without knowing what the impact on the environment.

Some researchers have conducted the research to find out the effect of polythene for the environment and the results showed that all packaging materials made from polythene have negative impacts on land, water, air and ecosystem health. Accumulation of polythene waste in the soil will result in poor soil saturation and poor absorption of water and nutrients. Because of poor absorption of water and nutrients, the plants cannot grow and our land will be destroyed. When a polythene waste is in the water, marine animals, like turtles, whales and sea birds mistake this

product for food or get entangled in it, resulting in painful injuries or even death. All of those reasons are resulting to bigger problems that we faced now that we called with global warming. In the picture, the globe is inside the plastic means that our world nowadays has been covered by polythene waste that we threw. This embedded picture supports the sentence below it that 'Don't pick the blue planet with polythene. Say no to plastic'. The sentence 'say no to plastic' is in big font because the directors want to tell the viewers that polythene is really bad for our environments and we need to stop using it in our daily life.

4.2 *Interpersonal Metafunction*

Interpersonal metafunction consists of the image act, the social distance and intimacy and the perspective from the viewers. This photograph in *figure 1* is effectively combines four aspects of the interpersonal metafunction to engender strong viewer involvement with the picture: visual *offer*, intimate distance, oblique angle and high angel. The dog's picture in the ads is not looking directly to the viewers, but it is looking outside the picture. It means that the dog in the picture becomes an object of contemplation for the viewer which constitutes an *offer*. They let the viewers to contemplate all the happenings that happened around them that impact to the dogs and what actions that would be taken to help the dogs. The directors do not demand the viewer to help the dog because they do not want to force the viewers in helping them. They need people's sincerity in doing good things for others.

Intimate distance here is related with the emotions of intimacy and distance. It can be interpreted that the viewers are they friends or they are strangers. The directors decided to have a dog as close as possible to the viewer because they want to create a strong sense of humanism. Same like mankind, dogs also living things that need a house to sleep, foods and affections. The picture of the dog is taken from an oblique angel. Kress and van Leeuwen (2002: p. 51) stated that when represented participant is presented obliquely in the picture, it creates greater detachment since it implies that the represented participant is 'one of them'. It means that there are still many dogs out there that need the viewers' help. Simultaneously, the high angel viewed from the viewers indicates that the represented participant is having less power than the viewers. The directors want to emphasize that a dog cannot talk when it needs our help and it cannot cry when it feels hurt and it can only rely on humans' help.

The dog's picture also embedded with the sentence 'I NEED YOU' below it. The word 'I' here represents the dog and 'YOU' is the viewers. The word 'NEED' in the middle of sentence is emphasizing that 'I', which is the dog, really need the helps from the viewer, which is in the ads is 'YOU'.

In the *figure 2*, the picture consists of demand act, intimate distance with frontal medium angle. It includes in demand act because the palm of the hand is facing forward. It means that the directors want to give a strong engagement between the viewers and the represented participants. The directors are demanding the viewers to stop using plastic because of its impact to the environment. They try to influence the viewers in order to get involved with the represented participants in the picture. The directors also seem to challenge the viewers to emulate it by stopping the use of plastic.

Intimate distance is resulted from the hand as the part of human's body. It determines the distance between the represented participants and the viewers which creates in feelings of intimacy. It is confirmed with the medium-frontal angle in which the picture is taken by the directors. This angle creates a strong involvement on the parts of the viewers and it promotes intense involvement also equality with the hand of a person and all the people who use plastics. Intense involvement and equality happens because they share commons wants, needs and concerns as people who live in the same world. The directors made the background of the picture in white because they want the viewers to focus on the hand, plastic and the globe as the represented participants which.

4.3 *Compositional Metafunction*

The picture in ads uses all the three kinds of information value systems to get the rhetorical message across to the viewers. In the *figure 1*, the dog is placed in the right side, because the directors wishes to offer as new information for the viewers that is really crucial to know. The new information which is trying to be delivered by the directors is about the condition of the dog which has been explained in the two information value systems before. New information also means that the problems about dogs' disposal and carelessness are never resolved. The picture of the dog that is combined with the text below creates an ideal and real system. An ideal system in the advertisement is the picture of the dog which portrays the idealized emotive appeal from the directors and the dog. The text below the picture of dog is realized as a real system which gives the specific and detailed kinds of support that can be given for the dog and the information why the directors made the advertisement.

Size, focus and foreground / background are the processes of salience that contribute to the rhetoric of the picture. The dog is the only represented participant in the picture which makes it as the focus of the advertisement. The directors

also blurred the light behind the dog which makes the color of the dog is in contrast with the background because they want to accentuate the dog than the text below. The viewer is, therefore, compelled to pay attention to the represented participant in the advertisement.

The picture of the dog is the real dog which captured by the directors. Saphiro (1988: p.124), a photographer, stated that of all modes of representation, photograph is the one most easily assimilated into the discourses of knowledge and truth for it is thought to be an unmediated simulacrum, a copy of what we considered 'the real'. The directors of the advertisement is used a high modality picture of dog so that the ideal will be picked, not as 'what might be', but as 'what it is'.

While in the *figure 2*, the left and center system are made within the picture. The hand in the left side indicates that it is given information that the viewers are familiar and already understood the meaning of the participant. The palm, plastic and the globe are in the center of the picture and in the foreground emphasizing the importance of the actions taken by the people in keeping our world clean from plastic waste. It is also strengthened by the ideal and real relationship between the picture which is placed in the top and the text which is placed in below.

The advertisement makers chose to use white as the background color of the advertisement because they want to show us the purity, chastity and cleanliness of the environment that we should protect to keep our earth healthy.

The same with *figure 1*, *figure 2* also uses photographs because it suggests a reality about the happenings that happen nowadays. The directors want the viewers to be aware of their own environment that has been destroyed by the waste of products made from polythene.

4.4 The Implementation in Language Teaching

The ability to think critically is one of the important things that should be done by people. Critical thinking is a skill that is obtained through the process. It is used in every situation and every opportunity in order to solve the problems. Therefore, it is important for people to learn to think critically, especially for students. Teaching students to think critically is a goal of education in this competitive world. Students not only learn about the facts, concepts and principles, but also they have to be able to effectively think about the knowledge which sometimes hides behind the rhetoric. They must be able to process the information they get since the world is changing so quickly.

Technology and media nowadays has evolved rapidly. There are many kinds of media communication that can be used by everyone and one of those media is advertisement. Advertisement is an example of media communication in which the information given is needed to solve critically and it can be used to teach the students becoming critical thinkers.

This method of critical thinking can be used to teach students with high proficiency levels in senior high school. It could be used for the students in XI or XII grade.

4.2.1 Critical thinking

Critical thinking is the movement of two waves (rational thinking and critique) that referred to critical analysis, but its details vary amongst those who define it (Paul and Elder, 1997). According to Beyer (1995: p.8), critical thinking means making clear and reasoned judgment. During the critical thinking process, the ideas that being proposed should be reasoned, well thought and judged. Based on those definitions, critical thinking is a process of reasoning, questioning and evaluating about ideas or assumptions.

4.2.2 The list of questions to guide students become critical thinker

Harrison (2003: p.52-58) proposed some questions that can be used by the teachers to teach the students' critical thinking:

The representational metafunction

- Who are the represented participants in the image? Include both human and non-human objects
- Are there any vectors in the image that indicate action? If so, what kinds of story does this action tell?
- Is the human RPs looking at each other, creating eye-line vectors? If so, what does this tell me about the history of these people?
- If there are no vectors, what is the image trying to tell me in terms of social/cultural concepts? What types of conventional thinking do different objects evoke in me?

- Is the image a complex one with more than one process embedded within it? If so, how do these embedded processes add to my overall understanding of the image?
- In terms of the overall document/Web site, does the choice of image RPs best enhance its intent and that of the text?

The interpersonal metafunction

- Does the image include human RPs? If so, what type of image act is taking place, a demand or an offer? Theoretically, an object can create a demand—for example, a car placed so that its headlights appear to be looking at us. However, demands and offers seem most powerful when they involve an actual human face.
- If the image act is a demand, how does it affect me? And is it accompanied by any gestures or expressions that make it more forcible?
- If the image act is an offer, why has the producer of the image chosen to make the RP an object of study?
- How close do I feel to the RPs in the image? Does the closeness make me feel as if the RPs are friends or strangers? In either case, why has the producer of the image chosen to evoke these feelings within me?
- What do I notice about the perspective in the image? What horizontal and vertical angles have been used?
- How does the horizontal angle affect my sense of involvement with the RPs?
- How does the vertical angle add to my knowledge of power relations between myself and the RP and between the RPs themselves?
- What other semiotic resources could the producer have used to create a different impression?

The compositional metafunction

- How have the RPs been placed to provide information, and why has the producer of the image chosen this placement?
- Which RPs is more salient than others, and how does this salience affect the impact and meaning of the image?
- How are the RPs held together or separated within an image, and why?
- How does the use of color or lack of it affect the rhetorical message of the image?
- How real does the image appear to the reader, and does this sense of reality affect the validity of its message and that of the accompanying text?
- Are there other ways this image could have been organized that would strengthen its message and more effectively enhance its accompanying text?

4.2.3 Teaching activities

In the process of language teaching and learning, critical thinking method can be used to teach the students in speaking, writing and reading skills of language.

Speaking

In teaching speaking, the teacher shows an example of an advertisement. She gives an example of the analysis first. Then, the teacher may ask the students make a group discussion and ask them to analyze the advertisement based on the list of questions from Harisson. After the discussion, each of the group has to send the representation to tell their critical thinking about the advertisement.

Writing

In teaching writing, the teacher shows an example of an advertisement. She gives the students steps how to analyze the advertisement using the list of questions from Harrison. After the students understand all the steps, the teacher gives another advertisement and asks the students to write their critical thinking about it in the form of essay. This task could be done individually.

Reading

In teaching reading, the teacher shows an example of an advertisement. The teacher gives its analysis about the language features, the aim and the elements that exists in the advertisement. After the students understand all the steps in analyzing the advertisement, the teacher gives another advertisement to be analyzed by the students. The students

also may use the list of questions from Harrison to analyze the advertisement. Then, the students made a text based on the analysis result of the advertisement.

5. Conclusion

Based on the discussion before, it is found that the advertisement represents conceptual structures with suggestive symbolic concept because the only represented participant captures the generalized essence of animals that needed help form the viewers and narrative structures with transactional action process because there are three represented participants, which create vectors of an action to keep the world clean. The act of both of the pictures in the advertisements is offering the viewers to help the represented participants with intimacy relationship.

The picture is taken from the high oblique angle, which creates greater detachment to the viewers and medium frontal angle that indicates a strong involvement and equality of the represented participants. The value of information from both of the advertisements has been got through a variety of elements like its compositional axes which shows that there is an ideal and real relation between the picture and the text below it. Its salience is showed through the color of the represented participants which contrasts with the background because the directors want the viewers only focus on the represented participants in the advertisements. The real photograph shows its modality that suggests a reality that is far stronger than that of drawings, illustrations and paintings.

In conclusion, the analysis result from the advertisement about the problem in the society is a good example of material that can be brought by the teacher to teach critical thinking of the students.

Appendix

I need you.

So do thousands of other homeless pets in your area. Many have been left without homes because of relocation, while others were dumped mercilessly on the street as babies. Every day animals are rescued in our area with the hope of finding a loving family and a place to call home. Without help, this isn't possible.

That's why the Humane Shelter of Southern Illinois is calling for volunteers. Our mission is to provide shelter, food, medical care, and love to each and every animal in our facility every day. The only way to reach our goal is with your help. Fill out an application today, and help our shelter stay alive.

Humane Society of Southern Illinois.
It all starts with you.

ABSTRACT

The study aims to assess students' understanding on the environment and the importance of using an integrated science teaching materials based on excellence of Lombok. In addition, this study aims to improve students' understanding on the environment, especially for junior high school students on the Lombok Island. Lombok is rich in culture and natural resources, both of them can be used as an integrated science teaching materials. This teaching material is expected to help students to understand the concepts of science related to the environment around them. So, they can resolve problems related to the environment and motivate them to act wisely on nature. Subjects of this study were 1) 91 students SMP / MTS and 4 science teachers in center of Lombok, 2) integrated science teaching materials. The object of this research are the students' understanding of the environment, integrated sciences basic competencies and characteristics of integrated sciences concepts which are relevant to Lombok's culture and natural resources. The results showed that 1) integrated sciences teaching without lifting local content made students' understanding on the environment related sciences material is very low. 2) Students and science teachers need to use teaching materials based on Lombok culture and potential nature to improve students' environmental science.

Keywords: *Sciences teaching material, Potential advantages of Lombok, Students' environmental understanding*

INTRODUCTION

Lombok is one of the thousand islands in Indonesia which located in the province of West Nusa Tenggara. The indigenous people of Lombok are *Sasak*. Lombok Island is divided into four districts, namely West Lombok, Central Lombok, East Lombok and North Lombok. Lombok Island has sufficient natural resources such as forests, fields and paddy fields. In addition, Lombok is rich in sea kelp, fish up to pearls. Lombok has beautiful beaches, some of the dyke, waterfall, Rinjani mountain which reached 12.224 feet. Besides being rich in natural resources, Lombok is also rich in culture.

The potential of nature and culture of this island should be maintained and developed to Lombok competitiveness both locally and globally. In doing so, to consummate that certainly needed a generation that understands the culture and the environment such as the condition, the potential of their environment and the culture which is related, so they can preserve and develop it properly.

The understanding of the environment is needed by students as the younger generation so that they can understand the natural conditions and to be considerate to nature. Lack of understanding and awareness of the environmental can cause natural disasters such as floods that occurred recently. Floods that occurred in West Lombok on the 15th of December 2016 is the worst floods over the past few years (Editors Lombok post, 2016), this is not only triggered by heavy rainfall, but also because of the disruption of irrigation channels. Rivers and culverts clogged garbage. In addition, the construction of villas in Batulayar shut irrigation canals so that the waters overflowed and caused flooding. Flooding in Lombok precisely in Suela village located at the foot of Mount Rinjani on Tuesday 17 January, 2017 due to deforestation that tree as reduced water absorbent. Flooding in Suela also trigger floods in four villages namely districts Pringgebaye Mumbul Chrysanthemum village, Labuhan Lombok, North Pringgabaya and Pringgabaya. The overflow of the river and make submissions water flooded four villages (Radar Lombok, 2017). Flash floods Bima was also caused by tropical cyclone *yvtt* that

causes extreme rainfall as well as environmental damage. Flood in Bima according to the head of Sub-Division of Administration Management Center Watershed Forest Reserve (DAS) is also due to damage to watersheds. The watershed land area in Bima are 25 838 hectares while 6403 hectares of it are now in critical condition. The hill which is the catchment area is converted into crop fields (Republika, 2016).

Students must understand the condition of their land, so they know which actions should and should not do in order to maintain and manage it. Thus, future environmental damage can be prevented and natural disasters as a result of such damages can be avoided. Furthermore, we look forward to the understanding of local conditions and potential of the region, students can develop this potential so as to have a value that can improve people's welfare. To meet these objectives, the students need to be taught science material related to the natural conditions and culture around them.

Subjects in form of culture, conditions and natural potential around the student can be used as an integrated science teaching materials. Teaching materials are all kinds of materials in the form of a set of material arranged systematically used to assist teachers / instructors in conducting learning and allow students to learn (Depdiknas, 2010: 27). Teaching material is one component in the process of teaching and learning which has an important role in achieving successful learning. Through an integrated science teaching materials that lifts local content, students can understand the nature and the environment around them, especially the wisdom and local advantages associated with science should they keep and develop. Local excellence is the result of the earth, the creation of art, tradition, culture, care, services, natural resources, human or other resources that are the hallmark of an area (Asmani, 2012: 30; Ahmadi, et al, 2012: 9). Education, including science education should facilitate and inspire the revival of local potential in Indonesia, so that each region can maintain and develop the potential of its local advantage to be able to compete in the national and global level. Progress region is a parameter progress of the nation; therefore the education of local excellence should be developed.

Education based local excellence (PBKL) by Dr. Toto Ruhimat M.Pd. is education that takes advantage of local and needs of global competitiveness in the economic, cultural, language, information technology and communication, ecology and more beneficial to the potential development of learners (Asmani, 2012: 58; Ahmadi, et al, 2012: 9). PBKL aims to enable students to know events and benefits of local area where they live, to understand the various aspects related condition and future of excellence so that they can manage and develop it (Asmani, 2012: 43; Ahmadi, et al, 2012: 10).

Research on learning by raising excellence and local wisdom shows that the knowledge and attitudes of students will be better after studying the science material associated with the culture. Research lifted East Nusa Tenggara local wisdom as biology teaching material shows an increase understanding and positive attitudes towards biology and environment (Ardan, 2016). Another study by Sya'ban & Wiluejeng (2016) about the development of the learning based on local excellence Banjar, South Kalimantan can increase students' scientific literacy and awareness about the environment in secondary school or MTS. Research Kurniawati, Wahyuni and Putra (2016) showed that the student understanding and student motivation increase after using teaching materials that raised the comics and local wisdom of Jember as material in integrated science teaching materials. Some of the topics in science teaching are in line with the cultural and natural conditions of Lombok. So the culture and the condition can be integrated in learning through science teaching materials based on potential and culture of Lombok.

METHOD

The focus of this research is assessing students' understanding of the Lombok environment, analysing basic competencies and concepts science that relevant to the culture and potential of Lombok. In addition it also assessing the importance of using an integrated science teaching materials based on excellence of Lombok to improve students' understanding the environment, especially for junior high school students on the Lombok Island.

Data were collected using questionnaires given to 91 students of secondary school and 4 science teachers in Central Lombok. Questionnaire for students consisted of 18 questions that access the students' understanding of the culture of Lombok related to the natural surroundings. While the questionnaire for teachers consists of nine questions related to the process of science learning and the using science teaching materials. In addition, researchers review the basic competencies and materials science which is in line with the culture and conditions of Lombok to develop teaching materials based on local advantages Lombok. All the data obtained were analyzed by using descriptive analysis.

DISCUSSION

The results of data analysis showed that student comprehension on science material which related to culture and natural conditions of Lombok was low. On questions regarding the terms or general knowledge of spoken and living in the *Sasak* community namely questions 1, 2, 3, 4, 9, 10, 12, 13 and 18 most of the students know, but in the related question of understanding on the question number 5, 6, 7, 8, 11, 14 and 15 it is known that their understanding is very low.

In general, students know the terms of the related natural and cultural of Lombok ever seen and engaged in the culture, but they do not understand the meaning and benefits. For example the question number 9 is whether you know what it *nyale* (seaworms appearing in Lombok every year between February and March) 81 out of 91 students know yet. However, when they asked “why *nyale* come to the surface (question 15), only four of the 91 students know why, likewise with other questions. This is because science learning in school did not connect the science content with the natural conditions and culture of Lombok. This is consistent with the findings of the question number 16 and 17 which asked about the process of science learning in class and on both these questions the students admitted to learning science is not connected to the local conditions Lombok. Likewise with 4 teachers who fill out a questionnaire. The teachers said he did not associate science materials with the conditions and culture of Lombok. They teach science according to science teaching materials available today which is given by the central government. Teachers use textbooks that exist without development or modification. Science teaching materials used by teachers as a learning resource are not connecting science material with the potential of local which is familiar with student’s life, as well as with the student textbook. As a result the students' understanding of local culture which related science content is low.

The objective of science education emphasizes the understanding of the environment and natural surroundings as well as its wealth to be preserved and kept in the perspective of biology, physics, and chemistry (Permendikbud, 58 2014: 9). To meet the learning objectives of the science, the science learning should be lifted material about the condition and potential areas of close and being around students. This is in accordance with the principles of didactic where learning starts from the simple toward the complex, of which close to the students to get to far, from which a new easy to difficult, from the concrete to the abstract (Anwar, 2015: 7).

Matter of local content and form of the condition, potential and culture of Lombok can be made a source of science teaching material. Development of teaching materials based on local advantages must be considered that science learning more meaningful for students. The results of the study on the basis of competencies and material science related to the culture of Lombok found that there are eight basic competency (KD) based on science curriculum 2013 revised version of which can be combined with the cultural and natural conditions Lombok namely:

- 3.7 Analysing interactions between living things and their environment and the population dynamics as a result of the interaction.
- 4.7 Presenting the results of observations of the interactions of living organisms with the surrounding environment.
- 3.8 Analysing environmental pollution and its impact on the ecosystem.
- 4.8 Make writings about the idea of solving problems of pollution in the environment based on observation.
- 3.9 Analysing climate change and its impact on the ecosystem.
- 4.9 Make writings about the idea of adaptation / mitigation of climate change issues.
- 3.11 Analysing the solar system, rotation and revolution of the earth and the moon, and their impact on life on earth
- 4.11 Presenting the work on the impact of rotation and revolution of the earth and the moon for life on earth, by observation or tracking resources.

The culture of Lombok is in line with the basic competencies above which are cultures of the season calculation or *perhitungan mangse* that refers to appearance of *Rowot* (Pleiades) constellation, and *bau nyale* tradition. Lombok local potential in line with basic competencies above is the potential of ecosystems Lombok both natural ecosystems such as forests and marine and artificial ecosystems such as rice paddies and fields. In addition to the recent flood disaster that occurred on this island is in line with the basic competencies above. The combination of the material on the basis of competence and local content can be developed in the form of science teaching materials based on excellence of Lombok Island. The expectation on the instructional materials that students can be better understood the surrounding environment then they can maintain and develop it.

CONCLUSION

The conclusion of this research are 1) Poor understanding of the student's condition, the potential of natural and cultural Lombok related science content due to science learning in the classroom do not connect science material with local content in the form of conditions, natural potential and culture of Lombok. This is because teachers are too fixed to do the teaching and learning process based on the textbook which provided by central government, so indispensable teaching science teaching materials which linked to local content with science materials for learning in the classroom so that students can understand the condition, potential and culture of the region on the aspects of science. 2) Teachers can develop science teaching materials based on excellence and culture of Lombok by combining the materials at KD 3.7 and 4.7 that the material ecosystem, KD 3.8 and 4.8 are environmental pollution, KD 3.9 and 4.9 that the material climates and seasons and 3:11 and 4:11 in material moon, stars, constellations and the solar system combined with the conditions, potential and culture Lombok such as floods, agricultural potential, forests and marine potentials in Lombok; Culture season calculation or perhitungan *mangse*, and *bau nyale* traditions.

Suggestion can be proposed by researchers is in learning science teacher should have raised the local content, connecting science material with the conditions, potential and Lombok culture so that students can understand them well so that they can be wise for nature and culture of Lombok. Teachers should teach the science material from the closest nature of student to get the far. In the use of teaching materials, the teacher should develop or modify to fit the needs of students' need.

Authentic Assessment of Reading Skill in Learning Indonesian

Boby Gunawan¹, Budhi Setiawan, and Muhammad Rohmadi

¹Indonesian Education Studies Program, Postgraduate Sebelas Maret University, bobby.boy91@yahoo.co.id

ABSTRACT

The aim of review literature is to know conducting authentic assessment of reading skill in Indonesian. Authentic assessment is crucial part of learning evaluation process. Assessment becomes important in developing education quality. There are authentic assessment techniques will be elaborated in this paper, namely: 1) Working assessment; 2) Self assessment and Cross assessment; 3) Oral interview; 4) Constructed response items or open question; 5) Retelling teks or story; 6) Written assessment; and 7) Portfolio assessment. Authentic assessment must require teacher conducting qualitatively or quantitatively scoring to measure students' ability by using various techniques or different ways so that acquires a valid result. Teacher are required to deeply understand every student's ability in reading skill. Basically reading skill might be improved if it is continuously trained so it becomes habit. Moreover, the right assessment on this skill will ease teacher in conducting further step to give training to students who are low in reading skill.

Key Words: *Authentic assessment, reading skill, Indonesian*

I. INTRODUCTION

Education becomes a priority in people's lives. Education needs to become the main need in advance technology era. Qualified education course through a good learning process. Brought a good learning process is influenced by various internal and external factors. One of such internal factors may be achieved through the process of planning a measured and structured. Planning a measured and structured obtained from the evaluation of education. One important role in evaluating the educational process carried out by the cutting edge of educational process, i.e, a teacher observes in the classroom. Furthermore, materials used as supporting media serves to facilitate the interaction between teachers and students. Teachers, students, and teaching materials are an important component management sustainability education. Thirdly it is a major factor in determining the achievement of the objectives of education. Therefore, there needs to be an evaluation in order to realize the goals of education in order to achieve the fullest. Evaluation can be obtained from the assessment. The assessment includes three components, namely information gathering, information interpretation, and decision-making (Kelvin, 2011: 12). The three components can be realized by seeing and observing real events that occurred during the learning takes place. It is called authentic assessment, the students observe it directly and interpret observations in the assessment sheet. There are some classic factors found in this evaluation phase one of which is the culture of reading is very less. This happens at all levels of education. Reading skills is an issue that needs to be studied to improve the quality of education in Indonesia. Reading is one very important language skills in addition to three other language skills. This is because reading is a means to learn about the world that you want, so that people can expand their knowledge, have fun and explore the messages written in the text. However, reading is not an easy job. According Somadayo (2011: 5) reading is an interactive activity to pick and understand the meaning contained in the board material. In addition, reading is also a process that is undertaken and used by readers to get the message to be conveyed by the author through the medium of words / writing materials. The same thing also expressed by Rahim (2008: 3) reading is interactive. Involvement read the text depends on the context. People who love to read a text which was helpful, will meet some of the goals achieved, one must read the text easy to understand so that the interaction between reader and text.

Efforts to achieve a culture of literacy in education need to have a special issue in terms of planning, process, and evaluation. To that end, the evaluation phase in this important realm of reading skills assessed to improve the quality of education. Authentic assessment in 2016 curriculum is already no longer a novelty in the evaluation phase, but there are still many educators who do not perform these steps on a regular basis.

II. DISCUSSION

a. Authentic Assessment Itself

Authentic Assessment (authentic assessment) is a mirror of the real (the real mirror) of the learning conditions of students (Basuki&Hariyanto, 2014: 168). Authentic assessment is the process of gathering information by teachers about the progress and achievement of learning undertaken by learners through a variety of techniques are able to express, to prove, or demonstrate precisely that the learning objectives have been completely overcome and accomplished (Nurhadi, 2014: 172).

Authentic assessment is an assessment of learning outcomes that require learners to demonstrate achievement and learning outcomes of the ability in real life in the form of performance or the work (Supardi, 2015: 24). Authentic assessment is an assessment of the actual to the development of learners so that an assessment is not done in one way, but it could use a variety of ways (ElinRosalin in Supardi, 2015: 25). Authentic assessment is the activity of assessing learners emphasis on what should have been assessed, both the process and the results of the various assessment tools that are tailored to the demands of the existing competence in the standards of competence or core competence and basic competences (Kunandar, 2014: 36). Authentic assessment is the term used to describe the real tasks required students to be implemented in generating knowledge memperoduksi information (Abidin, 2012: 250).

Authentic assessment is a meaningful measurement significantly over the study of students to the realm of attitudes, skills and knowledge (Ratnawulan and Rusdiana, 2015: 285). Authentic assessment is an assessment of the tasks that resemble the activities of reading and writing as well as in the real world and in school (Nurgiyantoro, 2014: 306). Authentic assessment is an assessment process in which involves a range of performance that reflects how students learn, achievement of results, motivations, and attitudes related to the learning activity (Callison in Nurgiyantoro, 2014: 305). Majid (2012: 186) says that authentic assessment is the process of gathering information by teachers about the progress and achievement of pupils learning is done through various techniques are able to express, to prove or to show exactly that learning objectives and abilities (competencies) properly controlled and accomplished.

The opinion of some experts on the general said the same thing that authentic assessment is an activity to gather information to determine the achievement of learning objectives in the realm of attitudes, skills and knowledge that has been achieved and mastered by the learner to apply the concepts and theories in the real world. While the principles of authentic assessment described by Majid (2012: 187), there are four, namely; 1) The assessment process should be an integral part of the learning process, not a separate part of the learning process (a part of, not apart from intruction); 2) The assessment should reflect the real-world problems (real world problems), is not a problem the world of school (school work kind of problems); 3) must use a variety of sizes, methods and criteria in accordance with the characteristics and essence of the learning experience; and 4) must be holistic covering all aspects of the learning objectives (cognitive, affective, sensomotorik). The following will explain the weakness and strength authentic assessment by Basuki&Hariyanto (2014: 175-176).

Table 1 Weakness and strength authentic assessment by Basuki&Hariyanto (2014: 175-176)

| No | Advantage | Disadvantage |
|----|---|---|
| 1 | Focusing on the skills of analysis and integration of knowledge | Requires time intensive to manage, monitor, and coordinate |
| 2 | Increase creativity | hard to be coordinated with educational standards that have been established legally. |
| 3 | Reflecting the real-world skills and knowledge | Challenging the teacher to give the scheme and providing consistent value |
| 4 | Encourage collaborative work | subjectivemannerof giving value will be |

| | | |
|---|--|---|
| | | probably bias. |
| 5 | Improve oral and written skills | assessment unique properties possibly, not recognized student |
| 6 | Directly connecting assessment activities, teaching activities and learning objectives | may be impractical for a class that contains a lot of students |
| 7 | Emphasizing the integration of learning at all times | exciting thing to float various kinds of teaching materials and various ranges of learning objectives |

b. Application of Authentic Assessment in Reading Skills

The forms of authentic assessment is actually no stranger to teachers in Indonesia. However, teachers are more familiar with this type of traditional assessment. Traditional assessment emphasizes knowledge acquisition with objective tests, while the emphasis on the authentic assessment of performance that reflects the mastery of knowledge and skills (Nurgiyantoro, 2011: 26). Differences traditional assessment and authentic assessment can be seen in Table 1 below.

Table 2 Differences in Rate of Traditional and Authentic Assessment

| Traditional Assessment | Authentic assessment |
|---|--|
| Traditional assessment asks students to choose an answer from multiple choices (eg multiple choice) with proper | authentic assessment asks students to demonstrate understanding by performing more complex tasks and usually represent a more meaningful application |
| Traditional assessment using tests that were made to demonstrate mastery of knowledge | authentic assessment asks students to demonstrate their ability to do something like in the real world. |
| Traditional assessment asks students to recall the knowledge acquired | authentic assessment asks students to analyze, synthesize, and apply what they have learned substantially. |
| Teachers create tests and answer to measure the ability of learners | Learners choose and construct answers demonstrated |
| Traditional assessments can not prove the ability of the learner directly ratings | authentically demonstrate the ability of learners directly through the application and construction of knowledge |

A good assessment is not only done at the end of the teaching and learning activities but also performed throughout the learning process. Therefore, the assessment of traditional and authentic assessment are equally necessary in learning. Authentic assessment is used in the assessment in the learning process, whereas traditional assessment is more practical to use in the final examination. O'Malley and Pierce (1998: 11-14) mentions some authentic assessment models, including oral interviews, recounting the text, writing samples, projects and exhibits, experiments or demonstrations, constructed-response items, teacher observation and portfolios. Meanwhile, authentic assessment models mentioned by Nurgiyantoro

(2011: 34-37), including a performance assessment, oral interviews, open questions, retelling the text or story, portfolio, and project. Authentic assessment models are also mentioned by Kemendikbud (2013: 234-238), among others, performance assessment, project assessment, portfolio assessment, and a written appraisal.

Here are some techniques that can be applied in the assessment measure reading skills.

a. Performance assessment

Assessment of performance commonly called the performance assessment or performance. This form of assessment is used to measure the status of learners based on the work of a task (MONE, 2003: 39). The performance assessment is used to test the learners to demonstrate their knowledge and skills, test what they know and can do based on real life or a particular context (Nurgiyantoro, 2011: 34).

Relation to reading skills, performance evaluation can be done by students are required to read the activities sebuat text. Then, the teacher assesses the students through the truth punctuation, intonation, and kelantangannya. Teacher performance appraisal is done to see how much ability indiviu students. observations that teachers can concretely explain the ability of students. Assessment with this performance, it also has the disadvantage of the allocation of the necessary time. Rate this observation should be treated well so that teachers can utilize the time available. Rather, this observation may be phased, for example by allocating 5 students at each meeting. Thus, at the end of the scoring, the teacher can complete the authentic assessment of students' reading skills with maximum performance assessment techniques. Keep in mind, in this performance assessment skills of reading aloud only activities that can be implemented. While similar ratings read abiding, can be done with other techniques.

b. Self-Assessment and Peer Assessment

Self-assessment is an assessment technique that asks students to assess themselves with regard to the status, process, and achievement levels of competence in certain subjects (Kemendikbud, 2013: 235). Rate peers (peers) is not much different from the self-assessment. Self-assessment asks students to rate themselves, while peer assessment asks students to be judged by his friends.

In the self-assessment and peer, the same aspects of the skills assessed by the performance assessment. Indeed, a skill that can be observed. This technique can be other references that can be selected teachers to shorten the learning time. For example, the class is divided into several groups. Then each group can practice reading in turns, while others do the judging of friends. Thus, at the same time can be taken a number of students in each group.

c. Oral interview

The interview is a planned activity through debriefing aims to get the information required by the destination. Teachers can submit questions for investigation to determine students understanding or mastery of a particular aspect of the language in this assessment. The main purpose of this assessment is to assess the competence of learners in the information verbally paraphrase interviewer asked correctly.

In this oral interview techniques, appropriate to be used on the skill of reading comprehension. Interest teachers to know students' ability to understand the reading. This technique, carried out through the oral test alternately so spend time learning. Teachers are required creative in react. For example, by specifying the important point, some students in the class, and then in turn the teacher asks different questions.

d. Constructed-Response Items or Open Questions

O'Malley and Pierce (1996: 13) mentions this type of assessment in terms of constructed-response items, while Nurgiyantoro (2011: 36) called it an open question. However, both referring to the same sense, the model of performance assessment asks students to read the material and then respond to the open questions that led to comprehension and higher level thinking. This assessment is more focused on how students apply the information rather than how many learners calling back what has been taught. However, an open question proficiency level should be limited so that the answer is not too extensive and meaningful purpose. This technique, teachers can do to determine the fraction of students in understanding a text. This technique can be done by giving the questions are scrambling in the classroom. Students who have the courage raised his hand and answered, can be given an award from the teacher. So that this technique can increase the motivation of students in the learning process.

e. Back Text or Story Telling

Recounting the text or story is a model of authentic assessment that asks students to read or listen to a text and then retell the main idea or piece chosen. This assessment is in addition to pay attention to the accuracy

of linguistic elements also involves the precision and accuracy of the contents or information contained in the discourse (Nurgiyantoro, 2011: 36). This technique, very good in seeing the students' understanding of the results read. But of course, take a relatively longer. This assessment can be done better by choosing randomly every meeting of 2-4 students are communicating the results of his reading teacher at home who have been determined in advance.

f. Written assessment

A written assessment is an assessment that is often used in the assessment of learning. Written assessment consists of selecting answers and supply answers (Kemendikbud, 2013: 237). Choose the answer consists of multiple choice, true-false choice, yes-no, arranged marriages, and causation. Written assessment supplying answers stuffing or complementary, short or short answers and descriptions.

Written assessment included in the model of authentic assessment is an assessment in the form of a description or essay requires students be able to remember, understand, organize, implement, analyze, synthesize, evaluate and so on material that has been studied (Kemendikbud, 2013: 227). This assessment fits conducted to determine students' mastery in reading comprehension.

g. Portfolio assessment

Portfolio assessment is an assessment against a set of works learners systematically arranged and organized that were taken during the learning process within a certain time (Surapranata, 2006: 21). Assessment portfolio is basically assessing individual works for a particular subject (MONE, 2003: 39). All tasks or answer results learners collected (eg during one semester) and then conducted a discussion between students and teachers. The goal is to determine the facts of learners and the process of how the facts obtained as a proof that shows the process of learning achievements of learners, which has reached the basic competencies and indicators in accordance with the established curriculum. Works that can be used as material for instance is the result of a portfolio assessment recounted the text that has been read in the form of writing, the written test results of students, and some other works from the reading process. Mueller (2013) suggested a number of steps to be taken in the development of authentic assessment, ie setting standards, determining the authentic task, of making criteria, and manufacturing sections.

1). Identification and Determination Standards

Standards are statements of what students should know and be able to do (Mueller, 2013). Better known as the standard of competence in Indonesia. Competence is a goal to be achieved in the learning process. The standards must be identified before the assessment is to determine the competence standard, basic competence and indicator which is the basis, reference, and destination in the assessment process.

2) Determination of Duty Authentic

After determining the standard, the second step is to determine the authentic task. The standard language that has been raised by either already showed what he had to do learners (Mueller, 2013). Selection of authentic tasks must be adjusted to which competencies are to be measured and well adapted to the circumstances in the real world.

3) Making Criteria Task Authentic

Criteria in authentic assessment is used to evaluate how well learners complete the task and how well they have met the standards (Mueller, 2013). The ability of learners to an assignment is determined by matching the learners' performance against a set of criteria to determine the extent to which the performance of learners meet the criteria for the task. Criteria should have been formulated before implementing the learning activities. Criteria are often also referred to the indicators in the competency-based curriculum.

4) Making Rubric

Rubric is used as a benchmark to determine the level of achievement of learners. Rubric usually made with contain important criteria and the level of achievement of criteria that aims to measure the performance of learners (Mueller, 2013). The criteria usually consist of certain words that reflect what should be achieved learners. The level of achievement of performance is generally indicated by the figures, the size of the figure also shows the high and low of the achievements of learners.

III. CONCLUSIONS

Authentic assessment is an assessment which requires an educator doing in qualitative and quantitative scoring in terms of measuring the ability of learners using a variety of techniques or a different way, so as to

obtain a valid result to determine whether the learning objectives have been met. Activities reading skills, is an activity that students are receptive to understanding the process of writing symbols lived. Implementation assessment can vary significantly reveal how much ability students. Basically class management capabilities and strategies gurulah highly influence the success in the learning process. To that end, teachers must be able to act creatively adjust to the situation and the conditions experienced at any given moment.

Pre-Service Teachers Performance in Field Study Courses and Practice Teaching

Jason J. Alvarez

Pre-Service Teachers Performance in Field Study Courses and Practice Teaching

Jason J. Alvarez

Rizal Technological University – College of Education, Manila, Philippines info.jasonalvarez@gmail.com

ABSTRACT

This study aims to assess the Performance of Pre-Service Teachers of Rizal Technological University – College of Education on their Field Study Courses and Practice Teaching in the laboratory high school and other cooperating high schools. This utilized the descriptive research design in which questionnaires were used to gather data. This was conducted with the help of 251 qualified respondents.

The data were processed, analyzed and interpreted using the following statistical tools: frequency, percentage, means, Cronbach's alpha and Pearson's R. The study showed that the Pre-Service teachers have recorded a good academic performance in six field study courses, manifested a very good academic performance in Practice Teaching both in-campus and off-campus.

The pre-service teachers have demonstrated a very high level of competencies in their field study courses. Further, it also found out that at .05 level of significance, there is no significant relationship between the respondents' level of competencies and academic performance on field study courses. Same results was manifested between the respondents' level of competencies on field study courses and their academic performance in practice teaching. However, the study have recorded a significant relationship between the academic performance of pre-service teachers on both Field Study Courses and Practice Teaching.

Keywords: *Experiential Learning, Field Study Courses, Teacher Education, Practice Teaching*

INTRODUCTION

The Problem and Its Background

According to Confucius, 450 BC "I hear and I forget, I see and I remember, Involve me and I will learn."

The principle of this statement is often quoted as being a belief underpinning many learning and teaching pedagogies. It's been a quest for educational philosophers to identify ways on how to educate students effectively which ended up with the thought of immersing them in their own learning process that latter been introduced as Experiential Learning. Students learn best by doing and through experience. It has been proven that experiential learning is one way to develop a child's innate ability by triggering their curiosity and letting them handle things themselves.

Although good lecturing should be part of an educator's teaching repertoire, faculty should also actively involve their students in the learning process through discussion, group work, hands-on participation, and applying information outside the classroom. This process defines experiential learning where students are involved in learning content in which they have a personal interest, need, or want. (Wurdinger and Carlson, 2010)

Experiential learning engages students in critical thinking, problem solving and decision making in contexts that are personally relevant to them. This approach to learning also involves making opportunities for debriefing and consolidation of ideas and skills through feedback, reflection, and the application of the ideas and skills to new situations. (UNESCO, 2010)

Experiential learning teaches students the competencies they need for real-world success. The public is clamoring for an education that teaches students the competencies they need for real-world success. Although we can simulate the real world in the classroom and laboratory, authentic experiential learning creates an invaluable opportunity to prepare students for a profession or career, learn the craft of a fine artist, or discover how the discipline creates evidence to contribute to its body of knowledge. Thus, Sullivan and Rosin (2008) argue that the mission for higher education should be to bridge the gap between theory and practice and Bass (2012) suggests that to do this, the educational environment needs to intentionally create rich connections between the formal and experiential curriculums. This gave birth to the Field Study Courses and its integration on the Teacher Education Curriculum in the Philippine Educational System for Higher Education Institutions, paving the way for a more concrete learning experience for students who are taking up education as their chosen career.

The field study experience for pre-service teachers is clearly stipulated in the CHED Memorandum no. 30 (CMO 30) which was promulgated on September 3, 2004. The purpose of which is of rationalizing the undergraduate teacher education in the country to keep pace with the demands of the global competitiveness. In consonance with this, Article V, Section 13 of the said memorandum provides for the inclusion of field study courses in the Teacher Education Curriculum which intends to provide with students with practical learning experiences in which they observe, verify, and reflect on, in actual school settings (Dela Rosa, Ed.D. 2014)

Field Study Courses involve collecting data outside of an experimental setting, this type of data gathering is most often done in natural setting and can be done in variety of ways for various discipline. Field Study Courses collect original or unconventional data via face-to-face interviews, surveys and direct class observation which are very common to most public Higher Education Institutions offering Teacher Education Program.

According to CHED Memorandum Order no. 11 series of 2009, the twelve (12) units of experiential learning shall be comprised of six (6) units of Field Study courses to be taken concurrent with Professional Education courses and six (6) units of practice teaching to be taken after the professional education courses. Field Study Courses are crafted to prepare and equip the pre-service teacher for their In-Campus and Off-Campus Practice-Teaching Performance. Thus, this research aimed to identify the effects of Field Study Courses on the teaching performance of Pre-service teachers of Rizal Technological University – College of Education with the help of its cooperating schools as determined by their Academic Performance. Specifically, this study will determine the level of competencies Pre-Service Teachers imbibed as characterized by the different core objectives of their Field Study Courses. Furthermore, this research will determine if there are significant relationship between the Academic Performance of Pre-Service Teachers on their Field Study Courses with that of their Academic Performance on their In-Campus and Off-Campus Teaching plus determining if there's a significant relationship between the Level of Competencies of Pre-Service Teachers to that of their Academic Performance on their Field Study Courses.

Assessing pre-service teachers on the effectiveness of Field Study Courses is a way to determine ways and means of improving the Teacher-Education Program. The results of this research can be a baseline data for designing a program that will help pre-service teachers to be prepared for the challenges of the newly implemented K12 Curriculum. It is also the aim of this research to provide meaningful assessment of the effects of Field Study Courses on pre-service teachers as they were exposed in pre-service teaching. This will craft an ideal proposal for administrators and officials of Higher Education Institutions for immediate response regarding the aforementioned matter.

Objective of the Study

The study tended to determine the academic performance of pre-service teachers in their field study courses and practice teaching and their relationship. Specifically, it sought to answer the following specific problems:

1. Is there a significant relationship between the respondents' Level of Competencies in their Field Study courses with their Academic Performance in their Field Study Courses?
2. Is there a significant relationship between the respondents' Level of Competencies in their Field Study courses with their Academic Performance in their In-Campus and Off-Campus Teaching?
3. Is there a significant relationship between the respondents' Academic Performance in their Field Study courses with their Academic Performance in their In-campus and Off-campus teaching?

METHOD

In order to make this research study accurate and reliable, different approaches were used to justify the data gathering and treatments. Descriptive Quantitative Research Design specifically the Descriptive Survey Research Method were used to describe specific behavior as it occurs in the environment, "Descriptive Research

was used to describe the data collected in research studies and accurately characterize the variables under observation with a specific sample” (DeMatteo, et.al., 2005),

In addition, “Descriptive analyses are frequently used to summarize a study sample prior to analyzing a study’s primary hypotheses. This provides information about the overall representativeness of a sample, as well as the information necessary for other researchers to replicate the study, if they so desired.” (Meneses, 2015).

In other research efforts, Meneses (2015) stated that “precise and comprehensive descriptions may be the primary focus of the study. In either case, the principal objective of descriptive statistics is to accurately describe distributions of certain variables within a specific data set. This method examines the distribution of a variable as a starting point of reference in statistical analyses, its characteristics and features in questions. It is also the common features and examines the relationship between two or more variable in interest.”

Causal-Comparative (Ex Post Facto) Design of Descriptive Research was likewise applied to determine the difference between two groups and then to look for possible causes for, or consequences of, this difference. According to Wallen and Fraenkel (2008), Causal Comparative Design is used to determine the cause or consequences of differences that already exist between and among groups of individual.

According to (Leedy and Omrod, 2001) “It is also used to look at conditions that have already occurred and then collects data to investigate a possible relationship between conditions and subsequent characteristics or behaviours.”

The researcher made use of Content-Data Analysis Method in order to preserve the advantages of quantitative content analysis as developed within communication science and to transfer and further develop them to qualitative-interpretative steps of analysis and Documentary Analysis Method will be utilized as a tool for obtaining relevant documentary evidence to support and validate facts stated in this research, especially during the chapter of literature review.

To determine if the program or intervention had the desired effect the Evaluation Design of Descriptive Research Method was used. “An evaluation design is done to determine the program strengths, weakness, or gaps with the purpose of improving it through modification.” (Chantrill et. Al., 1984), Gay (2006), states that “Evaluation Design is the systematic process of collecting and analysing data in order to make decision.” Furthermore, “It is also a process used to determine what has happened during a given activity or in institution which is evident in the objective of the present study. (Best and Kahn, 1998)

To make the gathering of data accurate, a Survey Technique was used to collect pertinent data from respondents.

Population and Sampling Scheme

The research population of the study was the students of College of Education, Rizal Technological University who took up Field Study Courses and conducted their Pre-Service Teaching for both In-Campus and Off-Campus for School year 2015-2016 at Rizal Technological University – Laboratory High School (In-Campus Teaching) and respective cooperating schools (Off-Campus Teaching). In this study, the researchers used the purposive population samples of enrolled Pre-Service Teachers since it didn’t meet the minimum number of 350 samples as per the formula recommended by the Philippine Social Survey Council.

Since there are just 251 qualified respondents for this study, they were all used as samples. The research used a Purposive Sampling Scheme.

Research Instruments

In the pursuit of the study, the researchers employed the following instruments in gathering needed data –

the survey questionnaire, and rating scale.

The Survey Questionnaire was the main research instrument that the researchers used to gather the necessary data for the study. The respondents, which were the RTU-CED Pre-Service Teachers, answered a structured questionnaire that the researchers, themselves, prepared which according to Kirklees Council n.d., “Structured Questionnaire is a type of a questionnaire where the possible response or answers of the respondents are already provided.”

The survey questionnaires prepared by the researchers was comprised of two parts:

The First part was composed of their demographic profile such as their Field of Specialization,

The Second part shows prevalent perceptions of the respondents as regard to their Level of Competencies towards the Six Field Study Courses, each Field Study Courses has Three (3) statements which was derived from the core objectives of the field study courses as stated in each FS Manuals authored by Dr. Brenda Corpuz. Four (4) options were available for each statements: Very High, High, Low, Very Low. These options are in form of a four-point Likert-scale.

Validation of Instrument

In order to ensure the validity, reliability and effectiveness of the researcher-made questionnaire, the researchers drafted a set of survey. They adhered with certain principles and procedures in validating the instrument using the following steps:

1. Content Validation

To test the survey questionnaire’s validity, the researchers asked various professionals to criticize constructively the drafted questionnaires. Included are: a Field Study (FS) Professor, a Professional Education (PROFED) Professor, a Professor/Critic who spearheads the deployment of Pre-Service Teachers for In-Campus and Off-Campus Teaching, and a Statistician.

These professionals assessed the validity of the instrument. Validity of instrument is defined as the extent of measurement on how likely the instrument will work when its function to measure is being described or qualified (Weiner, 2007). The instructions, modifications, and advices given by the people mentioned were used by the researchers in formulating the official survey questionnaires which were used for the study’s pilot test and the data gathering proper.

2. Dry Run

In order to determine the survey questionnaire’s reliability, the researchers randomly conducted a Dry-Run Testing to Thirty (30) Pre-Service Teachers from six fields of specialization.

Reliability of instrument means that the measurement approach relied on exhibits consistent results whenever applied repeatedly (Weiner, 2007).

A twenty-item (20) Cronbach’s Alpha measurement was used by the researchers to check the reliability of the instrument which resulted to an Alpha of eighty four hundredth (0.84), hence, there was a high or very high reliability. “Cronbach’s Alpha measurement is a function of the average inter-connections of items and the number of items in the scale” (Kimberlin and Winterstein, 2008). “It means that the items or statements presented in the questionnaires were consistent and reliable. It denoted that the measurement of the respondents’ response will be the same, every time, it is being employed” (Rosal, et.al. 2016)

Data Gathering Procedure

The researchers presented first the questionnaires to their statistician, several professors and then to their thesis Adviser and requested for validation of the instrument. Upon validation, the researchers sought permission from the head of the Management Information Center (MIC) of the University to get the respective grades of each Pre-service teacher on their Field Study Courses and In-&-Off Campus Teaching. Upon approval, the data in the academic performance was classified and tallied. The researchers sought for approval from the Dean of College of Education in order to conduct survey. After the approval from the Dean, the researchers administered a Dry-Run and conducted the Final survey through distribution of validated questionnaire to the respondents (Pre-Service Teachers). The researchers converted the respondents’ answer into data form for further information. The data retrieved was be classified, tabulated, statistically treated and interpreted.

Ethical Consideration

All data gathered by the researchers were used solely for the purpose of achieving the objectives of this study, which was to determine the level of competencies of the Rizal Technological University – College of Education Pre-Service Teachers on their Field Study Courses and its relationship to their Academic Performance in the subject. In addition, to identify the relationship of their Academic Performance in Field Study Courses towards their Teaching Performance for both In-Campus and Off-Campus Teaching as

determined in their Academic Performance in their Professional Education 13 (In-Campus Field Study) and Professional Education 15 (Off-Campus Teaching). Moreover, to identify how several educational theories are being adapted and integrated in Teacher Education Curriculum for Higher Education Institutions such as Rizal Technological University effecting positively the Pre-Service Teachers' teaching performance. Any information collated by the researchers that was beyond the scope and limitations of this study was kept with utmost confidentiality (Connelly, 2014). Diligence was observed by the researchers in ensuring that the respondents fully understand the nature of the study. In analyzing the information gathered, the researchers exercised due truthfulness. It also deemed that the participation exhibited by the respondents was voluntary and from their free will (Driscoll and Brizee, 2012). Also, due and proper citation was given by the researchers for every reference of this study. In doing so, they strictly followed the rules set out by the American Psychological Association (APA Format). Ultimately, the researchers observed the seven (7) RizalTech core values namely: excellence, affordable and accessible education, student-centered, research and scholarship, relationship-centered, integrity and accountability, openness to cultural diversity, and civic responsibility in the entirety of this study.

Discussion

Table 1. Relationship between the Respondents' Level of Competencies on Field Study Courses and the Academic Performance on Field Study Courses

| Field Study Courses | Coefficient/Values | P-Values | Verbal Interpretation |
|---|--------------------|----------|-----------------------|
| FS 1 | 0.040 | 0.530 | Not Significant |
| FS 2 | 0.020 | 0.749 | Not Significant |
| FS 3 | -0.016 | 0.800 | Not Significant |
| FS 4 | 0.044 | 0.490 | Not Significant |
| FS 5 | -0.035 | 0.579 | Not Significant |
| FS 6 | -0.021 | 0.741 | Not Significant |
| <i>*correlation is significant at the 0.05 level (2-tailed)</i> | | | |

Using Pearson's R Formula, Table shows that p-values above does not have 0.05 level of significance. Therefore, hypothesis stating that there is no significant relationship between the respondents' level of competencies on field study courses and academic performance on field study courses is - accepted. We conclude that based on this sample; the respondents' level of competencies on field study courses does not have any correlation with their academic performance on field study courses. This is because the respondents are graded based on criteria and not with their personal perception towards their level of competencies on the said subject.

Table 2. Relationship between the Respondents' Level of Competencies on Field Study Courses and the Academic Performance on In-Campus and Off-Campus Teaching

| Field Study Courses | Coefficient/Values | P-Values | Verbal Interpretation |
|---------------------|--------------------|----------|-----------------------|
| In-Campus Teaching | | | |
| FS 1 | 0.092 | 0.144 | Not Significant |
| FS 2 | 0.087 | 0.171 | Not Significant |
| FS 3 | 0.021 | 0.739 | Not Significant |
| FS 4 | 0.057 | 0.364 | Not Significant |
| FS 5 | 0.077 | 0.227 | Not Significant |
| FS 6 | 0.072 | 0.254 | Not Significant |
| Off-Campus Teaching | | | |

| | | | |
|---|--------|-------|-----------------|
| FS 1 | -0.120 | 0.057 | Not Significant |
| FS 2 | -0.019 | 0.762 | Not Significant |
| FS 3 | -0.123 | 0.052 | Not Significant |
| FS 4 | -0.023 | 0.711 | Not Significant |
| FS 5 | 0.020 | 0.748 | Not Significant |
| FS 6 | -0.062 | 0.329 | Not Significant |
| <i>*correlation is significant at the 0.05 level (2-tailed)</i> | | | |

Using Pearson's R Formula, table presents, p-values above does not have 0.05 level of significance. Therefore, hypothesis stating that there is no significant relationship between the respondents' level of competencies on field study courses and academic performance on in-campus and off-campus teaching is - accepted. We conclude that based on this sample; the respondents' level of competencies on field study courses does not have any correlation with their academic performance on in-campus and off-campus teaching. This is because the respondents are graded on their in-campus and off-campus based on certain criteria. Grades for both practicums may vary as what Abbott (2014) [16] stated "It may be because grades may be calculated differently from school to school or teacher to teacher"

Table 3. Relationship between the Respondents' Academic Performances on Field Study Courses and the Academic Performance on In-Campus and Off-Campus Teaching

| Field Study Courses | Coefficient/Values | P-Values | Verbal Interpretation |
|---|--------------------|----------|-----------------------|
| In-Campus Teaching | | | |
| FS 1 | 0.174 | 0.006 | <i>Significant</i> |
| FS 2 | 0.374 | < 0.0001 | <i>Significant</i> |
| FS 3 | 0.282 | < 0.0001 | <i>Significant</i> |
| FS 4 | 0.060 | 0.344 | Not Significant |
| FS 5 | 0.197 | 0.002 | <i>Significant</i> |
| FS 6 | 0.451 | < 0.0001 | <i>Significant</i> |
| Off-Campus Teaching | | | |
| FS 1 | 0.249 | < 0.0001 | <i>Significant</i> |
| FS 2 | -0.025 | 0.695 | Not Significant |
| FS 3 | 0.079 | 0.212 | Not Significant |
| FS 4 | 0.288 | < 0.0001 | <i>Significant</i> |
| FS 5 | 0.118 | 0.063 | Not Significant |
| FS 6 | -0.029 | 0.645 | Not Significant |
| <i>*correlation is significant at the 0.05 level (2-tailed)</i> | | | |

Table 3 shows the relationship between the academic performance on Field Study Courses and academic performance on in-campus and off-campus teaching of the Pre-Service Teachers of Rizal Technological University College of Education.

As revealed from the table, most of the respondents' academic performance in Field study courses is positively correlated with the academic performance on In-campus and Off-Campus teaching.

Field Study 1 with p-values of **0.006** for In-campus Teaching and **<0.0001** for Off-campus Teaching is the only subject who have significant relationship for both practicums. This only means that the Pre-Service teachers have mastered learned theories and concepts on Learner's Development and Environment which have been evidently manifested during their final demonstration on the said practicums.

All Academic Performance on Field Study Courses has significant relationship with the Academic Performance for In-Campus Teaching except for Field Study 4 who happened to have a p-value of **0.344**. This

connotes that there were problems that arises during the time when the pre-service teachers underwent exploring the Curriculum thus, manifested a low mastery of the learned concepts and theories of the said subject.

Pre-service teachers' Academic performance for Field Study 1 and Field Study 4 has significant relationship with the Academic Performance for Off-Campus Teaching both having p-value of <0.0001 . This goes to show that learned concepts and theories on Learner's Development and Environment plus Exploring the Curriculum was evidently manifested by the respondents during their Off-Campus Teaching. However, learned concepts and theories on some Field Study Courses were not justified during Off-Campus Teaching as reflected with the respondents' grades on the subject.

Therefore, the hypothesis stating that there is no significant relationship between the academic performance on field study courses and academic performance on in-campus and off-campus teaching of the pre-service teachers is – rejected. We conclude that based on this sample; the academic performance on field study courses do have a correlation with the academic performance on in-campus and off-campus teaching. This means that grades on Field study courses is directly proportional with the grades on in-campus and off-campus teaching. The higher the grades in Field Study Courses the Higher the grades in In-Campus and Off-campus teaching. However, certain factors greatly affect the results. E.g. Teacher Matter, Curriculum Implementation etc.

Above findings can be related to the study of Timbol (1999) [17], wherein he tried to look for significant relationship between the academic achievement of both BSED and BEED pre-service teachers on their General Education, Professional Education, Field of Specialization and Field Study Courses with the Academic Achievement on Student Teaching Performance. He found out that Saint Michael's College of Laguna's Pre-Service Teachers' Academic Achievement has a significant relationship with Academic Achievement in Student Teaching Performance.

CONCLUSIONS

With the findings mentioned above, the following conclusions are drawn:

1. Pre-service teachers manifested a good academic performance on Field Study Courses.
2. Pre-service teachers have performed very well during practice teaching as reflected through their grades.
3. Pre-service teachers showed a very high level of competencies on field study courses.
4. Among all the Field Study Courses, the pre-service teachers have mastered competencies on Learners' Development and Environment and Technology in Learning Environment.
5. The Level of competencies on field study courses has nothing to do with the grades obtained by the pre-service teachers on both Field Study and Practice Teaching.
6. The higher the grades on field study courses the higher the grades on practice teaching can get.

RECOMMENDATIONS

Based on the foregoing conclusions the researchers came up, with the following recommendations;

1. In order to attain very good academic performance in their Field Study Courses, pre-service teachers should be given enough time to accomplish necessary requirements to be submitted in fulfillment of the course. To be evaluated objectively, outputs are to be checked right after every episodes of each Field Study Courses. Uniform format of grading system should also be given to instructors for an objective dissemination of grades.

2. To maintain a very good performance during their practice teaching, Pre-Service teachers should be monitored every time, post conferences will surely help them. Corrections and immediate attention will elevate their performance.
3. As their personal assessment with regards to their level of competencies towards their Field Study courses gets a very high level, students should be motivated to do well in every Field Study Courses and be reminded that such experiential learning courses are essential to their development as a future teacher.
4. It is highly recommended that facets of Field Study Courses should be taught well during their Prof. Ed Courses in order to have a good foundation that will serve as a platform for the Field Study instruction. It is suggested that teachers who said to be handling the Prof. Ed Courses should also handle the equivalent Field Study Course since it is offered concurrently with each other to achieve a continuous articulation of instruction.
5. Since it is proven that their level of competencies on Field Study Courses has nothing to do with their academic performance, it is then recommended that implementing, monitoring and evaluating of necessary activities such as seminars, conferences and programs alike can contribute to the full attainment of the mission of the College of producing qualified licensed teachers. Furthermore, future researchers can seek details to find out specific factors that affects the performance of pre-service teachers in their practice teaching aside from their self-evaluation as reflected to their level of competencies. They can seek for the effects of each field study courses in the performance of pre-service teachers that can be determined through certain frameworks such as the NCBTS or the Experiential Learning Handbook.
6. Lastly, it is recommended that evaluation should be objective in nature. Providing a specific standard and format for evaluating both Field Study Courses and Practice Teaching should be provided. In the light of this matter, a single professor is recommended to handle the overall evaluation.
7. For the future researchers, it is recommended to pursue a research in identifying the specific effects of each field study courses in the actual teaching performance of pre-service teachers which can be obtained through their evaluation forms during their final teaching demonstration, academic performance and personal assessments. The population scope can be those students who have undergone the field study courses and practice teaching courses in the past.

Increase Nationality Insight Through Learning History

Mela Mita Septiana

History education postgraduate student at Sebelas Maret University, Surakarta Indonesia.,
mella_meta@yahoo.com

ABSTRACT

Nationality insight is defined as a perspective in the unity of the nation homeland, indicators of nationality insight is to appreciate diversity, sacrifice defend the nation, love of the homeland and the nation. The concept of national insight based on three aspects, namely national understanding, sense of nationality and national spirit. While each of these aspects contains various dimensions of value. One way to increase national insight is education. Education is an effective effort to instill the values of the next generation are realized through learning. Learning history became is one instill values to educate participants to apply the learning history based on the struggle of youth events. Through the struggle of youth-based teaching history students can take the values of the history of the struggle such as the value of nationality insight.

This study aims to determine the relationship of teaching history of the struggle of the youth in raising nationality insight. This research uses descriptive qualitative method obtained through a series of studies.

Key Words: *Nationality Insight, Learning History, Education*

A. INTRODUCTION

Bathed about education always be material interesting to talk about, the same talk about political problems, law, moral culture and forth. Education have significant roles a strategic way to build a nation. Various studies showed that the powerful relationship between the level of development of education nations, education is the tools the development of human resources. As we noticed that education sector according to law no. 20 years 2003 on the national education system that article 3.

“National education serves develop the ability and forming the temper of the nation as well as civilization a dignified in order intelligence life of the people, aims to further expansion potential learners to become a man who has faith and guard against evil to the lord of almighty god, glorious, health, magicians, ably, creative and independent being a citizen of a democratic and responsible”

Education in Indonesia today faced with various problems, problems of interest is the quality of the output to moral problems caused by filed education build values that should not indivisible to education. It is not easy build education in Indonesia, look at Indonesia is a heterogeneous and plural. Education also can be defined as a strategy to both developed a conscience over pride of a person to his people.

We need to know that Indonesia is the plural, Indonesia has diverse tribe, religion, and races. A nation upholding unity should can avoid disputes that caused by a difference. The phenomenon sparatism occurring in some areas, conflicts that the name of religion, race, and religion is widespread. While the conflict resolution was like resolved to the violence, so does not reflect nations civilized and dignity. The pluralism that moderately warm discussing today is allegations defamation of religion by the governor (www.kompasiana.com) Jakarta. The culmination of this case it was a demonstration in December 2th 2016, the impact of this case it is quite clear that is the community divided into two camps.

While irregularities happening in the society among students such as the fighting between students, motorcycle gang, drug use and free sex to be the case widespread. This phenomenon is an indicator their faded nationality insight that must be given solution in dealing the case. See if they students are generation. The youth has an important role in achieving consciousness nation and state. Appreciation nationality awareness and patriotism is a that we are part of the is the country. So as to uplifting nationality needed a commitment to strengthen the spirit of unity by firmly upholding watchword “*bhineka tunggal ika*”. For the past the national still grounded in the commons and a common vision of a joint purpose (Dadang: 2015).

Strategic way for increase nationality insight is through education. Education is one effort effective to infuse values to generation. Education could inspire man in the process of development at *wisdom, knowledge, and ethics* (Zaim: 2007). At least through education, phenomenon that occurs among students can be minimized. Teaching history is the subject in high schools has strategic role to increase values nationality insight. Learning history is the combination of activity learning and teaching inside studies events the past close related to the present (I Gede Widja: 1989). Teaching history relating to events youth Magelang struggle expected to increase the nationality insight students.

B. METHOD

Research methodology used is qualitative descriptive obtained through a series of research. Technique data collection through interviews, observation, and analysis documents. The validity of data using triangulasi and triangulasi method. Data analysis use component Milles and Hubermas (1982: 20) the data collection, reduction data, presentation of data, and the withdrawal of a conclusion that related with a series of stage data analysis.

C. RESULTS AND DISCUSSION

1. Learning History

Man and learn or learning cannot be separated to each other. Man grow because through learning, learn does not limited in time and space. The term learning closely related to understanding learn and teaching. Learning, teaching, and learning happening by in tandem. Learning can be carried out individuals or without activity teaching and learning formally. Meanwhile, the process teaching encompasses all the activities carried out by teachers so that the learning process to smooth, licentious and make students feel comfortable (Moh Suardi, 2015: 6). It is a part of activity teaching, and in particular teachers trying to implement curriculum in class. While according to Dimiyati and Mudjiono stated that learning was an attempt a deliberate involving and use professional knowledge owned teachers to reach seven curriculum (Dimiyanti and Mudjiono, 2009).

Meanwhile according to the opinion of another learning it can be said as a result of memory, cognition, and metakognisi that influence the understanding, this condition was often the case in everyday life because learning is a process natural everyone. Learning according to Gagne as the process of modification in the capacity of a man who can be maintained and promoted levels (Miftahul Huda, 2013: 2).The whole point of the statement that during a learning process someone can truly change the landscape or not against what is done. A learning process when it will undergo a change in behavior, the act of, the way, some of the form that somebody should be able to observing, learning verify it as an object. Of some opinion above we can conclude that learning bring changes in the think every individual.

While history is the number of changes, events, and events in reality around us, the story of change and knowledge who investigates about the changes (Ali , 2005: 12). Subjects history has been given to the ground level as an integral part of subjects social class, while at the senior secondary level subjects history given as subjects himself. According to Dennis Gunning , in general teaching history with the purpose of forming a good citizen, and aware students to know who and environment, and giving perspectives historikalitas. While specifically according to Gunning the purpose of learning history there are three as teach the concept, teach skills intellect, and giving information to students (Dannis Gunning, 1978: 179-180).

Teaching history is learning power to make students ability do construction the present associate or see the past which be the subject of teaching history. Their ability to construct this is what needs to be improved in order learning not being conservative. The same with opinion Aman (2011: 73) said that the nature of teaching history make students capable of actualize self in accordance potential himself and realized known to participate in determining a future more humane jointly with others. Based on study it so concluded that teaching history make of humans to be kind and wise through interpretation that affects in patterns of thought and the act of one.

Thus, teaching history is a process form attitude that based on values good and involve processes reflect in process knowledge of past. Teaching history not only aimed memorization all historic event but also is the subject had values on the process change and development of the people of Indonesia and the world from the past until now.

Teaching history at the high school had been on the levels analyze, knowledge deep on the history, give values character to be applied in daily life. Teaching history it can be said reached objective if can apply values in the process of learning. While values history can realized through teachers. Teachers hold an important role in managing and directing students to to connect historic event with the current events current. Because of continuity in the teaching history between events the past, the present and days are coming have ties and must be kept. The same with opinion Kochar that history is dialogue between events the past and development of to the future (Kocchar, 2008: 5). This is related to the realization that lifelike in social environment who always has relations functional and reciprocal.

We need to understand that values of an event history be able to be implemented in the life of student for learning. Meanwhile, the implementation process through habituation and motivation. Through habituation so would gradually embed values while motivation could lead students to act, habituation who took some getting used in the vicinity of the school so will implement in social. As for values required in the community multicultural now is values nationality insight. Through nationality insight students will more understand the meaning of the diversity, upholds unity, proud as the Indonesian nation. Material learning the history of resistance youth Magelang against Japan constitutes the materials history describing nationality insight at the time.

2. Magelang Youth Struggle against Japan in 1945

History national 1945 incident resistance youth to colonist in various regions. One of them is the youth against Japan 1945 that is one of historical circumstances local occurring in areas Magelang. Events started with the arrival of colonist Japan of regional Magelang. Japan use ruler local to run government, by using ruler local Japan had been successful in exploit human resources and natural resources in the interest of Japan. Due to the practice of exploitation resources, and policies losers the people then came up with resistance youth Magelang against Japan.

Max Weber opine that conflict as a system “authority” or system “power”. The difference between authority and might namely, power tending to put trust in on the strength of, while authority is power who legitimized, namely power which has received recognition common (Wirawan, 2012: 69). Of opinion it can be understood that events struggle youth Magelang to the occupation of Japan in accordance with a statement Waber, if in his theory states that conflict as an authority and might which will then delivery interests. So if connected to the resistance youth Magelang against japan be highly noticeable two groups who maintains concerns. The youth Magelang interested reclaim area in RI while government colonization Japan attempt to maintain regional colony.

According to Dahrendrof (in Wirawan 2012: 87) claim that power and constituted authority sources scary, because is in their interest to maintain the status quo. According to Weber, human actions driven by interests, but not only by interest have a material as said Marx, but also ideal interests. Of here we can understand that struggle youth Magelang against Japan is a form of conflict where happened challenge to policy run by colonization Japan. Youth starting to realize that the union is required to fight a power dominant. Like the history of struggle youth Magelang against Japan 1945 is a resistance to a mastery based for the interests of colonist losers the people and nationality insight owned by a youth Magelang as a unifying in expelling colonist.

Resistance youth magelang against the government colonization Japan is a form of community awareness of the formed over the ruling power by giving education for the purpose accumulate the community to contribute to colonist interests. The Japanese government continue to maintain his powers by interests that must be they achieved, so they insisted various regulations that sometimes exceeding policy should be so dislike the people to occupation. According to Antonio Gramsci in theory hagemoni intellectual organic the community the line of duty prophetic and raise awareness of the community being manipulated by force hagemonik, they are assigned strengthen the position of civil society to accumulate power. Is by applying struggles to legitimized strength (Mudji Sutrisno and Hendar, 2005: 31-32). So that can be concluded that the theory Gramsci is emphasized the formation of culture resistance than make peace with a dominating power.

Efforts to the people opposed the government colonization Japan the people give priority to the cooperation, the solidarity, and the exclusion of the difference to an end. For example that occurs in the struggle youth Megelang against Japan 1945.

When Japan had been successful in control Magelang the Japanese government implementing policies torment the people. Due to policies losers the people arising hatred the people against Japan and form a resistance. The top popular resistance when Japan have lost in world war II, so as to cause the liberation Indonesia and free self. The independence of Indonesia is a form of popular resistance in opposing domination the rulers of Japan. Due to oppression done Japan so consciousness raising for the people and youth that regardless of colonialism. Including occurring in Magelang, the youth united and cooperate in opposing foreign power. Nationality insight youth Magelang was proof that they felt they same feel the misery occupation. Values nationality insight that is in the struggle resistance youth Magelang this is what will be applied in learning.

3. Increase Nationality Insight

Nationality insight for Indonesian who have diversity good religion, tribe, and culture has become a key factor that should be owned any member of the peoples. Nationality insight this also important for high school student, to be raised as an instrument for overcome various issues, bearing numerous once news that have been published in from various media discuss of violence that is happening in the community and students. As at a discussion before that subjects of history having strategic role in improving nationality insight students via values nationality insight to the matter struggle youth Magelang against Japan 1945. Nationality insight referred to is not nationality insight used to fight colonist. But nationality insight that has been adjusted and relevant to be applied at the moment. Nationality insight used to respond to problems caused by multiculturalism that often occurred during this.

Bernabas Suebu thought that nationality insight Indonesia formed as a cultural history of an Indonesian society consisting of various groups in the nations because equation fate, so that they united, stand together to establish and build “negara bangsa” independence day. While Nur Syam in the papers titled Islam, Wawasan Kebangsaan, and Nasionalisme said that nationality insight be the basis and orientation of the social life, solution problems the nation and allegiance to four the consensus about Pancasila, UUD 1945, NKRI, and Bhineka Tunggal Ika.

Values nationality insight the will also be cultivate within students by means of motivate and application of in learning conducted in repeated. Strategy in increase nationality insight through teaching history struggle youth Magelang against Japan 1945 to be performed in several stages. First, carry out their experiences in the class either in groups students is expected to to know values nationality insight that is in matter, next students capable of internalisation values nationality insight in this current situation. Students directed to presented the results of work group, while teachers see the way presentation, responding to refutation and settlement the task of the groups that deals with nationality insight.

Nationality insight can defend unity it is expected that Indonesian citizens having a one language, same fate, the country, and have a determination in achieving the ideals of the nation. This must be they realize that Indonesia submitted to the principles of a plurality that puts forward and unity, thereby avoiding divisions caused by diversity.

D. CONCLUSION

Based on the problems in this study, about efforts to improve nationality insight through teaching history a conclusion can be drawn. Nationality insight play an important role on the society multicultural like Indonesia, especially for high school student. See the phenomenon of irregularities occurring dealing with the elements and SARA (suku, agama, ras) caused a lack of understanding nationality insight. A lack of understanding nationality insight has led to fading of the existence of the homeland, to the need for an effort to fertilize the union of being with the insight based on nationality. This should be realized that Indonesia consist of a numerous tribe of, religion, and different races.

So that required awareness think one language, same fate, one homeland, and one determination in achieving the ideals of the nation. Nationality insight this can be increased through education formal and non-formal education. At the senior secondary level through teaching history. Implementation of the realized through cooperative learning activities, thus teachers could lead students in company practices directly how value nationality insight built in the social life. Efforts to improve nationality insight through teaching history

this is important to be developed in learning. Bearing numerous problems occur in neighborhood community and schools the need values nationality insight.

ABSTRACT

This study aims to describe: (1) Planning of history learning in nonformal education, (2) the implementation of the history learning in nonformal education, (3) the constraints of history learning in nonformal education, (4) evaluation of history learning in nonformal education.

This research was conducted by using descriptive qualitative research method. Data sources in this study were includes informants, the activity of learning history, and documents. Data analysis technique used interactive analysis through the steps of collecting data, data reduction, presentation of data, and conclusion. Citation technique of this study use purposive sampling.

The resulted of this study are: (1) planning the history learning in non-formal education began with prepared the learning materials, (2) the implementation of learning history in nonformal education for kejar paket C program was divided into activity-face, tutorials, and independent activities, (3) the obstacles of history learning in non-formal education for kejar Paket C program involves psychological of learners, condition of learners who were already work, and the background of learners, (4) evaluation of history learning in noformal education for kejar paket C program was printed on learning materials.

Keywords: History Learning, Non-formal Education, Equality Education Kejar Paket C Program as level as senior high school

INTRODUCTION

Education is a necessity for society in this eras, it is because education is a key aspect for the future of a person. Education has been linked to a variety of efforts in improving the quality of human life as a whole. The educational efforts embodied in the overall development of human potential to a more mature and functional so creatively can generate various patterns of behavior in accordance with the demands of the task in life.

Education is the proper thing by every human being as a creature both individuals and as social beings. The importance of education can not be made-make, not just for personal development, but also to the development process of a country (Muller, 2001: 123). Through education, the state can be increase human resources implications for the progress in many other areas of life, such as: social, economic, political, and cultural. Therefore, the government must fulfill the right of every citizen to obtain education service as mandated in the 1945 Constitution.

The essence of education is characterized by readiness results in customizing, developing and conducting reforms in the direction of life more advanced, creative and responsive. Education is the one of keys to development of a nation. The development of public education in Indonesia is directed to generate smart society and competitive through increasing the availability, affordability, quality and relevance, equity and certainty of an education. Education takes place in accordance with the development of lifelong learner task demands and the development of society are becoming increasingly complex. Learners are also required to be able to continuously develop science, technology and life skills. Nonetheless, education is also a social barrier in society.

UU Tahun 1945, Pasal 31 ayat (1) states that every citizen is entitled to education. Furthermore, UU No. 20 Tahun 2003 on National Education System (Sistem Pendidikan Nasional) pasal 5 states that (1) Every citizen has the same right to obtain a quality education, (2) Citizens have physical, emotional, mental, intellectual, and / or social entitled to special education, (3) citizens in remote or underdeveloped and indigenous peoples isolated entitled to receive special education services, (4) citizens who have the intelligence and special talents are entitled to special education, (5) Every citizen is entitled to the opportunity to improve education throughout the life. Education should be the responsibility of the government, both central and local levels, in cooperation with the private sector and the public (Winata, 2012: 4).

People who do not have the opportunity to follow the formal education for various reasons by government efforts to implement the education that can be enjoyed by all people who called with equal education that is part of non-formal education. The government's efforts in improving the quality of Human Resources through education can not ignore the existence of non-formal education as an integral part of the national education system. Community learning needs can not be met through formal education can be carried out on non-formal education channels. The comprehensions of society to the importance of lifelong education affect affordability a range of non-formal education services (Karina, 2015: 2).

In order to reform the national education system has set the vision, mission and strategy of development of national education. Vision of national education is the realization of the education system as a social institution that is strong and authoritative to empower all citizens of Indonesia to develop into a human quality capable and proactive answer the challenges of the times are always changing. The national education system is expected to apply to all learners, good learners of school age and adults who for some reason do not have the opportunity to follow a formal education.

UU No. 20 Tahun 2003 on National Education System (UU 20/2003), pasal 13 ayat 1 confirms that the path of education consists of formal education, non-formal education and informal education to be replaced and enriching. The function of non-formal education as a substitute, enhancer and / or complementary education, non-formal education can be given to people who have special conditions. Service non-formal education that is specifically this could be due to economic factors (disadvantaged / poor), geographic (isolated), social (unemployment, former criminals, and others), psychosocial (do not want to enter formal education), or factors other. Therefore, children from marginalized groups are entitled to a decent education (Hermawan, 2012: 65-66).

Education has a very important role, therefore, education is becoming more crucial in this globalization era. The phenomenon of globalization such that have changed the pattern of world trade, technology, communications, and the global economic system that has indirectly also change the education system. The world of education as it is today, no longer segregated by territorial boundaries of a country. Global competition requires people to keep learning to improve by themselves, be it through formal education, informal and non-formal.

One variety of non-formal education programs is through education that includes equality Kejar Paket A similar program SD (6 years), Kejar Paket B equivalent to junior (3 years), and Kejar Paket C equivalent of senior high school (3 years) or so-called non-formal education. This program was originally intended for students who come from disadvantaged communities, never went to school, school dropouts, as well as reproductive age who wish to enhance their knowledge and life skills. Equality program is also intended for people who require special services in meeting their needs as a result of changes to increase the standard of living, science and technology in the era of globalization.

Equality education is present in the community provide greater opportunities for people who are not only limited to children and adolescents, but also adults to obtain educational services. Education at the present time is required in response to the demands of the times for a better development, so that someone at this time are required to continue to learn, to be able to develop themselves fully, in order to develop intelligence thought the civilized (cultured mind), or also encouraged by social role as workers in work organization (Suryana, Siswanto, & Dismawati, 2010: 2).

The implementation of educational equality refers to the applicable curriculum. The curriculum is a set of plans and arrangements regarding the objectives, content and learning materials as well as the ways that are used as guidelines for the organization of learning activities to achieve specific educational objectives that include national education goals and appropriate with peculiarities, conditions and potential areas, the education unit and learners. Therefore, the curriculum drawn up by the education unit to allow adjustment of educational programs to the needs and the potential that exists in the region.

Nowadays sense of nationalism further eroded with the times in accordance with the concept of globalization and westernization. Globalization has been started at a time of world civilization is no longer compartmentalized locally, at the time of human mobility has penetrated intercontinental. Mobility is facilitated by the industrial revolution, which would also trigger the growth of the idea that was almost free of space and time (Sumarno, 2011: 74). Globalization as a phenomenon of social, economic, political and can bring positive things and also bring more negative impact. Globalization in this case may be cited as the opportunities and threats (Winarno, 2008: xv). Positive and negative impacts or the effects of globalization can also occur on the lives of the nation's character. For example, a nation: a) learn from other nations; b) achieve progress which is not possible when only done alone or always in secrecy; c) increased competitiveness and achievement. Meanwhile, the negative effects can also occur, for example: a) excessive dependency; b) the fading of national character; and can also occur c) deterioration, even destruction of the life of the nation (Sumarno, 2011: 74). Indonesia as a developing country has the concept of globalization and westernization progress rapidly. Indonesia, which has astronomical and geographical location are very strategic enable the acceleration of

globalization and westernization. The effect of changes to the modern era of globalization and westernization are to do with efforts to establish a national character.

Therefore, the more widespread the negative impact caused by globalization, the government seeks to minimize the impact through various policies, one of which is through policies in the field of education by bringing character education.

According to Poerwadarminta in Syarbini (2012: 13) said that character means nature, character traits psychology, morals or manners that distinguish one person to another person. In addition, a prominent American psychologist named Alport, define the character as determining that a person as a person (character personality is evaluated).

Globalization makes Indonesia a multidimensional crisis led to education in Indonesia accused of failing to create quality human resources. The impact of globalization more negatively contribute to the development of the Indonesian nation, so that the necessary efforts to improve the quality of education. Character education became one of the educational discourses that are considered able to provide answers to these problems. Character education is defined as an effort to plant intelligence in thinking, appreciation in the form attitudes, and practice in the form of behavior that is in accordance with the noble values that became his true identity, embodied in the interaction with God, self, society and the environment (Zubaedi, 2011: 17). One means is through the formation of national character education is Kurikulum Tingkat Satuan Pendidikan (KTSP), which emphasizes the cultivation of character value for learners. Planting efforts effective character carried through learning that leads to nationalism, one of them is history.

Equality Education Curriculum to Kejar Paket C program, taught subjects oriented on two things, the subjects oriented to fostering good moral values and academic and subject-oriented life skills. Kejar Paket C is divided into two parts namely IPS (Social Program) and IPA (Science Program). In accordance with the curriculum developed at this time applying to the Kurikulum Tingkat Satuan Pendidikan (KTSP), which is in this curriculum subjects are History, taught by a teacher (tutor).

KTSP develop cultural values and character of the nation as whole educational activities that occur at school. The values in question, among others are: religious, honesty, tolerance, discipline, hard work, creative, independent, democratic, curiosity, the spirit of nationalism, patriotism, recognize excellence, communicative, love peace, love reading, social care and environment, as well as responsibility. The values are surrounding and integrated into all educational activities as school culture. Character values are applied at various levels in Kurikulum Tingkat Satuan Pendidikan (KTSP). One of the operational references KTSP is national unity and national values, where the curriculum should encourage insight and attitude of nationhood and national unity to strengthen the integrity of the nation within the Unitary State of the Republic of Indonesia. One of the efforts to strengthen the character of the students especially in national values is through learning history.

History as a past record of man always gives a very valuable lesson to the people living in the present, to learn history will realize that life had now rooted in the past, so that people can grow and take shape as mature and to learn the history also learn any form of peak experiences and the changes that have been achieved humans throughout the centuries (Daliman, 2012: 19 & 76). *Historia Magistra Vitae* (history is the teacher of life) is an expression that the study of history is very important for someone who studies history can take lessons from the events that occurred in the past.

The function of history in essence is to improve understanding or a deep understanding and better about the past and the present in relation to the future inter. While the usefulness or benefit of history, there are four that are: the *first* is education, that history brings give wisdom and discernment; *second* is inspiring means to give inspiration; *third*, instructive, that assist the activities of imparting knowledge or skills, and *fourth*, are recreational, aesthetic form which gives pleasure true stories of human experience.

The function and the role will grow stronger if balanced with meaningful learning history, which is supported by educators who have a history of competence. Competence in question is pedagogical, professional, social, and personality. Thus the mission of history education to raise awareness and build the character of a nation's history can be realized.

Learning history as a means for the formation of national character is given to students in every line and level of education, whether through formal education and non-formal education. Education today is a necessity for society, because education is a key aspect for the future of a person. Education has been linked to a variety of efforts in improving the quality of human life as a whole. Education takes place in accordance with the development of lifelong learners task demands and the development of society are becoming increasingly complex. Learners are also required to be able to continuously develop science, technology, and life skills. However, education is also becoming a constraint on the social community. Social inhibitions can occur because education is commercialized, so the distribution of education is uneven. As a result, many people are not getting a proper education as to formal education.

Learning the history of the Kurikulum Tingkat Satuan Pendidikan (KTSP) had a strategic significance in the formation of character and civilization of the nation's dignity as well as in the formation of Indonesian people who have a sense of nationalism and patriotism. Learners in non-formal education also have an equal

opportunity to develop and shape the character of the nation's life in accordance with the ideals of national education.

METHODOLOGY AND THEORY

This research was conducted by using descriptive qualitative research methods in history learning in non-formal education for kejar paket C program. Data sources in this study were includes informants, the activity of learning history, and documents. The techniques of collection data was through with interviews, documents, recording, observation, and literatures. Data analysis technique used interactive analysis through the steps of collecting data, data reduction, presentation of data, and conclusion. Citation technique of this study use purposive sampling with 10 respondents consisted of heads or chief, manager, tutor, and learners.

Learning is to educate students using the principles of education and learning theory is a major determinant of educational success. Learning is a two-way communication, teaching conducted by teachers as educators, while learning is done by learners (Sagala, 2006: 61). Meanwhile, according to Sugihartono, et al (2007: 80) learning as an activity to organize or manage the environment as well as possible and connect with students so that the learning process. Not only environmental study, but also includes teachers, props, libraries, laboratories, etc.

In this research used Non-formal Education Theory and Learning History Theory. Philip H. Coombs finds that non-formal education is any organized educational activities which organized outside by the formal system, both alone and as part of an activity that is broad, intended to provide specific services to target students in achieving the learning objectives (Joesoef, 1992: 50).

Education is essentially a conscious effort to develop a human personality inside and outside school, and lasts a lifetime. Therefore that education can be owned by the people in accordance with the ability of the community, and then education is the responsibility of families, communities and governments. Ahmadi and Uhbiyati (2007: 70) argues that education essentially is an activity that is consciously and deliberately, as well as full responsibility undertaken by adults to children so that the resulting interaction of the two children to reach maturity aspired and continues. In addition, education is an attempt to establish a full human and spiritual birth smarter, healthier, and noble character.

Education is able to shape the personality through environmental education can be studied either intentionally or unintentionally. Education is also able to establish that human beings have the discipline, the unyielding, not overbearing, respect for others, devoted, and creative, and independent. Based on the opinion above, it can be concluded that education is an activity between educators and learners which makes a person become a good person, independent, and responsible.

Non-formal education serves to develop the potential of learners with an emphasis on the mastery of knowledge and functional skills and the development of professional attitude and personality. Non-formal education includes life skills education, early childhood education, youth education, women's empowerment education, literacy education, vocational education and job training. The equal education includes the Kejar Paket A, Kejar Paket B and Kejar Paket C.

Learning is a process of individual behavior change through interaction with the environment. Within this interaction a series of learning experiences (Hamalik, 2001: 28). Meanwhile, Slameto (2003: 13) states that "learning is a process of business which carried out by someone to obtain a new behavior changes Overall, as a result of his own experience in interaction with environment". To get something someone should do business in order what is desired to be achieved. These can be self-employment and groups in an interaction. Based on the opinion above can be concluded that learning is a process attempt by someone to acquire a new change as a result of his own experience in interaction with the environment. Learning is the teacher effort in organizing the components-learning component for learners to achieve goals so that the learning can help students can be good learning.

History is a reconstruction of the past, reconstruction in history is what has been thought, said, done, felt and experienced by the people. History is a branch of science that systematically examines the overall development of the process of change and the dynamics of community life with all aspects of his life that occurred in the past (Kuntowijoyo, 1995: 18). Widja (1989: 91) stated that the learning history is a blend of learning and teaching activities in which learn about the events of the past that is closely related to the present. Meanwhile, according to Ibnu Khaldun in Abdurahman (2007: 5), suggests that history is the result of the effort of finding the truth, critical explanation about the cause and genesis of truth something as well as the depth of knowledge about how and why events happened.

From the definition above can be concluded that history is the study of life and the events of the past and reconstruct what happened in the past the past. Based on the definition above about learning and history, it can be concluded that the teaching of history is a process of interaction between the students and the environment, resulting in a change in behavior as a result of interaction by studying history.

DISCUSSION

Globalization has been started at a time of world civilization is no longer compartmentalized locally, ie at the time of human mobility has penetrated intercontinental. Mobility is facilitated by the industrial revolution, which would also trigger the growth of the idea that was almost free of space and time (Sumarno, 2011: 74). Globalization as a phenomenon of social, economic, political and can bring positive things and also bring more negative impact. Globalization in this case may be cited as the opportunities and threats (Winarno, 2008: xv).

Positive and negative impacts or from the effects of globalization can also occur on the lives of the nation's character. For example, a nation: a) learn from other nations; b) achieve progress which is not possible when only done alone or always in secrecy; c) increased its competitiveness and achievement. Meanwhile, the negative effects can also occur, for example: a) excessive dependency; b) the fading of national character; and can also occur c) deterioration, even destruction of the life of the nation (Sumarno, 2011: 74).

Globalization makes a multidimensional crisis led to education in Indonesia accused of failing to create quality human resources. The impact of globalization more negatively contribute to the development of the Indonesian nation, so that the necessary efforts to improve the quality of education. Character education became one of the educational discourses that are considered able to provide answers to these problems. Character education is defined as an effort to plant intelligence in thinking, appreciation in the form attitudes, and practice in the form of behavior that is in accordance with the noble values that became his true identity, embodied in the interaction with God, self, society and the environment (Zubaedi, 2011: 17).

The issue of character, culture, civilization and national life can be understood as problems in education because of an attribute called character, culture, and life is attached to the human subject and society. If there is moral decadence, fragility character, fading noble values, decline of civilization, beckon actually nothing wrong with education (in the broad sense), or there is a challenge, which is what can be done by education in the face of fading character of the nation. Education is not just teaching in the school, but all the efforts to help the people and communities undertake self actualizing its potential, according to the norm orientation noble values that are believed and always strived to make it happen. This education occurs in the family, schools, communities, workplaces with formal approaches, non-formal, informal, and even can also occur incidentally (Sumarno, 2011: 75).

Education is essentially a conscious effort to develop a human personality inside and outside school, and lasts a lifetime. Therefore that education can be owned by the people in accordance with the ability of the community, and then education is the responsibility of the family, society and government. These responsibilities based on the awareness that the high and low levels of public education effect on the culture of an area, because after all, culture is not only stems from the sheer instinct but mainly born from the learning process in a very broad sense. According to Brown in Ahmadi (2004: 74) that education is a process of conscious control where changes in behavior resulting in that person through in a group. From this view of education is a process that began at birth and lasts throughout life.

Widja (2012: 102) confirms the important role of education as a process of socialization in character education, especially in dealing with problems in the practice of national life such as the emergence of tribal sentiments that could escalate to all members of tribes into open conflict. Learners in non-formal education (learners) are more susceptible to conflict because of different backgrounds tend ranging from gender, age, occupation, and others. Thus strengthening this character needed to minimize conflicts among the learners. Non-formal education can be defined as the path of education outside formal education can be structured and tiered (UU No. 20 Tahun 2003). Meanwhile, according to Axin cited by Suprijanto (2005: 7) states that non-formal education is an intentional learning activities by the learners and learners in a setting that was organized (structure) that occur outside the school system.

History is an event that actually happened in the past of mankind. Leo Agung and Sri Wahyuni (2013: 55) defines history is a subject that instills knowledge, attitudes, and values regarding the process of change and development of the Indonesian people and the world from the past to the present.

Learning history can be regarded as a process of activities that encourage and stimulate learners reconstruct and gain knowledge of the history of the ensuing process of internalization of values associated with the various aspects of social life and nationality, as well as the values of humanity, so bring a change in behavior as a process development of the personality or character of the learners. History teaching character values appear in each of the learning materials. Residents learn in different circumstances with the non-formal education learners in formal education either in economics, purpose, and psychologically. Although the purpose of the learners to follow the non-formal education is to acquire life skills, but the character values should remain held as a way of life in the future. Learning the history of offering values the character into learning material such as education-oriented socio-cultural character of nationality designed and implemented to reflect and promote the nation's sociocultural values contextually, adapted to the development of the world. Contextualization strategy becomes a necessity. Contextually, meant that the core values of the local / national

remains a reference in the charge content of character education, but the actualization mode tailored to the context of national and international development (Sumarno, 2011: 78).

Learning History contained in non-formal education programs provided to similar SMA/K is Paket C. The program was developed considering the number of citizens of graduates Paket B and junior high schools do not continue, and dropout high school / Madrasah Aliyah, and of reproductive age who want to develop themselves in life skills so that there should be a pattern of services that can give them to be ready to enter the workforce or continue to pursue higher. It is given that citizens are able to apply knowledge learned in the can after the completion of study. Equality education unit level curriculum program Kejar Paket A, Paket B and Paket C was developed based on the following principles; centered on the life of diverse and integrated, responsive to the development of science, technology and art, comprehensive and sustainable, and the principle of lifelong learning. The values of character education are explored through the study of history shows the configuration of a character in the context of the totality of the process of psychological and socio-cultural can be grouped into: if the heart (spiritual and emotional development), though the thought (physical and kinesthetic development) and if the feeling and intention (affective and creativity development). According Kartodirdjo (1993: 52), the lessons of history have socio-cultural function, awaken historical consciousness that will shape the national consciousness to realize the unity of the nation. So the history course is very important given to students either on a formal education, non-formal or informal. One application of the teaching of history is on the non-formal education is the Paket C program.

Based on the results showed that the implementation of the teaching of history in Program Kejar Paket C is start from learning plan, kejar paket C program, and then manufacture of learning tools that includes syllabus, lesson plans (RPP), learning evaluation. The making of learning device refers to the applicable curriculum. To shape the character of good citizens to learn, then an educator or tutor must be used in ways that attract learners to study history. It is intended for the purpose of teaching history to shape the character of the people studied can be realized with certainty. Learning the history of the non-formal education, especially in the Kejar Paket C program according to curriculum set by the government using the educational unit level curriculum teaching of history should be included in it the character values, such as honesty, religion, nationalism, and others. Standar Nasional Pendidikan (SNP) Pasal 1 ayat 15 stated that KTSP is the operational curriculum formulated and implemented by each educational unit. Preparation of KTSP conducted by educational units with attention and based on standards of competence and basic competence developed by the Badan Standar Nasional Pendidikan (BSNP) (Mulyasa, 2009: 19-20).

The implementation of the teaching of history in the non-formal education includes three patterns that face to face, tutorials and independent activity. Face to Face activity is a learning activity that a process of interaction between learners, learning materials, and environmental educators. Tutor roles in face-to-face activities are very important in the learning process. Tutorial (tutoring) is aid or the nature of academic tutoring by tutors to students to help smooth the process of learning an Independent learners are individuals or group of related teaching materials. Tutorial conducted face to face or remotely based on the concept of self-learning. In tutorial process, tutor as an educator only as a facilitator of learning for learners, the role of learners is expected to be more independent at learning history. Independent activity is the activity which is prioritizing the role of the learners in the learning.

Characteristic of learning in educational equality is there are special skills (life skills/vocational skills) subjects taken by students as a preparation to face life in the future. On the subjects of history once the action taken independently of learning materials tailored to the skills taken by the learners. An example is the learning materials to the cultural influence of Islam in Indonesia, namely the development of carving art of calligraphy. Residents learn that taking carpentry skills can make the calligraphy of wood, while taking sewing skills can make up the calligraphy on fabric media by using the technique of embroidery.

There are several problems in the implementation of learning history, such as psychological of learners, condition of learners who were already work, the background of the learners. It can be happen because of the state of readiness of students to receive teaching on non-formal education different from that of students in formal education. Another obstacle in learning history at program kejar paket C is the lack of tutor in preparing methods, strategies, and learning resources well. In terms of delivery of learning materials tutor is expected to convey the fun and able to be understood by learners.

In terms of planning teaching history, tutor already implement the rules properly. But in the implementation of learning, not all plans can be realized well. This is due to the state during the learning process can not be predictable. State learners are uncertain presence causing less learning implementation can run well. For example, on the first day of learners to follow the implementation of learning face to face activities, but at the next meeting was not present due to various things. Therefore, it is also one of the obstacles to the implementation of learning the history of non-formal education.

Another obstacle in the implementation of the teaching of history, especially during the times of face-to-face is the availability of infrastructure resources to learn the history that is still less like a replica of the temple,

atlas history, as well as pictures of heroes or historical figures as a concrete example to students that history is an event that really right happened in the past.

Evaluation of history learning in non-formal education for kejar paket C program was printed on learning devices in accordance with the applicable curriculum in Indonesia is KTSP. Evaluation contained in the non-formal education includes summative and formative assessments that include affective, cognitive and psychomotor. Learning history in the efforts to establish a strong national character is less able to be applied properly on non-formal education. This is because the purpose of the learners in the study for a diploma (certificate).

CONCLUSSION

The conclusion of this study are: (1) planning the history learning in non-formal education began with prepared the learning materials, (2) the implementation of history learning in non-formal education for kejar paket C programs performed similarly to learning in formal school, the difference of the implementation process of learning was divided into activity-face, tutorials, and independent activities with life skills (3) psychological preparation of learners, time which owned by learners, condition of learners who were already work, the background of the learners were become the obstacles of history learning in non-formal education for kejar Paket C program, (4) evaluation of history learning in non-formal education for kejar paket C program was printed on learning materials in accordance with the applicable curriculum in Indonesia is KTSP.

Learning history has an important position in the national character building program. In the context of the teaching of history at the level of non-formal education program that focuses on the Kejar Paket C Program to provide motivation skills for learners to demonstrate its potential through work. It can serve as an example to strengthen the identity and sense of nationality as part of the national character building.

ABSTRACT

In order to prepare young generation to have good nationalism, Indonesian government has made various efforts. One of them is strengthening the character education in schools. However, the variety of foreign cultures is feared to fade the patriotism of Indonesian students especially those who are living in foreign countries such as Singapore. Therefore, this study aimed at analysing the efforts in developing students' patriotic spirit of Indonesian School in Singapore. This research utilised qualitative method. In addition, data obtained through observation, interview, and documentation.

The findings show that there were some constraints on developing students' patriotism of Indonesian School in Singapore. Thus, several attempts were conducted to realize the learning objectives. The study recommending that: 1) the constraints and solutions that had been attempted by Indonesian School in Singapore in developing students' patriotic character can be a reference for other Indonesian schools; 2) the cooperation between the foreign ministry and the ministry of education is required in supporting the efforts of Indonesian Schools abroad especially in Singapore in developing students' patriotism.

Keywords: Indonesian School in Singapore, Patriotism, Nationalism.

INTRODUCTION

The advances in science and technology which grew rapidly resulting the exchange of information in the world regardless of time and space. Progress has also led to an influx of foreign culture into Indonesia quickly so that the impact occurred. Indonesian culture clash with a foreign culture which can lead to conflict if the nation does not have a filter. Various foreign cultures that are incompatible with the Indonesian national identity can lead to a crisis of identity of the Indonesian nation. Thus, the influx of foreign culture without filter may cause crisis of patriotism for the nation of Indonesia.

The shifting values of Indonesia as a result of globalization can effect un-patriotic. Symptoms of value shifting can be seen from two facts occurring in Indonesia. First, some people are more appreciated foreign music than musical works of the nation. Second, some people are more confident using the foreign language term than using mother tongue for naming a place name or business travels. Some of the symptoms of value shifting can lead to a crisis un-patriotic. In short, the crisis can threaten the existence of the nation for causing the disintegration of the nation.

The crisis will be vulnerable to children and young people as the future generation. Children who are not equipped with a solid filter will have a great tendency towards un-patriotic. Therefore, efforts are required from all parties to develop a child's character to have the character of a strong patriotism. Strong patriotism consolidates filter to foreign cultures which are not in accordance with their national identity. Construction and development of the nation's character into a filter are needed so that the people especially the young generation of the nation's own culture can sort and filter other cultures that do not conform with the values of the culture and character of the nation's dignity (Winataputra, 2012, p. 32). Therefore, the patriotism of children needs to be built and developed to withstand the times of the development of science and technology which is rapidly increasing, especially for children that live abroad. People, who live abroad especially in Singapore with foreign civilized society, will be more vulnerable to be un-patriotic. Therefore, the developing student's patriotism at School of Indonesian in Singapore is needed.

METHOD

Source of Data

The research was located in the Indonesian School in Singapore. The participants included parties of Indonesian School in Singapore such as school administrators, teachers, extracurricular builder, OSIS builder, and students. Participants were selected using purposive sampling technique. Sugiyono (2011, p. 125) explains that purposive sampling is a sampling technique with a certain considerations.

Research Methods

The approach used in this study was a qualitative approach. Moleong (2007, p. 6) says that “qualitative research is a research that aims to understand the phenomenon of what is experienced by the subject of the study such as behavioural, perception, motivation, action, etc., holistically, and by way of description in the form of words and language, in a specific context that is naturally and by utilizing a variety of natural methods.” This study aimed to identify and develop a detailed understanding of a condition in Indonesian School in Singapore in developing the students’ patriotism. The phenomenon was not been a lot of research before discussing about it. Researcher examined a single phenomenon had have that appealed to researcher and expressed the phenomenon in a statement of intent.

This study used the case study method. Researcher utilized the case study method because the research only focused on a unit—Indonesian School in Singapore. Data were collected through observation, interviews, and documentation. Researcher observing circumstances became an obstacle to the implementation of the program of students’ patriotism development. Interviews were conducted with all participants based on the guidelines on the interview and were recorded during the process. Documentation came from the official school documents relating to the development of students patriotism and tailored to the needs of research. Researcher used Miles and Huberman model as data analysis techniques which included; data reduction, presentation of data (data display) and the conclusion and verification (conclusion drawing / verification).

Theories

Character is a unity of thought, feeling and will which cause power to act (Wibowo, 2016, p. 9). A good character consists of three psychological processes that determine a good thing (knowing the good), want a good thing (desiring the good), and do good (doing the good) (Lickona, 2015, p. 82). Character development in Indonesia is the mainstream of national development which is implemented through character education in national education. Article 3 of the Law of the Republic of Indonesia Number 20 of 2003 on National Education System (Law No. 20 of 2003 on National Education System) contains about the function of the national education. “National Education serves to develop the ability and character development and civilization in order to achieve a dignified life nation, aimed at developing students’ potentials in order to become a man of faith and fear of God Almighty, noble, healthy, knowledgeable, skilled, creative, independent, and become citizens of a democratic and responsible.” Based on the four philosophies of character education of Ki Hajar Dewantara, the Ministry of National Education (MONE) in 2010 developed a national character. The national character consist of eighteen character values, namely: religious, honest, tolerant, disciplinary, hard worker, creative, independent, democratic, curious, the spirit of nationalistic, patriotic, rewarding achievement, friendly / communicative, loving peace, loving reading, environmental care, social care, and responsibility.

Table 1 the Description of the Educational Value of the Nation's Character

| No. | Value | Description |
|-----|-----------|---|
| 1. | Religious | Attitudes and behaviours are obedient in carrying out the teachings of his religion, tolerant implementation of the practice of other religions, and live in harmony with other faiths. |
| 2. | Honest | Behaviour is carried out in an attempt to make himself as the person who always believed in words, actions, and jobs. |
| 3. | Tolerant | Attitude and action that respects differences of religion, race, |

| | | |
|-----|-----------------------------|---|
| | | ethnicity, opinions, attitudes, and actions of others who are different from themselves. |
| 4. | Disciplinary | Measures indicating orderly behaviour and comply with various rules and regulations. |
| 5. | Hard Worker | Behaviours that show an earnest effort to overcome various barriers to learning and assignments, as well as completing the task as well as possible. |
| 6. | Creative | Thinking and doing something to generate new ways or the result of something that has been owned. |
| 7. | Independent | Attitudes and behaviours that are not easy to depend on others to complete tasks. |
| 8. | Democratic | Way of thinking, acting, and acting the same rights and obligations judging himself and others. |
| 9. | Curious | Attitudes and actions are always working to find more depth and breadth of something learned, seen, and heard. |
| 10. | The spirit of Nationalistic | Way of thinking, acting, and sound that puts interests of the nation above personal interest and his group. |
| 11. | Patriotic | Way of thinking, being, and doing who demonstrate loyalty, caring, and high appreciation of language, physical environment, social, cultural, economic, and political nation. |
| 12. | Rewarding Achievement | Attitudes and actions that drove him to produce as useful to society, and recognize and respect other people's success. |
| 13. | Friendly / Communicative | Action being noticed pleasure to talk, hang out, and cooperate with others. |
| 14. | Loving Peace | Attitudes, words, and actions that cause others to feel happy and secure on the presence of himself. |
| 15. | Loving Reading | Take time to read the various readings are on virtue for him. |
| 16. | Environmental Care | Attitudes and actions which seeks to prevent damage to the surrounding natural environment, and develop efforts to improve natural disaster had happened. |
| 17. | Social Care | Attitudes and actions always wanted to help other people and communities in need. |
| 18. | Responsibility | The attitude and behaviour of a person to carry out the duties and obligations, he should do, to themselves, society, environment (natural, social and cultural), country and God Almighty. |

Source: MONE (2010, p. 9-10)

Patriotic character is one of the nation's character values. Patriotism is loving nation and state which is embodied in thoughts, attitudes, and behaviour. According to the Ministry of National Education, the notion of patriotism is a way of thinking, being, and doing who demonstrates loyalty, caring, and high appreciation of language, physical environment, social, cultural, economic, and political nation (2010, p. 10). McCain (2009, p. 78) says that patriotism is deeper than the flag or singing the song of heroism at sporting events. Patriotism is knowing that each of us is a small part of a greater struggle than ourselves-a small part, but the part that is given to us to perform.

Character development through character education is implemented by adhering to several principles. The principles are important to the development of character education, including: (a) the development is sustainable; (b) the value is integrated into all subjects, self-development activity and school culture; (c) the value is not taught but developed; and (d) the educational process is done with an emphasis which boosts learners to be active and fun (MONE, 2010, p. 13-14). Character development patriotism is conducted in schools in several ways, namely: school curriculum development, classroom management, and integration in the school culture. The development of character education curriculum in principle is not included as a subject, but integrated into subjects, self-development and school culture. Classroom management is one of the strategies in the development of character that students use in the classroom most of the time. As the result, the class is a strategic place for the implementation of character education. Koesoema A. (2015, p. 112) says that the class-based character education focused on creating a comfortable learning environment. Consequently, students can discover the excitement and to be able to develop creativity and knowledge in the learning process.

Those values are a provision for learners to become citizens that can contribute to the development of the nation and the state. Those values are integrated into the school culture. As a result, learners can internalize it. Wibowo suggests that the development of the values of character education in the school culture includes the activities undertaken principals, teachers, counsellors, administrative personnel when communicating with learners and the use of school facilities (2012, p. 93).

DISCUSSION

School Profile

Indonesian School in Singapore is one of the Indonesian schools that are abroad, or so-called Sekolah Indonesia Luar Negeri (SILN). SILN is some schools dedicated to Indonesian children that are abroad. SILN uses teaching system follow the curriculum in force in Indonesia, and combined with the curriculum in force in the respective countries (Disdikpora, 2015). The Website of Indonesian School in Singapore says that Indonesian School in Singapore serves as an umbrella to build and develop a sense of Indonesian nationalism, strengthen the sense of unity and personality of Indonesia. Operation of SIS is by the Joint Decree (SKB) between the Minister of Foreign Affairs and Minister of Education and Culture in October 7th, 1967, the Head of Indonesian Representative in charge. The following is a general formulation of the desired state at the end of the planning period and a general formulation of the efforts that will be implemented to realize the vision of Indonesian School in Singapore.

Vission: Superior in performance, Pioneers in Culture and Technology Development, Exemplary in attitude and action, for the realization of Indonesian School in Singapore the Global Insight and the Environment.

Mission: (1) Graduates realize intelligent, competitive and have an identity of Indonesia; (2) Realizing adaptive curriculum development and proactive; (3) Realizing an active learning process and efficient; (4) Realizing school cultural center of the promotion of national culture; (5) HR realizes that education has the capability and high employment; (6) Realizing adequate school management according the National Education Standards Plus; (7) Realizing fundraising adequate education costs; (8) Realizing the development of adequate valuation models; (9) Schools realize that global perspective that is able to compete with national and local schools; (10) Schools realize environmental friendly with the *Green School*.

Obstacles on Developing Students' Patriotism at Indonesian School in Singapore

There are several obstacles to develop students' patriotism at Indonesian school in Singapore. First, students have a very diverse background. Indonesian School in Singapore is an Indonesian government-owned schools that cater for all Indonesian children who live in Singapore. Indonesian children who come from various parts of Indonesia for living in Singapore for various reasons are supposed to school in the Indonesian School in Singapore. Most of these children follow their parents or siblings to move to Singapore because of work or other matters. The diversity is a constraint on the development of patriotism of students. These include diversity of race, religion, national origin, and economic conditions of the elderly. Moreover, some of these children had previously stayed and settled a long time abroad before moving to Singapore. For example, there is a student that was born in Indonesia and joined parents moved to Australia at the age of ten years. Then, at the age of sixteen, she participated to move to Singapore until now. Such children do not understand the culture of Indonesia. Therefore, teachers cannot teach using the same method for all children.

Second, the Indonesian School in Singapore has teachers with the contract system. However, teachers may choose to extend the contract or return to Indonesia. On the other hand, not all subjects taught by teachers having basic appropriate for students. The teachers can teach all levels of the Indonesian School in Singapore. Besides, teachers can teach some subjects at all levels in accordance with the distribution obtained. Constraint on the case is when a teacher who has background of exact science subjects should teach social science or other subjects and vice versa. As the result, there were some students that doubt the ability of a teacher to teach. In addition, they were not follow the teaching in earnest.

Third, the lack of support from the local community and people around them in developing students' patriotism. Community and family are the two parts of the three education centre that influence the development of students' patriotism. It is appropriately accompanied with real examples of everyday life in the community. However, students who live abroad, including in Singapore cannot learn and practice the rights and obligations as citizens of Indonesia optimally. The legislation in Singapore is different from the laws and regulations in Indonesia. As a result, students cannot practice on the responsibility as a citizen of Indonesia optimally. Moreover, some parents of students that attend school in Indonesian School in Singapore have a high workload thus less concerned about the activities of their children. In conclusion, there are three major obstacles that need to be concern to in order to develop students' patriotism who living abroad.

Efforts in Developing Students' Patriotism at Indonesian School in Singapore

As has been mentioned before, there are several obstacles to develop students' patriotism at Indonesian School in Singapore. Along with this problems, the efforts of all the parties relating to cope ar needed. Due to the constraints of the complex diversity that students at Indonesian School in Singapore addressed can be solve using two ways. The first way is to use a wide range of variation in learning activities both in the classroom and outside the classroom. The second way is the individualized approach. Diversity is sometimes caused by one student who cannot mingle with the association with other students. Teachers can take themselves to be a friend. In addition, the teachers can help student to be able to mingle with other students by conducting the task groups. Moreover, the small number of students can be monitored in maximize by teachers against students. Through such diversity, the teachers can teach students about unity in diversity. If the students can uphold the motto of the Indonesian nation and assume that diversity is the wealth of the nation Indonesia, patriotism on students will develop. Therefore, the use of methods that are varied and individual approach are two ways in which the teacher can use to overcome the obstacles to diversity.

The second constraint in developing students' patriotism is the division of tasks that remain to bring oblique view of some students towards teaching capabilities. These obstacles are overcame by seeking the implementation of learning seriously by group work. Since the division of teaching duties, teachers seek to learn the material that will be taught in the subjects. Lesson plan is prepared in advance. Teaching methods, teaching models, teaching materials, and learning media are prepared in detail before conducting the learning activities. The learning process is implemented and developed based on lesson plans that have been prepared. Thus, the confidence in students on teaching capabilities of teachers will increase. The trusted teachers will be easy to be imitated and followed by the students. Modelling is one form of acculturation and habituation in the implementation of character education in schools (MONE, 2011, p. 14). Exemplary is the behaviour or attitude of teachers and others in giving examples of the good actions that are expected to be role models for learners to imitate (Wibowo, 2012, p. 89). Through the example of the attitude of teachers who show high patriotism, the patriotism of students will also can be developed.

The third obstacle is the lack of support from the community and parents which cop with the effort to build a more intensive communication and cooperation with the community. Communication between teachers and parents is woven through direct meetings and social media. Direct meetings conducted when parents are invited to come to school to attend such parents' agendas. In addition, a direct meeting also done by teachers visiting the residence of the parents. Meanwhile, indirect communication between teachers and parents is done by forming a group chat in *Whatsapp* or email. Additionally, communication between teachers and parents also can be done individually. Thus, any activity undertaken in schools involving students can be known by their parents so that they can gain to support, including development activities of students' patriotism. Therefore, what is taught in schools and learned about patriotism gained the support of parents. As a result, more student's patriotism optimally developed. In short, because there are three obstacles, the researcher also provide three possible solution to increase the students' patriotism.

CONCLUSION

Amorousness of Indonesian students against Indonesia which is still lacking is not caused by where they live, but due to their lack of knowledge towards Indonesia. Indonesian student will still have the patriotism everywhere if the three participating educational centres' support them. Those three educational centers are expected to help to develop students' patriotism. The fact that teachers are more respected and trusted by some students than their parents at home. Therefore, various obstacles and attempts have been made by Indonesian School in Singapore to develop students' patriotism can be used as a reference by other schools.

***Serat Mudhatanya* : The Values Of Leadership And The Utilization Of The History Learning in High School**

Aris Cahyono

***Serat Mudhatanya* : The Values Of Leadership And The Utilization Of The History Learning in High School**

Aris Cahyono

Aris Cahyono, Sebelas Maret University, Ariscahyono2121@gmail.com

ABSTRACT

This article discusses about the use of old literary named *Serat Mudhatanya* for the importance of history learning especially for improving the leadership attitude of the students in high school. This serat is the opus of literary writer named R. T Purbadipura who lived during Pakubuwana X era. *Serat Mudhatanya* is a type of serat piwulang turned up because of the reaction of the condition of the societies in that time. There are eight leadership theories such as *kuwasa, purba, wisesa, kukum, adil, paramarta, dana, dan pariksa* presumed relevant for the leaders of Indonesia who seemed lost the direction and orientation of leading societies and disposed to follow the concept of western leadership. Whereas, if studied deeply we have many opuses from our ancestors such as the values that we can take for upholding our eastern cultures.

Key Words: *Serat Mudhatanya*, The leadership values, History learning.

INTRODUCTION

One element that can not be released to build a country becomes a developed country is education. It is understandable if education takes place in a country with so much hope both will produce output that is none other than student quality as well and vice versa.

Education is a conscious and deliberate effort to create an atmosphere of learning and the learning process so that learners are actively developing the potential for him to have the spiritual strength, intelligence, character, and skills needed him, society, nation, and state (Act No. 20 of 2003 on national Education system).

It is in line with that proposed by Dimiyati and Mujiono (2006: 248) that the teacher is a teacher who educates, besides teaching subject areas of expertise also been an educator for the young generation of his people. Therefore, as an educator, he focused on the students' personal, with particular regard to the revival of learning. Meanwhile, as a teacher, the teacher in charge of managing the activities of student learning in the classroom. Given the importance of the role of teachers in education, especially in the classroom, the teacher needs to understand and study carefully the matters related to learning.

Indonesia is an archipelago and is connected by sea. Natural resources are very abundant and tropical climate that makes the flora and fauna breed comfortably in this country. There are many tribes and also has a diverse cultural richness in every region becomes possessed.

With a very diverse culture that is actually on the first Indonesia already has many of the values and character of oriental as friendly, courteous, polite, religious, pacifist and also likes to work together in many ways. But today as the development of technology and the brunt of the increasingly powerful western culture so moral and character keindonesiaan as mentioned above began to decline and even disappear from Indonesia and particularly the individual communities of learners.

The Results of BNN cooperate with UI shows; 1) The number of drug abuse amounting to 1.5% of the population or 3.2 million people, consisting of 69% group and 31% regularly wear addicts group with the proportion of 79% men, 21% women. 2) The group regularly use marijuana abuse consisted of 71%, 50% of methamphetamine, ecstasy and tranquilizers 42% 22%. 3) The group consisted of abuse marijuana addict 75%, heroin / heroin 62%, 57% of methamphetamine, ecstasy and tranquilizers 34% to 25%. 4) With Injection Drug Use (IDU) by 56% (572,000 people) in the range of 515,000 to 630,000 people. 5) The economic burden is for the purchase or consumption of drugs is Rp. 11.3 trillion. 6) Mortality (Mortality) 15:00 addict people die within one year. ([Http://ntb.bkkbn.go.id/](http://ntb.bkkbn.go.id/) Articles: = Phenomenon Delinquency In Indonesia = Population and Family Planning, September 2, 2011).

Very ironic to see the data presented above, then the question arises who is then responsible for the moral decline and teenage characters, especially the students? Of course the answer is all of the elements of society that there are students in the environment, and the school seems to have a vital role in reducing negative behavior and it is time for school students begin to instill character values keindonesiaan back in class learning.

DISCUSSION

Talking about the subjects of history, it would appear the impression that learning is boring, dry, monotonous, and all forms of less favorable impression. Learning history is often identified with the fluency of storytelling. But we ought to revisit because not all teachers use only the ability to tell the history of a peristiwa the middle class and the development of advanced technology increasingly facilitates the history teacher in the learning process in class.

In addressing these issues, in fact Indonesia has a lot of heritage values of ancestors who presumably still relevant in addressing the above problems. The values of leadership that would be an important thing for students is an agent of change that is expected to make Indonesia better in the future. One of a heritage that is local but can also be used as guidelines nationally that contains the teachings of leadership is a Serat Mudhatanya written by R. T Purbadipura during leadership Pakubuwana X Kasusanan Surakarta.

Teachings of leadership in civic life contains about any provision that must be possessed to young people when later plunge in family life, neighborhood, and community. Among these there are eight guidelines for leadership that really must be understood *kuwasa, purba, wisesa, kukum, adil, paramarta, dana, dan pariksa*. In this manuscript is also described several examples of leadership style some particular king of kings in Java and also the leadership of the Prophet Muhammad and his companions.

Leadership values contained in Serat Mudhatanya would still be relevant in a state of Indonesia today and can be taken and applied in the teaching of history in the classroom, especially in the aspect of leadership that apparently began to fade given that the student is Agent Of Change as has been mentioned above and are required to future students do not imitate the leadership style foreign to forget aspects of oriental culture of Indonesia.

Learning is based on the values of oriental character of the Indonesian nation seems to need to be developed today. Especially values Serat Mudhatanya position of leadership in the teaching of history in high school. Model teaching history using manuscript or codex has not been done, especially with this Serat Mudhatanya. This is also supported by a statement Mulyasa (in Ali Ramdani in the Journal of Education Vol. 08; No. 01; 2014: 28-37) states that the successful implementation of character education is largely determined by one of the aspects of leadership in the planning, implementation, and the evaluation process of the implementation of character education as a whole.

Seeing the reality of the above, should the need for a repair for the purpose of teaching history achieved with the maximum. Aside from some external factors that lead to less maximum teaching history class it would also need to instill character values in students. Learning to use the values of ancient manuscripts have never been taught at both the high school when the students also need to know that our ancestors bequeathed also full of ancient manuscripts of the values therein.

Serat Mudhatanya is a Manuscript that was written by R T Purbadipura during Pakubuwana X became king in Surakarta. This manuscript is a type of piwulang manuscript. History has recorded that Java script type piwulang had experienced a golden age after going through periods of popularity back in the Old Javanese literary works in the early days of Surakarta. Manuscripts types piwulang sprung one of his reasons as a form of reaction to the social conditions of society at that time. One of the many works of literature are piwulang Serat Mudhatanya. Mudhatanya word comes from two words, namely "mudha" and "tanya". According Baoesastra W.J.S.Poerwadarminta in Java, the word "mudha" has two meanings of "enom" which means "young" and "Bodho" which means "stupid" (p. 323). The word "tanya" means "ask" (p. 592). Etymologically from the meaning of the title, we know that this text contains about a young man who asked for his ignorance.

These manuscript prose is presented in the form of a dialogue between two characters. Things that didialogkan or discussed between the two leaders about the social life of ethics and norms, as well as the leadership that comes with some of our Prophet (Prophet Muhammad, the Prophet Adam, Prophet David, Prophet Solomon, and Joseph) and friends Prophet Muhammad is commonly called the first four caliphs (Abu Bakr ashram shidiq, Umar, Uthman, and Ali bin Abi Talib). Also some stories about the leadership style some leaders or kings in Java starting from Kyai Ageng Sela to Pakubuwana VIII.

Serat Mudhatanya a handwritten manuscript (manuscript) with the letter New Java language Java and ngoko variety of manners. The screenplay was written by RT Purbadipura, court employees Regents Anom Gedhong Tengen in Surakarta on Thursday Legi, Sura 28, Jimakir 1858 (July 28, 1927). The screenplay was written by two authors, namely Wignyaukara and R.T.Purbadipura own. Serat Mudhatanya on page 1-37 written by Wignyaukara, 53-90 page written R. T Purbadipura own. Information on the author's manuscript Mudhatanya can be seen from the following quote:

Sêrat Mudhatanya punika, ingkang ngarang Raden Tumênggung Purbadipura, Abdi Dalêm Bupati Anom Gêdhong Têngên ing Surakarta Hadiningrat. Pangarangipun nalika dintên Kêmis Lêgi tanggal kaping 28 wulan Sura taun Jimakir angka 1858 utawi kaping 28 Juli taun angka 1927. Gagriya

salêbêtîng nagari ing kampung Kratonan Kidul, ondêr dhistrik Sêrêngan, sakilènè Pasar Gêmbblègan. (Purbadipura, 1927:ix)

Translation:

These manuscript are fabricated Mudhatanya Raden Tumenggung Purbadipura, Abdi Dalem Regents Anom Gedhong Tengen in Kraton Surakarta Sultanate. Pembuatannya when Thursday Legi Sura 28 months Jimakir year 1858 or July 28, 1927. Residing in the village Kratonan Kidul, Serengan district, west of Market Gemblegan. (Purbadipura, 1927: ix)

The contents of the Serat Mudhatanya is very interesting, which is about the teachings of leadership (leadership). Leadership in social life for the younger generation which is presented in the form of a dialogue between a young man with a clerics or scholars. Teachings of leadership in civic life contains about any provision that must be possessed to young people when later plunge in family life, neighborhood, and community. Among these there are eight guidelines that really must be understood, namely understood *kuwasa, purba, wisesa, kukum, adil, paramarta, dana, dan pariksa*. In the text of this BC, eighth guidelines are defined as follows:

1) *Kuwasa* means the authority held to decide everything wisely. Here's an excerpt:

Kuwasa: wênang ngewahi tatanan ingkang kirang murakabi dhatêng kulawarga (Purbadipura, 1927:7)

2) *Purba* means responsible for all all the problems in the life of the family, community, nation and state. Here's an excerpt:

Purba: mêngku dhatêng samukawis agêng alit, amis bacin, èwêt pêkèwêt, gampil angèl, ruwêt rêntêng, papa sangsara. Sadaya kukubanipun ing ngriku, punika anggèr ingkang kajibah mêngku. (Purbadipura, 1927:7)

3) *Wisesa* means firmly against anyone to always do good. Here's an excerpt:

Wisesa: punika satêngah amêksa dhatêng tindak sae. Angancam-ancam sintên ingkang nglampahi lêpat badhe tampi pamisesa ing samurwatipun nanging saderengipun kédah dipundhawuhakên. Yen ala bakal nemu ala. Yen becik bakal nemu becik. (Purbadipura, 1927:8)4)

4) *Kukum* mean the same legal treatment against anyone. Here's an excerpt:

Kukum: kédah nindakakên ing salêrêsipun. Têgêsipun: botên bahu kapine sintên-sintêna bilih botên lêrês inggih kédah kalêrêsakên. Manawi mêksa botên purun mantuni tindakipun ingkang awon. Ing ngriku sampun sêdhêngipun katindakakên prakawisipun. (Purbadipura, 1927:8)

5) *Adil* means being fair to everyone, in accordance with the efforts being made. Here's an excerpt:

Adil: punika tumrap dhatêng putra wayah sadhèrèk santana abdi agêng alit. Manawi prakawisan rêbat lêrês. Dhatêng sasaminipun putra wayah sadhèrèk santana abdi, kédah dipuntêtêpakên ing pangadilanipun ingkang jêjêg. Babasan utang nyaur, nyilih ngulihake. Utang lara nyaur lara, utang pati nyaur pati, sapiturutipun. Botên kenging dlemok cung, kédah wradin.

Têgêsipun yen si dhadhap kang utang, mung nyaur samene, yen si waru kang utang kudu nyaur samene, punika dlêmok cung namanipun. Sampun ngantos makatên, kédah sami-sami pamidananipun, sarta kédah têtêp ingkang sampun kasêbut ing anggèr, anggèr botên kenging mènçèng. (Purbadipura, 1927:8)

6) *Paramarta* meant to be soft and have the nature of mercy against anyone, patient and forgiving. Here's an excerpt:

Paramarta: punika bilih putra wayah sadhèrèk santana abdi gadhah prakawis dhatêng anggèr, ingkang sanès prakawis agêng, kadosta kalentu ing patrap, dêksura, kumasurun, anggègampil kagunganipun anggèr ingkang botên sapintêna, punika kédah dipunparingi paramarta. Sampun lajêng katêtêpakên ing kalêpatanipun. Kédah dipunaring-aringi supados asrêp manahipun. Saupami lêpat sakêdhik kemawon dhatêng angger lajêng kapidana awrat, sarta lajêng kauwus-uwus ingkang botên sampun-sampun, punika botên prayogi. (Purbadipura, 1927:9)

7) *Dana* means industrious charity by giving the best. Here's an excerpt:

Dana: inggih ingkang kêrêp paparing. Manawi paparing barang ingkang enggal risak, kadosta dhahar-dhaharan, sêmbêt sapanunggilanipun, punika kêdah ingkang kêrêp. Manawi paparing barang ingkang sagêd lami kanggenipun kadosta: ingkang warni mas, intên, dhuwung, tumpakan tuwin griya papan semahan. Punika kêdah ingkang awis-awis. (Purbadipura, 1927:9)

8) Periksa mean seriously when doing the monitoring and control of the performance of subordinates, not delegated but go directly to the bottom. Here's an excerpt:

Pariksa: pikajêngipun inggih ingkang pariksa sayêktos. Têgêsipun ingkang botên kaliyan aturing liyan, ingkang awon ingkang sae anggèr kêdah matitisakên piyambak dhatêng tiyangipun, botên mawi lalantaran utusan sabab utusan punika asring suda wêwah kaliyan nyatanipun. (Purbadipura, 1927:12)

Eighth above teachings are relevant at all to the reality of community life today. A young man who would later become a leader, both leaders in the family and the leader in the community. Because of his position greatly influence the change and improvement of socio-economic conditions of the community. Fair and prosperous society is born out of a collection of harmonious families and always adhere to the norms prevailing in society. Piwulang or doctrine is also equipped with a story of domestic life and leadership of the Prophet Muhammad and the story of the struggle of the Prophets before like Adam, David, Solomon, Joseph and the story of several caliphs like Abu Bakr as-shidiq, Umar bin Khattab, Uthman ibn Affan Ali bin Abi Talib (Purbadipura, 1927: 18-35). Also some stories about the leadership style some leaders or kings in Java starting from Kyai Ageng Sela to Pakubuwana VIII (Purbadipura, 1927: 75-90).

CONCLUSION

Indonesia is an archipelago connected by sea. There are many ethnic and cultural diversity of each region, it is a priceless wealth. Today the culture and also the original character of Indonesia has begun to fade in the public one reason is to scour the foreign cultures into Indonesia. Some of the problems that have been mentioned in the background would be overcome by applying or inserting the values of character education that can be obtained from some ancient manuscripts one of which is a Serat Mudhatanya that contain some guidance or teaching of leadership is strongly associated with the character education for the younger generation in particular is the learners who later would become the backbone of this country.

Religious Education Having Multiculturalism

Flavius Floris Andries

Religious Education Having Multiculturalism

Flavius Floris Andries

Flavius Floris Andries, Christian Protestant State College in Mollucas, gumran_2007@yahoo.com

ABSTRACT

This Research explores the theme of religious education and multiculturalism in the context of school communities in senior High School in Ambon reviewed through the approach of religion and educational sciences. The aim of this study is first to describe the context and religious education model. Second, is to know whether the implementation of religious education supports multicultural conception in those schools. Third, to know any relation and impact of implementing religious education having multicultural conception to attitude, behavior and views on student. The writers assume that the school communities in executing the education process have or support and awareness for multicultural conception influenced by contextualizing of multicultural discourse developed at social community.

The research was conducted by qualitative method such as: first, bibliography study was done by determining a theoretical framework and reviewing literature. Second, in-depth interview focuses on SMA Neg 3 in Ambon. The interview process at school is useful in tracking the process of multicultural religious education implementation through views, observation. The results of the investigation analyzed by describing the implementation of religious education at school especially for Grade XII has found that the content of Islamic religious education curriculum is oriented for theological dogmatism such as faith, moral, Aqeedah and Fiqh. Inversely Christian religious education especially for grade XII is not based on theological dogmatism oriented but the content of curriculum relating to the socio-cultural phenomenon such as HAM, democracy, science, art culture, humanity and multiculturalism. The impact of Islamic religious education curriculum on Islam-Christian student relationship in school, describes the fanaticism, distrust, suspicion regarding to the halal-haram. It is also disturbing the multicultural attitude, behavior and views on students.

Keynote: Religious education, Multicultural, Attitude, behavior and view of student.

INTRODUCTION

Religion is one of the aspects of culture that aims not only to satisfy a physical and mental wellness of its adherents but also to touch their welfare aspects which become the core reason of its presence in the world. On the basis of this assumption, can be said that the existence of the presence of religion in the world is semantically and pragmatically emphasized on the aspect of humanity through which all religious teachings are directed not only to emphasize the intellectual abilities of his followers of transcendent things, but also to touch on physical things through humanitarian relations.

Unluckily, the concept of humanity as a part of religious teachings is unable to repress the conflicts and violence as part of a daily fact of Indonesian plural society. Despite the core aim of religious doctrine and practices of providing happiness and welfare of mankind, it turns out that religion has been blamed as a source of conflict. On this account, various conflicts and violences have emphasized religion as implying to have great potential of conflict and violence in society. It also confirms that the humanitarian problems in the end have been labeled and stereotyped religion as the root of conflict and violence.

In this line, Marx considered the conflict and violence in the society as part of the social dynamics attributed to the difference in the society. Simmel, on the other hand, believed that plurality or differences in particular can create a model of antagonistic culture as shown in a culture that is full of inconvenience, the model of ambivalent culture which is mainly shown in the cultural tragedies, which is thus for Simmel, conflict and violence are rooted out of the perspective of culture in society (Widyanta, 2002, 120).

In reality, the religion on the one hand is placed as one of the tools of identity, functioning as triggers, mobilizing and controlling the emotions of the masses in order to achieve certain political objectives in the society. On the other hand, for the believer, religion is placed in the exclusive context thus creating segregation between communities due to ideology and indoctrination as the substance of the religion itself. Hence, religion loses its social functions to tighten the society, to articulate justice, and to foster prosperity and harmony in the society. Even worse, religion has become an exclusive institution, thus creating a barrier between people.

Religion has been laden with ritual affairs and with rhetorical indoctrinating messages of ideology that has made religion to be seemingly exclusive and ultimately counteract reality.

In contrast to this, Asy'arie (2003) argued that doctrinaire religion no longer opens space for differences and changes, and thus since there is no more room for the emergence of the dynamics of change and difference in terms of religion, it has worked against reality and rejected multiculturalism. No wonder when religion seems to incessantly create conflict and violence that ultimately indicated an absence of meaning and appreciation of the multicultural reality. By the end of this decade, the reality of Indonesian diversity or Indonesian multicultural context has depicted some hostile acts and actions against the multicultural reality that is loaded with a various conflicts of ethnic violence in terms of religious violence, sexual violence and other abuses. When it is not widely, objectively, and transformatively addressed, it will turn to be a destructive force against the nation's unity.

School as a public sphere is one of the formal state media shaping the character of human intellect. School becomes a social space which can contribute to the efforts of the meaning-making of multicultural facts. Charles Taylor (1994) argued that education becomes one of the media to support and appreciate the multicultural facts based on cultural recognition, equality and equity. Therefore, the author places education in a strategic place to express critical thinking in addressing the reality of the social context loaded with issues such as violence, social injustice, poverty, and other conflicts. Thus, education is directed to develop a multicultural dimension.

In line with this, the curriculum of religious education in Indonesian schools, including that in Maluku Province is oriented towards ideological and theological aspect. This is extremely different from the education provision of developed countries like The United States which provides a secular religious program without indoctrinating students at school (Nord, 1998: 165). Hence, Asy'arie articulated that religious education in the school curriculum generally does not enliven the multicultural nuances of global reality, and even worse, it tends to be directed towards the opposite. The frequent social conflicts are legitimated by religious law taught through religious education at schools. In short, there is an ambiguity in the form of expression and application of religious values in the national education because students are taught to learn separately. School has been practicing social segregation (students) through religious education owing to the particularist claims of truth that is exclusive and ideologically dogmatic. Therefore, schools not only serve as a place to educate the society but also serves as a place to foster the nature of religious fanaticism.

Thus, it is essential that Indonesian schools apply religious education system of diverse multicultural context and diverse phenomenon which takes into account the contemporary situation and globalization. This becomes the underlying reason to study religious education in Indonesia, particularly in Maluku, in relation to religious education with multicultural vision in particular towards several schools in the city of Ambon.

This research addresses the issue of religious education of a multicultural vision, by including the issue of interaction between teachers and students, among the students themselves, and between the students and teachers at school and out of school after they learn religious education. The author also examines the delivery and development of government policy on religious education and understanding of the educational community in the understanding of religious education in the transformation efforts of religious values in multicultural society. This research focus on SMA negeri 3 Ambon which is Geographically located in the subdistrict of Teluk Ambon, SMA Negeri Tiga lies at the heart of education center of Ambon city, nearby Pattimura University of Ambon. Therefore, it bears exceptional significance towards the progress of education in the city of Ambon. In addition, as history notes, SMA Tiga which is located in Rumah Tiga village used to be an area of conflict from which there had been mass of exodus of Christians since 1999. When the conflict ceased, some inhabitants of Rumah Tiga returned to their village. However, the incident has left its mark on the culture and dynamics of social life, including life at school.

The subdistrict of Rumah Tiga villages consists of diverse Muslim and Christian society labeled as diaspora communities with inhabitants who have just returned from refugee camps during the conflict. These diverse inhabitants have colored the social life of SMA Negeri Tiga Ambon which is eventually referred to as a multicultural school. In addition, the administration of the religious and moral education of the school curriculum is also based on the nationally acclaimed 2013 curriculum.

This study focus on the fundamental issues whether it is feasible for schools to run the multicultural vision of religious education that respects diversity Specially for XII level. Such underlying research question is formulated into the following questions:

1. How does the Christian and Islamic religious education teacher response to religious education curriculum work on the process of implementation of multicultural education at school?
2. What is the impact of religious education for the development of attitudes and behavior of learners in understanding multicultural values such as, conflict, violence, peace, justice, trust, and other social values?

To answer the research question, this research was conducted by qualitative method, by using indepth interview, observation participated and review literature. The indepth interview was done to teacher of Islamic religious education and Christian religious education to know what they understand and opinion about the content of religious education curriculum. Indeept interview is also done to the student of both religions to know they opinion on the content and implementation of religious education regarding to the human relation in scholl area and oversight. The participated observation was done to see the students daily activity, attitude, behave as implication of religious education having multiculturalism. The literature review regarding to the setting of the theoretical frame work as the tools to analyzing and interpretation of the data.

A. Teachers' Response towards Education Curriculum

1. Teachers of Islamic Education Subject

Opinions of teachers towards the 2013 curriculum-based religious education vary widely. Islamic education teachers of SMA Negeri Tiga have the same understanding related to what the curriculum of religious education should comprise: faith, the moral, Aqeedah and Fiqh.⁷⁴ The explanation of those religious teachers is still emphasized on dogmatic religious content dominating religious subjects. Upon being asked, these Islamic education teachers of SMA Negeri 3 affirmed that:

Dogmatism is essential because it is the foundation for children to know the rules of God, the textual proposition (dalil naqli) that children should have.⁷⁵

This information confirms that the element of dogma does exist in the curriculum of Islamic education and is considered positive for XII class students in demonstrating their existence as a cautious person and the socially and environmentally related person. In principle, Dogma does not make students become a closed person; in contrast, they learn not only to live in relation with God but also to live with other mankind.

This indirectly confirms the existence of identity problems of a person who rely on religion and dogmatic aspects as the basis of their formation of identity. Dogma turns into a set of tools for a person to know their personal and communal identity.

2. Teacher of Christian Education Subject

In relation to the 2013 based religious education curriculum, the Christian Education teachers in SMA Negeri 3 have this say:

The 2013 curriculum on religious education, in this case is Christian, is more open and not oriented towards dogma. The content of 2013 Christian education curriculum is more contextual, thus leading the students to inquire and discover what they deem as positive in relation to the very subject.⁷⁶

The aforementioned saying indicates that the 2013 religious education curriculum in terms of Christian education has aimed at training the students to learn religious values out of a dogmatic base; instead they learn to relate themselves socially and environmentally.

c. Religious Education Curriculum: Segregation Practice of School Community

The segregated social pattern is an inevitable social fact which also affects the social context of the Moluccas in the aftermath of the conflict. Geographically, Batumerah, Kebun Cengkih, Galunggung, and its surrounding were only inhibited by Moslem society. The same also applies in Batu Gantung, Kudamati, Benteng, OSM and other areas which were only inhibited by the Christians. The socially segregated condition

⁷⁴ Interview of the Islamic education teachers of SMA Negeri III on October 8th 2016, and Islamic education teachers of SMA Negeri Satu on November 5th 2016.

⁷⁵ Interview with the Islamic Education teachers of SMA negeri 3 simply known as 'H' on October 8th 2016.

⁷⁶ Interview with the Christian Education teachers of SMA negeri simply known as L in October 2016.

has grabbed the attention of the society, politicians, observers, and researchers since social segregation has a severe social impact which inhibits the pattern of social relation.

Serious attention of the whole society has been paid towards the gaping social segregation, however none touches the social segregation at school due to the religious education at school. The whole society and teachers have seen their students to sit together, learn together, discuss together, or even do assignments together in the house of students with different religion. However, this culture turns out to be different when they have religious education.

Upon being asked, the Islamic education teacher of SMA Negeri 3 says:

Segregation culture at school is mainly attributed to religious education containing dogmatic elements which 30% deals with human relation to God as automatically seen from Islamic perspective. Initially, this context has led to difficulties in building multiculturalism. Students prefer to be seated with those of the same religion and there are many fights in the name of religious differences. However, such situation no longer prevails since the introduction of multicultural education.⁷⁷

The aforementioned saying has genuinely portrayed the difficult implication of multiculturalism in SMA Negeri Tiga Ambon mainly owing to the fact that the students and teachers resided in conflict areas; just like those Christian part of the diasporic society students who were forced to flee during the conflict. Interestingly, this experience and historical conflict have laid a foundation to mingle with those of different religion at school.

The Christian religious education teachers of SMA Negeri Tiga said that they separated the students based on religious difference because of dogmatic aspect as the foundation of religious education, in which Moslem students should learn Al Quran whilst the Christians should learn the Bible, making it impossible to unite them during the study. However, 2013 curriculum has contained materials which requested both students and teachers to appreciate diverse facts in all aspects of life.⁷⁸

The informants of SMA Negeri Tiga considered religious education as the root of social segregation among students at school. Luckily, the 2013 religious education curriculum of multicultural nuance 2013 has allowed both teachers and students to appreciate differences as a gift from God.

d.2. Teachers' and Students' of SMA Negeri 3 Understanding on The Importance of Religious Education at School.

An interview with the teachers of SMA Negeri Tiga highlights the importance of education to be taught at school since they are demanded to know and understand rules of God or known as *dalil naqli*.⁷⁹

An informant known as S emphasizes on the importance of religious education at school as an implementation of the first principle of Pancasila. In addition, religious education's significance lies on the fact that not all people are provided with good religious education, thus, no wonder that the government has set policy of religious education at school.⁸⁰

The foregoing elaboration indicates that school serves as an arena of indoctrination and ideological process in terms of religion. This is owing to the fact that religion is taught on the dogmatic dimension, instead of its social dimension. Thus, dogmatic aspect dominantly overwhelms the teaching of religious education despite the fact that the social context of the society is also set as a reference for the religious education at school by making it in line with the Holy books.

On the basis of an interview with the students, the researcher came to know the critical questions of the students regarding the followings:

Why were the Moslem students and Christian segregated during the religious education? However, they eventually realized of the dogmatic aspects of religious education at school, which serves as border.⁸¹

⁷⁷ Interview with Islamic education teacher simply known as H on October 20th 2016.

⁷⁸ Interview with religion teacher of SMA Negeri 3 Ambon simply known as L on October 20th 2016.

⁷⁹ Interview with Islamic education teacher, simply known as H in October 2016.

⁸⁰ Interview with Islamic education teacher simply known as S in October 2016.

⁸¹ Interview with a student simply known as A, in October 2016.

Other insights derived from students were the fact that religious education at school is aimed at casting light on the students on the values of goodness which may fail due to the religious dogmatism claiming on what accounts to be true or false, thus seemingly causing religion as a source of conflict. The conflict of the Moluccas serves as a fact that religion can easily lead to conflicts and violence owing to dogma and militance and the fanaticism of religion believers.⁸²

The foregoing explanation depicts the way the student reflects the existence of religion and its role and how they reflect their religious experience in a simple manner. They seem to imply that religion poses ambiguity, containing both positive dimension of asking people to live peacefully and love each other, and negative dimension of asking them to act fiercely for the sake of religion. Conflicts and violence in terms of religion become a social fact of the double side of religion. This notion of the ambiguous aspect of religion is clearly emphasized by Gregorio Baum.

Thus, the informant highlights on the multiculturalism aspect of religious education bridging all religions in one understanding of diversity and existence of each person in this world.

In terms of teaching and learning process at school, method and strategy lie as the most essential substantive factor to guarantee the success of learning for all materials including religious and moral education.

1.2. Learning Method and Strategy of Christian Education of Multicultural Vision at SMA Negeri Tiga

The religious education of multicultural vision has become part of the 2013 education and moral curriculum which is dominated by multicultural learning materials. The multicultural issues ranging from human rights, multiculturalism, and democracy constituted the religious and moral education of XII grade students.⁸³

The interview reveals that SMA Negeri Tiga Ambon refers to 2013 curriculum as a learning guideline. The research document confirms the foregoing information based on the interview with the teachers. On the account of learning method and strategy they simply put it:

I always encourage students to explore and find something related to the subject. By and large, I tell them to learn from other identity groups to discover the characteristics, culture, traditions, and more and that is where students are taught to appreciate it as a gift of God.⁸⁴

The interview indicates the creativity of teachers in applying the learning method and strategy by stimulating students to explore and discover something in relation to the subject materials. The explanation of the teachers reveals that the students have successfully addressed the challenge of their teachers by presenting their works in front of the teachers who also learned from what they presented.⁸⁵

This stage clearly signifies the implementation of the multicultural concept in the process of learning since the teachers did not position themselves as patron and students as clients, instead both were given the equivalent position in terms of knowledge sharing. This is in line with what is brought by Taylor (1994) related to equality and cultural recognition. What is meant by equality is that students are not served as the object of teaching and learning process, but they act as the subject or actor of knowledge. In this line, what is meant by cultural recognition in this research refers to the acknowledged students' identity as the source of knowledge through what they share with the teachers and other students. Behind this, there appears two things namely the existence of mutual trust and mutual understanding in the process of transformation of knowledge.

1.2.2. Learning Method and Strategy of Islamic Education of Multicultural Vision

To live peacefully, honestly, with justice and tolerance is the reflection of multicultural principle. As a multicultural barometer of Ambon city, SMA Negeri Tiga and its whole education environment are entitled to apply multicultural principle amply in all activities including the religious and moral education teaching and learning. A good thing is that multicultural material is constituted in the religious and moral education based on the 2013 curriculum. Thus, as the Islamic education teacher, the researcher and other religious teachers including Christian education teachers are liable with a huge responsibility to actualize the curriculum.⁸⁶

⁸² Interview with a student simply known as G in October 2016.

⁸³ Interview with a religious education teacher simply known as W on October 20th 2016.

⁸⁴ Interview with a religious education teacher, simply known as W, on October 20th 2016.

⁸⁵ Interview with a religious education teacher, simply known as W, on October 20th 2016.

⁸⁶ Interview with a religious education teacher, simply known as H, on October 20th 2016.

The mostly referred learning method to apply in teaching and learning process of Islamic education is specifically dogmatic materials of religious teaching. In particular I always use real examples in line with social relation of the society such as how to appreciate others.

It is the Americans of Christian religion who firstly invented airplanes, and it is us Moslem who utilize it to go on pilgrimage for haj or umrah.⁸⁷

Such statement implies the students to appreciate others not only of different religion, but also others of different ethnic and different country. It is principle that all mankind on earth need each other.

In the case of SMA Negeri Tiga which is set as the multicultural barometer of Ambon city, through the students' organization, OSIS, they created a mental development program aiming at both Moslem and Christian students. The mental development program for the students is initiated with an introduction of religious concepts teaching to live peacefully through tolerance by referring to religious texts implemented in human relation. As an example, the Moslem students are presented with surah Al-Kafirun of verse 6 "*For you is your religion and for me is my religion.*" Islam highly emphasizes the value of tolerance since principally Islamic tenets forbid a Moslem from entering the heaven owing to the mistake he has done to others.⁸⁸

The foregoing information obviously indicates the fact that religious texts are still mostly referred for religious guideline since there is no religion without religious texts. The understanding of the informants mainly lies on religious texts and dogma which is why they never consider the social aspect of the religion as part of religious teachings.

a. The Impact of The Provision of Religious Education of Multicultural Vision for Students of SMA Negeri Tiga Ambon

As a multicultural barometer of Ambon city, SMA Negeri Tiga through its learning method and strategies has influentially affected the insight and behavior of its students in the internal interaction at school across students of diverse religion, diverse ethnic, as well as with the students of diverse school.

1. The Impact of Religious Education on Social Interaction and Tolerance towards Students of Diverse Religion

Principally, every man is created as a social creature that relies a lot on each other through individual, group, or a wider scale of communal social relation. Unluckily, over and over again do we find such social relation is destroyed by ideological reason, both due to religious ideology, ethnic ideology, as well as other ideologies. Such reasons have disrupted or moved apart the social relation due to ideological differences thus making the social relation be fulfilled with suspicion, prejudice, watchfulness, which eventually may lead to the dying out social relation.

The social interaction of students of diverse religion may be disrupted by religious symbols setting as a border between Islamic versus Christian students. The following quote is derived from an interview: The Moslem friends who visit our house usually rejected the offer of food for halal-haram reason. Thus, we can say that such suspicion is still growing between us, a feeling of fear owing to religious reasonings which draws the line in the social relation. Thus, for me myself, getting close to religion means growing fanaticism which may lead to a conflict.⁸⁹

The statement clearly indicates how the student realizes his religion as the root of the loose knit of friendship between him and his friends. In addition, he also considers religion as a source of fanaticism which may lead to social conflict. It is thus he believes religion as having both positive and negative aspect.⁹⁰ The religious ideology has led the social interaction of students of SMA Negeri Tiga Ambon into a relation of tolerance. However, upon dealing with the issue of halal-haram, as a Moslem I still feel suspicious or even afraid to be offered with haram food when visiting the house of a Christian friend.⁹¹ Halal-haram reason is considered as the most sensitive and fundamental reason for the Moslem student since it has been regulated in the Islamic tenet. The consequence of such tenet is the feeling of being cautious, suspicious, and self correction.⁹²

⁸⁷ Interview with an Islamic education teacher simply known as H in October 2016.

⁸⁸ Interview with an Islamic education teacher simply known as H in October 2016.

⁸⁹ Interview with a Christian student simply known as A in October 2016.

⁹⁰ Interview with a Christian informant simply known as S in October 2016.

⁹¹ Interview with a Moslem student simply known as A on November 5th 2016.

⁹² Interview with a Moslem student simply known as A on November 5th 2016.

The student's saying indicates the fact that religion in terms of ideology has led its followers to the religious doctrine from which the feeling of suspicion and fear against those of different religion may root out. In some ways, it is important to maintain their identity and to know deeper on the identity of a Moslem as an individual and as a group. On the other hand, such ideology will lead a person to become a fanatic, exclusive, and even worse to a potential conflict. It is thus possible to consider religion as a symbolic capital or according to Bordieu is what termed as cultural mode which may turn from symbolic capital into symbolic power and eventually may lead to symbolic violence.

The fact that people always suffer from suspicion indicates that psychologically the very person feels uncomfortable and restless. Somebody of such condition may lose control and may do whatever harmful to him and others. The social interaction between Moslem and Christian students in SMA Negeri Tiga as previously explained indicates a telltale of disappointment of the Christian student towards the behavior of his Moslem friend. On the other hand, the cautious feeling inhibits the Moslem student from behaving joyfully with no burden and nothing to lose in the social interaction.

This excerpt has emphasized Gregorio Baum (1975: 62-114) thesis on the ambiguous nature of religion. In some ways, religion has taught us to be friendly, polite, kind and free of suspicion. However, in some other ways, religious doctrine also allows a room for cautiousness in the social relation with those who have different religion. The religious ambiguity in this case is obvious from the effort to build tolerance in the social interaction in one side. On the other side, when dealing with halal-haram issue, the students still bear the feeling of being cautious and suspicious which is made lawful by the religion in order to maintain the purity of the religion based on religious tenets.

From the multiculturalism perspective, the social interaction with others of diverse religion at school which is greatly fulfilled with the feeling of being suspicious and cautious or distrust are the challenge against multiculturalism. Such distrust does not reflect the spirit of multiculturalism as what is explained by Farrelly (2004: 43) who puts:

"Multiculturalism is not about difference and identity, but about those that are embedded in and sustained by culture, that is a body of beliefs and practices in terms of which a group of people to understand themselves and the world and organize their individual and collective lives".

Farrelly's argument highlights that in a multicultural society, there is no need to debate about the difference of identity. The emergence of multiculturalism concept provides us with an insight that each different identity can understand each other and appreciate each other's difference to live in harmony in the collective society. In other words, it is possible for those different identities to live together in a social relationship. (Karengga, 1997: 196, Heywood, 2002: 119).

What needs to be highlighted here in the social interaction of diverse religion students in SMA Negeri Tiga is the issue of mutual trust, in which the religious education of multicultural vision implemented in the interreligious relation is not fully educating the students to have mutual trust across diversity. The issue of religion with elements of dogma becomes the fundamental reasons for the students to inculcate suspicious feeling, so the cultural contacts could not walk well at school and out of school. School as a laboratory of multiculturalism has not successfully managed to bring the school community to be fully included in a collective consciousness of multicultural nature which is characterized by the absence of suspicion and excessive religious fanaticism. The same thing applies not only in the social relation out of school, but also in the social relation at school environment. Therefore, the affair of halal-haram is a fundamental issue to watch out for.

Islam is sensitive to the issue of halal-haram, so the bias is the emergence of suspicion.⁹³ Suspicion is a form of resistance in relation with the construction of identity. Giddens (1994) has a say about the process of dialectics in the construction of identity, in that the nature of the suspicions is one way of resistant against the internal factors for Moslem students on the value of halal-haram of the religious principles. On the other hand, within the framework of the discourse of multiculturalism there seems to be a lack of mutual trust among students.

2. The Impact of Religious Education of Multicultural Vision for Students to Understand the Socio-Political Context of the Society.

⁹³ Hasil interview dengan informan berinisial, A, 5 Novemebr, 2016

An understanding of multiculturalism at SMA Negeri Tiga is not merely on the social interaction of the students at the internal level of the school as an implementation of multicultural values they encounter during the religious education session. It also lies out of the school environment as obviously seen from the external relation between SMA Negeri Tiga and SMA Negeri Satu Piru of Seram Regency of The West Part.

An interview with the students unveils their experience dealing with students fight, smoking, and alcoholic drinking, all of which were things they newly encountered at school. These issues were perfectly addressed at multicultural session. The young generation who should not be mingled with negative things like smoking, drinking, and fighting already developed them as a part of culture in SMA Negeri Satu Piru based on what they experienced.⁹⁴

The culture of SMA Negeri Satu Piru is unlike what is found in SMA Negeri Tiga Ambon. However, they realize it as a part of cultural difference. In one side, they have to acquire it as a fact of diversity despite the potential danger in it. Thus, what is most important is the way to tackle the issue wisely since every decision is not free from consequences. Such awareness is thus essential in the social interaction to avoid any offense. However, it is pivotal that the students do not imitate the negative culture and that they maintain their identity.⁹⁵

In related to the issue of smoking and alcoholic drinking in SMA Negeri Satu Piru during the monthly language program, there was an opinion that smoking was not the wardrobe of a man. Every man should have a future vision and mission for goodness. Thus it is totally wrong to justify drinking and smoking as a part of maleness identity.⁹⁶

The foregoing information indicates a rejection against the issue of male stereotyping attached to smoking and drinking. The utterances express a resistance against the discourse that has been civilized in the society by resisting smoking and drinking as part of the attached maleness identity. The preference to smoke or drink is merely personal and is not related with gender identity neither as a male nor as a female.

CONCLUSION

As a formal media to shape the knowledge and noble character of a person, school is also a public sphere which unites the smallest number of multicultural communities. Thus, school is a media for dialogue to bridge the society to develop an understanding of multiculturalism. The process of actualizing multiculturalism at SMA Negeri Tiga Ambon shows a great development. This school provides the students with religious and moral education based on the 2013 national curriculum comprised of multicultural values. What is undeniable is that there has been a greatly dominant orientation of dogmatic theology in the religious education process. Still, the four principle pillars namely morals, Fiqh, Tauheed, and Faith become the basic foundation of the religious and moral education. Thus, the multicultural values are integrated with those four principles. This is what makes Islamic education different from the Christian education, in particular as referred to grade XII. The materials mostly focus on the relevant issues with the concept of multiculturalism such as human rights, democracy, multiculturalism, and so on.

The author understood that the class situation of religious education implementation of multicultural vision in schools for the Islamic education and Christian education were based on the 2013 curriculum by referring to certain ideology thus leading to different spirit of multiculturalism and different implementation of multiculturalism. The implementation of religious education in SMA Negeri Tiga indicates that the Christian students were more opened in terms of the religious materials than the Moslem students. The religious education materials were brought to socio-political issues and the culture at SMA Negeri Tiga.

The implication of the religious education of multicultural vision at SMA Negeri Tiga Ambon by referring to 2013 national curriculum can be obviously seen in the social interaction among students and in the aspect of discourse. Tolerance among students was commonly found as they helped each other and exchanged role as a committee during the religious days. However, in terms of faith, there were still dogmatic ways of teaching leading to a feeling of suspicion between students of diverse religion. At the school context, there was a feeling of suspicion between teachers and students of different religion in regard to halal and haram food, such

⁹⁴ Interview with a student simply known as A on October 26th 2016.

⁹⁵ Interview with a student simply known as S on October 26th 2016.

⁹⁶ Interview with a Christian student simply known as P on October 20th 2016.

suspicion also took place out of school. The author saw the implication of religious education of multicultural vision implemented in schools based on the 2013 curriculum was due to the curriculum content which did not constitute mutual balancing. Thus, it inhibits the idea of multiculturalism to be in line with the content and the implementation of the religious education so that the teacher can merely implement it particularly for the Islamic religion class. Things are different with the Christian education class in that both students and teachers in SMA Negeri Tiga creatively explored and discovered the values behind the materials which were not merely rooted from the Bible. The students explored and discovered the values from all of media and other references, including the social and political cases both nationally and globally as a learning reference for multiculturalism materials.

The author realized that homogeneous understanding in dealing with discourse of multiculturalism at the level of curriculum making is not equally distributed since limited scope means limitation of perspective. This is obvious in terms of the curriculum content of religious education of both Islamic and Christian education at XII grade which was significantly different. This indicates the government's frailty as the decision maker of the religion aspect. The imperfect provision of religious education of multicultural vision at school leads to the imperfect understanding of the multiculturalism content which eventually inhibits the teachers and students from having a broader perspective in dealing with the concept of multiculturalism.

The provision of religious education which greatly relies on the texts of the Holy Books leads the teachers and students to lack of creativity in exploring the issues regarding multiculturalism. The interview and observation highlight that there has been homogeneous understanding and insight on the issue of multiculturalism in the religious education in grade XII. In the essence, the different religion, ethnic, and culture is always seen as part of discourse of multiculturalism.

Hence, the author concluded that the religious education curriculum of multiculturalism vision has not been implemented at its best to explore the values and issues of multiculturalism openly by touching the political, economic, social, cultural, and other issues. In fact, those issues have become the everyday crisscross of the social life and the life of the students themselves. This is where the failure of the government lies as the curriculum maker which only acts partially since they merely consider the dogmatic aspect of each religion without taking into account the main goal of the religious education of multicultural vision. As a result, it inhibits the room to bridge the curriculum of Islamic and Christian education. All in all, it is just to say that one of the inhibiting factors of the religious education of multicultural vision is the dogmatic curriculum.

Investigation Students' Logical Thinking Abilities on Chemistry Learning

ABSTRACT

The study of students logical thinking ability on chemistry learning was carried out. The purpose of this study was to map students' logical thinking abilities students for learning chemistry. A total of 39 students of SMK-SPP Negeri Samarinda grade eleventh Agribisnis and Horticultura Program participated in the study. Test of Logical Thinking (TOLT) was administered to determine students' reasoning abilities. Quantitative descriptive was used to analyze the datas. The result shows that 84,62 % students for concrete levels, it consist of male 58,97 % and female 25,64 %. Further, 7,69 % male students found at tranition level and 7,69 % students for formal level, each 2,56 % male and 5,13 % female.

Key Words: *logical thinking abilities, Piaget, students' logical thinking*

INTRODUCTION

The success of the learning process is influenced by the fit between the subject matter and level of thinking ability of students (Nuroso & Siswanto, 2012). According to Piaget, every individual have each of cognitive development level. Piaget stresses that as children mature mentally, they pass through four major stages of cognitive development sequentially, each stage having several sub stages. The major stages of cognitive growth are: sensory motor stage (0 - 2 years), preoperational or intuitive stage (2 - 7 years), concrete operations stage (7 - 11 years) and formal operations stage (11 - 15 years) (Simatwa, 2010). Formal reasoning is characterized by the ability to think about abstract ideas, organize ideas, logical thinking, reasoning about what will happen later.

The relationship between prior knowledge, reasoning ability, achievement and gender has received special attention in science education research for many years (Yenilmez, Sungur & Tekkaya, 2006). Throughout the courses taught in elementary and middle school, 'science' is the one requiring intellectual skills to collect and analyze data to solve problems. In fact, science process skills taught in elementary grades such as observing, classifying and collecting data act as prerequisites for integrating the processes usually taught in middle school grades like hypothesizing, controlling variables and defining operationally (Yenilmez, Sungur & Tekkaya, 2005).

Chemistry is one of the most important part of science that make students to understand what is happening around them. Chemistry relates generally to the structure of matter. Chemistry combines many abstract concepts, which is the basis of knowledge to learn more about the chemistry and other science (Taber, 2009). Chemistry curriculum commonly incorporate many abstract concepts, which are central to further learning in both chemistry and other sciences (Taber, 2009; Sirhan, 2007). Abstract concepts is important because chemical/ science concepts further or subsequent theories could not be understood easily if the concepts are not well understood by students (Coll & Treagust, 200; Sirhan, 2007). Empirical studies (e.g. Ben-Zvi, Eylon, & Silberstein 1986, 1987) have shown that learning the microscopic and symbolic representations is especially difficult for students because these representations are invisible and abstract while students' understanding of chemistry relies heavily on sensory information (Wu, Krajcik & Soloway, 2000).

Actually it is still aligned with the level of students' thinking which has entered formal thinking according Piaget level, that the ages of 11-15 years and over able to think abstractly. Ben-Zvi, Eylon, dan Silberstein (Wu, Krajcik & Soloway, 2000) find many students senior high school which has not reached the level of thinking that difficulties in understanding chemical concepts. With the result that students who studied chemistry just memorize chemistry concepts without understanding the concepts.

Throughout the courses taught in elementary and middle school, 'science' is the one requiring intellectual skills to collect and to analyze data to solve problems. Flavell mention that Jean Piaget's theory of intellectual development (Simatwa, 2010) is considered a leading theory on cognitive development.

Piaget viewed constructivism as a way of explaining how people come to know about their world. He buttressed this explanation with extensive documentation of behaviors he witnessed and with well-supported inferences about the functions of the mind. Piaget (1952) viewed the human mind as a dynamic set of cognitive structures that help us make sense of what we perceive (Brooks, J. G., & Brooks, M. G, 1999).

Piaget also states that children are considered ready to develop a concept or special material when obtaining the necessary schemata. This means that children can not learn if you do not have the cognitive skills. This means that the learning process becomes blocked when students do not have formal reasoning as required.

UPTD SMK-SPPN Samarinda have their own mapping in recruiting student based farming region spread in East Kalimantan. So that the school has the capability profile of students who are very diverse, especially coming from the rimland. The ignorance of teachers to the theory of cognitive development that has resulted in the settlement of existing problems in learning and follow intuition teaching experience.

With the result, it is necessary to conduct research cognitive development according to Piaget. Because according to their age they should have in the thinking stage of formal operations (Simatwa, 2010). The teacher's knowledge of the cognitive development of students made the teachers can plan the exact method that can be used in the learning process happens in the classroom.

METHOD

Sample

A total of 39 students (27 male and 12 female) of SMK-SPP Negeri Samarinda grade eleventh Agribisnis and Horticulture Program participated in the study.

Instrument

The Test of Logical Thinking (TOLT), developed by Tobin and Capie (1981), was used to determine the formal reasoning ability of students. The test consists of ten items designed to measure proportional variables (1-2), controlling (3-4), probabilistic (5-6), correlational (7-8) and combinational reasoning (9-10). Students select a response from among five possibilities and then they are provided with five justifications to choose from (A. Yenilmez et al, 2006). In the first 8 questions, the student is asked to provide the correct answer and the reason that this answer is correct. Both the answer and reason must be correct for the student to be awarded a credit. The last 2 questions involve combinatorial reasoning and require the student to enumerate the possibilities. The score on the TOLT is an integer value between 0 and 10. For each question correctly answered, the student receives 1 point, and for each question with a wrong answer, the student receives 0 points (Etzler and Madden, 2014)

Procedure

In each class, students are informed about the purpose of the questionnaire and the procedure for completion. After this short explanation, the answer sheets were distributed, and students were required to complete the personal background information on the answer sheet. They were instructed to think about each question and answer it as it applies to them. Then, the tests were distributed and students were asked to complete the questions on their own. It took about 40 minutes for students to complete the test.

Data Analysis

This research was quantitative descriptive study, the research described the mapping of formal thinking skills class XI student of Agribusiness and Horticulture Program SMK-SPPN Samarinda. Therefore, the data were analyzed by quantitative descriptive.

RESULTS

The TOLT scores of the 39 students ranged from 0 to 5. The average age of the students taking the test was 15-18 years. The youngest students were 15 years old and the oldest student was 18 years old. Nevertheless, age of the students was not a significant factor relating to the TOLT score. Sixty nine percent of the students taking the TOLT were male. There was no significant difference between TOLT score and gender and the average TOLT scores of each gender were nearly the same.

Descriptive statistics are used to see the distribution of student TOLT results shown in Figure 1, Figure 2 and Figure 3. In this study, the performance of students at TOLT also used to categorize the stages of cognitive development by Piaget criteria of students in detail divided on a concrete level, transition, and formal. Formal stage was also divided into two parts, the formal stages and the final stage of formal. In this study, the performance of students at TOLT also used to categorize the stages of cognitive development by Piaget criteria of students in detail divided on a concrete level, transition, and formal. Formal stage was also divided into two parts, the early formal stages and the final formal stages (Valanides, 1997). The results are presented in Figure 1.

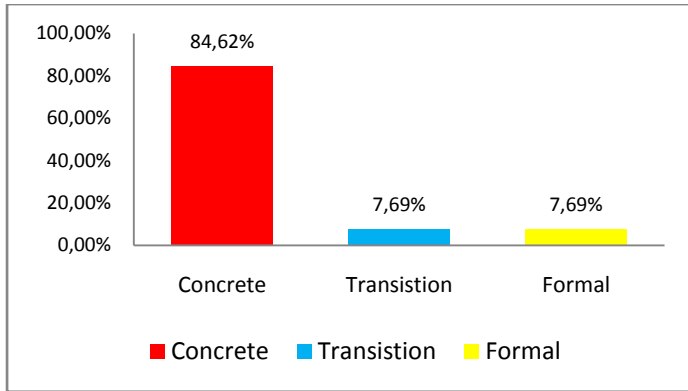

Figure 1. Students Mapping Cognitive Development

Students mapping cognitive development by gender differences were presented in Figure 2. As shown in Figure 2, only a minority of students have reached the formal operational stage. Of the total study sample as many as 39 people had been found as many as 33 students at the level of concrete thinking (84,62%), three students at the level of thinking transition (7,69%) and 3 students think early formal (7,69%). The percentages of the male students more than the female student in the concrete and transition level. Eventhough, the highest percentages in the formal level were the male students.

Figure 2. Students Mapping Cognitive Development by gender

Students mapping four of cognitive development male and female were presented in figure 3.

Figure 3. Students Mapping Cognitive Development Male and Female

Based of figure 3 female students got score higher than male students in proporsional logic level, controlling, probabilistic and combinational reasoning. But in correlational level, male students got score higher than female.

DISCUSSION

If categorized in stages of cognitive development just a little students have entered the formal stage. Most of student at the stage of concrete. This means they are still not able to predict the final answers so that any data and information geared towards achieving that goal.

The ability to think of students who have not entered the stage of formal thought would make them difficult to understand chemistry. Because chemistry is generally combines many abstract concepts, which is the basis of knowledge to learn more about the chemistry and other sciences (Taber, 2009).

Individual differences in cognitive development refers to the difference in capacity and speed of learning chemistry. Individual differences learners will be reflected on the nature or characteristics of their abilities, skills, attitudes and habits of learning, as well as the quality of the learning process and results either in terms of cognitive, affective and psychomotor.

The teaching methodology and teaching materials, and the learning activities should be those that are appropriate to each of the cognitive developmental stages of the learners. Since the theory says that there is a mutual interaction between the learner and the environment, teaching materials should come from the learner's environment (Simatwa, 2010). The learning model that we can use is contextual learning model or could be combined with other learning model that is essentially rooted in the daily lives of the students.

Teachers as instructional managers should use the hierarchy to: understand why children think and reason as they do; and to help the pupils' master intellectual processes at the appropriate age (Simatwa, 2010). Each student has different intellectual capacity. Children at various ages have different capacities for attention and comprehensive.

Piaget opined that teachers as learning managers must ensure that the learning environment should be rich in physical experiences because intellectual development stage depends on the activity. Student activity is the key to intellectual development. How teachers manage the class will be visible from how independent and how creative the students are in the classroom (Brooks & Brooks, 1999). Curriculum, learning and task developers must make a special effort to understand the world of children. They should not assume that what they think is good for children is certainly good for the child. They can design an educational experience based on the needs and readiness of children (Simatwa, 2010).

Chemistry teachers' understanding of students' logical ability thinking can make teachers plan learning chemistry better and stimulate students' ability to think logically. For instance, teacher could create multimedia to explain abstract concepts in chemistry learning.

Here are some practices that can maximize cognitive functioning of students in remembering, understanding, and applying knowledge of chemistry or other science.

1. Make learning relevant and activate prior knowledge (Shodri, 2012). Use of the early organizers (analogy, elaboration) with students to help activate their previous knowledge. Teacher can use visual image or animation to present microscopic level in chemistry matter. The cognitive processes involved in comprehending a visual image can be described on various levels. At a minimum, they include (a) identifying the important features of a visual display, which is referred to as surface-level processing or external identification, (b) relating the visual features to their meaning, i.e., semantic processing, and (c) constructing the communicated message, i.e., pragmatic processing (Plass, Homer and Hayward, 2009).
2. Organize information. Teacher should try to be well informed on how the students interpret ideas which come up in class by encouraging free discussion. He should also watch for the tendency of the adolescent to

- indulge in unrestrained and unrealistic political theorizing. The teacher may handle such immature forms of thinking by helping students realize that they have overlooked certain considerations. Another example is classifying specific issues under the more general problem (Shodri, 2012).
3. Using questioning techniques. Presentation of questions prior to the introduction of teaching materials to help students learn the material related to the teaching (Shodri, 2012). Teachers encourage student inquiry by asking, open questions and encourage students to apply for a review question one another. Teachers always engage students by experiences which could make contradictions between each student. So there will be a discussion of hypotheses and perspectives. Teachers can not know what will be perceived as a contradiction for the students, this is an internal process. But teachers can and should challenge students' conceptions of this, knowing that the challenge only if the student considers contradictions. Teachers directs the student's perspective to help them understand what the idea of another student and enable them to accept or to reject the conflicting views (Brooks & Brooks, 1999).
 4. Using multimedia interactive for abstract concepts. The analysis further revealed that dynamic visualizations are more effective than static visualizations only when they are of a representational rather than decorative nature. The analysis also showed a larger benefit of dynamic over static visualizations when the target knowledge was procedural motor knowledge rather than procedural or declarative knowledge (Plass, Homer, and Hayward, 2009).

Some of the above can be applied by teachers in order to help the cognitive functioning of students in chemistry and learning in general. After applied then there will be implications in learning, it is easier for the students to process information and knowledge then will have implications on their learning outcomes as well

CONCLUSIONS

The study conclude that the total study sample as many as 39 people had been found as many as 33 students at the level of concrete thinking (84,61%), three students at the level of thinking transition (7,69%) and three students think formal (7,69%).

Chemistry teacher plays an important role in helping and facilitating students to learn chemistry in accordance with ability and cognitive development of students. Teachers as learning chemistry managers in the class should ensure that the learning environment should be rich in physical experiences for growth in one stage depending on the many activity.

ABSTRACT

One of the purposes of science education is to create a better future generation who is able to face and solve globalization's problems in order to improve their life quality. Being creative is one of the efforts to achieve that purpose. School is the place where students might develop that skill. Therefore, this study aims to investigate students' creative disposition, creative thinking skill, and creative product in engineering design-based science learning activity. This study was conducted in junior high school. Research method that is used is descriptive. The result of analysis shows that there is an improvement of students' creative disposition after they learn science using engineering design-based science learning activity. Meanwhile in students' creative thinking skill and creative product, the average percentage which achieved is different between lesson related to creating product of cage of cricket and water purification tool. Students' performance in creative thinking skill related to the creating of cage of cricket is better than students' performance in creative thinking skill related to the creating of water purification tool. The same result is shown in creative product in which creative product of cage of crickets is better than water purification tools. The discussion related to engineering design-based science learning activity, students' creative disposition, creative thinking skill, creative product, as well as factors that might affect those variables are served.

Key Words: Creative Disposition, Creative Thinking Skill, Creative Product, Engineering Design.

INTRODUCTION

Currently, social and economic condition requires every individual to have a variety of skills and experience that can make life better and more useful. One important goal of science education is to create a generation that can face the global challenges of the 21st century. Through science education, many scientists and engineers who have an important role in carrying out studies that can answer today's problems such as lack of energy, environmental degradation, deterioration of natural resources, decline in nutritional quality, and decreased quality of health and climate change are created (Trefil, 2008). Moreover, the purpose of the current reform is to increase science and technology literacy to all walks of life, not just for scientists and engineers in the future.

Recently, Science, Technology, Engineering, and Mathematics (STEM) education has become something which is considered important in education. However, the 'E' (Engineering) of STEM itself has long been ignored in education, particularly by educators in school. To face these challenges, the increased exposure

area of engineering and technology starting from primary school is considered important. One of the commitments of Next Generation Science Standards (NGSS) is renewing the structure of education in science by integrating engineering and technology and encouraging the use of engineering design in science lessons in the classroom (Marulcu, 2014).

Engineering design involves identifying and solving problems in a process of iteration. In this process, students find solutions by using science concepts, mathematics and technology, through the process of thinking, making a model, and analyzing the possible solutions to answer the existing problems. There are various benefits of this learning activity such as improving achievement in math and science, raising awareness of engineering, understanding how the performance of an engineer, understanding and having the ability to engage in design process, interested in engineering as a career, and increasing technology literacy (Katehi, 2009).

On the other hand, creativity is considered to be an important element in problem solving. However, teachers rarely support students' creativity in the classroom. Instead of being part of the daily learning process, the status of creativity is often put in extra-curricular activities, and supporting the students' creativity is considered in addition to the regular curriculum, not an integral part of the curriculum. Studies conducted in Indonesia generally have found that students' creative thinking skills is still relatively low with an average score of less than 60 (Maria, 2015). The results of this research suggest that the need for greater efforts to enhance students' creative thinking skills. Studies conducted in other countries reveal that most teachers consider that creative thinking skills is a talent and not the result of an education, so there is no serious attempt to develop students' creativity. Though the actual creativity can be taught (Hong and Kang, 2009).

Creativity is not only about thinking skill, but also the creative disposition and product. Although there are many differences in the indicators of creative thinking skills, but in general can be classified into four indicators, namely fluency (skills to generate lots of ideas), flexibility (skill to see a problem from different point of view), originality (skills to generate new ideas) and elaboration (skills to give details of an idea) (Shaughnessy, 1998; Torrance, 1977). In addition to creative thinking skills, there is a disposition to think creatively which Lucas, Claxton and Spencer (2013) classifies the character into five types such as inquisitive, persistent, imaginative, collaborative, and disciplined. Skills and dispositions may be analogous to the two sides of a coin that cannot be separated (Widodo, 2015).

Creative product is the result of the transformation of the process of creative thinking. When students are experiencing the process of creative thinking, students are involving creative thinking skills and dispositions that go with it to produce creative ideas that can be transformed into creative products. Based on Amabile (in Hennessey, Amabile & Mueller, 2011), the characteristics of creative products are new (original), correct response to task, and valuable in responding to the task. Although there is no definition of creativity that is universally accepted, the most recent conception defines creativity as an ability to produce original and compatible within a specific context. Creativity may be different in a particular context, which means creative products in a context may not be considered as something creative in a different context.

In grade 7, there are some materials that could facilitate students to develop their creativity through engineering design-based science learning activity. These materials include adaptation behavior and separation of mixture using filtration method. Both of these materials have the same characteristics that allow students to create a product to solve the problem. Problem that is presented for behavior adaptation material is to create a cage of crickets that allow crickets to produce sound even at noon. While the problem that is presented related to mixture separation using filtration is to create a water purification tool.

Based on various descriptions above, it could be seen that the studies related to the implementation of engineering design-based science learning activity related to students' creative disposition, creative thinking skill and creative product is a very important research to be carried out. Therefore, this study aimed to investigate the students' creative disposition, creative thinking skills and creative product in engineering design-based science learning activity.

METHOD

The method that is used in this research is descriptive. The data are gained by using student worksheet, questionnaire, video recordings, and students' products. The research was conducted in Bandung. The subject of research is junior high school students of class VII B. Subjects are selected by using purposive sampling technique that is chosen with consideration and specific purposes. Subjects are selected with consideration has been accustomed to using engineering design-based science learning activity. There are several techniques that are used to collect data in this study, such as by using questionnaire, student worksheets and products. Questionnaires were analyzed to measure students' creative disposition and worksheet is used to measure creative thinking skill. This worksheet contains product design. The final result of the study is that students are able to solve problems that are presented by creating product. Products that have been made are analyzed to see the students' creativity. In this study, there are three kinds of instrument that are used to obtain the data. Those three kinds of instrument are described as follows.

Questionnaire

The instrument that is used to measure creative disposition is using a questionnaire containing statements that are developed by creative disposition indicators that have been formulated by Lucas, Claxton, and Spencer (2013). These indicators are inquisitive, persistent, imaginative, collaborative, and disciplined. The questionnaire is self-assessment. Each statement contains checklist column that indicates how often the statements occur when the learning took place. The scale used in the questionnaire is a behavior scale. For a questionnaire consists of a scale of 5 for always, 4 for often, 3 for rare, 2 for seldom, and 1 for never. Before given to the subject of the study, the questionnaires assessed by supervisor, tested on a sample of students in other schools of the same level, the validity and reliability aspects analyzed using SPSS version 22, and select statements that have good validity. The data that have been obtained are analyzed by calculating the percentage of each indicator, then categorize the achieved percentage into several categories. The interpretation of creative disposition is shown by Table 1.

Table 1 Interpretation of Creative Disposition

| Achieved Percentage | Creative Disposition Category |
|---------------------|-------------------------------|
| 81 – 100% | Always |
| 61 – 80% | Often |
| 41 – 60% | Rare |
| 21 – 40% | Seldom |
| 0 – 20% | Never |

Worksheet

The instrument that is used to measure creative thinking skills is using student worksheet which consists of a problem that should be solved by creating a design that can assess the student's ability to formulate and express design ideas through sketching designs, providing descriptions, identifying materials, and identify problems to be solved by the design. Worksheet were scored based on a rubric created based on indicators of creative thinking skill that has been formulated by Torrance, such as fluency, flexibility, originality, and elaboration. Each indicator was developed into four criteria that had a scale of 0 to 3. The data that have been obtained are analyzed by calculating the percentage of each indicator, then categorize the achieved percentage into several categories. The interpretation of creative thinking skill is shown by Table 2.

Table 2 Interpretation of Creative Thinking Skill

| Achieved Percentage | Creative Thinking Skill Category |
|---------------------|----------------------------------|
| 81 – 100% | Very good |
| 61 – 80% | Good |
| 41 – 60% | Adequate |

| | |
|----------|-----------|
| 21 – 40% | Poor |
| 0 – 20% | Very poor |

Products

The instrument that is used to assess the creative product is using a product that has been made by the students. The products were assessed by using a rubric which was created based on indicators of creative products that have been formulated by Amabile (1996) which is a product that has the characteristics of new (original), useful, and correct response to task. These indicators were developed into four criteria which have scale of 0 to 3. The data that have been obtained are analyzed by calculating the percentage of each indicator, and then categorize the achieved percentage into several categories. The interpretation of creative product is shown by Table 3.

Table 3 Interpretation of Creative Product

| Achieved Percentage | Creative Product Category |
|---------------------|---------------------------|
| 81 – 100% | Very good |
| 61 – 80% | Good |
| 41 – 60% | Adequate |
| 21 – 40% | Poor |
| 0 – 20% | Very poor |

DISCUSSION

Creative Disposition

The description of creative disposition is based on the results of questionnaire analysis. Each questionnaire was processed and analyzed for each indicator. Figure 1 shows the average percentage of students' creative disposition before and after conducting Engineering Design-Based Science Learning Activity while figure 2 shows the average percentage of students' creative disposition specifically based on its indicators.

Figure 1: Average Percentage of Creative Disposition

Figure 2: Average Percentage of Creative Disposition Based on Indicators

Based on 1, creative disposition percentage achieved by students before implementing engineering design-based science learning activity is 69% (often), while the creative disposition percentage achieved by students after learning as much as 76% (often). This indicates that an increase in student creative disposition equal to 7% after students conduct engineering design-based science learning activity. The results of questionnaire analysis show that students often show creative disposition when conducting engineering design-based science learning activity. This indicates that students consider themselves to be more creative after conducting engineering design-based science learning activity. The results support the assumption that has been stated by Csikszentmihalyi (1996) that creativity is something that can be learned, and not just a talent.

Figure 2 shows that before the lesson, the average percentage of curiosity is equal to 68% (often). While the average percentage of persistence, imaginative, collaborative and disciplined respectively as much as 80% (always), 71% (often), 75% (often), and 68% (often). Meanwhile, after the lesson, the average percentage of

curiosity, persistence, imaginative, collaborative and disciplined respectively as much as 76% (often), 80% (always), 72% (often), 82% (always) and 74% (often). A few indicators that have increased percentage are curiosity, imaginative, collaborative and disciplined. While persistence do not change after students conduct engineering design-based science learning activity.

The average percentage of curiosity increased by 8% after students conduct engineering design-based science learning activity. On the average, students assume that their curiosity often arise when learning science based engineering design progresses. This indicates that the average students often express questions and curiosity of a thing that allows students to think about these things and are able to develop new ideas. Based on the questions that arise, students express their curiosity through exploration and investigate the question actively by seeking out information (Claxton, Edwards, and Scale-Constantinou, 2005). Curiosity that often appears in students showed that young people have a sense of skepticism that these students will not be easy to believe the information acquired before the students examine the information. Engineering design-based science learning activity supports disposition which expresses questions and exploration in problem identification phase, as well as supporting the skeptical disposition in the testing phase.

The average percentage of persistence remained unchanged. The achieved percentage before and after conducting engineering design based learning activity is 80%. This percentage included into the highest category. It indicates that students always show the persistence during the learning takes place. This shows that the average student-resistant and able to deal with adversity. This is important because it allows students to be able to go beyond the idea that is already known and to get new ideas. In addition, the average student had the courage to differ from the other and have the confidence that is a prerequisite to having the ability to take risks and tolerance of an uncertainty (Lucas, Claxton, and Spencer, 2013). This was reflected when they wanted to test the products they make. They must have confidence that their products will successfully resolve the problem, but must have a tolerance for uncertainty if their products do not successfully resolve the issue. They should be able to analyze the weaknesses of the product and improve it.

Like curiosity and collaborative indicators, the percentage of imaginative increases after students conduct engineering design-based science learning activity. The percentage increases by 1%, and the percentage of this indicator still falls into the category often. It means students often show imaginative disposition, either before or after engineering design-based science learning activity. This indicates that the average student is able to imagine solutions and possibilities that may occur. They are able to develop ideas that involve the manipulation of ideas, try out ideas, and improve the idea. In addition they were able to connect one idea with another idea and use intuition in making new contacts and bring up thoughts or ideas that will not always be realized based on analytical thinking alone (Lucas, Claxton, dan Spencer, 2013). All that occurs when students formulate solutions based on information obtained from their prior knowledge, from the media (books or internet), and the results of the discussion in small groups.

The fourth indicator, is collaborative, has the increment percentage as much as 7% after students conduct engineering design-based science learning activity. The results of questionnaire analysis showed that before and after learning, students often show collaborative disposition. Students assume that they are always able to collaborate when learning science based engineering design progresses. In addition, students are able to contribute in giving and receiving feedback. This means that they have a desire to hear the opinions of others so that the ideas that they have can be repaired (Lucas, Claxton, dan Spencer, 2013). The disposition of this collaborative emphasis on social aspects. This is consistent with the character of engineering design-based science learning activity. Engineering design-based learning activity involves people to work together in resolving problems that show social and personal needs that connects social processes (Atman in Marulcu, 2013).

The fifth indicator in creative disposition is disciplined. The percentage increases as much as 6%. Based on the results of questionnaire analysis, students often show the disposition of discipline when conducting engineering design-based science learning activity. This indicates that students have the knowledge and expertise in making creative products and in developing expertise (Lucas, Claxton, dan Spencer, 2013). In this learning activity, students are able to evaluate an idea that requires decision making skills. The evaluation process occurs when students discuss ideas either with friends in group or guided by inquiry-based questions from the teacher. In addition, the results of questionnaire analysis describes that students often focuses on the details of the idea (design and products), improve the product and make sure the product is working as designed so that it can resolve the problems being faced.

Four groups experienced a failure when making water purification. But all four groups successfully analyze the weaknesses of the product so they can fix it. Finally, after several filtrations, the muddy water becomes clean. This is consistent with the results of questionnaire analysis of the indicators of discipline increased by 6% after conducting engineering design-based science learning activity. Although before learning activity the average percentage of disciplined have been classified as often (68%), this is because the level of intellectual development of the students who have reached the formal operational level. Flavel (in Dahar, 2011)

states that at the age of approximately over 11 years, students have been able to think reflectively. Children at this period are able to think back on a series of mental operations. They can think of "thinking".

Creative Thinking Skill

When carrying out engineering design-based science learning activity, students are free to express their ideas openly to participate in problem solving and creative thinking skills will be trained. Sidharta (2005) reveals that the creative thinking skills can be trained to students through problem-solving activities. In other words, each student has the ability to solve problems because basically they have the potential to be creative, but the extent of that potential is developed on students depends on internal factors and external factors that occur to the students. It has been proven in the results of this study which is shown in Figure 3. Figure 3 below illustrates the average percentage of creative thinking skills of students during the learning process using two different topics such as the create of the cage of crickets and water purification tools while figure 4 illustrates the average percentage of creative thinking skills of students based on its indicators.

Figure 3: Average Percentage of Creative Thinking Skill

Figure 4: Average Percentage of Creative Thinking Skill Based on Its Indicators

Based on Figure 3, in general it could be seen that there are differences in the acquisition of the average percentage of students' creative thinking skills when presented with a problem related to the creating of the cage of crickets and water purification. The average percentage of creative thinking skills obtained by the students when learning related to the creating of the cage of crickets higher (83%) than when students faced problems related to the creating of water purification tool (63%). Generally, the average percentage of creative thinking skill after conducting engineering design-based science learning activity as much as 73.2%. The achievement of this percentage indicates that the students' creative thinking skills after implementing engineering design-based science learning activity has been good.

In engineering design-based science learning activity, students always use creative thinking skills to solve problem that allows students' creative thinking skill develops. According to Torrance (1977), problem solving oriented lesson such as engineering design-based science learning activity is an effective method to enhance the potential of creative thinking skills. This is consistent with Cunningham and Hester (2007) who stated that one of the benefits of engineering design-based science learning activity is to support students' problem-solving skills.

The learning steps in engineering design-based science learning activity such as identifying problems, designing product, create product, product testing, and redesign product can facilitate students in developing creative thinking skills. In identifying problem, students will try to identify the problem by plugging their prior knowledge. When there are some things they do not know, they will try to find such information in a discussion or from the literature. At discussion session, they have potential to produce a lot of ideas, answers, solve problems (fluency), look at things from the different point of view (flexibility), think in a unique way (originality), and enrich as well as develop an idea or a product (elaboration).

In addition, the characteristic of engineering design-based science learning activity has potential to develop creative thinking skill. As explained by Crismond (2001), engineering design-based science learning activity clearly defines the purpose of enabling some of the ways to solve problem. It could facilitate students in developing aspects of fluency. Another characteristic is allowing some designs are repeated to improve the performance could facilitate students in developing creative thinking skills in the aspect of flexibility.

Figure 4 shows that the indicator of elaboration reaches the highest average percentage, as much as 93%. Meanwhile fluency reaches the lowest average percentage, as much as 40%. In addition, originality reaches an average percentage of 64% and flexibility reaches an average percentage of 46%. The highest average percentage is achieved by elaboration, which is 93% (very good). This proves that the engineering design-based science learning activity could facilitate students' creative thinking skills on aspects of elaboration. In other words, students are able to enrich and develop an idea or product, and add or elaborate the details of an idea so that it becomes more attractive. Those things are confirmed when the student through designing step. In this

step, students were able to draw the design in more detail the parts of the design, what materials that are used to make the design into a product, and is able to describe the reason for the selection of tools and materials, there is even a group that adding accessories to make design more attractive.

The indicator of originality reaches an average percentage of 64% (good). This achievement indicates that students are able to bring new and unique ideas, and able to make combinations that is unusual in making the product. For example when creating a cage of crickets, in terms of design forms, none has the same design. This shows that they have a unique design forms that they have respectively. In addition, some groups use different materials with model product and the design of other friends. Group 5 uses a modified bucket for cage of crickets while other groups use cardboard and plywood to make the cage of crickets. Figure 5 shows the design of a cricket cage made by the group 5.

Figure 5: Design from Group 5

In indicator of flexibility, the achieved average percentage is 46% with the category adequate. The achievement indicates that students are quite capable in producing many ideas as solutions to the presented problems and provide many ways to transform the design into a product. Such activities are reflected when students make many designs with many procedures. For example, when students make a cage of crickets, the students are able to make more than one crickets cage design. Group 1 and 4 made three designs, while group 2, 3, and 5 only able to make two designs only. One of the weaknesses of the students on flexibility indicators are students less able to present a lot of alternative materials that are used. Although the design that they make is quite a lot, but the materials that are used to make those three designs are relatively the same. As performed by groups of 4, even though they made three different designs but materials that are used is relatively the same, such as using egg tray and wire nets. There is difference in the second design, which uses plywood while the design 1 and 3 use cardboard. Figure 6 shows three designs created by group 4.

Gambar rancangan beserta label

Figure 6: Crickets Cage Designs by Group 4

The lowest average percentage is achieved by students is fluency. The average percentage that is achieved is 40% and categorized as poor. This indicates that although students are able to make more than one design but they are less able to describe more than one way to create the product. It might be caused by several factors such as time limitations in making the design description related to procedure of product creating. This step is the last task on the design process at the first meeting. Therefore, students were only able to describe one way in making the product.

Creative Product

Creative products were assessed using observation sheet. The ratings refer to the rubric that has been developed by researchers from Amabile's indicators creative products. The assessment results are then processed and analyzed. Figure 7 below shows the results of the analysis of creative products produced by students during the learning related to the creating of the cage of crickets and water purification while Figure 8 shows the average percentage of creative product based on indicators.

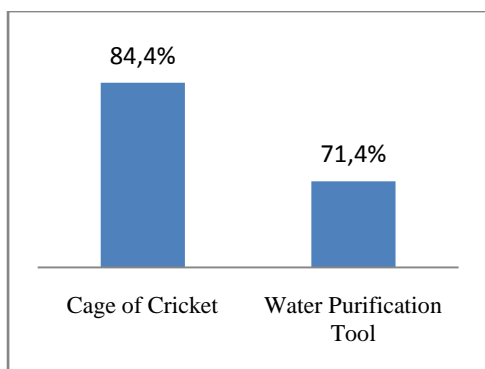

Figure 7: Average Percentage of Creative Product

Figure 8: Average Percentage of Creative Product Based on Indicators

Based on figure 7, the creative products of cricket cage that have been constructed by the students gain percentage as much as 84% (very good) while the achieved percentage of water purification tools as much as 71% (good). It could be concluded that the resulted product of cricket cage is more creative that water purification tools. The result of analysis shows that the average percentage which is achieved by the students as much as 77.9% (good). It shows that engineering design-based science learning activity is able to facilitate students to create creative product. Besides that, this is proportional to the result of critical thinking skill result. Generally, students' creative thinking skill is categorized good. Specifically, students' creative thinking skill related to constructing cage of cricket categorized very good while the creative thinking skill related to constructing water purification toll is categorized good. It proves that when students have a good creative thinking skill then product that is resulted tends to be good as well (creative).

Figure 8 shows that the average percentage of creative products for the cricket cage in indicator originality, usefulness and correct response to task task respectively as much as 67%, 73% and 73%. The indicators of usefulness and correct response to task obtain the average percentage which are higher than the indicator of originality. While the average percentage of creative products for the water purification for indicators of originality, usefulness and correct response to task respectively as much as 50%, 55% and 65%. Indicator of correct in answering the task obtains the highest average percentage compared to other indicators, while indicator of originality obtains the lowest average percentage. In more detail, indicator of originality, usefulness, and correct response to task on products cage of crickets achieve higher percentage than the water purification products. All three indicators on the product cage of cricket is categorized as good. This is different with the indicators on water purification products. Although the indicator of true in answering the task is categorized as good, but the indicators originality and usefulness is still categorized as adequate. There are several things behind the low performance on the percentage of water purification products. In the originality indicator, students obtain a lower percentage because almost all groups have designs and products with tools, materials, and shapes which are similar. The entire group using mineral water bottle as materials container and mineral water glass as container of clean water. In addition, there are similarities materials used for all groups, such as roofed, red brick, charcoal, sand, and gravel. Although there are variations in the use of fabrics, cotton, or sponge.

In the indicator of correct response to task, products that are made by four of the five groups (groups 1, 2, 3, and 5) reaching the lowest percentage. They used materials that are less clean and the sequence of the materials that were used is wrong. Thus, they must go through a phase of redesign. These groups reflect the weaknesses related to products that are made and then they recreate the new product. Despite the indicator of usefulness reaches the highest average percentage, but no single tool is able to purify the water in one trial. They require at least three times filtering so the clear water is obtained.

For the cage of cricket's product, the indicator of originality is categorized as good because all products have different shape with various combinations of materials. Those products are different both with the model product and other groups' products. There is one group who is unique, that is group 5, who use chamber to create the cage of cricket. They do not need lots of effort and the time taken to create the product is relative shorter than the groups (1, 2, 3, and 4) who use plywood and cardboard to create the cage of cricket. Figure 9 shows the product of cricket cage which made by group 5.

Figure 9: Cage of Cricket Made by Group 5

The indicator of usefulness and correct in answering task in cage of cricket achieve the average percentage which is higher than the indicators in water purification products. The products of cage of cricket do not pass through the step of redesign because the products which are resulted are successfully made the crickets produce sound although at noon. The products have the characteristics which are dark, warm, and humid. These conditions allow cricket to produce sound. There is another factor that might allow cricket to produce sound, such as the ratio of male and female which are put in the cage. The male should be much more than female so it allows male to do competition. Besides that, the male that put in the cage should males which have not been through the mating period. These kinds of control variables do not appear in water purification products. The variable control for water purification products are the dirty water which are used should be the same for all groups. It might be provided by the teacher. Secondly, there should be clear water as a comparator for the resulted clear water which has been through filtration process so the resulted clear water could be measured objectively. But in fact, the dirty water provided by the students so the dirty water that used different for all groups and there is no clear water as a comparator so the level of clear water which resulted might different for all groups.

CONCLUSION

Generally there is an improvement in students' creative disposition after students experience the engineering design-based science learning activity. Meanwhile in students' creative thinking skill and creative product, the average percentage which achieved is different between lesson related to creating product of cage of cricket and water purification tool. Students' performance in creative thinking skill related to the creating of cage of cricket is better than students' performance in creative thinking skill related to the creating of water purification tool. The same result is shown in creative product in which creative product of cage of crickets is better than water purification tools.

ABSTRACT

Environmental problems have become big issues of various countries in the world, including Indonesia. Environmental problems caused natural disasters and high losses for every single person. One of the causes is from themselves. Therefore it needs to enhance the attitude of environmental awareness. Establishing the attitude to love the environment can be done through education and language learning. The book became an important factor in education to provide the knowledge, skills, positive attitudes to the children about the importance of maintaining and preserving the environment. This study examines the environmental wisdom in 2013 curriculum Indonesian textbook for seventh and tenth graders by kemendikbud. This study focuses on describing the role of physical settings (environment), showed concern over environmental destruction, human relationships and physical setting (environment), and the values consistency of environmental wisdom. This study has shown that environmental wisdom contained in a text book on the depiction of the physical background environment, and damage. Aspects of the shape consistency values still minimal environmental wisdom.

Key Words: *environmental wisdom, textbooks, Indonesian.*

INTRODUCTION

Environmental crisis and the impact of pollution is an issue and the world community's attention to nature and the human. That behave about massive exploitation causing ecological continuity damage. This environment problem has been raised in the Rio Declaration, Principles of Sustainable Development by producing some agreement. Human as center in continuity development. They give attention of development in a healthy and productive life, in harmony with nature (UNCED in Bruce et al, 2007).

Indonesia is one country that suffered a crisis environment due to illegal logging, pollution, environmental pollution, and so forth. In fact, the government has set, namely on the Protection and Environmental Management in Law No. 32 of 2009 which states that environmental protection and management

is a systematic and integrated efforts are being made to preserve the environment and prevent pollution and / or damage to the environment that includes planning, utilization, control, maintenance, supervision, and enforcement. However, facts on the ground indicate that the use of the environment is not in accordance with the exist law. As told on a research conducted by Muryani (2008) shows there has been a degradation of coastal mangrove forests in Pasuruan both in quantity and quality. Some reclaiming mangrove forests annually, but the success rate is less than 50% and the destruction of forests still lasts until now. Some activities causes of mangrove forest destruction in Pasuruan are due to logging undertaken by locals. Mangrove trees along the coast will be sold as well as to meet the needs of the family. Felling of mangrove forests also carried residents to open a new local pond. The people there cut down mangrove trees due to the small population income as a fisherman (Muryani, et al., 2011).

In the same case, the rate of land degradation in the Dieng plateau increasingly. It decrease production of potatoes, wild plant species diversity level is getting lower and included in the low category. This is caused deforestation of conservation, so the impact on the decrease of water resources (Ngabekti, 2007). Likewise with sand mining in the district Sukaratu negative impact on the landscape and air.Laju erosion on sand mining sites ranged 163.49-1,194.16 tonnes / ha / year with Erosion Hazard Level (TBE) as very severe. Value Total Suspended Solid (TSS) and Cikunir Cibanjuran River ranged from 26-186 mg / liter, this value is still below the quality standard, but too good for fishing (Suhermana, 2015)

Until November 2016, record of natural disasters that occurred in Indonesia some 2,175 cases, 567 deaths and missing, the victim suffers and 2,771,303 displaced, 36 296 damage settlement (DIBI BNPB: 2016).

Figure 1.: Statistik Bencana di Indonesia hingga November 2016

One of the causes of these disasters is human activity itself. According Keraf (2010: 47), man is seen as the central system of the universe. Humans, in view ecocriticism, as part of nature should view themselves as entities that align with nature, not master and how they explore it. Therefore, ecocriticism aims to transform the world into a more healthy and harmonious (Berry, 2002: 252) .Garrard (2004: 14) emphasized the importance of ecological knowledge not only to see the harmony and the stability of environment but also to determine the attitudes and behavior of human beings. The relationship of man and the universe in general affect each other. However, man has always had its interests, in the order of the ecosystem, is considered the most decisive in the

policies related to nature, either directly or indirectly. Human behavior is only concerned with desire and lust of consume something in relation with the use of natural resources will affect the occurrence of various kinds of conflicts of interest (Armawi, 2007).

Problems utilization of natural resources as environmental components have a wide variety of linkages, such as with the economic, political, cultural and security. It can be seen in the example that occurred in Bali on interests that can cause environmental damage. Hardiningtyas (2016) explains that the issue of land in Bali has occurred in the 1990s since the developing tourist industry. So the rapid growth and development of the tourism sector in Bali cause the change of land rights is changing constantly. It is as disclosed Franks and Falcover (1999) that the community forests as empty land (land that is not useful) so often deliberately transformed to enable land to other uses which are considered more profitable

Teach to love the environment can be done through education, starting as a teacher, learning, and textbooks. Textbook is an important factor in education to provide the knowledge, skills, and a positive attitude to the children about the importance of maintaining and preserving the environment. In fact, the environmental conservation efforts should be a concern of all elements of the environment of education. Preservation not only the responsibility of teachers teaching science or science, but by all teachers of subjects, including English teacher Indonesia. Indonesian textbook or instructional materials provided should give enough attention to efforts to preserve and preserve the environment (ecosystem) . The study of environmental literature should be encouraged to remember his contribution to the urgency of the ecological crisis resolution today (the Goddess, 2015) .With holds principles of respect, responsibility, love and caring, simplicity and fairness possibility occur of lifestyle which was originally oriented material to a simple lifestyle friendly loving and caring for others (K, Juliasih, 2012) . The principle of these principles can be taught in textbooks in learning.

Thus, it is important to do research to describe and explain the environmental wisdom contained in Indonesian textbooks. Research on the environment in the textbooks was made by Kelvin et al (2016) who study book called Speak and compose Indonesia for SMP / MTs Class VIII Karangana Asep Yudha Wirajaya and Sudarmawati, Indonesian (for SMP / MTs Class VII) work Atikah Anindyarinidan Sri Ningsih, Languages Indonesia's SMP / MTs ClassIX Atikah work Anindyarini, Yuwono, and Suhartanto, Indonesian Language and Literature 3 for SMP / MTs Class IX Maryatidan Sutopo work. The study describes that Indonesian textbook language lessons for junior high school in general is still dominant disclose matters that are knowledge and yet insists on the internalization of the intelligence of the ecological as well as their application, either in the form of adaptation actions on the environment, solving problems arising from environmental impacts, management / preservation natural resources, and use of the environment in a positive way.

The difference of this research with the research conducted by Kelvin, et al (2016) are the components that will be described. In addition, textbooks studied also different. In this study a textbook that will be studied is the text book published by the Ministry of Education and Culture curriculum revised edition 2013 class VII and X. The newly launched Textbooks and used this year. Identifying environmental wisdom that includes the role of physical background (environmental) showed concern over environmental destruction, human relationships and physical setting (environment), form values consistent with environmental wisdom. From these findings can be developed or compiled Indonesian text book model-based environmental wisdom.

METHOD

This research approach is descriptive qualitative content analysis method (content analysis). This analysis was conducted to describe and explain the local wisdom charge in Indonesian textbookbook published Kemendikbud class VII and X. In addition, analysis of textbooks, also carried out literature studies related to environmental wisdom.

The procedure of this study as. First, determining the source of the data, which collects data in accordance with the formulation of the problem of environmental wisdom contained in textbooks. Primary data

is Indonesian Student Book Grade VII SMP / MTs Kemendikbud published in 2014 and Indonesian Class X SMA / MA / SMK / MAK published Kemendikbud 2015. Secondary data includes various references related to environmental wisdom. Second, the collection and classification of data, namely a preliminary reading, after which all data both primary and secondary data collected and the data classified. Submitting begins by mapping or classification of the concepts environment. Third, data analysis application that local wisdom or ecocriticism the Indonesian Student Book Grade VII SMP / MTs Kemendikbud published in 2014 and Indonesian Class X SMA / MA / SMK / MAK published Kemendikbud 2015. The data has been analyzed using data clustering system those based on previous research objectives have been determined by the researcher. Based on category, researchers reviewed the data inductively.

RESULTS AND DISCUSSION

DESCRIBING ROLE OF PHYSICAL BACKGROUND (ENVIRONMENT)

Nature is home to a culture at the community level. Natural role not just stop. Not only in home to develop the culture but also nature also plays a role as a shaper of character and mindset of the people in it. This is clearly illustrated in the Indonesian Student Book Grade VII SMP / MTs Kemendikbud published in 2014 and Indonesian Class X SMA / MA / SMK / MAK published Kemendikbud 2015. Discussion of the physical background (natural) in a work not only includes the role of Satra human figures alone, but of all the elements that exist in the universe. Literature study and environment work together in shaping the human mind against nature. Lawrence Buell (2001: 9) says that the study of literature and the environment should make the case about literature and environment in order to present the physical environment as a force that formed in art and human experience, as a work of aesthetics.

The depiction of physical settings contained in the introductory section before entering the study text description Chapter I. Background The physically present in the song Flirt Coconut Island "my homeland safe and prosperous island very fertile coconut, jasmine idol island nation, from time immemorial, waving palm on the shore, whispering, nomadic king, adored the island, beautiful scenic, Fatherland Indonesia (BSBI7, 2014: 2). Physical background looks on ground water environment beautiful with fertile soil. The imagine of Indonesian islands that beautiful. The background that illustrate the physical environment on the coast. "The scenery Parangtritis are great. In the left, the cliff looks very high, on the right, we could see a large rock that seemed ready to keep the onslaught of the waves coming in every moment ... "besides Parangtritis, there is also a beach Senggigi" the hills are tough background appears to be part of the Senggigi island. That beach is charm really like painting on canvas is a vast expanse of nature ".At the text of the report were also presented the results of observation beach as physical settings in more detail" the beach also has a coastal ecosystem that are components of biotic and biotic components abiotic. Beach component consists of plants and animals who live in coastal areas. While the beach abiotic components consist of waves, currents, wind, sand, rocks and so on. Not only that, there are still many who are on the beach and we can use for life. (BSBI7, 2014: 3, 13, 137).

The depiction of the physical background of environment have been recognized as being attractive and can preserve the nature. The roles of nature are so important can be learned through the text description. Assignment to write a description of the environment contained in the following quote "Writing Text Description: 1) The environment in which you live, 2) town or village you know well, 3) Tourist attractions that exist in your area, 4) unique place in your area, 5) the performance art area in your region (BSBI7, 2014: 37). Almost all topics to write a text description of the environment.

Description of physical settings on the marine environment, namely the next. It appears in the first chapter of the text description. "The series of Karimun Jawa sea corals in various shapes and colorful. There is a flower-shaped corals beige and pink, in the middle there spots resembling stamens. So beautiful corals that. On the other hand there is a reef with a cactus plant forms jagged, blue and green patterned (BSBI7, 2014: 22). There are also descriptions of the sea in Chapter II examines the material, variations in the structure of fantasy stories such as the following quote "The sea was calm and light blue wavy greenish water. The act signifies

nothing was happening in the world ocean. I have to check what happened. I do not want to see the people wounded by fighting oceans of the earth "(BSBI7, 2014: 63).

The depiction of physical settings in the future regarding the text contained in the river. Fantasy background stories titled Son moon. "Nono, the Son moon, leaving himself Wlingi vacation, stay Mbah Sastro. He always love holidays there, because he can bike around Wlingi and bathe-bathing in the Lekso refreshing "(BSBI7, 2014: 46). There is also a forest backdrop that looked at the text of chapter VI fable. "When Ulu arrived under the tree, he saw a bird perched on a tree branch and cleaning feathers. Ulu thought Birds also like ants and fish are not able to enjoy the rain ... "" A horse is running on a wheat field towards a forest. The horse has satisfied eating grain in the fields it. He looked happy because no farmer wheat guarding his field ". (BSBI7, 2014: 204, 218)

Mangrove forests cannot be separated from the physical background telling the Indonesian text book of class VII. "Mangroves are also called mangrove. Mangrove forests are part of beach ecosystem. Mangrove forests growing on brackish water marshes and is located on the line beach (BSBI7, 2014: 123). With regard to the material in Chapter VIII of the Readers Become Effective, on the identity of the book also poured reviews related to the environment. "While Janus became well established and has everything for destiny. They must undergo togetherness entering the slums to rural Indonesia: Dayak in Kalimantan, Publications, Old Town, Bali, Toraja and Sampih Swamp Village" (BSBI7, 2014: 286). in these quotations to explain the background environment that has been navigable as seedy places to places in rural Indonesia.

In the book Indonesian students of class X, the physical background is described as forest. It looks at four lessons with a text entitled Hikayat Indera Duke. "After hearing the words of the king, Shah Indera Noble Elves and even prayed to go looking for a reed yearns that. They into the forest out of the forest, hiking down the mountain, entered the jungle out of the jungle, toward the sun to live ... "as well as in the following text" Lunch. Darko always linger in the gap mounds in line. Like a soil's feeling the breezy air under the trees the old birds. Catches from distance. Smell the bush. His mouth moved, as if reciting a prayer. (BI10, 2015: 108, 135).

The next physical setting of the ocean text. Entitled Hikayat Bayan Budiman, sea picture looks like the following "One day Khojan Maimun interested in commerce at sea, and then ask him about his wife. before let him go, suggest him to his wife" (BI10, 2015: 121) .In the forest and the sea, physical settings found on the Indonesian Books about the ricefield background. Like on lesson 7 on the text biography. In text telling Oge figures. "Oge farmers prefer to call her father than employee. Because the meet needs of everyday life, Silas, assisted by his wife, Nelce Wofam, and their five children, cultivate fields and plant the tubers "(BI10, 2015: 217) .In addition to the eight lessons about studying poetry, the text contained poetry Sun titled poem by WS Rendra

wahai kamu, wanita miskin!

kakimu terbenam di dalam lumpur.

Kamu harapkan beras seperempat gantang,

dan di tengah sawah tuan tanah menanammu! (BI10, 2015: 253)

Rice fields is the habitat of the crusts center adjacent to the village, the city limits, and the city. Background of the fields contained in the text of the biography indicates that being a farmer is more fun than employee. The position imagery in poetry lace appears that farmers are struggling with sludge in the rice field. Background linked to the aims of a farmer want results that have been planted. It provides an understanding that Indonesia is very rich. Natural elements such as rivers, forests, beaches, and fields provide the power and should be preserved.

SHOWS CONCERN FOR ENVIRONMENTAL DAMAGE

Ecocriticism is the study of the relationship of human and non-human, the whole history of human culture and requires a critical analysis of the term 'man' itself by doing a critical analysis of the human and the environment (Garrard, 2004: 5). From these explanations, which included relationship between humans and non-humans, including also forms of environmental damage natural. The damage happened cannot be separated by human behavior is too excessive in nature. That exploit this requires a profound analysis of the relationships between nature, culture, and maintenance so that the knowledge and the advancement of age who happens not cause negative impacts to the natural conditions.

Humans on earth presented with many advantages that almost perfect. Humans are presented with the hope to maintain and preserve the world. Advantages of humans not possessed by other living creatures that humans is the cornerstone of the determinants of survival of all creatures. Human mind support to survive in the wild earth. This ability process natural resources available to make the human population increasingly strong top the ecological chain. With such conditions, the need for food and clothing materials has increased so nature will inevitably be exploited until their needs are met. It seemed to depart from the mindset dichotomous nature-culture (natural and cultural). Man can do anything against nature. Moral value only applies to people who have sense and free wills. Thus, for those who have no sense and is not free, that slaves, women of color and race can be applied in accordance with the will of her male employer. Books Student Indonesian class VII contains material components that show respect and concern for environmental damage or pollution through the aspects of abiotic-as presented in the material writing fantasy stories, Chapter II Writing Fantasy "Dig the idea to create a fantasy of the topic of the environment, technological sophistication, the heroes, or other topics that interest you! Imagine if you wander in 100 years to come up with extraordinary technological sophistication or environmental conditions are already very polluted / damaged. (BSBI7, 2014: 76). Chapter VII Correspond with Personal Letters and Official.

In the introductory part of the correspondence presented a letter addressed to the President because of the smog that hit. Father, my fourth grade students of SDN Kuala Panduk. I lived in the village of Kuala Panduk. Already one week me and some other friends do not go to school due to illness. We are sick because we breathe air. Our lung busy when we breath. Eyes clear when it open. It feels good Sir, we should be the final exam soon. We must go to school to study and exams. We can not really learn and exams due to heavy smoke in the classroom. (BSBI7, 2014: 242). Ozi I heard your town are madly smoke disaster. I worry about my mood. Are you alright? What you can learn at school without being disturbed smoke? This semester break, my father would give free counseling program Desa Fire in your village. I was invited by the father in order to visit you. How about your holiday bustle this semester? If not, I would be very pleased to visit you (BSBI7, 2014: 148).

Events dense smog from forest fires pose a huge impact. In addition to causing disease, smog also interfere with students' learning process. Still on the same material relating to correspondence, there is a form of concern shown by the figure of him as the sender of the letter "We are indeed far inland, we do not have high ideals, we just want to be able to share knowledge like Mom and Mister. We do not want this beautiful lake evicted by coal companies. Therefore, we must be good "(BSBI, 2014: 249). The concern shown by rejecting the lake in the environment to be used as a coal company. Obviously if the lake was converted into the coal company would damage the environment. In the Indonesian book class X, concern over environmental damage was opened with the events that have been experienced by major cities in Indonesia. "Today the garbage is increasing, especially in Cities such as Jakarta and Surabaya" (BI10, 2015: 43). In Lesson II shown in the picture is through text Development and Disaster Environment, "From this it can be imagined how great the natural damage that occurs because of the large population, the consumption of natural resources and pollution are increasing, whereas current technology can not solve the problem, For example, every year in our country is estimated there is deforestation, simp as 3,180,243 ha (or an area 50 times the size of Jakarta). This was also followed by the extinction of flora and fauna is very clear rare. The fact described the destruction of nature is happening now followed by catastrophe for humans. In 2005 - 2006 were recorded, there have been 330 floods, 69 landslides, volcanic eruptions disasters 7, 241 earthquakes and 13 tsunamis. Landslides and floods caused by

deforestation and development that ignores the natural conditions "(BI10, 2015: 56-57) .At the text presented an overview of the environmental damage so detailed. Begin with deforestation resulting devastating disasters nature. There river with trash. As the following fragment of "The river is flowing dali river flow downstream to upstream, the river is generally used as some of the activities that help people. However, in the village of Jantur Bumiaji misused river into landfill so that river water that once flowed now become dry and filled with waste "(BI10, 2015: 31). The river actually is the source of life if utilized properly. Culture throw garbage into the rivers will cause the impact of disasters, such as floods. The relationship between man and nature as it would disrupt and damage the environment occurs nature. The destruction was followed by a gesture made by human. the reader as if it got a hard slap. Destruction of environment that have occurred so badly, but the man never regained consciousness. " environmental degradation and its effects continue and happen. Human tend to regret their destiny. The time their gradually weeping for the fate of the forgotten and considered as a gust of wind that left. That trace of cries because of the effects of environmental damage that happened just stay becomes a memory for being told. However, they keep in mind that it is not enough if people merely crying over his fate, but in fact never realized that all these events are the result of behaviors and actions that should be improved and changed "(BI10, 2015: 60). In lesson 2, described the destruction of forests that lead to catastrophic smog. "Disaster smog is heartbreaking disaster. Already this month the country partly cloaked in white smoke. Sumatra and Kalimantan sky was no longer visible sky blue ... ", lesson 5 of the negotiations" Panguripan water source into a provider bersir water for consumption as well as to meet the irrigation of tens of hectares of rice fields. When construction of the hotel was forwarded, water resources Panguripan will die .. ", task 1 lesson 6" ACEH - The floods due to overflowing river water soak back hundreds of homes in the village of Rantau Gedang, District Singkil, Aceh Singkil, Aceh, Friday (6 / 11/2015). Due to flooding, land access from Rantau Gedang towards the city center end total. To reach the city center, access to the only drivable residents only through streams that are overflowing. They use the kecil.Hal boat would threaten the safety of citizens (BI10, 2015: 75, 165, 201).

HUMAN RELATIONS AND BACKGROUND OF PHYSICAL (ENVIRONMENT)

Human relationship with the environment dalah pattern of the relationship between humans and the physical environment to live a life together in the universe. Garrard (2004: 5) argues ecocriticism is a study that explores the ways as to how we imagine and describe the relationship between humans and environment. Relation between humans and the environment is a word that has been given to God. Human beings have always lived require another example of plants and animals need to meet everyday needs. Which is actually a harmonious relationship should be maintained so that mutual reliance that does not lead to a loss in either party.

Man was created as the controller of nature should have an awareness that the natural environment around them not only to be exploited, but both of their (human) must care for and preserve the natural environment for the benefit. One of the example actions that do not harm the environment is improving mutual care from the man himself. With a sense of concern that the man will have the awareness of the existence and function of the surrounding natural environment. The shape of the caring attitude that is (1) the emergence of conscious attitude to not do things that harm the environment, (2) utilizing the natural environment is not excessive, (3) in addition to taking advantage of the natural environment, humans also have to update our resource nature that they have taken so that the ecological balance is maintained. The impact can be felt when a man has to have a sense of concern for the environment is the rising harmony between the natural environment and the creatures that live in it and create a symbiotic mutualism between humans and the natural environment.

The relation between the environment and man looks at class VII textbook. In Chapter III about text described procedures utilize natural human relationships by using it as a traditional medicine. "How To Make Traditional Medicine Insomnia, you experience insomnia (sleeplessness)? Our ancestors bequeathed traditional recipes for insomniacs. Ingredients 5 pcs green coconut root of each 4 cm (BSBI7, 2014: 82) .There is also a form of human relationship with nature in the procedure make biopori. "1. Choose the soil in the area around the tree. 2. Strengthen the hole with cement approximately 2-3 cm and a thickness of 2cm around so that the land does not fall into the hole to be filled trash. 3. Make a hole by punching holes in the ground with a diameter of

10-30 cm and a depth of 80-100 cm using a crowbar, bamboo, or pumping unit biopori (BSBI7,2014: 103-104). In addition, the bamboo plant is able to provide many benefits to humans. As the procedure text how to make angklung. "The first step, prepare bamboo, bamboo sticks and then cleaned up branches, and cut to length to taste (BSBI7, 2014: 105). Mangroves forest that are on the waterfront has a crucial role to the preservation of human habitat. The attitude with nature, in terms of These mangrove forests that humans utilize mangrove forests as the land to survive. "the benefits of mangrove forests can also be seen in terms of a place to live mangrove biology. Sea biotic life. Then, the surrounding community take advantage of mangrove forests as a source of livelihood. Mangrove forests also provide some essential elements pharmaceuticals. Mangrove forests are typical. The mangrove forests have benefits to protect the marine environment, economic benefits, and provide a source of food / medicine (BSBI7, 2014: 124). Environment provides a variety of needs for human. Started from coconuts, bamboo, mangroves with various benefit. Relation that exists between natural and man surely to preserve and can be utilized by the human lineage further. In the Indonesian book class X there is a relationship between humans and the environment. Man's relationship with nature is supposed to keep each other and care. It may too much. Relation not between man and the environment associated with utilizing and caring as the use of wood in one lesson compile the results of observation "Shadow puppets made from the skin of animals, such as buffalo skin, cow, or goat. Wayang wong means puppets displayed or played by people. Puppet show are puppets who use the wooden puppet as a character actor .. "then benefit in the national park," National park has various benefits in the form of products for environmental services, such as clean air and natural scenery. Both of these benefits are in a same space and time. It takes a form of policy that is able to regulate the allocation of resources in relation to the needs of people with regard to the carrying capacity of the environment and the societies around

CONSISTENT FORM OF VALUES EXPRESSED

Local knowledge was the brainchild of local (local) that are wise there, full of wisdom, good-value embedded and followed by its members (Sartini, 2004: 111). Local knowledge is defined as a view of life and knowledge as well as various life strategies that intangible activities undertaken by local communities in addressing the various problems in the fulfillment of their needs fulfillment. System definitely covers all elements of life, religion, science, economics, technology, social organization , language and communication, as well as the arts.

Wisdom can be equated with the meaning of knowledge, ingenuity, cleverness, knowledge, and wisdom in making decisions with regard to the settlement or prevention of a problem or set of problems that are relatively complicated and difficult. Talked about the wisdom of course can not be separated from values and moral principles espoused and performed by certain communities as a guideline for behavior. Keraf (2010: 14-16) confirms that the general system of values that are kept as a good living habits, inherited and passed down through religion and culture which is considered as the main source of norms and values.

Environmental problems require a cultural analysis of the scientific basis for the problem is the result of the interaction between ecological knowledge and change the culture. Garrard (2004: 14) emphasized the importance of ecological knowledge not only to see the harmony and stability environment but also to determine the attitudes and behavior of human beings. Therefore, in a nutshell he said ecocritical interdisciplinary analysis that crisscross discipline other sciences, namely literature, culture, philosophy, sociology, psychology, history of environmental, political and economic, and religious studies.

The explanation that the man lives and sustainably on the earth is not separated from the natural role as a loyal partner of their lives is not inevitable. Humans rely on nature in a variety of complex needs of human life, so came a traditional wisdom of people who have always relied on nature and roots of their ancestors in the past. Keraf (2010: 34) revealed that traditional wisdom is all forms of knowledge, belief, understanding or insight as well as custom or ethics that guide human behavior in the lives of those in the ecological community.

Shape the values of wisdom in preserving the environment in textbooks contained in traditional poetry. Traditional poetry materials including old literature handed down to date. Poetry be a means to convey a message for society. Culture as shown in fragmentary material examine spatial development patterns following poem,

*Buanglah sampah pada tempatnya,
Jangan membuang di tengah jalan;
Kalau kita tidak mau bertanya,
Tidak bisa mencapai semua harapan.*

*Di Bengkulu tumbuh bunga rafflesia
Bunga unik tanpa duri
Alangkah indahny alam Indonesia
Marilah kita jaga agar lestari*

*Lestarikan alam kita
sebelum alam menjadi murka (BSBI7, 2014: 177&179)*

At the top of the poem fragment, environmental load delivered on stanza. message section contains the so dispose of waste in place and do not dispose of in the middle of road. Then on the second stanza. A part of second fragment contains the advice to keep nature beautiful Indonesia to remain natural. then continued on the last citation that preserving nature is crucial before nature into a fury of human behavior. Forms consistency values regarding environmental wisdom also appears in the book Indonesian class X. These values appear via text excerpts observation report titled "Know the Bedouins". Bedouin ethnic tribes including them. It can be seen preserve the ancestral culture that they keep the forest place of residence and do not want to interact with outsiders. "in the Bedouin are not familiar with foreign cultures and is located in the deep forest. It is not yet know the culture of the outside, the Bedouins In still have a culture that is very original. They are known to be very obedient maintain customs and heritage of his ancestors (BI10, 2015: 24). "In addition, the form of the consistency of the values to keep the environmental wisdom also tamoak the second lesson is to develop an opinion in exposition. It shows how cultural values in protecting the environment as look at the following fragment "here the man in her life should be able to appreciate the nature and use effectively and wise. Such as, Papuans understand nature as a mother who gives life" (BI10, 2015: 61). Papua people greatly appreciate nature. They use the nature with appropriate and does not exploit large. Value that can be taken is that Papuans were likened to appreciate nature as a source that gives them life. Through the principles of the culture of nature will remain stable.

CONCLUSION

Based on the results and discussion, it put forward some conclusions as follows. The components of environmental wisdom in the Indonesian Student Book Grade 7 and Grade 10 Indonesian books presented are

varied. First, the role of physical settings on the Indonesian Student Book Grade 7 looks natural conditions homeland Indonesia, beaches, oceans, rivers, mangroves, and shantytowns to Indonesia's natural hinterland. While the Indonesian book 10 classes, physical settings include forests, sea, and rice paddies. The existence of physical setting environment in the book Indonesian grade 7 and 10 through text descriptions, text fantasy story, report the results of observations, fable, folklore, text biographies and poetry.

Forms of environmental damage contained in the Indonesian Student Book Grade 7 is the result of the treatment of human nature that do not utilize properly. Most of the environmental damage due to natural law as happened in the village of Kuala Panduk affected by smog, the lake is going to be a miner. While the Indonesian book class X, concern over environmental damage is indicated by exposure of the big cities in Indonesia that has been polluted trash, logging an area of 3,180,243 ha (or an area 50 times the size of the city of Jakarta), extinction of flora and fauna, 330 floods, 69 landslides, volcanic eruptions disasters 7, 241 earthquakes and 13 tsunami. Concerns of environmental damage that makes humans just crying over his fate major cities in Indonesia. Disaster haze in the sky Sumatra and Kalimantan sky, flooding due to overflowing water of the river in the village of Rantau Gedang, District Singkil, Aceh Singkil, Aceh.

Human relationships and environments seen in the Book of Indonesian students grades 7 through human relationships that take advantage of nature by using it as a traditional medicine, bamboo plants can provide benefits such as making angklung, humans exploit mangrove forests as the land to survive. In the Indonesian book 10 classes, people are destroying the river by throwing garbage into the river. Relation between humans and the environment are also things that are related to a possitive manner. It bring as the use of wood as a puppet. Keeping the national parks, the process of reconciliation, and develop the concept of drainage to prevent flooding.

The values that are consistent with the environmental wisdom is knowledge gained through abstraction typical experience through both religious and environmental wisdom culture. Value the Indonesian Student Book Grade 7 looks through cultural trditional poetry. Through traditional poetry culture used to transmit values to preserve the environment. while the Indonesian book class 10, the values that are consistent with the environmental wisdom looks at the cultural guarded by Bedouins who remained firm to preserve nature through the culture. Indeed, the Papuan community hold the principle that nature is the mother who gives the source of life. The existence of environmental wisdom in the Indonesian student 7th grade book distributed in various chapters, ie learn to describe, understand and create a fantasy story, legacy of a culture through text procedures, drill down to a science in the report on the observation, inherited the noble values and the creation of folk poetry, appreciate and create a fable, corresponded with a personal letter and mail services, and become creative readers. While the Indonesian book 10 classes, components environmental wisdom contained in chapter prepared a report on the results of observations, develop opinions in the exposition, preserve the value of local knowledge through folklore, made an agreement through negotiation, found through debate, study of biographies, and steeped in poetry. There is only one chapter that there are no environmental wisdom that is the lesson 3 convey ideas through anecdotes. In general, environmental wisdom contained in textbooks over the depiction of the physical background of the environment, while aspects of the consistency of the values of environmental wisdom is still minimal.

ABSTRACT

Indonesia has implemented inclusive education as a purpose of giving a proper education for the students with special needs. The fact shows that not all of the schools in Indonesia apply inclusive education for some reasons. Based on the data from The Directorate of Special Education Guidance and Special Education Service of Primary Education in the year of 2015, from the number of 1, 6 million of special needs children in all over of Indonesia, it is only 164,000 of them who have the access of education both in public and private schools. The instructional process for English acquisition especially to the special needs students requires a particular strategy based on its needs. A teacher at inclusive learning has to focus more on his or her ability in class management on the running class with the students who have varied mental and physical disabilities and background.

Keywords: Special Needs, Inclusive Education, English Acquisition

INTRODUCTION

The mandate of constitution instructed by *Undang-Undang Dasar 1945* (Indonesian basic law), especially on the fourth paragraph of preamble, states that the aim of the country is to improve its people astuteness. It also means building people's character in deep knowledge. In order to reach the goal as mentioned above, a medium is needed, namely education. It gives a chance for the people to grow and develop its capability without cease. It is an effort to create learning situation and instructional process actively by developing students' potential in terms of spirituality, intellectuality, religiosity and skills acquired by themselves, society, and country. One of the country's components in a field of education is children with different capability. It can be related to physical or mental capability. The ability to use the senses or differ with other people is called as physical ability. While the deviant of someone critical and logical thinking to respond surrounding, both in supernormal and subnormal can be defined as mental ability.

In international perspective, there have been many steps done by the Human Rights activist to promote inclusive education, among others are;

1. 1948: Declaration of Universal Human Rights
2. 1989: United Nations Convention on The Rights of The Child
3. 1990: World Declaration of Education for all
4. 1993: United Nations Standard Rules On The Equalization Of Opportunities for Persons with Disabilities
5. 1994: Salamanca Declaration and Action for Handicapped
6. 2004: Flagship PUS on Education and Disabilities.

The United Nations convention held in 2006 had declared children rights and emphasized that all of the children have the equality chances for education without any discrimination in any terms. Moreover, in World Education Forum, in Senegal (2006), legalized Education for all as the framework for many countries covering;

1. Enlarging and increasing the quality of taking care and education for early childhood especially in less fortune condition
2. Making sure children with difficult conditions to have an access for education

3. Decreasing number of illiteracy
4. Eradicating the gender disparity on elementary and secondary level of education

On the other hand, education is a process of people's delivery to grow themselves as a person in a whole, as a social one who has the power to determine his/her choice to be a part of country's life. National education must cover and accept all of the components without considering the social, economic, tribes, religion, faith, gender, mental and physical difference. Thus, it is called as inclusive education.

Inclusive education is a multidimensional concept that includes the celebration and valuing of difference and diversity and consideration of human rights social justice and equity issues, as well as the social model of disability and a sociopolitical model of education. It also encompasses the process of school transformation and a focus on children's entitlement and accessibility to education (Kozleski et al., 2011; Loreman et al., 2011; Mitchell, 2005; Topping, 2012; Slee, 2011; Smith, 2010). The overall goal of inclusive education has been stated as to "...conceptualize inclusive education as a means to provide students with educational access and opportunities to participate in society" (Kozleski et al., 2011, p. 9). Salend (2011, p.39) provides a useful definition of inclusive education; a philosophy that brings students, families, educators and community members together to create schools based on acceptance, belonging and community. Inclusionary schools welcome, acknowledge, affirm and celebrate the value of all learners by educating them together in high-quality, age-appropriate general education classrooms in their neighborhood schools. By giving the same chance towards students with different capability to have an access of learning and education, it means as a way to decrease the number of disparity of education between normal student and with the needs one.

Generally, Indonesian public schools provide only regular class, where the students are normal without any disabilities. It happens for decades and becomes public acceptance to have a point of view that normal students go to regular schools while the ones who are in disabilities are in special schools.

Central Java as one of the provinces in Indonesia has also faced the problem of education equality towards special needs education through inclusive system. It occurs when the demand of its system rises rapidly but the system and supporting facilities are still improper. Applying an inclusive education is not easy. The schools at least must prepare themselves with innovation in order to ease the one in disabilities participate in the instructional process well. Meanwhile, they have to be able to give enlighten to all the schools staffs that disabilities are part of us and accepted in regular public school. Setting up the curriculum, teaching method, instructional media, teacher's competency, evaluation and academic service must be arranged in a particular way which is time-consuming and high cost. It has a purpose to give the best service for all without any distinction.

METHOD

Theory Perspectives

Special Needs and Inclusive Education

A comprehensive definition of special education is provided by Salend (2011, p. 7) as follows: Special education involves delivering and monitoring a specially designed and coordinated set of comprehensive, research-based instructional and assessment practices and related services to students with learning, behavioural, emotional, physical, health or sensory disabilities. These instructional practices and services are tailored to identify and address the individual strengths and challenges of students; to enhance their educational, social, behavioural and physical development; and to foster equity and access to all aspects of schooling, the community and society. This indicates that special education is characterized by:

1. Individual assessment and planning
2. Specialized instruction
3. Intensive instruction
4. Goal-directed instruction
5. Research-based instructional practices
6. Collaborative partnerships
7. Student performance evaluation

Salend (2011, p. 39) provides a useful definition of inclusive education, as follows:

Inclusion is a philosophy that brings students, families, educators and community members together to create schools based on acceptance, belonging and community. Inclusionary schools welcome, acknowledge, affirm and celebrate the value of all learners by educating them together in high-quality, age-appropriate general education classrooms in their neighbourhood schools.

This indicates that inclusive education is characterized by:

1. A philosophy of acceptance and belonging within a community
2. A philosophy of student, family, educator, and community collaboration
3. Celebrating the diversity and value of all learners
4. Valuing educating learners in high-quality schools
5. Valuing educating learners alongside their age peers
6. Valuing educating learners in mainstream classrooms
7. Valuing educating learners in schools in their local community

Teaching Children with a Wide Range of Special Needs and Disabilities:

Discourse of Inclusive Education

In order to implement effective inclusive special education, all teachers need to know about the different types of special educational needs and disabilities (SEND) that are found in schools. They need to know how to identify children with SEND and also learn about practical guidelines for teaching them, whether the children are in mainstream school, special class, resource room, or special schools settings.

Range of SEND

In England 11 types of SEND are recognized (DfE 2011, p. 19). These are:

1. Specific learning difficulty
2. Moderate learning difficulty
3. Severe learning difficulty
4. Profound and multiple learning difficulties
5. Social, emotional, and behavioural difficulties
6. Speech, language, and communication needs
7. Hearing impairment
8. Visual impairment
9. Multisensory impairment
10. Physical disability
11. Autistic spectrum disorder

There are also three further types of SEND that are considered to potentially benefit from special education services. These are children with mild learning difficulties (Farrell 2012), those with dyspraxia (Sugden and Chambers, 2005), and those of high ability, who are considered gifted and who may be underachieving (Winebrenner and Brulles, 2012). Here is the list of 8 categories:

1. Mild learning difficulty
2. Moderate learning difficulty/mental retardation
3. Severe learning difficulty/mental retardation
4. Profound and multiple learning difficulties/mental retardation/multiple disabilities
5. Autistic spectrum disorder/autism/Asperger's syndrome
6. Specific learning difficulty/dyslexia/specific learning disability
7. Dyspraxia/developmental coordination disorder
8. Speech/language/communication needs/speech or language impairment

Learning Difficulties

There are several ways of categorizing the different levels of children's general learning difficulties. A distinction is made between mild, moderate, severe, profound, and multiple learning difficulties. Children with learning difficulties make up the largest group of children with SEND. Learning difficulties range from mild, through moderate and severe, to profound and multiple learning difficulties. Children with severe, profound, and

multiple learning difficulties are small in number compared with those who have mild or moderate learning difficulties who make up the majority of this group.

Children identified as having mild learning difficulties experience problems in acquiring basic literacy and numeracy skills. Children with moderate learning difficulties are, in addition, likely to have delayed speech and language development, poor social skills, and also may exhibit emotional or behavioural difficulties. Children with severe learning difficulties are likely to have substantial problems in all these areas as well as possible problems in learning basic self-help skills such as dressing and toileting. Children with profound or multiple learning difficulties will encounter major challenges in acquiring all of the above skills.

Mild and Moderate Learning Difficulty

Children with mild learning difficulties have below-average intellectual ability with IQ scores of around 70–85 points. They are the largest group of children with SEND but, because of the mild nature of their SEND, are typically not identified until the process of their elementary schooling (Westwood 2008). The vast majority of these children are educated in mainstream schools, but these children are more vulnerable to developing social, emotional, and behavioural difficulties (SEBD), so some of them will be found in special classes, resource rooms, or special schools for children with SEBD. Children with moderate learning difficulties have below-average intellectual ability with IQ scores of around 55–70 points. They are typically unidentified until the early years of elementary schooling (Polloway et al. 2011). The trend is toward educating more and more of these children in mainstream schools, but in some countries, many of them are in special schools, resource rooms, or special classes within mainstream schools (Farrell 2012).

Identification

Children with mild or moderate learning difficulties typically have:

1. A short attention span
2. Difficulty understanding instructions
3. Difficulty learning reading, writing, and number skills
4. Delayed speech and language skills
5. Difficulties with fine and gross coordination skills
6. Behaviour that is immature

Severe Learning Difficulty

Children with severe learning difficulties have well below-average intellectual ability with IQ scores of below 50 points. They have difficulties in coping with most aspects of schooling and many other aspects of independent living. They are typically identified during their preschool years (Farrell 2012; Snell and Brown 2010). Most of these children are educated in special schools or special classes in mainstream schools, but an increasing number of them are now attending mainstream schools, particularly in the early years of elementary schooling.

Identification

Children with severe learning difficulties typically:

1. Are slow to begin to walk and talk
2. Have speech that is not clear and their vocabulary is limited
3. Have poor fine and gross coordination skills
4. Have great difficulties learning reading, writing, and number skill
5. Exhibit behaviour that is immature

6. Prefer to spend time with adults or with children younger than themselves

Profound and Multiple Learning Difficulties

Children with profound and multiple learning difficulties typically have well below-average intellectual ability with IQ scores of below 30 points. They also usually have additional sensory, health, or physical difficulties. They have problems coping with all aspects of life and are unlikely to be able to become fully independent as adults (Bruce 2011; Snell and Brown 2010). They are typically identified during their first 2 years of life. Most of these children are educated in special schools or special classes within mainstream schools.

Identification

Children with profound and multiple learning difficulties typically:

1. Have great difficulty with self-help skills such as eating and dressing
2. Have speech and language that is extremely limited
3. Have poorly developed fine and gross coordination skills
4. Have great difficulties learning academic skills, such as reading and writing
5. Exhibit behaviour that is immature and unpredictable
6. Have great difficulty relating to both children and adults

Autistic Spectrum Disorder

There is a very wide spectrum of abilities among autistic children. Those children are at the mild end of the autistic spectrum function at average or above-average levels intellectually and are also referred to as having Asperger's syndrome (Attwood, 2007). Children at the severe end of the autistic spectrum, who function at well below-average intellectual levels, tend to have difficulties with most aspects of life but also have certain features which distinguish them from children with other types of learning difficulties (Jones, 2002; Hull Learning Services, 2013). Most severely autistic children are educated in special schools or classes, whereas those with Asperger's syndrome attend mainstream schools (Conroy et al., 2011).

Identification

Children on the autistic spectrum typically:

1. Have delayed speech and language development, or disordered language, for example, they may echo words or phrases that they have heard
2. Show a lack of interest in relating to others, including their parents

Specific Learning Difficulty/Learning Disability (Dyslexia)

Children with specific learning difficulties, or learning disabilities, also referred to as dyslexia, can have IQ scores in the average, below-average, or above-average ranges. The distinguishing feature of these children is that there is a significant discrepancy between their level of intellectual ability and their level of academic performance (Pullen et al., 2011). Children with dyslexia have specific learning difficulties in one or more of spelling, writing, reading, and/or mathematics but can function well in other aspects of the curriculum (Kelly and Phillips, 2011; Reid, 2009). The vast majority of children with specific learning difficulties are educated in mainstream classrooms.

Identification

Children with specific learning difficulty/learning disability can have:

1. A discrepancy between their oral language skills and written work
2. Difficulties with auditory or visual processing skills

- 3.Short-term memory or sequencing problems
- 4.Problems with concentration, organization, or left-right orientation
- 5.Difficulties with phonological processing

Dyspraxia

The essential features of dyspraxia include a significant impairment in the development of coordination that significantly interferes with academic performance and activities of daily living. Children with dyspraxia can also have problems with the development of language, thinking, and organization. Dyspraxia is an increasingly common type of SEND and has been estimated to affect between 3 and 6 % of the school population. It is also known as “developmental coordination disorder” and used to be called “clumsy child syndrome” and “minimal brain dysfunction” (Everatt and McNeill, 2013; Sugden and Chambers, 2005).

Identification

- 1.Children with dyspraxia typically have:
- 2.Difficulties with fine motor skills, such as handwriting, tying shoelaces
- 3.Difficulties with gross motor skills such as locomotion, agility, and manual dexterity
- 4.Difficulties with recreational skills such as riding a bicycle and playing ball

Communication Difficulties

Communication difficulties often coexist with other disabilities, especially hearing impairment, cerebral palsy, and moderate to profound levels of learning difficulties (Kuder 2012; Loncke 2011). Thus, the majority of children with more severe degrees of speech and language difficulties are taught in special schools or special classes in mainstream schools. However, mild to moderate levels of such difficulties are common in mainstream classes.

Identification

Children with communication difficulties can have:

- 1.Articulation problems (e.g., substituting r for w in speech)
- 2.Fluency problems (e.g., stammer or stutter)
- 3.Voice disorders (e.g., hoarseness or high-pitched voice)
- 4.Delayed speech or language (e.g., in children with severe learning difficulties)
- 5.Disordered receptive or expressive language (e.g., in dyspraxia and autistic children)

DISCUSSION

English Acquisition by Language Teaching through Inclusive Education

A key component of inclusive special education is the use of teaching strategies or interventions which have strong evidence of effectiveness and the avoidance of interventions that lack evidence of effectiveness. Teachers need to be able to identify the children with special educational needs and disabilities (SEND) in their classes and follow the practical guidelines for teaching them. However, they need to go beyond this. They need to make sure that they use instructional strategies and interventions that have proven effectiveness for addressing the learning difficulties and managing the behavioural challenges which children with SEND present. This includes using interventions for facilitating the learning of academic skills such as reading, writing, and arithmetic, as well as the broader communication, social, and vocational skills necessary for independent living. It also

includes using interventions for managing behavioural difficulties at individual, small-group, and class-wide levels. Therefore, teachers need to be able to evaluate interventions, strategies, and programs in terms of the adequacy of their research evidence bases so that they can select those that are evidence-based practices and avoid those that are not. They also need to know how to overcome various barriers to the implementation of evidence-based practices in schools, as well as the key issues to be addressed in bringing about change in order to embed evidence-based practices in the culture of schools.

Cooperative Learning

Cooperative learning has been found by Hattie (2009) to be one of the most effective class-wide interventions in the field of education with an effect size of 0.59 when compared with individual learning. Cooperative learning is typically defined as the instructional use of small groups in which students work together to maximize their own and each other's learning (Johnson and Johnson 1992). Three of the major developers of cooperative learning, Johnson and Johnson (1992), Kagan (1994), and Slavin (1995), all define cooperative learning in terms which exclude simply working in small groups in order to make it clear that not all group work constitutes cooperative learning. What makes cooperative learning different from other types of group work largely lies in its two fundamental elements: positive interdependence and individual accountability. The authors above insist that the term cooperative learning can only be applied to activities where there is individual accountability and positive interdependence linked to group rewards or goals.

An important feature of cooperative learning encourages the use of small groups that have a wide range of ability within them, rather than grouping students with similar abilities together. This makes an ideal approach to use in classrooms that includes children with SEND. Moreover, it is highly compatible with the aims of inclusive special education. Therefore, as Putnam (2009, p. 93) states, "Cooperative learning, when properly implemented, is an essential approach for the inclusive classroom."

Peer Tutoring

An intervention often used within cooperative learning approaches but also an important strategy in its own right is peer tutoring. Hattie (2009) reports an effect size of 0.55 for peer tutoring, so it is clearly an intervention that has strong evidence supporting its effectiveness. Peer tutoring, also referred to as "peer-assisted learning" or "peer-mediated instruction," is a technique that can be used with individual students, small groups of students, or as a class-wide strategy. It involves children acting as tutors to other children (tutees) on a one-to-one basis under the supervision of a teacher. The format of peer tutoring varies from highly structured, with training for tutors and a prescribed procedure, through semi-structured tutoring where tutors are provided with guidance but can adapt procedures as they go, to unstructured peer tutoring in which the procedures followed by tutors are not set by teachers.

There are also many types of peer tutors including same age tutor and tutee, older tutor to younger child, more able tutor to less able child of the same age or younger, less able child as tutor to younger child, and behaviourally challenged student as tutor to younger less able child. Peer tutoring has been used to support learning across a wide range of academic curriculum areas and has been found to facilitate both cognitive and social gains, including improvements in academic achievement for a diversity of learners, in a wide range of subjects including literacy, numeracy, language arts, science, social studies, and physical and health education (Goodlad and Hirst, 1989; Topping, 2001).

Formative Assessment, Evaluation, and Feedback

Hattie (2009) considered that providing formative assessment and feedback is one of the most effective strategies for increasing children's achievement. He reported an average effect size of 0.73 for providing feedback and an average effect size of 0.90 for providing formative evaluation. These are some of the largest effect sizes he found for all the interventions he studied. Formative assessment, evaluation, and feedback are interventions in which information is collected on students' learning in order to provide frequent feedback to students and to adjust teaching strategies, as necessary, to optimize learning (Mitchell, 2014). The main purpose of providing feedback is to motivate learners by informing them how well they have done and by showing them how they can improve. Effective Teaching Strategies for Inclusive Special Education To achieve these goals, feedback should be timely, explicit, focused on strategy use rather than on the learner's ability, adjusted to the complexity of the task, provided in manageable units, and able to be used by learners (Mitchell, 2014).

Direct Instruction

The term "direct instruction" is used in various ways in the education literature and is sometimes confused with the use of didactic means of instruction such as the teacher-dominated "chalk-and-talk" approach (Rosenshine, 2008). Direct instruction is more a teaching model than an elaborated program for teaching, say, reading or mathematics. The teaching practices involved are teacher directed. It emphasizes the use of individual or small-group, face-to-face instruction by teachers using carefully designed lessons in which skills to be taught. Key Evidence-Based Practices for Inclusive Special Education are broken down into small steps, sequenced deliberately, and taught explicitly (Carnine 2006).

CONCLUSION

In a process leads to inclusive learning, the schools at central java need to take steps gradually consisting of socialization, human resources preparation, curriculum testing, need assessment and instructional method. Teachings towards students with disabilities are done in the same class along with the normal one in terms of full inclusion. It can be achieved through the addition of Special Guidance Teacher who has a duty as a consultant for the classroom both subject teachers themselves and the disabilities students.

Universitas Kristen Indonesia

ABSTRACT

In the present, one of the most current issues in EFL context is that the learning approach that must be put into account by the teacher or faculty before designing or creating a more various teaching methods or approaches in their teaching activities.

The aim of this study was to investigate the most dominant of EFL Students' learning styles preferences and to increase the teachers and faculties' awareness and understanding of the strength of learning styles in teaching and activities process. The respondents were administered a questionnaire which was adapted from Cohen, Oxford, and Chi's (2001) Learning Style Survey (LSS). To support the data, interview was also conducted to a number of respondents.

The result of data analysis showed that the primary and secondary learning styles of the students' preferences were visual and kinesthetic. Whereas auditory was the last learning style preference found in the study.

Key Words: Learning Style, Learning Style Preference, English Language Learners

INTRODUCTION

English is considered as a foreign language in Indonesian. In the current practice of Indonesian education system, formal English learning at school begins at primary or secondary level. The students usually are taught twice a week, with a time span of somewhere between one to one and a half hour per session. However, being a foreign language, English is usually not used in Indonesian students' daily life. They speak either any of Indonesian vernacular languages or Indonesian at home. Not surprisingly, teachers of English deliver the materials in Indonesian so as to make it easier for the students to understand. The difficulties in learning English arise from the fact that the Indonesian language may not apply various techniques or strategies. This often results in the students' complaint toward the situation.

Second and foreign language researchers and teachers have long been trying to develop theories about learning style as a way to find solutions to the problems faced in the teaching and learning activities. In the context of English as Foreign Language (EFL), learners are encountered with so many problems. One of them is the way the learners acquire the learning material might be different from one another. For example, some may prefer to recognize the words or material when studying, others may be interested in pictures, and the other ones may prefer to demonstrate their own rather than keeping memorizing. This can be understood since learning requires a high concentration in order to understand the concept of learning. Such condition and situation for concentrating are very much connected to learning style.

For the past few years, a number of scholars investigated the learners' learning style preferences. Hyland (1993) in his study to learners in Japan also found that the learners preferred Auditory and Tactile styles. Reid (1987) conducted a study focusing on the learners' learning style preferences. The participants of the study came from different cultures. It was found out that Korean students were more visual in learning styles preferences. Whereas, Chinese' students studying in the USA favored Kinesthetic and Tactile styles than other styles. Similarly, Peacock (2001) examined the learning style preferences of EFL and ESL students. The results of these studies also showed that the students preferred kinaesthetic learning styles above others.

There have also been a number of papers reporting some aspects of the students' perception on learning style depending upon the personal factors and their learning styles' distinctions. A number of studies (e.g. Montgomery, 1996; Dangwal & Mitra, 1999; Zapalska & Brozik, 2006; Akkoyunlu & Soyulu, 2008; Karthigeyan & Nirmala, 2013). Another study conducted by Riazzi and Riasati (2007), in their study they found out that the EFL learners preferred to be actively engaged during their study. Few number of studies have investigated the impact of learning styles in community college courses (see Jones, Reichard & Mokhtari, 2003; Terry, 2001). Even though those studies aimed to help the students or learners understand their learning style, however, up to now, little attention has not been paid concerning such study in the context of university level in Indonesia. Therefore, the present study can be one of important considerations for the teachers or faculties in providing appropriate strategies or techniques when teaching in the class.

This paper discusses the findings of a study recently done to find out the EFL students' perceptions on their learning style preferences at the English Teaching Study Program of the Faculty of Education and Teacher Training of the Christian University of Indonesia, Jakarta.

METHOD

Learning Styles

The success of learning the language does not merely depend on one aspect of the teaching and learning strategies. This is in line with Oxford (1990) who stated that "many factors affect the choice of language learning strategies among which we can name: degree of awareness, stage of learning, task requirements, teacher expectations, age, sex, nationality, general learning styles, personality traits, motivation level, and purpose for learning the language." Grasha (1996, p. 41) has defined learning style as personal qualities that influence a student's ability to acquire information, to interact with peers and the teachers, and otherwise participate in learning experiences. There are four commonly preferred learning styles, i.e. independent, dependant, collaborative, and participant. Independent - learners prefer to work alone on tasks given than with other students. (2) Dependent - learners tend to look at their teachers and friends in which they are as the source of information. (3) Collaborative - learners acquire information by sharing and working together with their teacher and friends. (4) Participant - learners actively engage in class activities and discussion. (Grasha, 1996) According to Brown (2000) learning styles is as the way in which every learner perceives and processes information in learning circumstances. He argues that learning style preference is one aspect of learning style, and refers to the choice of one learning situation or condition over another. Celcia-Murcia (2001) defines learning styles as the general approaches—for example, global or analytic, auditory or visual—that students use in acquiring a new language or in learning any other subject. The manner in which a learner perceives, interacts with, and responds to the learning environment.

In accordance with the experts' explanation, the researcher conclude that some learners have different learning styles and some others may learn best by watching and listening, others by reading, and the others learn by doing and moving hands. Therefore, it is important to take into account the students' learning styles while teaching or developing a course material. As a result, the learners may improve more on their learning achievement whenever they know their learning style. This is in line with Matthew (1996) who stated that students who learn with their preferred learning styles tend to gain more knowledge and skills as well as actively engage when taught and presented with new materials. Likewise, Stebbines (1995) said that students who know their learning style preferences are able to build their self-confidence that can reinforce their willingness to be risk-takers.

Learning Styles Models

For the past few decades, a number of researchers have constructed and designed varied learning style models and instruments assessing the learner's learning style, for example David Kolb. In his model, he categorized four types of learners, i.e. divergers, assimilators, convergers and accommodators. This model, however, focuses primarily on adult learners (Kolb, 1984). Gregorc (1985) has designed a model for learning style namely concrete-abstract and sequential-random. He further stated that one may possibly have different combination of those models such as abstract-sequential, abstract-random, concrete-sequential, concrete-random. Other scholars like Dunn & Dunn (1989) also proposed the learning style model and it concentrated on five domains: environmental, emotional, sociological, physiological and psychological containing 21 elements in those domains. Reid (1995) has developed learning style model based on how students learn best using their perceptions: visual, auditory, kinesthetic and tactile preferences and also two social aspects of learning: group and individual preferences. Given (2002) constructed a broad approach to learning styles by including five learning systems based on the brain's natural learning systems, i.e., emotional, social, cognitive, physical and reflective. Cohen, Oxford and Chi (2001) designed a Learning Style Survey (LSS) in which among the number of main aspects, it includes these three aspects, i.e., visual, auditory and kinesthetic. The aim of the LSS is to assess the students' general approach to learning and to see their overall learning style preferences.

In accordance with the definitions from the scholars previously, the present investigation the researcher has adopted Cohen, Oxford and Chi's (2001) Learning Style Survey (LSS) to identify the students learning style preference in the context of English as a Foreign Language.

The Role of Learning Styles in Teaching and Learning Process

Gilakjani (2012, p. 109) said that "knowledge of learning style also provides information to the student as to why s/he has learnt in a different way than others. It helps to control the process of learning." Since the way the learners acquire the knowledge is different from each other in the teaching and language learning process in EFL context, the teachers should not only prepare the material well but also provide good approach or strategies for their learners so that the factors influenced or the learning obstacles encountered by the learners can be reduced. This is in line with Oxford (2003, p. 1) who said that "language learning styles and strategies are among the main factors that help determine how –and how well –our students learn a second or foreign language."

Furthermore, the students may have different learning style preferences, the teachers and learners must also understand the role of learning styles as one of the keys to improving their knowledge in their study. This is in line with Csapo and Hayen (2006, p. 129) said that "understanding learning styles and the role of learning styles in the teaching/learning process is a key component in effective teaching." Additionally, it is believed that when the learners are introduced earlier with the learning styles, they may work best in their study during the teaching and learning activities. Moreover, by understanding the role of learning style, it is highly expected that they can absorb the information or knowledge given by the teacher and the teaching and learning process may be much more meaningful to both the students and the teachers. As a result, the language learning can be well achieved (cf, Choi, Lee, and Jung, 2008)

This study was carried out in Christian University of Indonesia on August-October 2016 to find out the undergraduate students' perception on their learning style preferences. The participants were 58 students of English Teaching Study Program – batch 2013-2015. The participants were administered a set of questionnaire which was adapted from Cohen, Oxford, and Chi's (2001) Learning Style Survey and consisted of 30 items (5-point Likert scale: *never*, *rarely*, *sometimes*, *often*, and *always*) was used. The questionnaire was also divided into three main categories – the first category is focusing on Visual Learning Style, the second is for Auditory

Learning Style, and the last is for Kinesthetic Learning Style. The time taking for the questionnaire lasted for seventeen minutes.

In order to support the students' perception on learning style, a focus group discussion (group interview) was conducted by inviting fifteen students who were randomly selected from different batch. The students were interviewed to obtain a more detailed description of their perceptions on learning style preferences. The interview questions were basically similar to the statements written on the questionnaires and it took about thirty five minutes to complete the interview.

Eventually, all the questionnaires were then scrutinized and to support the data, the findings of the study as well as the result of the interview were also included in the study.

DISCUSSION

The following are the results and findings of the research in which the researcher classified based on the most dominant order of occurrences namely from the highest rank to the lowest one. The findings showed that the most dominant learning styles preference is visual, followed by kinesthetic and the last is auditory. To support the data, the interview result is then included in the study.

Since the discussion covers the most preference of the respondents' learning style i.e., visual, kinesthetic and auditory, it is then presented based on the most dominant frequencies found in this study. The first learning style preference found was Visual (see Table 1).

Table 1

| No. | Visual | Respondents (N=58) | | | | |
|-----|---|--------------------|----------|-----------|-----------|-----------|
| | | never | rarely | sometimes | often | always |
| | | f (%) | f (%) | f (%) | f (%) | f (%) |
| 1 | I remember something better if I write it down. | 0 (0%) | 3 (5,2) | 20 (34,5) | 25 (43,1) | 10(17,2) |
| 2 | I take detailed notes during lectures. | 1 (1,7) | 4 (6,9) | 21 (36,2) | 23(39,7) | 9(15,5) |
| 3 | When I listen, I visualize pictures, numbers, or words in my head | 2 (3,4) | 5 (8,6) | 23 (39,7) | 16 (27,6) | 12(20,7) |
| 4 | I prefer to learn with TV or video rather than other media. | 3 (5,2) | 6 (10,3) | 25 (43,1) | 14(24,1) | 10(17,2) |
| 5 | I use color-coding to help me as I learn or work. | 5 (8,6) | 7 (12,1) | 20 (34,4) | 20(34,5) | 6 (10,3) |
| 6 | I need written directions for tasks. | 1 (1,7) | 7 (12,1) | 13 (22,4) | 24(41,3) | 13 (22,4) |
| 7 | I have to look at people to understand what they say. | 1 (1,7) | 2 (3,4) | 10 (17,2) | 27(46,6) | 18(31) |
| 8 | I understand lectures better when | 4 (6,9) | 3 (5,2) | 16 (27,6) | 23(39,6) | 12(20,7) |

| | | | | | | |
|----|---|----------|-----------|-----------|----------|-----------|
| | professors write on the board. | | | | | |
| 9 | Charts, diagrams, and maps help me understand what someone says | 5 (8,6) | 11 (18,9) | 17 (29,3) | 15(25,9) | 10(17,2) |
| 10 | I remember peoples' faces but not their names. | 7 (12,1) | 4 (6,9) | 17 (29,3) | 13(22,4) | 17 (29,3) |
| | Total of frequency | 29 | 52 | 182 | 200 | 117 |

Respondents' Visual Learning Style Preference

Table 1 illustrated the majority of the respondents' learning style preferences i.e., visual learning style. It is obviously stated that among the 10 items of visual' learning style preference statements, 200 instances were found in *always*, followed by 182 *often*, and 117 frequencies found in *sometimes*, while 52 instances were found in *rarely*, and only 29 instances were *never*. The data were supported by the respondents' interview result. When the respondents were asked whether they always learn best and take detailed notes during the lecturer or not, a respondent interviewed (R3) said, "I do take notes, but most of them are doodles and random notes from my thoughts about the lectures. I write only the most important one, even sometimes I draw image of the lectures situation." Another interviewee (R2) stated similar response, "Yes, because I usually remember something what I write besides what people say."

When asked whether they prefer looking at the teacher during the lecture to understand what he/she says, interviewee (R1) said, "Yes, I often look at teacher when I want to understand what he say and also it can help me understand the material described better." Interviewee (R5) said, "Yes, I like to see the teacher body language and at the same time I will more understand what he says."

Next, when asked whether they prefer to learn with TV or video rather than other media during the lecture, a few of interviewees (R15) said, "Yes, learning with TV or video can help me look at the people when they are speaking and it makes me understand the material well." Similar response uttered by another interviewee (R6) said, "I sometimes enjoy watching TV or video, especially learning through video showed in the class. To me, it is very helpful to learn the material from the video."

However, when asked whether charts, diagrams, and maps help them understand during lecture. Interviewee (R4) said, "I don't really think charts and diagrams can make me more understand about the material." Another interviewee (R7) said, "I can learn best by using video. I rarely learn by charts and diagrams."

There is a tendency that the most of the respondents prefer the visual learning style during the lecture and they seem to work best when it is visually provided with videos or other media to assist them in learning the material. The visual learning style preference found in the study also confirms the study carried out by Reid (1987)

Table 2

Respondents' Kinesthetic Learning Style Preference

| No. | Kinesthetic | Respondents (N=58) | | | | |
|-----|---|--------------------|-----------|-----------|-----------|-----------|
| | | never | rarely | sometimes | often | always |
| | | f (%) | f (%) | f (%) | f (%) | f (%) |
| 21 | I prefer to start doing things rather than checking the directions first. | 5 (8,6) | 11 (18,9) | 21 (36,2) | 15(25,9) | 6 (10,3) |
| 22 | I need frequent breaks when I work or study. | 0 (0%) | 1 (1,7) | 19 (32,8) | 23(39,6) | 15(25,9) |
| 23 | I need to eat something when I read or study. | 3 (5,2) | 7 (12,1) | 25 (43,1) | 13(22,4) | 10 (17,2) |
| 24 | If I have a choice between sitting and standing, I'd rather stand. | 7 (12,1) | 15(25,9) | 22(37,9) | 7 (12,1) | 7 (12,1) |
| 25 | I get nervous when I sit still too long. | 11 (18,9) | 12(20,7) | 17 (29,3) | 11 (18,9) | 7 (12,1) |
| 26 | I think better when I move around (e.g., pacing or tapping my feet). | 6 (10,3) | 6 (10,3) | 20(34,5) | 18(31) | 8(13,8) |
| 27 | I play with or bite on my pens during lectures. | 10 (17,2) | 7 (12,1) | 19 (32,8) | 13(22,4) | 9(15,5) |
| 28 | Manipulating objects helps me to remember what someone says. | 2 (3,4) | 5 (8,6) | 26(44,8) | 19 (32,8) | 6 (10,3) |
| 29 | I move my hands when I speak. | 3 (5,2) | 4 (6,9) | 9 (15,5) | 23 (39,6) | 19 (32,8) |
| 30 | I draw lots of pictures (doodles) in my notebook during lectures. | 10 (17,2) | 9 (15,5) | 21 (36,2) | 11 (18,9) | 7 (12,1) |
| | Total of frequency | 57 | 77 | 199 | 153 | 94 |

Table 2 indicated that the second learning style preference of the respondents is *Kinesthetic*. It can be seen in the total of instances that was found in *sometimes*, 199 occurrences, followed by 153 instances *often*. Next, it was found in *always* 94 instances, 77 instances were found in *rarely*, and the last, it was found in *never* 57 instances. The data were also supported by the respondents' interview result. When the respondents were asked whether or not they always get nervous when they sit too long during the lecture, a number of respondents admitted that they always get nervous when they sit too long. A respondent interviewed (R9) said, "yes, I always get nervous when I sit too long in the class. I don't like if I don't participate in the study. Besides, sitting is boring without doing anything." Another interviewee (R7) stated similar response, "Yes, because in my opinion nobody likes to sit all the time during studying. So, the teacher must make the teaching more fun and show the students with other media or new technique."

When asked whether they prefer frequent breaks when studying. Several of the respondents stated that they prefer to have more time to break when they study. Interviewee (R11) said, “Yes, I prefer to have breaks because I am often bored listening and sitting in the class during the lecture, but if I have something to do I like to study.” Another Interviewee (R6) said, “Yes, I think it depends on the class. If it is not fun and boring, I prefer to have breaks than studying in the classroom.” Next, when asked whether they prefer to move around during the lecture. 33% of the respondents said that they sometimes think better when they move around (e.g., pacing or tapping their feet). An interviewee (R11) said, “Yes, moving around the class is helpful and it helps me understand the lecture well.” Another interviewee (R2) said, “Sometimes I enjoy moving around the class while asking questions to my friends. It makes me improve not only my speaking but also my vocabulary.” In addition to this part, this study seems to confirm the study conducted by Riazi and Riasati (2007) stating that the students preferred to be actively participated during their study in the class.

Next, some of them said that they rarely check the direction in the beginning instead of starting doing things. An interviewee (R4) said, “I prefer to start doing things rather than checking the directions first. Even, when I look at the direction it is very quick.” Another interviewee (R6) said, “Yes, honestly I am always in a hurry doing things. I don’t look at the direction. Sometimes I got bad result.” The last, when asked whether or not manipulating objects helps them to remember what someone says. Surprisingly, 10% of them stated *never* enjoy it, while the rest understand it better. Interviewee (R10) said, “I don’t like people manipulating objects when studying. I understand better when the teacher just give a clear instruction.” Similar response from another interviewee (R8) said, “To me, it doesn’t make any difference. I don’t agree if people manipulate some objects can make them understand better. So I actually just need clear explanation and description.” Unlike the study by Peacock (2001) who pointed out that Kinesthetic was the first learning style preference of the learners above others, in this study, Kinesthetic was found in the second rank.

Table 3

Respondents’ Auditory Learning Style Preference

| No. | Auditory | Respondents (N=58) | | | | |
|-----|--|--------------------|-----------|-----------|-----------|-----------|
| | | never | rarely | sometimes | often | always |
| | | f (%) | f (%) | f (%) | f (%) | f (%) |
| 11 | I remember things better if I discuss them with someone. | 1 (1,7) | 2 (3,4) | 14(24,1) | 22(37,9) | 19 (32,8) |
| 12 | I prefer to learn by listening to a lecture rather than reading. | 1 (1,7) | 8(13,8) | 18(31) | 19 (32,8) | 12(20,7) |
| 13 | I need oral directions for a task. | 1 (1,7) | 5 (8,6) | 20 (34,4) | 18(31) | 14(24,1) |
| 14 | Background sound helps me think. | 2 (3,4) | 10 (17,2) | 19 (32,8) | 15(25,9) | 12(20,7) |
| 15 | I like to listen to music when I study or work. | 7 (12,1) | 11 (18,9) | 11 (18,9) | 8(13,8) | 21 (36,2) |
| 16 | I can understand what people say even when I cannot see them. | 4 (6,9) | 9(15,5) | 26(44,8) | 17 (29,3) | 2 (3,4) |
| 17 | I remember peoples’ names but not their faces. | 11 (18,9) | 12(20,7) | 21 (36,2) | 9(15,5) | 5 (8,6) |

| | | | | | | |
|----|--|---------|-----------|-----------|-----------|-----------|
| 18 | I easily remember jokes that I hear. | 1 (1,7) | 2 (3,4) | 17 (29,3) | 25 (43,1) | 13(22,4) |
| 19 | I can identify people by their voices (e.g., on the phone). | 1 (1,7) | 3 (5,2) | 18(31) | 25 (43,1) | 11 (18,9) |
| 20 | When I turn on the TV, I listen to the sound more than I watch the screen. | 2 (3,4) | 11 (18,9) | 23(39,6) | 17 (29,3) | 5 (8,6) |
| | Total of frequency | 31 | 73 | 187 | 175 | 114 |

Next, Table 3 showed that the last preference of respondents learning style is auditory. It is clearly seen in the total of occurrences of each frequency found in this study. 187 instances were found in *often*, followed by 175 instances were found in *sometimes*. Next, 114 instances were found in *always*. Whereas 73 instances were found in *rarely* and 31 instances were found in *never*. The result also indicated that the respondents tend to frequently prefer learning when auditory style is conducted. The data was supported by the respondents' interview result. When the respondents were asked whether they always learn best when listening to a lecture, a respondent interviewed (R13) said, "Yes, I prefer to listen to a lecturer rather than to read myself." Another interviewee (R8) stated similar response, "Yes, I remember things better if I listen to a lecturer' explanation."

When asked whether they prefer listening to music when they study or work. Interviewee (R7) said, "Yes, I like to listen to music very much and I often listen to music while I am studying." Interviewee (R10) said, "Yes, listening to music will improve my vocabulary in my study."

Next, when asked whether they prefer to easily recognize someone by the voice. A number of interviewees (R14) said, "Yes, I can identify people by their voices easily rather than their face." Another interviewee (R6) said, "Yes, I think it is easy to remember someone by the voice rather than their face." The other interviewee (R12) said, "Yes, listening to someone's voice is much easier than recognizing their faces."

Based on the result, it seems that a number of the respondents prefer the auditory learning style and they also have their opinion that by listening more to recorded audio, it will help them improve their pronunciation better.

In summary, it is obvious that the majority of the respondents in learning style preferences vary from one another. Therefore, as the teachers or faculties need to understand their learners' needs of learning style involving the learners' participation so that they may find their own learning style preferences to solve the problem encountered during the study. This way can also help the students know their individual learning style preferences. Moreover, by understanding the students' learning style preferences, the teachers or faculties can also help the students to be aware of their various strengths as well as improving their weaknesses during the studying or lecturing.

CONCLUSION

As the results of the study have shown that the primary and secondary learning styles of the students preferences were visual and auditory, and kinesthetic was their last learning style preference. There may be an indication that the EFL learners have their own learning style preferences and these preferences varied from one another. Therefore, it is highly important to the policy makers or teachers to integrate multiple teaching methods in teaching and learning activities. It is also important to know that by understanding the learners' predominant

learning style, the teacher must also provide learning media as the tools to make the teaching and learning activities more various. In addition, understanding the EFL learners' particular learning style may assist the teachers or faculties in making instructional strategies and is highly essential to performing better in the classroom that allow both the learners and the teachers mutually meet their needs. Lastly, incorporating or combining the learning style in a teaching can also become one of considerations for the teachers or faculties as the solution to the learners who belong to a single learning style preference so that they can see the differences in learning styles among students and improve the students' learning strategies for their successful learning. In so doing, it can also help the students to understand their learning style better that may result in the improvement of the students' academic achievement.

As the result of the study may not be implemented in other institution, a further investigation is then highly recommended. For the future research, the result of the study should deliver an important message to the teachers or faculties and academic institutions who are keen on teaching their courses in EFL environment. In other words, assessing the learning style in the context of EFL should give the teachers and faculties indication of how learning methods or new directions in the classroom should be kept developing and in big scale study for a betterment.

Appendix

Questionnaire

Questionnaire

Dear Students,

I would like to conduct a research study in learning style. This study aims at investigating and assessing your general approach to learning English as a Foreign Language (EFL). It does not predict your behavior in every instance, but it is a clear indication of your overall style preferences. In addition, regarding your personal data will be kept confidentially.

Personal Identity:

Gender: Male Female

Age: _____ years old

Batch: 2015/2016 2014/2015 2103/2014 2012/2013

Instruction:

For each item, circle the response that represents your approach. Complete all items. There are 3 major activities representing 3 different aspects of your learning style. When you read the statements, try to think about what you usually do when learning. Do not spend too much time on any item—indicate your immediate feeling and move on to the next item.

For each item, circle your response:

0 = Never

1 = Rarely

2 = Sometimes

3 = Often

4 = Always

Part A

| No | Statement | Frequency | | | | |
|----|--|-----------|---|---|---|---|
| | | 0 | 1 | 2 | 3 | 4 |
| 1. | I remember something better if I write it down. | 0 | 1 | 2 | 3 | 4 |
| 2. | I take detailed notes during lectures. | 0 | 1 | 2 | 3 | 4 |
| 3. | When I listen, I visualize pictures, numbers, or words in my head. | 0 | 1 | 2 | 3 | 4 |
| 4. | I prefer to learn with TV or video rather than other media. | 0 | 1 | 2 | 3 | 4 |
| 5. | I use color-coding to help me as I learn or work. | 0 | 1 | 2 | 3 | 4 |
| 6. | I need written directions for tasks. | 0 | 1 | 2 | 3 | 4 |
| 7. | I have to look at people to understand what they say. | 0 | 1 | 2 | 3 | 4 |
| 8. | I understand lectures better when professors write on the board. | 0 | 1 | 2 | 3 | 4 |

| | | | | | | |
|-----|--|---|---|---|---|---|
| 9. | Charts, diagrams, and maps help me understand what someone says. | 0 | 1 | 2 | 3 | 4 |
| 10. | I remember peoples' faces but not their names. | 0 | 1 | 2 | 3 | 4 |
| | Total | | | | | |

Part B

| No | Statement | Frequency | | | | |
|-----|--|-----------|---|---|---|---|
| | | 0 | 1 | 2 | 3 | 4 |
| 11. | I remember things better if I discuss them with someone. | 0 | 1 | 2 | 3 | 4 |
| 12. | I prefer to learn by listening to a lecture rather than reading. | 0 | 1 | 2 | 3 | 4 |
| 13. | I need oral directions for a task. | 0 | 1 | 2 | 3 | 4 |
| 14. | Background sound helps me think. | 0 | 1 | 2 | 3 | 4 |
| 15. | I like to listen to music when I study or work. | 0 | 1 | 2 | 3 | 4 |
| 16. | I can understand what people say even when I cannot see them. | 0 | 1 | 2 | 3 | 4 |
| 17. | I remember peoples' names but not their faces. | 0 | 1 | 2 | 3 | 4 |
| 18. | I easily remember jokes that I hear. | 0 | 1 | 2 | 3 | 4 |
| 19. | I can identify people by their voices (e.g., on the phone). | 0 | 1 | 2 | 3 | 4 |
| 20. | When I turn on the TV, I listen to the sound more than I watch the screen. | 0 | 1 | 2 | 3 | 4 |
| | Total | | | | | |

Part C

| No | Statement | Frequency | | | | |
|-----|---|-----------|---|---|---|---|
| | | 0 | 1 | 2 | 3 | 4 |
| 21. | I prefer to start doing things rather than checking the directions first. | 0 | 1 | 2 | 3 | 4 |

| | | | | | | |
|-----|--|---|---|---|---|---|
| 22. | I need frequent breaks when I work or study. | 0 | 1 | 2 | 3 | 4 |
| 23. | I need to eat something when I read or study. | 0 | 1 | 2 | 3 | 4 |
| 24. | If I have a choice between sitting and standing, I'd rather stand. | 0 | 1 | 2 | 3 | 4 |
| 25. | I get nervous when I sit still too long. | 0 | 1 | 2 | 3 | 4 |
| 26. | I think better when I move around (e.g., pacing or tapping my feet). | 0 | 1 | 2 | 3 | 4 |
| 27. | I play with or bite on my pens during lectures. | 0 | 1 | 2 | 3 | 4 |
| 28. | Manipulating objects helps me to remember what someone says. | 0 | 1 | 2 | 3 | 4 |
| 29. | I move my hands when I speak. | 0 | 1 | 2 | 3 | 4 |
| 30. | I draw lots of pictures (doodles) in my notebook during lectures. | 0 | 1 | 2 | 3 | 4 |
| | Total | | | | | |

Thank you for your participation!

Can the Dissemination of Election Program Increase Voter Participation? A Quasi-Experiment Study

3 University of Indonesia, inelnelly@yahoo.com

ABSTRACT

Many surveys that have been conducted since the holding of elections in the reform era show that the level of community participation in elections is not optimal and tended to decrease. Factors that influence the level of participation of which is the difficulty in using their voting rights either because of the geographical aspects, the registration process, as well as the allocation of time, and low public political literacy.

The aim of this study is to demonstrate empirically that an effective promotion of election program can increase the level of voter participation. The dependent variable being tested is the tendency of voters to participate, the reason for participation, and the level of confidence in their choices. By using the method of quasi-experiments conducted on control and experimental classes, as well as the manipulation of the promotion of election program on participants, the research objectives can be proved.

Research results prove empirically that there are significant differences between the control and experimental classes for all variables tested. These results will form the basis of recommendations for the government to manage the promotion of election more effectively.

Key Words: *promotion of election, voter participation, quasi-experiment*

1. INTRODUCTION

Political participation is generally understood as an activity of an individual to influence political policy, nor state or government. Most people see political participation as the activity of a person or group to participate actively in political life. Hibert McClosky argued that political participation is a voluntary activity of citizens through which they take part in the process of selecting the ruler, and directly or indirectly in the process of formation (Schlozman, et al., 1999). Democratic countries generally assume that the higher number of people's participation in elections (voter turnout) shows democracy in the country is already well underway. In another context, the high level of participation also shows that citizens engage in political activities, both active and passive. High level of participation in elections also shows the extent to which the electoral process run according to the principles of freedom, where citizens have the right and sovereignty given the freedom to determine their choices. Instead, there is an assumption that the low level of political participation in a country considered to be less good for democracy because it shows a lack of attention and concern of citizens on political issues.

Low voter turnout in legislative elections can be caused by many factors. The general public tend to argue that the low public awareness of the importance of the elections is one of the factors causing low voter participation in elections. It is often considered to occur because of dissemination conducted by the organizers of the election is not effective, as well the absence of the role of political parties in political education. However, do not rule out the possibility that the administration of a less than optimal electoral legislative and presidential elections, make people question the performance of organizer and even be indifferent to the elections.

Some of these factors (e.g.: ignorance of voters about the registration process, the voting process, execution time, the benefits of elections, and the track record of the candidates to be selected) can be classified more specifically in one category, and other factors are grouped into categories else anyway. To maximize the result, some obstacles can be addressed by an effective dissemination of the electoral program.

This study will demonstrate empirically the hypothesis that the tendency of people to participate in elections, the reason to participate/not to participate, and the level of confidence in the selection will be different if there is an effective dissemination of election program.

2. METHODS

Studies conducted by Teixeira in 1992, Dalton in 1999, and Norris in 1999 mentioned that the low turnout in addition to the issue of freedom, it is also possible for the issue of discontent citizens (Franklin, 2004). While the experience of developing countries such as those in Brazil and also in some cases in Indonesia, the behavior of not to vote is in a variety of forms, among others are spoil ballot papers and ballot paper. Such behavior is regarded as a protest against the government, political parties and democratic institutions. The presence or absence of voters can be influenced by institutional factors due to the behavior of not voting as a structural product (Power & Robert, 1995).

Feddersen and Sandroni (2006) stated that the success in the implementation of direct elections can be measured by the level of community participation in the electoral process. If the level of community participation as a shareholder voting rights is high, then it can be proved that the democratic process is running well because the voters have the understanding to cast their votes in choosing their representatives in accordance with the political aspirations (Feddersen & Sandroni, 2006).

Previous researches have been conducted by several researchers stating that one of the reasons why voters did not participate in the elections was due to lack of confidence of voters against candidates who will be selected (Center of Political Research Indonesian Institute of Sciences & General Election Commission, 2014; General Election Commission Gorontalo Province, 2015; General Election Commission West Nusa Tenggara Province, 2015). In addition, voters' misunderstanding about the election process may also lead to lack of motivation of voters to participate (General Election Commission Gorontalo Province, 2015; General Election Commission West Nusa Tenggara Province, 2015). Source and method of how voter get information about electoral process is through the medium of billboards/banners/leaflets/pamphlets/brochures distributed by the election organizers (82%) than through dissemination either conducted by electoral participants, the Commission, the government, the company that they work for, NGO/organizations (General Election Commission West Nusa Tenggara Province, 2015). It shows that dissemination is an important factor needed by voters in particular who really want to participate in the election.

Research on the level of community volunteerism in electoral politics in Majalengka also shows one of the influential factors is political consciousness, which is defined as awareness of their rights and obligations as citizens as measured from the respondents' knowledge of their rights and obligations as citizens (General Election Commission Majalengka Regency, 2016). Knowledge is referred to in the above description, among others, can be understood as information obtained related citizen electoral process and electoral candidates.

This study is classified as a quasi-experimental research (quasi experiment), the design of this study uses a Posttest-Only Control Design. The schematic design of this study is as follows (Sekaran, 2003)

Table 1 Posttest only with experimental and control groups

| Group | Treatment | Outcome |
|--------------------|-----------|----------------|
| Experimental group | X | O ₁ |
| Control group | | O ₂ |

Treatment effect = (O₁ – O₂)

Note:

O₁: the measurement results of the treated group (with treatment).

O₂: the measurement results of the untreated group (without treatment).

Effect of treatment: O₁ – O₂.

Variables in the study can be explained as follows:

1. The promotion of the biodata and track record of the candidates to be selected as a free or independent variable (X).
2. Questionnaire scores given by participants as a form of opinion/their perceptions about electoral activities as bound or dependent variable (Y), which consists of a variable of tendency to participate in general elections (Y₁), reason to participate/not to participate in the election (Y₂), and the level of confidence in the candidates to be selected (Y₃).
3. In order to examine the causal effect of the independent variable on the dependent variable, MANIPULATION (TREATMENT) was conducted. Manipulation means making levels of different independent variables to assess their impact (treatment effects) on the dependent variable. The manipulation was whether or not the dissemination of electoral mechanisms and the dissemination of information about potential contestants who participated in the election were implemented or not.

Researchers divided the participants into two (2) classes, they are those who run the electoral process by getting manipulation (treatment) dissemination of the election called as **experimental class**, and participants who run the electoral process without getting manipulation (treatment) are called as the **control class**. The number of participants in the experimental class is 43 people, while the number of participants in the control group is 41 people. Table 2 describes the participants in the experimental study both in the experimental class and control class.

Table 2 Participant of Experiment Study

| | Number of Participant |
|----------------------|-----------------------|
| Control Class | |
| Female | 26 |
| Male | 15 |

| | |
|-------------------------|-----------|
| Total | 41 |
| Experiment Class | |
| Female | 26 |
| Male | 17 |
| Total | 43 |

Source: Processed data

Samples of the control and experimental classes that have been tested for normality and homogeneity of variance, were analyzed by t test (t-test) using a significance level of 5%, and statistically formulated as follows: $H_0 : \mu_1 = \mu_2$ against $H_1 : \mu_1 \neq \mu_2$.

3. DISCUSSION

The results of the study with an experimental method are described below.

3.1. Descriptive Analysis of the Control Class and Experiment Class

Table 3 Tendency to participate in the election

| Preference | Control | Experiment |
|---------------------|---------|------------|
| Very Uninterested | 1 | 0 |
| Uninterested | 3 | 0 |
| Less Interested | 16 | 0 |
| Neutral | 5 | 3 |
| Somewhat Interested | 9 | 6 |
| Interested | 7 | 29 |
| Very Interested | 0 | 5 |
| Total | 41 | 43 |

Source: Processed data

Table 4 Reason to participate/not to participate in the election

| Preference | Control | Experiment |
|------------------|---------|------------|
| Very Not Helpful | 1 | 0 |
| Not Helpful | 1 | 0 |
| Less Helpful | 4 | 0 |
| Indifferent | 18 | 3 |
| Somewhat Helpful | 8 | 1 |
| Helpful | 9 | 25 |
| Very Helpful | 0 | 14 |
| Total | 41 | 43 |

Source: Processed data

Table 5 Level of confidence on the candidates to be selected

| Preference | Control | Experiment |
|--------------------|---------|------------|
| Very Not Confident | 3 | 0 |
| Not Confident | 5 | 0 |
| Less Confident | 14 | 2 |
| Neutral | 7 | 1 |
| Somewhat Confident | 8 | 12 |
| Confident | 4 | 22 |
| Very Confident | 0 | 6 |
| Total | 41 | 43 |

Source: Processed data

Table 6 Attitude in Elections

| Attitude | Control | Experiment |
|-------------|---------|------------|
| To Vote | 16 | 43 |
| Not To Vote | 25 | 0 |

Source: Processed data

Table 3 shows that in the control class, the tendency for voters to participate in the election varies for each choice of attitude provided in the questionnaire, while in the experimental class, it is obvious that more than 50% of participants expressed their interest and are keen to participate in elections after they acquire the dissemination process and the profile of the candidates. Similarly, in Table 4, no participants in the experimental class stating it is not very helpful, not useful, nor less than helpful. While in the control group, more than 50% of participants found their reasons for participating/not participating because the elections were not very helpful, not useful, or indifferent. Table 5 shows that in the control class, none of the participants felt very confident with the candidates to be selected and only four people who claim they are confident, in contrast with the experimental class which shows a total of 28 people feel confident or very confident in their choices. Table 6 shows the attitude in the selection of study participants is very different. Manipulation (treatment) clearly shows that the effect is not the same between the control and experimental classes. Presentation of data experimental results is shown in Figure 1.

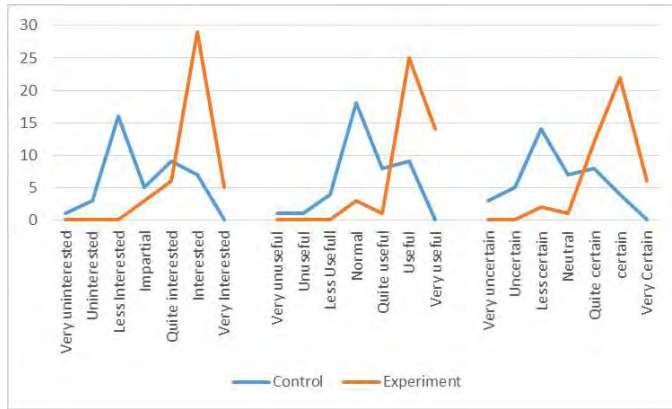

Figure 1: Comparison of the Number of Participants' Perception by Variable

The data collected show differences in the distribution of data from the control and experimental classes, based on the graph in Figure 1 showing the data distribution of the control class that tends to be normal, while the data distribution from the experimental class tends to be dominant to the right (negative skewness).

3.2. Differential Test (t-test)

On normality test using Jarque-Berra method in the control class, it is proved that all variables have normal distribution as shown in table 7 Jarque-Berra probability value is greater than 0.05 (respectively is 0.4156; 0.3993; 0.6249), according to previous predictions by using the graph in Figure 1 which states that the data tends to be normally distributed (symmetrical).

Table 7 Jarque-Berra Normality Test for Control Class

| | | | |
|-------------|-----------|-------------|----------|
| Mean | 3.951220 | | |
| Median | 4.000000 | | |
| Maximum | 6.000000 | | |
| Minimum | 1.000000 | | |
| Std. Dev. | 1.359250 | | |
| Skewness | 0.088891 | | |
| Kurtosis | 2.001858 | | |
| Jarque-Bera | 1.755986 | | |
| Probability | 0.415616 | | |
| Mean | 4.414634 | Mean | 3.585366 |
| Median | 4.000000 | Median | 3.000000 |
| Maximum | 6.000000 | Maximum | 6.000000 |
| Minimum | 1.000000 | Minimum | 1.000000 |
| Std. Dev. | 1.161370 | Std. Dev. | 1.395987 |
| Skewness | -0.469113 | Skewness | 0.045462 |
| Kurtosis | 3.440987 | Kurtosis | 2.263649 |
| Jarque-Bera | 1.836012 | Jarque-Bera | 0.940402 |
| Probability | 0.399315 | Probability | 0.624877 |

However, in the experimental class, not all variables are proved to be normally distributed (Table 8) due to the probability of the Jarque-Berra that has a value of less than 0.05 (in succession is 0.015543; 0.000372; 0.003945). This also is in accordance with previous predictions by using the graph in Figure 1 which states that the data distribution tends to be not normal (left skewed) or asymmetrical.

Table 8 Jarque-Berra Normality Test for Experiment Class

| | | | |
|-------------|-----------|-------------|-----------|
| Mean | 5.837209 | | |
| Median | 6.000000 | | |
| Maximum | 7.000000 | | |
| Minimum | 4.000000 | | |
| Std. Dev. | 0.721448 | | |
| Skewness | -0.907083 | | |
| Kurtosis | 4.164980 | | |
| Jarque-Bera | 8.328340 | | |
| Probability | 0.015543 | | |
| Mean | 6.162791 | Mean | 5.674419 |
| Median | 6.000000 | Median | 6.000000 |
| Maximum | 7.000000 | Maximum | 7.000000 |
| Minimum | 4.000000 | Minimum | 3.000000 |
| Std. Dev. | 0.784682 | Std. Dev. | 0.918615 |
| Skewness | -1.187493 | Skewness | -0.991351 |
| Kurtosis | 4.781523 | Kurtosis | 4.499251 |
| Jarque-Bera | 15.79243 | Jarque-Bera | 11.07045 |
| Probability | 0.000372 | Probability | 0.003945 |

On the homogeneity test, the variance is presented in table 9.

Table 9 Variance Test (F-test)

| Variable | F | P(F<=f) one-tail |
|---|---------|------------------|
| Tendency to participate | 3.54968 | 0.00004 |
| Reason for participating/ not participating | 2.19056 | 0.00668 |
| Level of confidence on the candidates | 2.30938 | 0.00419 |

Source: Processed data

Table 9 shows a significant proof that three dependent variables tested in this study have a common value of the variance between the control class and experimental class (shown with a value of P (F <= f) one-tail that is less than 0.05). It follows the differential test used in analyzing the data which is sample t-test assuming equal variances.

Table 10 T-Test Results: *Two-Sample Assuming Equal Variances*

| Variables | P(T<=t) one-tail | P(T<=t) two-tail |
|---|------------------|------------------|
| Tendency to participate | 0.00000 | 0.00000 |
| Reason for participating/ not participating | 0.00000 | 0.00000 |
| Level of confidence on the candidates | 0.00000 | 0.00000 |

Source: Processed data

Results of data processing show that the three variables tested proved to be significantly different between the control group and the experimental class. It proves empirically that manipulation (treatment) has an impact on participant responses on the variables tested. Table 10 shows that there are significant differences between the control group and the experimental group for testing the variable of participation tendency in the election, the variable of reason for participating/not participating in the election, and the variable of level of confidence in the candidates to be selected.

Based on surveys by CSIS and Cyrus Network, in the post-reform era, namely 1999 elections, the level of participation in Indonesia reached 92.6 percent and 7.3 percent Abstentions. Poor participation rates occurred in the 2004 elections, which fell by 84.1 per cent and the number of abstentions increased to 15.9 percent. In the first round of the presidential election, voter participation rate reached 78.2 percent and 21.8 percent Abstentions, while in the second round of the presidential election, voter participation rate reached 76.6 percent and 23.4 percent abstentions. In the 2009 legislative elections, voter participation rate decreased at only 70.9 percent and the number of abstentions increased to 29.1 percent. In the 2009 presidential election, voter participation rate reached 71.7 percent and the number of abstentions reached 28.3 percent. In the 2014 general election, voter participation rate was 75.2 percent, while voters who did not exercise their voting rights reached 24.8 percent (Pratomo & Firdaus, 2014).

The aforesaid discussion suggests that the problems of elections in Indonesia at this time, in addition to the number of high cost, is still low community participation in elections, so that the election results are not yet fully reflect the aspirations and the voice of Indonesian people. Various efforts have been made by the government including through the dissemination process throughout the election process. But this still does not show the expected results, therefore, the government need to make more detailed arrangements on the mechanisms ranging from the pre-election, during the election, the calculation of election results and the possibility of a lawsuit on the election results. Settings on the process of dissemination and media of the prospective contestants can increase voter participation to participate in the election. Voters who are confident and fully understand the mechanisms in the electoral process as well prospective contestants will be chosen, are predicted to be more interested in participating in the election.

Democracy, Is It Ideal or Just Another Things to Deal?

Agoeng Widyatmoko and Diah Marfi Anita

ABSTRACT

Nowadays many countries have a democratic system on ruling their government. Some said it's the best system to choose to run for a better nation. United States of America always said as one of the best democratic country in the world. But, is that true? On their latest presidential election, Trump win. Many are shocked. There are so many demonstrations happened across US or even the world to protest Trump winning. But, US system said, winner takes all. It showed that democratic system has many things to concerned. Indonesia has the same challenge. Since democratic system with one man one vote applied, there are so many corrupt elected leaders punished by the law. Around ¾ elected leaders tend to corrupt during their ruling period. Do we have to deal with a democratic system like this or should we back to our last period before reformation era? This is our chance to change, and choose, what kind of better state management to be applied in our country.

INTRODUCTION

US America President election already done. Trump wins! Hillary, lose! This is unpredictable to many Americans. But American democracy system have rules to follow, winner takes all. That's why Trump can win this election. But then, many Americans feel disappointed. Some are shocked! Many demonstrations happened around America, and even in some rest of the world to protest Trump winning. By this situation, we are facing one question, is democracy the best political system in the world? Is democracy fair enough? Can democracy guarantee the chosen people are the best person to lead the country? If yes, how come it followed by some unsatisfied group protesters?

Those questions are very important to be asked in terms of political system across the world. Why? Think about this. When democracy using votes to win—one head one vote—there's no difference between those who educated enough and those are don't. The people that know a lot about the good or bad about the candidate are the same value of vote with the people that not knowing at all about the candidate. Is it fair enough to make it as the same voter's quality? This might be one thing that we should criticize about democracy system. But we have to admit, the fact shows us almost the rest of the world using democracy system in their countries. In 1900, there were only 10 countries that were democracies. Yet, within around 2014, there are only 71 countries that not using democratic system.¹ So it's around 2/3 countries that using democratic system.

DISCUSSION

How democracy can be used by almost all countries in the world? Before we talk more about the controversy of democracy, we'll discuss about the democracy system in the world. According to the Lecture at Hilla University for Humanistic Studies (2004), democracy consists of four basic elements: 1. A political system for choosing and replacing the government through free and fair elections; 2. The active participation of the people, as citizens, in politics and civic life; 3. Protection of the human rights of all citizens; 4. A rule of law, in which the laws and procedures apply equally to all citizens.² Seems very ideal right? That's why most of all countries adopted this system. Human right and fairness becoming the key points that make democracy system looks perfect. But history shows us different ways. In many countries that using one man one vote or winners takes all system, the democratic resulting many problems. Especially, in countries that having some issues such

¹ <https://www.reference.com/government-politics/countries-democracy-8f9e05f7d96a76e7#>, accessed on Dec 6, 2016

² <https://web.stanford.edu/~ldiamond/iraq/WhaIsDemocracy012004.htm>, accessed on Dec 6, 2016

as cleavages, a malfunctioning economy, unfavorable history, governmental instability, and foreign involvement (Diskin, Diskin, Yazan: 2005).³

Ideal or the real deal?

Back to US Presidential election that using winners takes all system, beside Hillary vs Trump case, we can setback to the case of George W. Bush winning in 2000 elections. George W. Bush won due to the electoral system, although his opponent got the majority of votes. Is that seems pretty fair enough? Is it fair to “sacrifice” well educated voters compared to those who don’t really understand about the candidate?

Maybe we can use this analogy. Imagine 100 people having stocks or share in a company. But not all of them having equivalent portions of stocks. 49 people have majority stocks, 51 people have very limited stocks. One day, that company want to make a big deal to decide what’s the best for the company. The peoples are agreed to vote with one man one vote system. 47 amongst 49 that having majority stocks agree to A decision. 2 of them rejected and choose B decision. But, those 2 people influencing 51 people that have minority share to follow them. They’re having some deals to support each other to make the B decision win. Of course, like idioms says, *there’s no free lunch* to support that plan. So, with 51 people minority stock owner plus 2 from majority stock owners, B decision win the vote. Is it sounds fair enough? The analogy symbolize majority owner is person with well-educated background. The minority are those who don’t know much about the candidate or the decision to be chose. But since the system using one man one vote, all being treated equal. That’s what happened in democratic system.

CONCLUSSION

That’s very common in a way of democratic country when trying to make their policy or some rules. The idea of democracy seems ideal when it gives people the right to choose their own government. But after the chosen candidate didn’t meet the need of the society, people are now having realized that their vote doesn’t make a difference. No wonder now the people are more and more stay away from the polls.

To understand more about democratic is best or worst political system still need deeper investigation and research. But from the facts that happened in many countries around the world, we should consider more, that we need to find other political system that can be more fair and bring more good to many people.

ABSTRACT

The Indonesian government have published a lot of policies related to the prevention and combating of corruption. The policy aims to realize the state civil apparatus as agents of change in the prevention of corruption and improving public services. Various policies have been issued including the Presidential Regulation No. 55 Year 2012 on the Long Term National Strategy for the Prevention and Combating of Corruption (Stranas PPK) 2012- 2025 and The Midle Term of Stranas PPK in 2012-2014. The various action plans implemented by government through bureaucratic reform policy, the enforcement of the law against corruption, public information disclosure policy, Government of Internal Control System (SPIP), and formed the supervisory agencies. Besides, the Indonesian government is also implementing an open democracy by giving freedom for non-government organizations to participate in government oversight.

This research was conducted in order to determine the success of the policy of the Government of Indonesia in efforts to combat corruption. The method used is a qualitative method using primary and secondary data, as the materials used in the research analysis.

The results of the study illustrate that the policy of the government in efforts to combat corruption showed a positive progress from time to time. This is shown by the decreasing number of bribery and corruption in the public sector (comparison years 2014 to 2015). Reduction in corruption cases also occur in various of Indonesia's government agencies such as the Parliament, the police, the judiciary, the central government and local governments. Despite the decline in the index of perception of corruption, but the public perception of corruption in the public sector have not shown satisfactory results. This is because Indonesian people still assume that legal investigations related to corruption within government agencies do not reach a satisfactory conclusion. Various factors inhibiting to combat corruption, because the government has not been firmly in the law enforcement against corruption, the amount of political pressure on efforts to combat corruption, and public participation in efforts to eradicate corruption is not significant.

Key Words: government policies, combating of corruption, corruption perception index.

INTRODUCTION

Corruption is deviant behavior by a group of people who have power and have an access to public resources, and then fully utilized for personal interests and enrich themselves. Corruption conducted by the political elite, high-level officials and the agents of the government even considered a common and reasonable measures to establish a culture in public sector organizations as well as pervasive in public life. Since the winds of change blew into the political system in conjunction with the movement of people demanding government

reforms, people demanded the law enforcement for the perpetrators of corruption and demanded the government agencies in carrying out the administration of government and public services by applying the principles of transparency, accountability and good governance without corruption. Combating corruption has become a national issue by involving all elements of government, private and community, because the negative impact of corruption had led to inefficiency development both from a quality and quantity, the inability of the government in fulfilling the needs of society both in the field of education, health, and welfare.

Anti-corruption efforts undertaken by the government continuously by issuing a series of policies including Presidential Regulation No. 55 Year 2012 on the National Strategy for the Prevention and Combating of Corruption Long Term Year 2012-2025. Through this regulation, the President instructed all regions to implement the National Strategy on the Prevention and Combating of Corruption. The indicators of the success of anti-corruption efforts not only improve the corruption perception index but also implement the National Integrity System.

Even though the government has adopted a policy on the prevention and combating corruption, but in fact, the Indonesian government is not also able to discourage the perpetrators to stop such unlawful acts. According to the data base of the outcome of corruption cases in the Supreme Court⁴, accumulation of corruption that has been decided by the court from 2001 to 2015 as many as 2321 cases. Losses suffered by the state due to corruption of the year 2001-2015 reached Rp. 203, 9 trillion⁵. Based on the achievement of combating corruption, Indonesia is still classified as a country with a very high level of corruption. In 2014, Indonesia was ranked 107 of 175 countries in the world, Indonesia Corruption Perception Index with a score of 34 on a scale of 0-100. Based on these facts indicate that the policy of prevention and fighting corruption is still not effective in combating corruption in Indonesia. The efforts to eradicate corruption by Indonesia government moves very slowly, therefore, through this research, aims to determine the factors inhibiting the implementation of policies to prevent and combat corruption in Indonesia.

THEORITICAL REVIEW

Corruption is the abuse of authority and an act of unlawful marked by fraud, lies, irregularities committed for the benefit of oneself or others, which result from such actions could harm the state and society. According to Transparency International, as cited by Kuncoro (2013), corruption is the behavior of public officials, politicians, civil servants who improperly or illegally enrich themselves or other people who have a close relationship with a way of abusing power or authority that public has entrusted to him. According to Shah and Shacter (2004), there are three kinds of corruption. The first type, grand corruption is the theft of resources and public nature of the large amount of misused by public officials who have the authority. Second type, state or regulatory capture is a form of corruption where public institutions in collaboration with the private sector collusion action for personal gain. Third type, bureaucratic or petty corruption that acts of public officials who abuse their power only to accept small bribes or kickbacks or illegal fees. Grand corruption and state or regulatory capture is usually done by the political elite and state officials who abuse their powers to take advantage of these resources belong to the state to enrich themselves, and accepting bribes from big companies nationally and internationally to create a favorable policy entrepreneurs. The third type of corruption is usually done by government employees in the course of his public services such as administration of residence, school affairs, paying taxes, taking care of licensing, as well as health services.

There are several theories that are used to understand why someone doing corruption. The theory of utilitarianism, for example, This theory explains that the reason for someone to do something due consideration of the advantages or benefits derived. For them, the act of corruption can be justified because it provides great benefits at a time of happiness. To pursue this happiness, according to Nugroho (2012), then the person is willing to take any action in order to obtain the happiness. According to Al Khair (2014), the theory of principal-agent relationship may also explain the motivation of a person committing corruption. Citing the opinion of Sri Mulyani Indrawati (2010) and Moe (1984), Al-Khair explained that the theory of the relationship principal-agent in the corruption caused assymmetric information, where government officials and / or the political elite has more information than the people (as principal). This makes the information held by public officials and political elites use it for its own interest and thus potentially lead to moral hazard or dysfunctional behavior. Similarly with legislators on behalf of private interests as the interests of the people. Klitgaard (2014) says that corruption followed the power, when there is a monopoly of power in which a person is given such great power

⁴ The Database of corruption can be accessed at mahkamahagung.go.id

⁵ according to a study that released by the Laboratory of Economics, University of Gadjah Mada in 2016

(discretion of the official) but is not accompanied by the ability of the supervisory apparatus (minus accountability), then there will be corruption. According to Bologne (1987) explains that corruption occurs because of four components, namely greedy, opportunity, needs, and exposes. Exposes, is the component that related to the consequences received by a person on the act of doing that which in the context of corruption, abuse of authority behavior occurs because there is no deterrent effect arising from the sentence given to perpetrators of corruption. the consequences received by a person on the act of doing that which in the context of corruption, abuse of authority behavior occurs because there is no deterrent effect arising from the sentence given to perpetrators of corruption. However, according to Cooper Drury, et al (2006) expressed the opinion that the democratic system adopted by a country can at least reduce the level and composition of corruption.

RESEARCH METHOD

This study uses a qualitative method by conducting the description and analysis of the effectiveness of the implementation of this policy in terms of Presidential Decree No. 55 Year 2012 on a national strategy to prevent and eradicate corruption in the long term from 2012 to 2025, also describes the factors inhibiting the successful implementation of the policy.

This research technique is desk study using secondary data and literature studies. Some data on indicators of successful eradication of corruption obtained through credible sources such as data Corruption Perception Index, Worldwide Governance Indicators of the World Bank, Index of the Law Enforcement Commission, Anti-Corruption Behavior Index of the Central Bureau of Statistics, and data from previous research results that are relevant to the research topic. Various data were analyzed and compared with each other, as well as the use of relevant theories in order to obtain an explanation of the realities of corruption, as well as answer research questions.

RESULT OF RESEARCH

The corruption case is still continue in Indonesian, the government issued Presidential Regulation No. 55 Year 2012 on the National Strategy for the Prevention and Combating of Corruption Long Term Years 2012-2025 and 2012-2014 Medium Term. With this policy, the President instructed all heads of provincial and district / city to implement this program. The regulation formulated the six strategies to prevent and eradicate corruption, especially in governance and public services. Six of these strategies, are as follows:

1. Prevention Strategy, aims to narrow down the chances of corruption on governance and society concerning public services and case handling clean of corruption. Through this strategy is expected to realize public services and tackling corruption more transparent, accountable and clean. The success of this strategy is measured by the index of corruption prevention and Ease of Doing Business rankings (EoDB) issued by the World Bank.
2. Law Enforcement Strategy, aims to resolve the case of corruption consistently and based on positive law in order to restore public trust in impartial and transparent law enforcement. The success of this strategy is measured by the index of law enforcement that includes five sub an indicator ie the percentage of complaints resolution corruption, corruption inquiry completion percentage, percentage of completion of the investigation, conviction rate, and the percentage of completion of the execution of the verdict.
3. Harmonization of Legislation Strategy, which aims to establish and revise legislation of anti-corruption and in other strategic areas that could potentially open up opportunities for corruption. This strategy is implemented in order to create a harmonious order of regulation and adequate for the prevention and eradication of corruption. In addition, this strategy also aims to achieve compatibility between the provisions of the UNCAC with the applicable law in Indonesia. Indicators of success in achieving this strategy lies in the improved condition of the inconsistency of legislation in Indonesia in order to provide an adequate legal basis for the prevention and eradication of corruption. The success of this strategy is measured by the percentage of compatibility between the legislation of anti-corruption Indonesia with the rules of UNCAC.
4. International cooperation strategy and the rescue of state assets from corruption offenses, aims to increase the return on assets to compensate countries that pursued through increased international cooperation in the prevention and fight against corruption, especially with the filing of mutual assistance on criminal matters, enhancement of intensive coordination between enforcement agencies, and increasing the capacity of officers of law enforcement agencies. The successful implementation of this strategy is measured by the percentage of the level of international cooperation in the field of corruption and percentage of rescue assets from corruption.
5. Education and anti-corruption culture strategies, aims to strengthen each individual in making ethical decisions and integrity, create a culture of zero tolerance towards corruption. Through the

implementation of this strategy, people are expected to become active agents of prevention and fight against corruption so as to influence ethical decisions and integrity in the social environment, as well as the establishment of the community with a culture of integrity in the various lines of life of the nation. The successful of strategy implementation is measured by the Index of Conduct Anti-Corruption. High or low of index figures show the value of anti-corruption culture that is increasingly internalized and embodied in the actual behavior of each individual to combat corruption.

6. Strategy of mechanism in implementation of reporting corruption eradication, aims to ensure the availability of regular reports and information related to the implementation of the provisions of UNCAC and the prevention and eradication of corruption in Indonesia and its achievements. The successful implementation of this strategy is measured from the Stakeholder Satisfaction Index on the Prevention and Combating of Corruption Reports. This index is measured from the two elements of the utilization Preventing and Combating Corruption report and the timeliness of the report publication.

For in sum, the success of the national strategy to eradicate corruption is characterized by the following indicators:

Table 1. Success Indicators of Prevention and Anti-Corruption Strategy

| No | Strategy | Success Indicators |
|----|--|--|
| 1 | Prevention Strategy | Control of Corruption (CoC) Index |
| | | Ease of Doing Business (EoDB) |
| 2 | Law Enforcement | Indeks Penegakan Hukum Tipikor |
| 3 | Harmonization of legislation in the field of combating corruption | The percentage of compatibility between the legislation of anti-corruption Indonesia with the rules of UNCAC |
| 4 | International cooperation strategy and the rescue of state assets from corruption offenses | the percentage level of international cooperation in the field of corruption |
| | | percentage of rescue assets from corruption |
| 5 | Education and the establishment of the Anti-Corruption Culture | The behavior of Anti-Corruption Index |
| 6 | Mechanism on Reporting of Anti-Corruption Implementation | Stakeholder Satisfaction Index of Preventing and combating corruption report |

Source : Part of Explanation of Presidential Regulation No. 55 Year 2012

To support the success of the national strategy, The Corruption Eradication Commission (KPK) has compiled a Road Map for Combating Corruption in Indonesia in the years 2011-2023. The success of corruption eradication program measured by indicators of increasing in the Corruption Perception Index (CPI) and the National Integrity System (NIS). The use of the two indicators is considered as an indicator of corruption eradication that globally enforced. Corruption Perceptions Index shows government's progress in fighting corruption. CPI uses a scale of 0-100. The higher the CPI index shows that country is free of corruption action, conversely the lower index indicates more corrupt country. While the concept of National Integrity System which has been designed by the Commission is a long-term target that aims to build a system that applies nationally. National Integrity System was made in order to eradicate corruption in an integrated manner involving all the essential pillars of the nation. National Integrity System, describes the input, process and output not only oriented to outcome and impact. As for the achievements of the national strategy for the prevention and eradication of corruption that has been done by the government of Indonesia, are as follows:

1. Implementation Strategy of The Corruption Prevention

The success of corruption prevention strategy is measured by two indicators are Ease of Doing Bussiness and Control of Corruption Index. Since the policy implementation of prevention and eradication of corruption in 2012, ease of doing business rankings in Indonesia has increased very significantly. Earlier in 2012, Indonesia was ranked 116, then in 2013 and 2014, ease of doing business rankings in Indonesia decreased to rank 120. Decrease in ease of doing business ranking is presumably caused by the condition of the political crunch. Political crunch occurred during the presidential and legislative elections are usually accompanied by

conditions of political instability and the threat of disruption of national security. These conditions make investors feel safe to invest in Indonesia. But these ratings then increased again after political conditions and government assessed stable. Then, rating ease of doing business in Indonesia in year 2016 sharp shot to number 91. Indonesia is considered as a safe country and support the ease of investing. Ease of doing business index in Indonesia has increased, earlier in 2016, the index value ease of doing business in Indonesia amounted to 58.51, in 2017, ease of doing business index increased to 61.52.

Graph 1. Ease of Doing Bussiness Rank in Indonesia
Source: www.tradingeconomics.com

However, despite the ease of doing business rankings in Indonesia has increased, but the index of corruption prevention not increased significantly. It can be seen from the graph 2 below.

Graph 2. Control of Corruption Index 2012- 2015
Source: World Government Index, World Bank, 2015

Seen from the two graphs above, shows that despite the ease of doing business in Indonesia has become wide open, but the index of the control of corruption in Indonesia is still low.

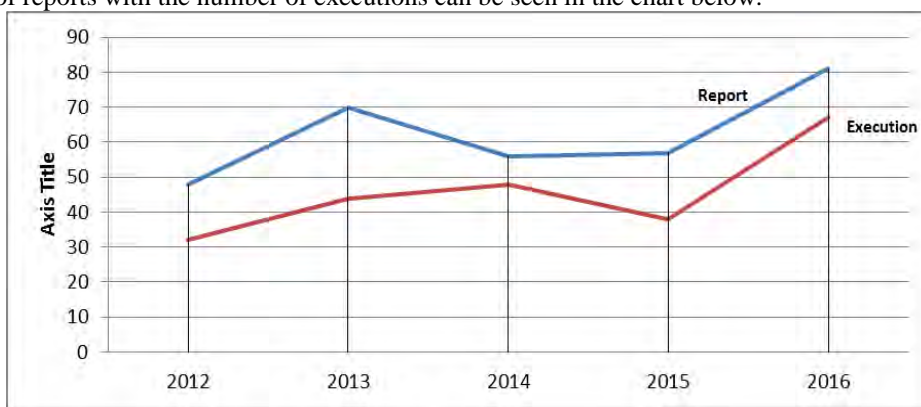

2. Strategy Implementation of Law Enforcement Against Corruption

Index corruption prevention in the first strategy could be correlated with the index Law Enforcement. Score of law enforcement index in 2014 amounted to 61.80%, decreased compared to the year 2013, which amounted to 67.95%. The graph below shows the indonesia index of Law Enforcement in 2013-2014.

Graph 3. Indonesia Law Enforcement Index in 2013-2014
Source: KPK, 2015

Indonesia of law enforcement index decreased in 2014, this is because the number of cases that were executed in the courts remained much lower than the number of reports of corruption filed. Comparison between the number of reports with the number of executions can be seen in the chart below.

Graph 4. Comparison Between Number of Corruption Reports and Cases in Execution
Source : KPK, 2016

Although the percentage of cases that were executed are lower than the number of reports, but at least the anti-corruption efforts undertaken by the commission has opened the eyes of us, that how bad the apparatus mentality and high-ranking officials who have abused their authority at the expense of the public interest. Prosecution of cases of corruption committed by the commission has given an overview map of corruption based on the number of cases handled as follows:

Graph 5. Number of Cases handled by KPK
Source: KPK, 2012

The forms of corruption as shown in the graph above, proves the Shah and Shacter (2004) opinion, that the authority possessed by a number of state officials, politicians and officials turned out to be misused to steal

public resources, bribery, to cooperate with businessmen in project collusion and making favorable policy for the entrepreneurs.

Corruption Map that released by KPK can also be viewed from the perspective of government territory. Based on its territory, the most corrupt government agencies is the central government with the number of cases amounted to 54.1%, rather than local governments as much as 35%. At the local government level, West Java Province was rated as the most corrupt local government (9.4%), DKI Jakarta (6,9%), and East Borneo (4,7%). As for the perpetrators of corruption handled by the KPK is dominated by officials from state officials and politicians at the central government level. The perpetrators of corruption can be seen in the following chart below:

Graph 6. Perpetrators of corruption handled by KPK
Source : KPK, 2015

Based on the corruption map, the fact remains that corruption was more prevalent in the central government level than the local government, this indicates that government management is not good. Ideally, the central government should be able to supervise and be a role model that shows better performance to local governments. The effort to fight against corruption will be difficult, if the central government actually has become a lawbreaker and played with the policies of their own making.

3. Strategy Implementation of Harmonization of Laws and Regulations

In order to the bureaucracy reform, the eradication of corruption starting from public sector organizations. To realize the governance and public services can not simply rely on the law to eradicate corruption, it should also be strengthened by the existence of other legislation that synergy and harmony in order to prevent acts of corruption that increasingly massive and systematic. Some of the legislation that supports the prevention and eradication of corruption in the public sector is as follows:

- Act No. 28 of 1999 on the Implementation of the Clean State of Collusion, Corruption and Nepotism
- Act No. 31 of 1999 On the Eradication of Corruption
- Act No. 20 of 2001 on the amendment of Act No. 31 of 1999 On the Eradication of Corruption
- Act No. 30 of 2002 on the Corruption Eradication Commission
- Act No. 25 of 2003 on money laundering
- Act No. 1 of 2006 on Mutual Assistance Criminal Matters
- Act No. 7 of 2006 on the Ratification of the United Nation Convention Against Corruption in 2003
- Act No. 13 of 2006 on the Witness and Victim Protection
- Act No. 14 of 2008 on Public Information Transparency
- Act No. 25 of 2009 on Public Service
- Act No. 46 of 2009 on the Corruption Court
- Act No. 8 of 2010 on Money Laundering
- Act No. 6 of 2011 on Immigration

- Government Regulation No. 71 Year 2000 on the Implementation of Public Participation and the Award in the Prevention and Combating of Corruption
- Government Regulation No. 110 of 2000 on the Financial Position of Parliament
- Government Regulation No. 24 of 2004 on the Financial Protocol and the Chairman and Members of Parliament
- Government Regulation No. 19 of 2000 on the Joint Team of Corruption Eradication
- Presidential Regulation No. 55 Year 2012 on the National Strategy for the Prevention and Combating of Corruption Long Term Years 2012-2025 and 2012-2014 Medium Term.
- Presidential Decree No. 13 of 2007 on concerning the composition of the Selection Committee, the Selection and Implementation Procedures Candidates Militancies Witness and Victim Protection Agency
- Presidential Decree No. 11 of 2005 on Corruption Eradication Team
- Presidential Decree No. 7 years 2007 on the establishment of the Selection Committee Members and Candidates Witness and Victim Protection Agency
- Presidential instruction No. 5 of 2004 on accelerating the eradication of corruption
- Presidential instruction No. 4 In 1971, About the Supervision Order Administration in Government Institutions
- Presidential instruction No. 9 In 1977, About the Conduct of Operations
- Presidential Instruction No. 7 of 1999 on Government Agencies Performance Accountability
- A presidential instruction No. 1 of 1971, concerning the coordination of combating counterfeiting
- Instruction President of the Republic of Indonesia Number 10 Year 2016 About the Action Prevention and Fight against Corruption Year 2016-2017

4. Strategy Implementation of Work International Cooperation and Rescue Assets From Corruption Offenses Results

In terms of implementation of international cooperation, KPK has cooperated synergistically with anti-corruption agencies from 26 countries, both in Asia and Europe. The international agencies are the MACC Malaysia, SFO Britain, AGD Australia, ACB Brunei Darussalam, CPIB Singapore, NACC Thailand and MOS China, and recently KPK also cooperates with Anti-Corruption Commission (ACC) from Bangladesh. The cooperation with international institutions is done by considering that corruption classified as an extraordinary crime that may occur across the boundaries of a country. Therefore, the handling of corruption must also be carried out in an extraordinary way and involves a lot of anti-corruption agencies in various countries. The cooperation is not only in the scope of capacity building and sharing of best practices of both state agencies, but also encompasses the field of prevention and prosecution⁶.

Related to efforts of corruption eradication, KPK has made a number of seizures of state assets that have been taken by the perpetrators of corruption. According to the study that has been done by the laboratory of Economic Sciences of University of Gadjah Mada, despite the efforts to combat the corruption in the public sector throughout the year 2001-2015 increased, but the results of the anti-corruption efforts on the outcomes of return loss to the state was not significant. Indemnification of the state collected from fines and confiscation of assets only amounted to 21.26 trillion, whereas the value of state losses due to corruption in Indonesia during 2001-2015 reached Rp. 203.9 Trillion. It's mean the efforts to combat corruption, rescue assets and indemnification of the country amounted to only 10.42%, while 89.58% of state losses due to corruption according to results of this study should be borne by society. The results of studies of economics laboratory, University of Gadjah Mada showed that administration of legal sanctions for those convicted of corruption tend to 'sharp downward but blunt upward' this means firmness in enforcing the law on corruption applies only to petty corruption with corruption scores below 10 million were convicted on average 3,428% of the losses that were created, while the grand corruption with a value above 25 billion convicted of corruption on average 8.3% of the losses (Pradiptyo, 2016). According to Rimawan Pradiptyo as quoted by Al-Khair (2014) that the the maximum punishment for a criminal offense of corruption actually stimulates the perpetrators to perform the calculation of the degree of corruption more favorable, the deterrent effect of the maximum penalty under the law is getting weaker in line with inflation in Indonesia that continues to increase. That is the cause of how corruption in Indonesia is very difficult to eradicate, because the punishment given to the corruptors are much lighter than the profit earned. Punishment to the perpetrators of corruption in fact never provide a deterrent effect.

⁶ <http://mediaindonesia.com/news/read/67133/kpk-perkuat-kerja-sama-internasional/2016-09-15>

5. Strategy Implementation of Anti-Corruption Education and Culture

Conduct Anti-Corruption Index is to measure anti-corruption culture among the individuals of society and governance. It is expected the anti-corruption culture will be manifested in actual behavior of individuals to fight corruption. According to the survey conducted by the Central Bureau of Statistics (BPS), The Indonesia of Anti-Corruption Behavior Index from 2012 to 2015, changes up and down. The following data shows the anti-corruption behavior index in Indonesia.

Table 2. The Anti-Corruption Behavior Index In Indonesia, 2012-2015

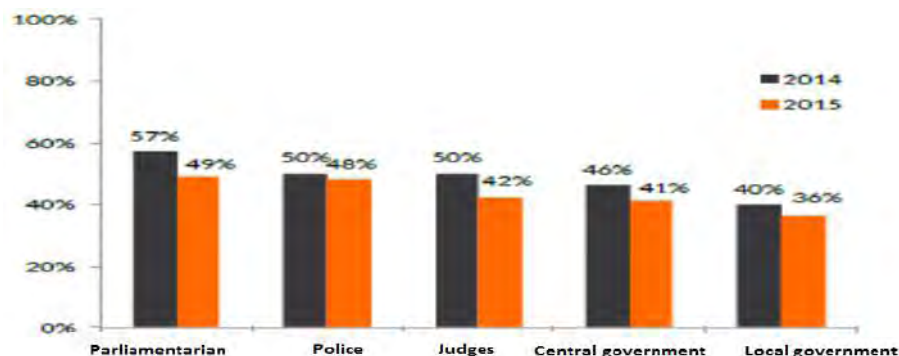

| Dimension | 2012 | 2013 | 2014 | 2015 |

Source: BPS, 2016

Based on the data in the table above, shows that the government's efforts in providing anti-corruption education does have a positive impact on the corruption perception index. Based on perception, people demonstrate behaviors that corruption is bad and harmful actions. While perceptions of corruption based on demographic characteristics indicate that the urban community more understand about the dangers of corruption than rural communities. Based on a gender perspective, shows that the understanding of man on the impact of corruption is better than women. Based on education level, public perception comparisons by level of education shows that higher levels of education tend to show understanding of the anti-corruption better than people who are low education. Unfortunately, a high level of understanding of corruption have no impact on anti-corruption behavior (that seen from the experience index). It is explains that an individual's understanding of corruption do not affect behavior in the society life daily. These data indicate that the empowerment and building awareness to the public and government officials about the dangers of corruption has not managed to provide any positive impact in the formation of anti-corruption behavior.

6. Strategy Implementation of Mechanism on Reporting of Anti-Corruption Implementation

The sixth strategy implementation is shown from the level of community satisfaction with the performance and reporting of the Commission towards the prevention and eradication of corruption. Although this community satisfaction index has not been released, however surveys on public perception related to efforts in corruption eradication and a decrease in cases of corruption in the public sector showed the following.

Graph 7. Public opinion about the perception of corruption in Government Institutions 2014-2015

Source : World Justice Project, 2015

Then the public perception about the execution of corruption showed an increase in public trust to law enforcement agencies, although according to the public that number of corruption execution is almost comparable with the investigation of corruption cases that do not reach any conclusions or law enforcement authorities tended to ignore the lawsuit on the reports of corruption. Data on the public perception of the court and the imposition of legal sanctions against perpetrators of corruption can be seen in the following data.

Graph 8. Public Perception on Corruption Court

Based on the data that has been shown in the framework of the implementation of the strategy of prevention and eradication of corruption is still the inability of the Indonesian government to take a firm action against the perpetrators of corruption. Inability of the government in fighting corruption, at least influence the corruption perception index and indonesia rank position at the international level in efforts to combat corruption. Despite efforts to combat corruption is considered slow, but Indonesia's achievements in cracking and combating corruption provides a positive change. This result needs to be appreciated properly.

Graph 9. Indonesia Corruption Perception Index, 2005-2015
Source: transparencyinternational.com

Based on the data above, Indonesia's Corruption Perception Index experienced the largest increase in the Association of Southeast Asian Nations (ASEAN) in 2015. However, the corruption perception index is still low, amounting to 3.6 (2015) of the maximum value 10. Achievement of this corruption perception index did not reach the targeted rate in 2014, which is the target CPI score is 5.0.

From the results of the study, as already described above indicate that the implementation of the strategy to eradicate corruption it can be said not succeeded yet effectively. Cooper Drury, et al (2006) expressed the opinion that the democratic system adopted by a country can at least reduce the level and composition of corruption. In fact, although in Indonesia has been implementing a democratic system but corruption remains high and difficult to overcome. It shows a paradox of democracy, because democracy does not materialize in reality essentially when people are completely helpless in controlling and critical of the performance of government.

Some of the factors inhibiting the strategy of prevention and eradication of corruption in Indonesia, are as follows:

- The reality of prevention and eradication of corruption in Indonesia has not shown full commitment of the government to crack down firmly and give severe penalties to the perpetrators of corruption, especially grand corruption perpetrators. The result of a court decision, the maximum punishment given to the petty corruption rather than the perpetrators who commit grand corruption. Legal sanctions that imposed for corruption did not create a deterrent effect. Low penalties for corruption actually stimulate the actors to perform the calculation of the degree of corruption that more advantageous.
- Indecision law enforcement in penalizing to the corruptor is due to the political pressure on efforts to combat corruption. Corruption actually occur at the level of central government rather than local government. the perpetrators of the corruption at the national level it is at the strategic level as policy makers (such as members of Parliament and state officials).
- Low involvement of community in efforts to combat corruption. This is evident from the experience index that indicates people are still permissive towards corruption.
- Perpetrators of grand corruption, with financial abundance is still owned, it still has power in society, it also shows a weak social sanctions in support of corruption eradication in Indonesia.

CONCLUSION

The results of this study indicate that government policies in an effort to eradicate corruption from time to time experienced a positive change. This is demonstrated by the successful eradication of corruption among the decreasing number of bribery and corruption in the public sector (comparison 2014-2015). Figures decrease in corruption cases also occur in various government agencies such as the Parliament, the police, the judiciary, the central government and local governments. Despite a decrease in corruption perception index, but the public perception of corruption in the public sector have not shown satisfactory results. This is because people still assume that legal investigations related to corruption within government agencies do not reach a

satisfactory conclusion. Berbagai faktor penghambat dalam upaya penegakan korupsi diantaranya belum kuatnya ketegasan pemerintah dalam penegakan korupsi, there is political pressure on efforts to combat corruption, and active public participation in efforts to eradicate corruption is still low.

Related to the policy on combating and prosecuting corruption, the government needs to do a number of actions in combating corruption by changing policies which contain strict sanctions by way of impoverishment the perpetrators of corruption and his family, sanction of dismissal as government apparatus, doing social work, up to the death penalty, so the imposition of severe sanctions can provide a deterrent effect both for the perpetrators of corruption itself, the perpetrator's family, and the environment. Development of a national integrity system is not enough to just law enforcement, controlling, create organization value and individual value such as competition, accountability, and ethic code, but also the government should strive to instill values that keep the organization climate of anti-corruption in the public sector, values development of anti corruption in public life has been instilled early, such as in basic education level. Increased of public of empowerment and awareness to participate in supervising and criticizing the government's performance. Community participation in the eradication of corruption as an early warning system and become the important part of the national integrity system.

Compliance on Fragmented Regimes: A Southeast Asian Perspective on International Refugee Law

Dio Herdiawan Tobing

Research Manager, ASEAN Studies Center, Faculty of Social and Political Sciences, Universitas Gadjah Mada, dio.herdiawan.t@mail.ugm.ac.id

ABSTRACT

This article critically examines Southeast Asian countries', in particular Indonesia, Malaysia, and Thailand, perspective towards international refugee law. This research will do so by identifying their compliance towards international norms and existing national law or policies towards refugees. The argument of this article is carried by the perspective of Constructivism which claims that the construction of international norm is shared by states individually. Subsequently, the regional perspective towards international refugee law is shared by majority of Southeast Asian countries. Therefore, it is arguable that to understand Southeast Asian countries' respect or compliance to international refugee law should not be based upon the parameter of whether they sign the 1951 Convention Relating to the States of Refugees, but whether they comply towards the essence of international norm and values concerning refugees.

Key Words: *ASEAN, compliance, customary international law, international law, Southeast Asia, refugee law,*

INTRODUCTION

The mass influx of refugee has posed a challenge throughout the Southeast Asian region. Started with the Indo-Chinese in 1970s (Petcharamesree, 2016) until today, yet, neither any instruments for refugee were created under the umbrella of the Southeast Asian regionalism, the Association of Southeast Asian Nations (ASEAN). Only in 1996, ASEAN and UNHCR created a framework to deal with the mass influx of refugees, known as the Comprehensive Action Plan (Petcharamesree, 2016). Many have agreed that Southeast Asian regionalism always failing to deal with human rights issues (Acharya, 2009), especially when it touches the layer of human security. This includes the idea of promotion and protection of fragile communities in Southeast Asia, in particular those who have no legal status as citizens of any countries in Southeast Asia. In regards to this problem, scholars and media tend to frame that the inability of the Southeast Asian countries to comply towards the international norm by responding or protecting refugees and asylum-seekers is carried by the fact the there are only two ASEAN members have ratified the 1951 Convention Relating to the Status of Refugees (hereafter referred to as the 1951 Refugee Convention), without analyzing further the reasons behind why the chose not to become the parties of this particular convention.

Sara E. Davies is at her best revealing the underlying factors of Southeast Asian countries' rationale of not ratifying the International Refugee Convention 1951, which is the the incoherence of the convention with Southeast Asian's preference. Derived from similar realization, this article will critically explore the perspective of the Southeast Asian countries — Indonesia, Malaysia, and Thailand, towards the the 1951 Refugee

Convention, and argues that in understanding Southeast Asian's compliance towards the international refugee law, should not be based upon their ratifications on this Convention, but it is necessary to explore how these particular countries are following the essential norm of the formation of this convention, namely the principle of non-refoulement and how their national policies are in line with this notion. To this end, this article suggest ratification is not the only exclusive indicator of compliance, but also international norms and values. In line with this argument, Indonesia, Malaysia, and Thailand are picked for countries sample because they are the countries that mostly troubled by the refugee crisis. Furthermore, this article will analyze their domestic policy concerning asylum-seekers or refugees.

METHOD

To conduct this research constructivism perspective in international relations is chosen to understand reaction and relation between domestic and international norms. As general idea of a Constructivist suggests that domestic norm plays an important role in the making of shared or common norms in international sphere, therefore, it is also suggested that in international organizations, instruments, and laws, norms are institutionalized (Burchill, 2005). Therefore, norm plays an important role in international cooperation. In the case of ASEAN, institutionalized structure shapes collective identity of its member states as the agent of norm its creates collective identity.

Additionally, apart form the utilization of constructivism perspective, this research will explore existing literatures, including government instruments and reports to look at the existing policies of countries in Southeast Asia regarding refugee. Books and journals are also included to reflect the existing research that have been conducted in the past. Lastly, this research will explore all data using qualitative method to support the argument of this article.

NORMS OF THE SOUTHEAST ASIAN COUNTRIES

From ASEAN, the Southeast Asian countries enshrine their similarity, norm, and values. Their similarities include how the Southeast Asian countries perception towards international legal regime is constructed. Now, to describe how the Southeast Asian countries interact one and another, should we take note on how ASEAN adopts the ASEAN Way. Constructivists explain that in International Relations, culture, ideas, institutions, discourse, and social norms play in shaping identity and influencing behavior (Brunnée & Toope). This also applies in the case of ASEAN, how the Southeast Asian countries share similar norms and identity. The inter-subjectivity of Southeast Asian norms plays an important role in 'the ASEAN Way' construction (Haacke, 2003). The Southeast Asian countries are being overshadowed by the experience of colonialism and western imperialism, which thus, leads to the production of the ASEAN Way, a norm that objects formal and sanction-modelled approach in dispute settlement.

The ASEAN Way is a norm shared by Southeast Asian countries which highly emphasizes on informality, dialogue, non-interference, and consensus-building. Speaking of its legality, this norm is stated in the Treaty of Amity and Cooperation (TAC) which was adopted by ASEAN members in 1976. Art. 2(c) of the TAC, emphasizes that,

In their relations with one another, the High Contracting Parties shall be guided by the following fundamental principles...non-interference in the internal affairs of one another;

Reflected from art. 2(c) of the TAC, non-interference principle is chosen by ASEAN member states as a pathway in their working method when dealing with issues present within the territory, including refugees. However, in the practice of Southeast Asian diplomacy, scholar like Soesastro describes that the Southeast Asian norms in ASEAN includes the principle of seeking agreement and harmony, the principle of sensitivity, politeness, non-confrontation and agreeability, the principle of quiet, private and elitist diplomacy versus public washing of dirty linen, and the principle of being non-Cartesian, and non-legalistic (Soesastro, 1995). This phenomenon helps us to understand that we must refrain a formal, strict, and legalistic approach in understanding Southeast Asia. These norms shall be the guiding principles of interaction between Southeast Asian countries, and perspective to understand how these countries are perceiving regional law-making process and international law. Critically, ‘consultation’ and ‘informal’ approach in Southeast Asian countries’ interaction, shall become the main reason why there is only a few legally-binding documents created in the sphere of ASEAN.

For Southeast Asian countries, the process to codify regulations into a legally-binding instrument is the highest stage of policy-formulation. The issues must be very critical that Southeast Asian countries decide to create a legally-binding instrument to tackle the problem. Since its inception, there are only a few top legally-binding instruments ever made in Southeast Asia related to security issues, for instance, Treaty of Amity and Cooperation (TAC), ASEAN Agreement on Transboundary Haze Pollution, Southeast Asia Nuclear Weapon Free Zone (SEANWFZ), the ASEAN Convention on Counter Terrorism, and ASEAN Convention Against Trafficking in Persons Especially Women and Children.

The process of issue securitization should be on top of all ASEAN members’ priority in order for them to draft legally-binding instruments. The problem is not all issues are considered urgent to be institutionalized into treaties. Although Southeast Asian countries have experienced the mass-influx of refugee in the region since many years ago, the securitization of ‘refugee’ in Southeast Asia has never been successful. This issue is not yet formally ‘securitized’ because the role of ASEAN chairman affects the setting of agendas, by linking different issues to create a package that gives benefits for all the involved stakeholders (Pitakdumrongrit, 2016). Major example can be taken when several proposals on the South China Sea issues in 2011 and 2012 were rejected by the ASEAN Chair, seeing that the proposal made by the Philippines would escalates the territorial dispute and the proposal submitted by Philippines and Vietnam was also rejected because it was seen by the chair as not preferred the initial interests of the Philippines and Vietnam (Suzuki, 2014). Southeast Asian countries only decide to uphold their norms on informality, consultation, dialogue, and most importantly, bilateral or multilateral constructive engagement in dealing with refugee problem. Nevertheless, by not codifying regulations into treaties or not ratifying the existing treaties does not reflect their dishonor or violate the existing international norm or values.

SOUTHEAST ASIA AND INTERNATIONAL REFUGEE LAW

The 1951 Refugee Convention becomes cornerstone in the making of an international set of standards on defining ‘refugee’, that James Read refers it as the ‘Magna Carta for Refugees’. In the making of the 1951 Refugee Convention, the concern of the instrument has changed, from ‘protection’ under the League of Nations to ‘individual’ in the 1951 Refugee Convention. This ‘individual’ approach was developed to promote the political objectives of the West to erase the perception on mass prosecution towards refugees by states the West were in combat with (Davies, 2002). In article 1(A) of the 1951 Convention, the term of refugee only put concern to those who needs protection from the state. The assumption of refugees under the 1951 Convention was only based on fear of political prosecution and did not include other concerns, such as conflict and natural disasters (Schmeidl, 2001). The formation of refugee law initially was designed by European states for European refugees and was accompanied by a substantive and procedural narrowing of the underlying

commitment for protection (Hathaway, 1991). And this is not in line with the experience of the Third World, especially the Southeast Asian region which did not necessarily become colonizer during the colonial or imperialist era. The existing international refugee legal regime is not universal, it only offers a small protection towards minority of involuntary migrants (Goodwin-Gill, 1988). It is true that in Asia, Africa, and South Africa people fled seeking refuge, but the driving factors are ethnic conflicts, man-made environmental disasters, natural disasters, coups, and interstate conflicts (Davies, 2002). For the Third World, particularly Southeast Asia, the international refugee law is a discourse dominated by the West, as the West always excluded Asia and the developing countries in forming the international refugee law. This might be the underlying reason of why there are only two Southeast Asian countries have ratified the 1951 Refugee Convention, as the accommodated interest codified in the 1951 Convention only represents the powerful minority states (Hathaway, 1991).

It is difficult to set an compliance indicator based on the Southeast Asian countries' ratification of the 1951 Convention because it does not make any sense. First, the Southeast Asian countries do not prefer formal and legally-binding instrument to pressure their actions towards refugees and secondly, they do not see the urgency to ratify the 1951 Refugee Convention as none of its provisions is in accordance with the experience of the Southeast Asian countries. This article suggests that to look whether the Southeast Asian countries comply towards the international refugee law, should we look at the essence of the refugee law itself. According to the United Nations High Commissioner for Refugees (UNHCR), the principle of non-refoulement shall be the cornerstone of the international refugee protection (UNHCR, 2006). It is embedded on Art. 33(1) of the 1951 Refugee Convention, stated that;

“No Contracting State shall expel or return (“refouler”) a refugee in any manner whatsoever to the frontiers of territories where his [or her] life or freedom would be threatened on account of his [or her] race, religion, nationality, membership of a particular social group or political opinion.”

Art. 33(1) may not bound those who are not becoming parties to the convention, however, the principle of non-refoulement is still binding because of its nature as customary international law. The UNHCR is of the view that the principle of non-refoulement satisfies the elements criteria for customary international law, which are states practice and *opinio juris* (UNHCR, 1994). As such, it is binding all States including those who are not parties to the 1951 Refugee Convention. The principle binds all states, including all subdivisions and organs thereof and other persons exercising governmental authority and will engage the responsibility of States in circumstances (Lauterpacht & Bethlehem, 2003). Even for some, the nature of non-refoulement in international law stands as *jus cogens* a norm that cannot be reduced in any circumstances. Jean Allain is one of those who advocates non-refoulement as *jus cogens*. He demonstrated his argument through the practice of states in Latin America, the work of scholars, and to Executive Committee conclusions, which he describes all of them as relevant because they reflect the consensus of states (Allain, 2001).

A VIEW ON SOUTHEAST ASIAN COMPLIANCE

Despite the longstanding debate between the stand of non-refoulement in international law, we can now see at least the principle of non-refoulement stands as international custom, which binds all states without their ratification status in the 1951 Refugee Convention. To this end, we shall now explore how the Southeast Asian countries comply towards the international norm and practice. This section, thus, focuses to explore how Southeast Asian countries compliance towards international refugee law be widely understood. First, this section explores to what extent the Southeast Asian countries exercise the principle of non-refoulement and secondly, how they adopt this norm in their national policy, particularly for Indonesia, Malaysia, and Thailand.

Southeast Asian countries have shown their respect on the international refugee law through their adherence towards the principle of non-refoulement since the Indo-Chinese refugee crisis by playing important role as temporary host during the crisis. During this time there were mixed of reports from the UNHCR related to the offer of cooperation offered by Southeast Asian countries (Davies, 2008). At this time, the UNHCR face difficulty in ensuring people seeking asylum by boat would be rescued at sea provided with asylum upon their arrival in Southeast Asian region (UNGA, 1975). However, seeing this difficulty, Asian countries responded by acceptance of those populations for temporary asylum (UNHCR, 1975). In response to this, the UNHCR decided to create a Protection Officer position in Bangkok, due to the fact that thousands of Indo-Chinese asylum seekers needed refuge and refugee status in third countries (UNHCR, 1975). Southeast Asian countries are countries that act only as countries for temporary settlement. They insisted that permanent resettlement of refugee within their borders was not possible and desirable and they provide temporary settlement if the international community agreed to provide permanent resettlement places (Davies, 2008). The Southeast Asian region is already a high population and birth rate, and during this era the fact that Southeast Asian countries were developing and needed all possible resources for their population, their need for political stability, the centrality of security considerations in the handling of any problems and for Southeast Asia, it was their best to assist in providing temporary settlement (Soeprapto, 1975).

This is a norm construction process which leads to the emergence Southeast Asian countries' self-identification that they play role as transit countries. Southeast Asian countries today still identify themselves as transit countries, in particularly Indonesia, Malaysia, and Thailand (Missbach, 2015). Their respect and obedience towards the principle of non-refoulement shall be reflected from their action in providing temporary settlement. In Malaysia the number of boat people had risen from 1.157 early 1977 to 6974 by December 1977. Malaysia also received 90.000 Filipinos seeking refuge in the country. For Indonesia there were 43.000 boats arrival in the mid of 1979 and for Thailand, the government provided temporary settlement for 25.000 population in the beginning of 1977 and was increased to 113.300 by mid 1978 before being moved to resettlement countries (UNGA, 1979). These evidences show a least reflecting that these countries comply towards the principle of non-refoulement, and to date only, there are approximately 4,806 refugees and 7,135 asylum seekers currently in Indonesia, 132,838 refugees including 57,500 unregistered persons originating from Myanmar living in the refugee camps and 8,336 asylum seekers in Thailand, and 98,207 refugees and 47,352 asylum seekers in Malaysia (Missbach, 2015).

Now to see whether such practice conducted by these states are adopted into their domestic law, it is necessary to look up their domestic law. Firstly, for Indonesia, the adoption of the principle of non-refoulement is enshrined through the Letter of the Directorate General of Immigration No. F-IL.01.10-1297. This particular policy enshrined in the document does not show any specific reference to refugees. The government of Indonesia only refers a single treatment towards illegal migrants, asylum-seekers, or refugees as aliens. Art. 1 of the Directorate General Letter declares that;

“Generally denies any aliens entering the Indonesia territory which does not meet the requirements according to the applicable regulations.”

This policy was made to respond towards illegal migrants coming from South Asia, however in general, the government of Indonesia rejects any aliens coming to the country, yet exceptions were given to those who are looking for asylum and any treatment towards refugees or persons seeking asylum is being referred to the UNHCR office in Indonesia as the government partner in dealing with refugees. Furthermore, every asylum-seekers who arrived in Indonesia after 18 March 1989 are subject to screening process by the P3V, a national body responsible for the administration of refugees where the UNHCR takes part on screening process as well (Davies, 2008).

The signing of Presidential Decree No. 125/2016 also plays an important role to identify Indonesia's effort to obey and respect the principle of non-refoulement. Although it has not yet become Indonesian law, the

decreed provides framework on how Indonesian government should act when asylum-seekers and refugees are found within the country. For Indonesia, this decree is significantly important because it unifies fragmented approach in each government institution in Indonesia. Thus since the enactment of this decree government institutions in Indonesia will have a centered and uniform perspective on refugees' treatment.

In Malaysia, during the Indo-Chinese refugee crisis, Malaysia accepted most of the boat people and refugees in total (Robinson, 1998). Malaysia's generous action during the Indo-China refugee crisis was appraised by the UNHCR. In Malaysia too, the process of asylum-seeker or refugee determination is selected on case by case basis by the UNHCR. The selected bureaucracy taking concern on refugee issue in Malaysia falls under The National Task Force VII, consisting of military, police, and immigration officials. The UNHCR will present and assist the government during the interview sessions of the asylum-seekers or refugees. For Malaysia the government does not generally deport individuals recognized as persons of concern by the UNHCR and does not impede any humanitarian organizations from assisting refugees (Kaur, 2007). Malaysia has no mechanism for granting asylum or registering refugee populations, all the operations are being conducted with the government cooperation together with the UNHCR office in Malaysia (Kaur, 2007).

In Thailand refugees are mostly considered as illegal immigrants and thus cannot enjoy their rights in which they are entitled to, under international law and mostly seen as threats towards the Thai society (Larsson, 2008). However, under Thai domestic law, the term refugee can closely be referred as '*persons fleeing fighting*' caused by instability in their country of origin (Larsson, 2008) and the term was then broadened into '*persons fleeing persecution or for other reasons*' (UNHCR, 2006). Under this term, Myanmar refugees in Thailand fall under this categorization can apply for a temporary asylum and to reside temporary in the refugee camps due to prosecution in Myanmar (UNHCR, 2006). The process for status determination of asylum-seekers is complex in Thailand. It consists of preliminary interviews by the district officials, hold in the Holding Centre for no more than 30 days before systematically interview by a team from Ministry of Interior, and recommendation will be submitted to the central Board for Status Determination in Bangkok before decisions to be made within 45 days after the interview (UNGA, 1989). The Thai government also stays in coordination with the UNHCR, where the UNHCR would be able to institute an appeal on behalf of the applicant and present its opinion at the appeal (Davies, 2008).

CONCLUSION

The 1951 Refugee Convention sparks a question on the universality of human rights as how the values and norms embedded in the convention are western-centric. On the other hand, the fragmentation of regimes in the world leads to different perception towards international law. In this particular case we see that Indonesia, Malaysia, and Thailand represents the Southeast Asian countries perspective on international refugee law. As how this article suggest, norms and values plays an important role in shaping the regional's perception towards international refugee law. The Southeast Asian countries do not see the importance to formalize collective policy response into treaties and urgency to ratify the 1951 Refugee Convention and its protocols. Therefore, to understand how Southeast Asian countries comply towards international refugee law should be based on how they uphold international norm and values, which is the principle of non-refoulement and how they adapt towards this norm and start building domestic policy to implement such norm. The Southeast Asian countries have their own preference on how should they implement the principle of non-refoulement in their domestic laws, and by enacting such policies, they are not failing on this particular issue. The Southeast Asian countries have complied and respect the International refugee law by committing themselves towards the principle of non-refoulement and formulated policies in their domestic law.

Interpretation of Political Communication: The Al-Maidah 51 Case

Ikhtiyar Zitraghara Nalar Siregar, Mubaddilah Rafa'al, Nuris Alfian Fikri
Universitas Airlangga, Indonesia

INTRODUCTION

John Lennon, the frontman of the Beatles, once exclaimed, "*Christianity will go, it will vanish and shrink. I needn't argue about that; I'm right and I will be proved right. We're more popular than Jesus now; I don't know which will go first, rock 'n' roll or Christianity. Jesus was alright but his disciples were thick and ordinary. It's them twisting it that ruins it for me.*" (Erang, 2014: 121).

As a result of the statement, a number of demonstrations were held by then baby boomers in a number of locations in the United States. These demonstrators deemed the statement as an insult to their faith. The Beatles had been welcomed with open arms by American youths, in a time when their elders considered the band as a threat to American music, part of *British Invasion* scenario. The case was resolved when Lennon officially apologized for his statement, admitting that he did not intend to insult Christianity.⁷ He stated that he was merely trying to convey the Western youths enthusiasm on the Beatles as compared to these youths' visits to church. In a scene of the movie *Eight Days A Week: The Touring Years*, it was shown that the case was not considered serious in the United Kingdom, the hometown of the Beatles.

Almaidah:51 and Public Reaction

This paper is a study on a number of online news by tempo.co related to the recent case of religious blasphemy, specifically the one involving a Jakarta governor candidate, Basuki Tjahaja Purnama or Ahok. A number of international media has also reported on this case, which started when the official website of the Jakarta province quoted Ahok as claiming himself to be a recurring victim of those who use Al-Maidah 51 to stop him from becoming a political leader. Social media also play a great role in this case, as networks such as Youtube and Facebook exploded with the video of Ahok's speech in the Pramuka Island of the Thousand Islands (*Kepulauan Seribu*).

Ahok committed a number of fatal mistakes as recorded in the video. First, it must be understood that the video is an official documentation of the Jakarta province official activities. Second, Ahok stated the possibility that the program he is giving a speech on may be discontinued when he is no longer the governor. This statement is inappropriate as it may influence voters cognitively to vote for him. Third, Ahok stated that his political career is always hindered by the interpretation of Al-Maidah 51.

Media as a Tool of Political Communication

Entman (1993: 52) stated that *framing* in the media means the selection and emphasis of certain aspects of reality through communicative text (Berger, 2014: 374). As such, the text chosen by the media to represent an event may not be able to describe the reality of the event fully. The function of media text analysis is to discover hidden reality from the media text. In the context of post-*reformasi* Indonesia, almost all of the corporate-owned media have their own framing of events or reality based on their vested interest and goals. These *framings* are especially evident in Indonesia after the 2014 presidential election, as society became divided in two camps: those who support the government and those who are against it.

Symbols in Political Communication

To understand the al-Maidah 51 case, all stakeholders should be examined, not only those who are directly involved in it. The masses who are participating actively in the Defending Islam (*Bela Islam*) movement have high hopes towards the government. As such, the focus of this research is to understand the political communication of government actors in dealing with the demonstrating masses. In this context, the impact of

⁷ <https://www.youtube.com/watch?v=3p904k85DRQ>.

polarization which divides both formal and non-formal state and societal institution shows us the inequality between dominating and dominated groups, including inequality of access to the media.

Taking the context of a play, Subiakto and Ida (2012) has stated that communication occurs among actors and between actors and audience. A scene can contain a variety of communicative tools. Such context can be extended to political communication. Through a deceitful strategy, political actors can create or influence situations according to their will (Subiakto and Ida, 2012: 12). The important point to understand is the politics of meaning practiced by the media (Eriyanto, 2001: 37).

Meaning is a very contested aspect of the media (Volosinov in Hall, 1982: 77). This contest can result in miscommunication between political actors spotlighted by the media. In the Almaidah 51 case, this miscommunication occurred when the Minister for Maritime Affairs confirmed that Presiden Jokowi would be in his office during the 411 demonstration. (<https://m.tempo.co/read/news/2016/11/03/078817321/demo-4-november-jokowi-tetap-bekerja-di-kantor-presiden>).

In the Tempo report, the President's agenda for the day of November 4 was also conveyed. There were several events, such as the discussion between Japan and Indonesia for high-speed rail system between Jakarta and Surabaya, cabinet meeting to discuss the 411 demonstration attended by several ministers. This report can be taken to mean that the president was going to be available at the Presidential Palace to meet the demonstrators to discuss about the Almaidah 51 case.

On the day of November 4 2016, Jokowi was reported to have left the Presidential Palace 2 hours before the demonstration reached the Palace (<https://m.tempo.co/read/news/2016/11/04/078817622/menjelang-demo-4-november-jokowi-tinggalkan-istana>). The Cabinet Secretary, Pramono Anung, stated that the President was having a 'walkabout' (*blusukan*) with the Transportation Minister. Readers were reminded that the President was supposed to have meetings at the Palace.

From the language used in the report, it can be seen that tempo.co was also perplexed with the sudden change in Jokowi's whereabouts. The demonstrating masses insisted on remaining just outside the Palace region to demand the Ahok be arrested immediately for his blasphemy charges. The meeting between representatives of the demonstrators, Bachtiar Nasir from AQL Islamic Center, Misbah from Front Pembela Islam, and Zaitun Rasmin from Wahdah Islamiyah, with representatives from the government, the Vice President Jusuf Kalla, Religious Affairs Minister, State Secretariat Minister, Cabinet Secretary, Chief of Staff to the President, Coordinating Minister for Politics, Law, and Security, Police Chief, and Army Chief, was deemed insufficient. (<https://nasional.tempo.co/read/news/2016/11/04/078817775/kalla-terima-3-perwakilan-demonstran-4-november>).

After the 411 demonstration, President Jokowi started political communication with a number of political figures in government coalition with a dinner party in the Presidential Palace. This step was taken to cool the political temperature. On 21 November 2016, Tempo reported the statement by Megawati who spoke of the changing coalition composition in the political parties which support the government (<https://m.tempo.co/read/news/2016/11/21/078821868/mega-sarankan-jokowi-kumpulkan-semua-pimpinan-partai-gawat>). Megawati also reiterated her support towards Ahok to win the Jakarta election.

Megawati's statement reflected her importance towards Jokowi's presidency and Jokowi-Ahok's relation. On the same day, Tempo.co reported the response of the Democrat Party towards Jokowi's statement. (<https://m.tempo.co/read/news/2016/11/21/078821973/ini-tanggapan-demokrat-soal-saran-megawati-kepada-jokowi>). Roy Suryo, a Democrat Party figure, expressed the need to strengthen the government political party supporter coalition. Roy also regretted the lesser communicative portion given by Jokowi to the military elites as compared with the political elites. Roy deemed the military as important to deal with external threats facing Indonesia.

From the news report above, it can be found that various meanings can be ascribed towards communication symbols contained in the report. Megawati's statement on the need to strengthen the coalition of political parties which support the government implied a suspicion towards political parties outside the coalition. Roy Suryo responded against this statement by stating that threats can come from outside of Indonesia, instead of from inside Indonesia. Suryo deemed foreign intervention as more worthwhile to be worried about than domestic political dynamics.

CONCLUSION

For political actors, political communication through mass media (print, electronic, Internet) can be very effective to shape political reality. This effectiveness depends on two main factors: the ability of political actors to communicate symbols, and the politics of meaning practiced by the media. Miscommunication occurs when these two factors are not paid attention to. In addition, the vested interest of all parties or actors involved, including the media, also play a large part in determining the success of political communication through mass media.

The Challenge of Sustainable Innovation in Palm Oil Industry

Jo Jhony

The Challenge of Sustainable Innovation in Palm Oil Industry

Jo Jhony

Universitas Bina Nusantara

ABSTRACT

Sustainable innovations are regarded as a strategic premise to creating, maintaining and upgrading sustainable competitiveness. However, many companies are convinced that the more environment-friendly they become, the more the effort will erode their competitiveness because of high investment cost to develop sustainable innovation as required by sustainable development. This paper try to elaborate issue of sustainable innovation in palm oil industries based on Harvard Business Review Journal, "Why Sustainability is Now the Key Driver of Innovation" by Ran Nidumolu, C.K. Prahalad and M. R. Rangaswami. The study was conducted by analyzing the implications of the application of sustainable innovation to support the palm oil's business units to remain competitive by integrating economic, environmental, social, and operational performance factor that gives competitive advantage by explore roles sustainable innovation developed from the dimension of the human resource management, value chain, strategy management, and characteristics of the company. This research analyzes palm oil firm's strategies management in decision to implement sustainable innovation Results from this research are expected to provide information on the effect of sustainable innovation to competitive advantage in the oil palm's business unit that can be determined short-term and long-term strategy with risk analysis.

Key Words: *Sustainable Innovation, Strategic Management, Competitive Advantage*

INTRODUCTION

Gary Hamel in his book "The Future of Management" (Hamel, 2007) argues that organizations need management innovation now more than ever that management in the previous era is more centered on the control and efficiency is no longer sufficient in a world where the success of adaptation and creativity to face competition business to grow in the future. Companies must reinvent management continuously to innovate to adapt the change, challenge and competition. While in the state of the economy and the environment "turbulence", innovation is very important for companies to adapt to the environment up and down and achieve a sustainable competitive advantage (Zhou and Wu 2010). Werbach in his journal "Strategy for Sustainability" explains the company while it looks for patterns ongoing development of a new one that avoids the cost of the environment and harmful to products, processes and services company. He developed a new technology that allows the community to healthier and more sustainable without damaging the natural environment be the primary goal of management innovation. (Werbach, 2009).

In the article, "Why Sustainability is Now the Key Driver of Innovation," Nidumolu, Prahalad, and Rangaswami argue that sustainability is a driver of innovation and a key tool for the advancement of an organization's competitiveness. This article show relationship of how sustainability is linked with innovation. Where the paradigm that sustainability costly, this article try to answer why sustainability should be a touchstone for all innovation because in the future, only companies that make sustainability as goal will achieve

competitive advantage. This mean it is important that company rethinking business models as well as products, technologies, and processes (Nidumolu,2009). This article give try to explain how palm oil companies try becoming sustainable is a five-stage process, and each stage has its own challenges based on. Nidumolu journal. The journal argue that the pursuit of sustainability has to be more than simply demonstrating social responsibility, but more importantly, sustainability should be seen as an opportunity to seek out new benefits from an organizational and/or technological perspectives. There are five separate stages on the path to sustainability to go through five distinct stages of change. The five stages include

1. Viewing Compliance as Opportunity
2. Making Value Chains Sustainable
3. Designing Sustainable Products and Services
4. Developing New Business Models
5. Creating Next-Practice Platforms drilling down into these stages,

1. Viewing Compliance as Opportunity

In the palm oil industry to anticipate the needs of sustainable development established the Roundtable on Sustainable Palm Oil (RSPO) in 2004 which aims to transform the palm oil industry in collaboration with the global supply chain, to put it on a sustainable path. The other compliance body are ISCC (International Sustainability Carbon Certification) is one of the leading certification system for sustainability and emissions of greenhouse gases. The European Commission recognizes ISCC as one of the first certification scheme for demonstrating compliance with the requirements of the EU Renewable Energy Directive (RED) for biodiesel fuel. ISCC certification can be applied to meet the legal requirements in the bioenergy market and to demonstrate the sustainability and traceability of raw materials in the food industry, feed and chemicals. (ISCC 2011). While in Indonesia, Government establish Indonesia Sustainable Palm Oil (ISPO) supported by the Ministry of Agriculture to ensure that all the palm oil companies meet the standards of farming are allowed. (ISPO, 2013). Sustainable development is required to run on Palm Oil Industry provides social pressure both to the company and its top management to meeting compliance and requirements of the RSPO certification, ISCC, and ISPO in accordance with the legitimacy that affect companies and force them to adopt practices certain managerial rules of sustainable development.

As define by Nidumolu. et. all where the first steps companies must take on the long march to sustainability usually arise from the law. The issue of palm oil need sustainability certification comes from the issue of deforestation and the expansion of oil palm plantations pose a threat to the environmental damage. Those fact are central challenge, where the company consist on strategy to compliance for sustainability. Palm Oil Companies should ensure that compliance with norms becomes an opportunity for innovation. Viewing compliance as opportunity, as authors argue that the first step a company faces when it comes to sustainability is the need to address applicable government legislations and regulation. Palm Oil companies with sustainable oriented practice could understanding or more in tune with government priorities when it comes to sustainability. The benefit are better positioned to not only influence regulations, but are also able to use foresight in determining how to effectively meet compliance in a timely fashion. That argument supporting why big palm oil companies, although not obtain economic benefits now but remain join RSPO and ISCC. Being a frontrunner when it comes to sustainability, enabling the organization to influence future regulations and avoid hefty fines associated with non-compliance. Organizations that lead the sustainability pack are also positioned to potentially curtail the enactment of inappropriate regulations, which could inhibit change and progression, and present unnecessary barriers for them.

2.85 million hectares certified

3,001 members

The amount of certified palm oil globally :
10.95 million tonnes
17% of global palm oil

members that received RSPo principles and criteria certification :
274 Certified palm oil mills
67 Growers
2,021 Companies with supply chain certificates
3,491 Facilities with supply chain certificates

Figure 1: RSPo Membership and Certified Area Across the Map
 Source : RSPo To Date July 2016

Figure 1: RSPo membership and certified area across the map shown, there are still lack of companies in Indonesia and Malaysia that join RSPo and ISCC and becomes minority of RSPo and ISCC 's member (only 67 grower) Those gives challenges and difficulty to sustainable oriented Palm Oil Companies could have more authority in influence of future regulation of those international sustainability body. Figure 2: RSPo membership and rank by SPOTT shown most of palm oil company not join at all of their business unit but part of business unit. Most of companies are multinational companies that have urgency to join for their product to market in Europe Union or USA. Sustainable Palm Oil Transparency Toolkit (SPOTT) could use to scoring value of their achievement in join RSPo.

2 Making Value Chains Sustainable

Figure 3: Palm Oil Supply Chain
Source : RSPO Web Site

Organization to focus on increasing operational efficiencies from their supply chains, operations, workplaces, and product returns. Central challenge of this stage are increase efficiencies throughout the value chain. However this competencies need technology and organization capacity to support their supply chain become sustainable oriented beside organizations should direct considerable efforts to develop innovative ways to address these issue and ensuring that appropriate investments are made. The issue of making value chains sustainable are traceability, technology utilization, and investment. Palm Oil have long supply chain distribution shown in figure 3: Palm Oil Supply Chain. Most large Food Manufacture and Consumer Good induce suppliers to become environment conscios by offering them incentives. For instance, responding to people’s concerns about the destruction of rain forests and wetlands, multinational corporations such as Cargill and Unilever have invested in technology development and worked with farmers to develop sustainable practices in the cultivation of palm oil, soybeans, cacao, and other agricultural commodities. This has resulted in techniques to improve crop yields and seed production. (Nidumolu et al., 2009, p. 6). Food Manufacture and Consumer Good are end chain of value chain of palm oil required that traceability from plantation to refinery from source certified plantation. The occasion paper research by Sophia M Gnych, Godwin Limberg, Gary Paoli about “Motivating uptake and implementation of sustainability standards in the Indonesian palm oil sector” have finding that CGMs (Consumer Good Manufactured are now demanding higher standards, but have shown little willingness to sacrifice their own profits to pay or more sustainable production practices. There is much scope for improved sustainability within the industry, but current incentives and disincentives for uptake of higher sustainability

standards are not working. These market imbalances are reflected in the high membership of retailers, manufacturers, refiners and traders in the RSPO and the relatively small numbers (13,3%) of grower members within the RSPO (Gnych, Limberg, & Paoli, 2015). This cause most of cost of sustainable certification will afford by palm oil company, and reduce interest of most palm oil company to join RSPO.

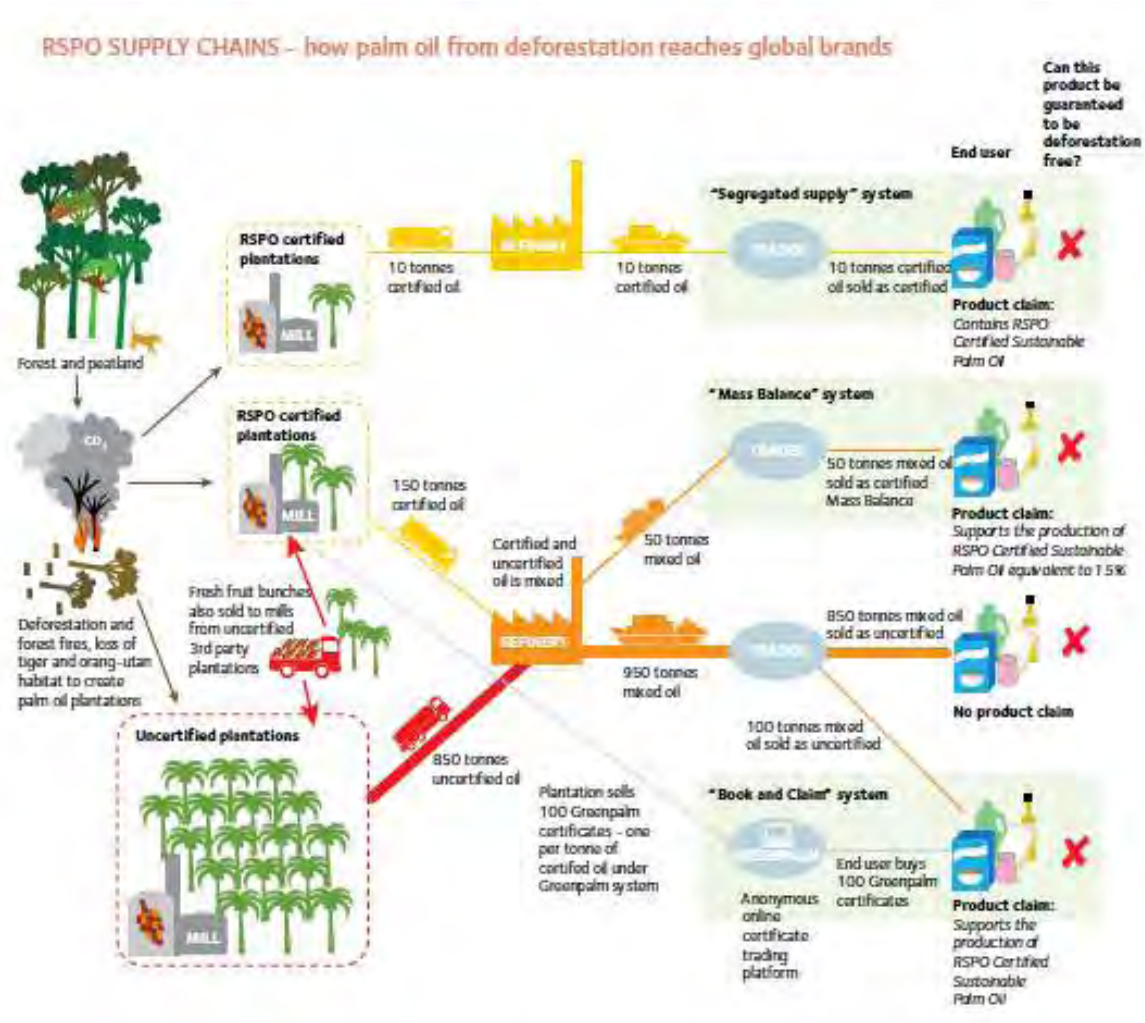

Figure 4: RSPO Supply Chain-how palm oil deforestation reaches global brands
Source : RSPO Web Site

Most Palm Oil companies have difficulty dealing with traceability of RSPO and FMCG requirement, Pressure from consumers led companies such as GAR (Golden Agri Resources) and Wilmar take the development strategy of "Zero Expansion or Deforestation" to prove their supply chain without uncertified plantation with deforestation. This issue cause minimize utilization and barrier to expansion of Palm Oil Companies. Source of Fresh Fruit Bunch usually not only from company itself but from small holder or other companies with possibility not certified. The risk are decreasing utilization in mill with consequence higher processing cost per-ton of CPO by reject FFB from other source. This arise increase of production cost and lower output when companies with sustainable oriented are dependent only its production supply. Palm Oil Company need to make efficient their supply chain to compete in industry.

3. Designing Sustainable Products and Services

Designing sustainable products and services, the main challenge that organizations face is the difficulty in developing and offering eco-friendly products and services to consumers. Consumers are becoming increasingly more knowledgeable on the subject of sustainability than previous generations. World consumer Survey Company has release a research report, showing that consumer tend to buy more expensive products concerning environmental friendly product. There are increase 65% in Asia Pacific, 63% in Latin America, 42% in North America and 42% in Europe. This changes urge companies to produce more environmental products. Nowadays, fast progress of palm oil industry also required development areas to implement sustainable plantation but there also need to increase the availability of palm oil areas. The key challenge of this stage are developing sustainable offerings or redesign existing ones to become eco-friendly.(Nidumolu et al., 2009, p. 6). Palm oil companies strategy through sustainability division or investor relation try to communicate proactively to their consumer by media such as special sustainability reports or annual reports which inform their sustainability process of product and services as shown in figure 5: GAR sustainable awareness, how GAR awareness and action to sustainability as example to show to stakeholder that company actively in sustainability campaign in their special sustainable report.

Figure 5 GAR Sustainable Milestone
Source : GAR Sustainability Report 2015

Key issue & concern of sustainability in palm oil are :

- **Deforestation of High Carbon Stock (HCS) forests**
HCS is a forest area that stores a lot of carbon, when converted to plantations cause environmental damage by the release of carbon dioxide (CO₂). HCS to detect the approach typically uses a combination of high-quality satellite images of the forest concession and mapping of forest areas to analyze the effects of carbon emissions. Only areas containing low carbon, such as shrub and grassland can be considered for conversion to plantations.
- **Degradation of High Conservation Value (HCV) forests and biodiversity**
Protection of high conservation value forest (High Conservation Value Forest Protection) is a forest management principles that meet the criteria set by the Forest Stewardship Institute where the protection of forests that have high conservation value, by having one or more traits: forest areas containing globally, regionally or nationally significant concentrations of biodiversity values, endemism, endangered species, forest area inhabited by animals that are in the level of threatened or endangered ecosystems, forest areas that provide protection in critical situations such as flood control and erosion control and forest area is the source of meeting basic needs of local communities for livelihood or a regional cultural identity, ecology, economics and religion.
- **Peat Protection (Protection Areal Peat)**
Peat area is low-lying areas to the type of soil that is formed from the accumulation of plant debris were half rotted and has a high organic content. Soil Carbon Stock generally have very high. Clearing of land in the area of peat land is rejected by the environmentalist while the government regulation number 71, 2014 concerning the protection and management of Peat ecosystem, the government regulates the systematic effort and integrated undertaken to preserve the peat ecosystem and prevent damage to the ecosystem of peat which includes planning, utilization, control, maintenance, supervision, and enforcement.
- **Human and Community Right Protection**
Human rights and community is where palm oil companies are required to respect human rights, protect local communities compensation, and provide jobs to the local community
- **Supply chain Sustainability**
- **Employee health, safety and well being**
- **Labor relations and human rights**
- **Greenhouse gas (GHG) emissions**

Communication what corporate initiate and plan for sustainability in internet and social media will increase company image. Consequently, consumers are seeking more transparency and accountability from organizations. Although, this will require organizations to pay closer attention to their sustainability practices, it will likely benefit them in the long run. Developing eco-friendly products and services not only appease the eco-savvy consumers, but provides an opportunity to draw consumers to a product or service they might not have been drawn to in the past.

4. Developing New Business Models

The next stage in the path to sustainability is the development of new business models. The difficulty of developing new business models stems from the challenges faced by organizations in identifying alternative ways of doing business, but also in overcoming inertial tendencies. Executives and their organizations need to question the status quo, move out of their comfort zones, and develop new delivery mechanisms for their businesses (Nidumolu et al., 2009, p. 9). The message that the authors are delivering with this stage is that businesses seeking sustainability often fall victim to inertia, or the general tendency to preserve the status quo.

Central challenge in developing new business models are to find novel ways to delivering and capturing value which will change the basis of competition (Nidumolu et al., 2009, p. 6). It means the palm oil need improve their process for generating products and service more eco-friendly. The challenge are every changing the process need investment and human resources development to change business operation more eco-friendly. Developing new business models could mean change the business process through developing successful implementation of Sustainable Innovation. This action cannot be separated from the role of human factors in the Palm Oil Business Unit. Human resources management affect the successful implementation of Sustainable Innovation. According to (Wright and Snell, 2009) the role of Human Resources practice is divided into how to improve the knowledge of the employees of the company in terms of knowledge, skills, and abilities of human resource management in terms of recruitment, training, selection and dissemination that need it in implementing sustainable innovation. Consequently, the relationship SHRM supports the Sustainable Innovation in this case how human resource management provided when a palm oil company to make changes to run the Sustainable Innovation strategy is required to improve the knowledge of the employees of companies that exist on Sustainable Development.

Figure 6: Sime Darby group business model show Sime Darby Group new business model creating sustainable value through their Business Model to support sustainability issue (Sime Darby “Innovating the Future”, Annual Report, 2016 page 20). It try to gives description to stakeholder that company enroll new business model that sustainable oriented.

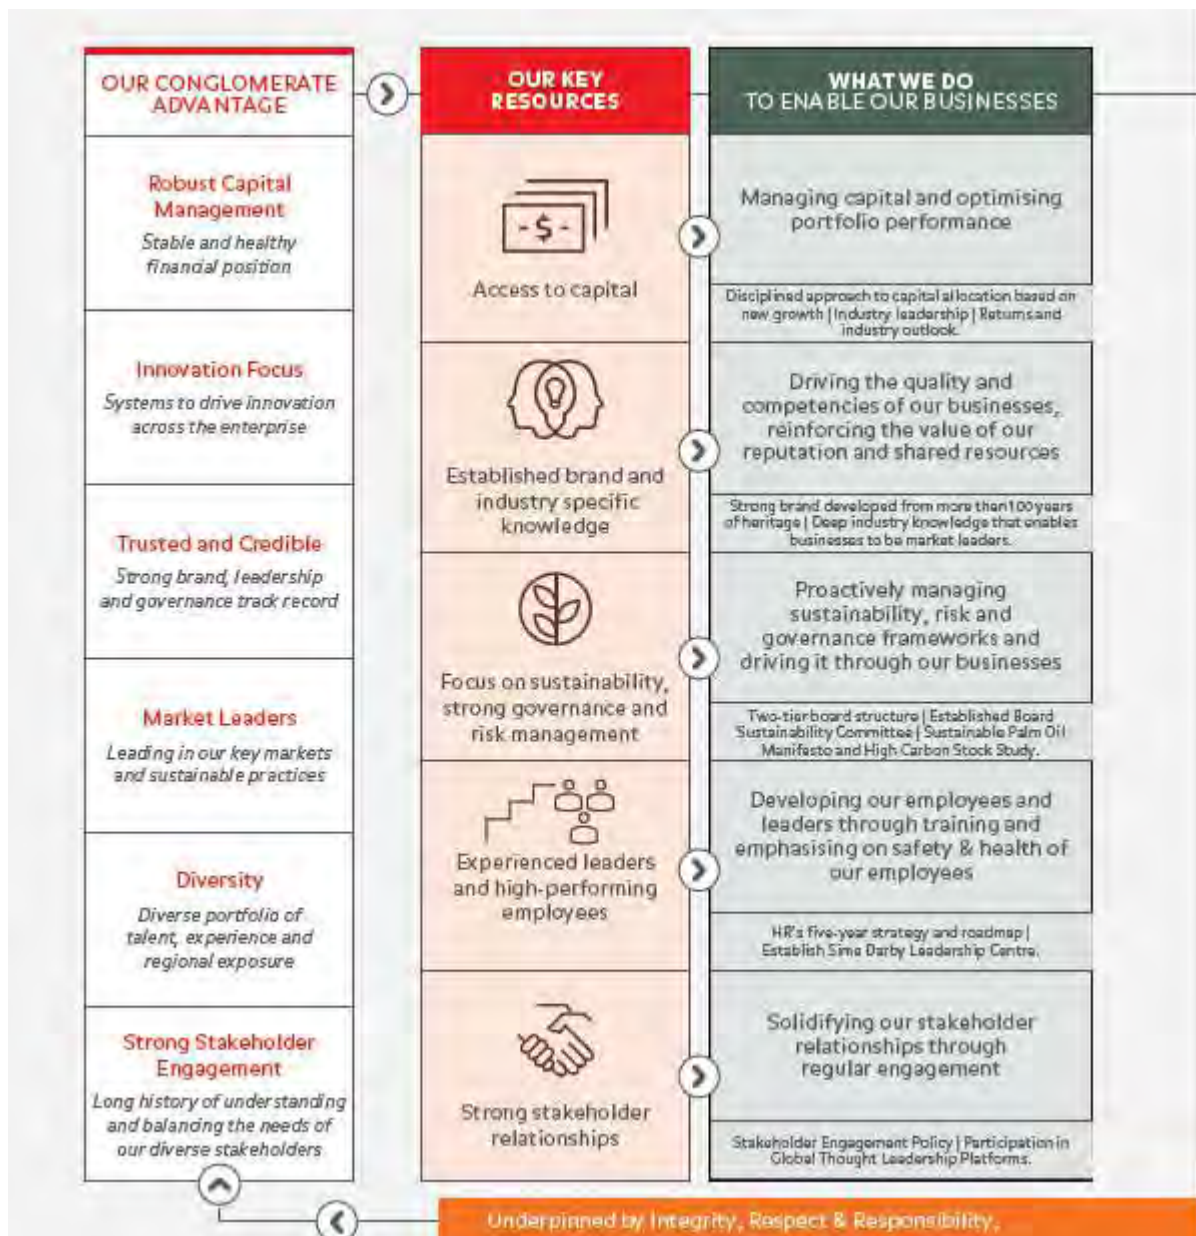

Figure 6 Sime Darby Group Business Model
 Source :Annual Report 2016 Sime Darby

Business Unit can conduct knowledge development is to improve knowledge about sustainable development and the environment from the inside by innovating in the business unit itself or a company to recruit from outside. In this case the acquisition resources business unit conduct outside the existing resource in the business unit to support the successful implementation of the certification requirements. Palm oil companies can form Sustainability division or find a consultant who served to support and monitor the implementation of the implementation of the "Sustainability Development". The expected results from each business unit either in the estate or mill can meet the same requirements. Division of sustainability is also responsible for media liaison with shareholder others such as government, non-governmental organizations, certification bodies, farmers, environmental organizations and the government in addition to developing sustainable innovation implementation across the business units of the oil palm company. Companies will have spent a considerable

cost to finance the cost of implementation of certification and also pay attention to the readiness of human resources to support implementation new process that sustainable oriented.

Building new model for sustainability gives innovation opportunity by developing new delivery technologies that change value-chain relationships in significant ways, creating monetization models that relate to services rather than products and devising business models that combine digital and physical infrastructures. (Nidumolu et al., 2009, p. 6). This change the business model and process of organization with implementation of new technology to support into digitalization era

Figure 6 Sime Darby Growing Innovation
Source :Annual Report 2016 Sime Darby

The development of new business models is particularly difficult for mature industries where executive support for the introduction of new ideas or changes is difficult to obtain. Implementing changes is often a long and need commitment of all management and organization. Successful in design and developing new business model need

- "Alignment" Achieving harmony and unite the different parts of the organization into one unit so that the organization can work towards the vision of the company and understand what consumers want and to figure out different ways to meet those demands in all of supply chain.
In this case the palm oil industry should be able to perform alignment between industry upstream (Estate and Mill Palm Oil which produces Fresh Fruit Bunch (FFB) processed into CPO), industry midstream (in the form of refinery processing of crude palm oil into RBDO, Olein, and PFAD) and industry downstream (such as RBDO processing into cooking oil, kernel oil processing industry to Oleo chemical into cosmetic products to the consumer) and the Biodiesel industry that converts the CPO into biodiesel in one sustainability business model

2. "Agility" the ability to respond quickly to external risks and challenges in the business model and process. In this case the palm oil industry should have the capability in responding change business process that adapt sustainability change.
3. "Employee Buy-in" ability to communicate strategy to employees to process the changing in Business Model or Business Process that adapt sustainability change. So that they understand the company's strategy and supports the contributions in implementation of change.
4. "Clear Accountabilities" have clear accountability for each business process in every level of the organization, in every individual to achieve the objectives and target in new business model or process.
5. "Knowledge Capital" to assist the learning process and encourage the sharing of knowledge in everyday work of sustainable issue, technology, and capacity.

5. Creating Next-Practice Platforms drilling down into these stages,

The last stage of sustainable innovation are creating next practice platforms, the central challenge in this stage, how the sustainability lens the dominant logic behind business today. In creating next-practice platform, the importance of executives needing to question the implicit assumptions behind current practices (Nidumolu et al., 2009, p. 10). Especially to build competency and knowledge of how renewable and non-renewable resources affect business ecosystems and industry, also expertise in technology required. During these times of recessions, businesses quickly begun to understand the need to reduce waste, increase efficiencies, and seek out new markets in which they could flourish. This is possible when organizations pursue sustainable initiatives, as outlined in the discussion on the various stages above. Nidumolu et al.'s article provides a useful overview of what an organization will face along the path to sustainability and help those responsible for enacting sustainability practices in their organization identify which stage of sustainability their organization is currently seated. Being able to identify or categorize the extent of sustainability is a useful exercise to evaluate the progression towards leadership in sustainability. In addition, the various competencies that the author presents with regards to each stage could be useful for identifying shortcomings in an organization. Addressing any shortages in necessary competencies for a stage will help organizations progress further and have a higher impact with their sustainability initiatives. As Palm oil companies need to continue improve their standard practice, especially in agronomy practice combine new technology. Sustainable innovation will impact the competition and gives impact to palm oil's business units to remain competitive by integrating economic, environmental, social, and operational performance factor that gives competitive advantage by using eco-friendly technology. Palm oil companies today while profits slumped due to the decline in CPO prices, by sustainable innovation could improve cost efficiency of production such as by innovation and transformation business process into mechanized production, the reduction of the administration cost by conduct automation, innovation development, improve seeds quality to double yield production using Biotechnology in Tissue Culture or cloning so they could win the competition by having the lowest production costs and highest yield production compare other vegetable oil industry without expand the area.

ABSTRACT

The vast globalization traffic has pushed many states with strong economy to invest abroad, caused the increasing number of multinational corporations around the globe. One of them is a gigantic business group from Japan called Sogo Sosha, consisted of 7 multinational corporations in a wide range of sector. Sogo Sosha Group has been a key actor toward Japan success in the international trade, yet often recognized as the one that led Japan to be the global economic giant. On the other side, Japan under Shinzo Abe leadership has shown a shifting of security posture, shown by the New Security Policy in 2015 that provides them collective self-defense. Understanding that the vast economic power has been strongly associated with the security posture of a country, this paper is aimed to find out to what extent the Sogo Shosha Group has influenced the Japan New Security Policy in 2015. Firstly, this paper will be explaining the process on how economic power and military power has been influencing each other as foreign policy instruments of a state, on this case multinational corporations and security policy to broaden our knowledge regarding the economy and security nexus. Second, this paper will explain in detail on in contextualization how Sogo Sosha has lead Japan to posses high economical income from its influence in global economy, trade surplus and tax to the extend it provides Japan with high confidence to generates New Security Policy in 2015.

Key Words: *Globalized Economy, Multinational Corporations, Sogo Sosha Group, Japan Security Policy, Foreign Policy Instruments*

INTRODUCTION

On this globalization era as borderless community is constructed in the world, the economic activity becomes borderless as well shown by a huge number of people who is making money outside their country whether it is in the form of Foreign Portfolio Investment or Foreign Direct Investment. This economic globalization has pushed many states with strong economy to invest abroad, caused the increasing number of multinational corporations around the globe. Multinational corporations is defined as a company that is operating and economically profit seeking outside their country of origin as a credible actor that both will affect its home country where its main headquarter is located and the host country where it is operated to receive their investment as Foreign Direct Investment (FDI) (Cohen, 2007).

This paper believes that MNC could provide a vital contribution to a state, such as Japan. Japan has a gigantic business group from Japan called Sogo Shosha, consisted of 7 multinational corporations in a wide range of sector. Sogo Shosha Group has been a key actor toward Japan success in the international trade, yet often recognized as the one that led Japan to be the global economic giant. By knowing that Sogo Shosha is literally meaning “General Trading Companies” who basically sell various kinds of commodities from noodles

to satellites, and it is not closing the possibility that Sogo Shosha will be involved in the arm trade too after the weapon export ban lifting in 2014(Fackler, 2014).

On the other side, Japan under Shinzo Abe leadership has shown a shifting of security posture, shown by the New Security Policy in 2015 that provides them collective self-defense. During this 7 decades, Japan only posses their right to protect themselves as individual-defense other than collective defense to protect other states. It is known that the improvement of military aspect of Japan comes hand in hand toward Shinzo Abe “Abenomics” to revive Japan economy after global crisis 2008 in which the revival allows Abe to increase military budget, showing a strong correlation between economics and security.

Understanding that the vast economic power has been strongly associated with the security posture of a country, this paper is aimed to find out to what extent the Sogo Shosha Group has influenced the Japan New Security Policy in 2015. First, this paper will explain how the nature of MNCs and traditional security is related as foreign policy instrument through both political and economic perspective. Then this paper will be analyzing on why Sogo Shosha companies are exclusive toward Japan economy compared to any other companies, until we can measure to what extend it influence Japan security posture.

Nature of MNC and Traditional Security

The major economic reason why MNC was chosen as an actor in this paper is because it has macro level of income as an impact form of globalization. While from political perspective, the MNC nature that has high involvement in various aspect of the people’s life inside its host country will increase the political leverage of the home country over the host country (Kapfer, 2006) . MNCs contribution toward the host country economy has indeed tightened the trade and economic relation between both states, moreover if both states have enjoyed the mutual benefit. This strong political leverage does strongly support the state agenda in making allies and constructing prominence in the global security.

Firstly, what makes multinational corporations is so favorable on this globalization era to invest abroad is because it enables the ownership of asset from all over the world, and their wealth is much bigger than its asset (Stopford, 1998). It means that, MNC has the ability to earn more economical benefit since their assets are spread globally due to globalization. . Thus, it is known that it is very possible for MNCs to gain more income than the state that hosts their corporation. Take an example as in 2010, Wal Mart Stores (\$ 408 billion)has the bigger income than South Africa (\$ 364 Billion) according to Global Policy Forum.

The very basic connection between economics and security has been presented on the early days since Ancient Athens increased the tax among its people to increase its military power for war against Sparta (Friedberg, 1991) . The nexus between these two foreign policy instruments has been strongly connected even before the economic activity has been globalized and before the concept of multinational corporations becomes popular. As mentioned above, MNCs does exclusively increase the national income. This huge income of MNC could provide strong role toward a state GDP if it is strategically operated, in which a prominent GDP number will ease the government to manage (or increase) the military budget as the main mean of traditional security, as what happened to Ancient Athens that imposed more tax to its people to fund the war against Spartan .

Second, MNC is also having several benefit than any other way of investment because FDI through MNC enables the home state to also invest its political presence in its host country. MNC is not only equipped by the knowledge of production, but also the ability to take part of changing political situation by influencing the state policy to attain legitimate position to establish a public policy according to the international system that MNCs are really into (Kapfer, 2006). Undoubtedly, the number of MNC in developing countries grows higher on this globalization era. Not only because they are able to grow good investment, but also increasing its prominent political bond with the host state. In which this bond lead to the increasing interstate relation due to increasing BIT as United Nations Conference on Trade and Development (UNCTAD) estimates that 178 countries are involved in at least one BIT, with more than 2900 BITs signed among these countries (Bodea & Ye, 2009). From a realist it sees that allies trade more than non-allies because states are wary of the security externalities that arise through bilateral economic exchange (Long & Leeds, 2006).

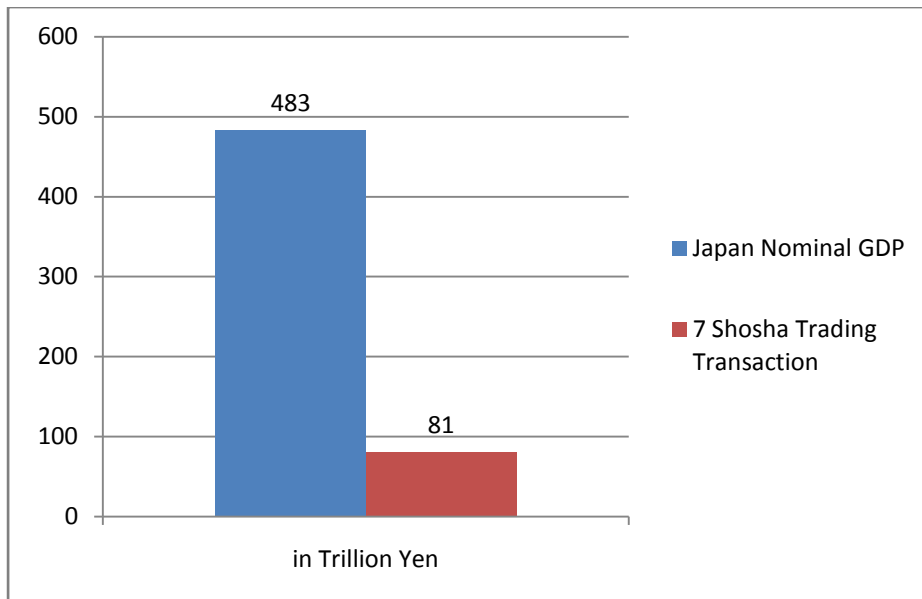

It does mean a lot for security aspect of a state, especially the host state. The tighten economic-political relation between the home and host state will also lead to the stronger military relation between these two or more state as a good ally in trade will also be a good ally in security as mentioned in the previous paragraph. Added by the fact that MNCs (especially Japanese ones) are now started to also involve in the military technology after the Japan Export Military Ban Lift in 2014, the MNC role in security is no longer doubted (Soble, 2015).

Sogo Shosha Exclusive Role in Japan Economy

There are various factors that leads Japan to be economically strong, but there are some strong arguments why Sogo Shosha Group should be analyzed on this case. First, Sogo Shosha brought Japan to survive the economic disaster after WW 2 lost to be one of the largest trading nations in the world by being a spearhead that lead Japan to a progressive economic growth to the international level and contribute a huge number of Japan national income (Handbook of Shosha, 2015). Second, Sogo Sosha has an exclusive diversity of good being traded as it is not usually found in other countries (Tanaka, 2012). Thirdly, as commonly known, as a big MNC it has a global level of network.

First, Sogo Shosha has a vital role in brought Japan back from downfall in World War 2 to be economic giant nowadays. Sogo Shosha was a very important factor in Japan economic growth during 1960-1970 that was never less than 10%, in which it was huge (Aditya, 2014). Moreover, Japan vast economic growth post World War 2 was the result of the nation high ability in doing foreign trade, in which Sogo Shosha has an exclusive role in managing the Japanese complex role in international trade. Other than that, Sogo Shosha also contributes a huge part of Japan income as we can see in the diagraph below (Handbook of Shosha, 2015):

Japan Nominal GDP vs & 7 Shosha's Trading Transaction Fiscal Year 2013

Second, Sogo Shosha have an exclusive diversity of good being traded as it is not usually found in other countries until 2015, there were no business entities which developed like Sogo Shosha. It was known that Forbes in year 2000 recorded 11 Japanese trading companies are counted in the top 21 including five Japanese Sogo Shosha which dominate the top five (2010 version) (Tanaka, 2012). Such company does not grow in the western countries as well as in Japan. Thus, this variety of goods being traded enables Japan to enter a wider markets as it also a wide network

Third, related to the second point. It is known that Sogo Shosha is a MNC with a global network. Thus, it is obvious that they have a wide access to market worldwide to sell their products more efficiently. Added by the

fact that Shogo Shosha companies is directly in charge for their exports, it is undoubted that Sogo Shosha brought Japan to compete prominently in global trade market (Young, 1985). As table below mentioned the number of Japan largest Sogo Shosha branch around the globe:

What It Means For Japan New Security Policy

According to Charles Kengley, there are 3 level of analysis on how a country generates their behavior, they are: *global influence*, *state influence* and *individual influence* (Charles Kengley, 2013). This paper sees that the Abenomics success was the state influence for the Japan New Security Policy. This chapter explains on how the *individual influence* of Shinzo Abe personality and personal conservative ambition is in accordance with the *state influence* of economic power of Japan are connected to generates such security behavior.

In 2012, Shinzo Abe was appointed as Japan Prime Minister for the second time after his term ends in 2007. Revising the Article 9 was Abe personal ambition as a conservative. It is quite famous that Shinzo Abe

has a strong conservative stance inside himself. This conservativeness is represented by his thought that is strongly willing to bring the 'Great Japan' back (Yellen, 2014). The prime minister and likeminded conservatives want Japan to become a "normal" country with only limited restrictions on military activities. They want Japan to have a powerful military power as other big states which they want to revise the Article 9. On the other hand, Shinzo Abe wants to have a stronger military alliance with United States to balance the influence of China in East Asia. United States was always pressing Japan to be more proactive in the peacekeeping with Washington, regardless the fact that United States is guaranteeing Japanese security. Abe fears that if Tokyo does not participate, United States will abandon Japan from fighting against China in Senkaku- Diaoyu dispute. (Yellen, 2014).

In economic perspective, since the first day he came to office, he already concerns about both security and economy of Japan that was severe as he said (Gibbs & Beech, 2014) :

"When I came to office, in terms of diplomacy and national security, as well as the economy, Japan was in a very severe situation." – Shinzo Abe Interview with Time Magazine in 2014

Thus in 2012 Abe launched Abenomics that surprisingly served a greater political purpose: creating enough of an economic feel-good factor, even if temporary, to allow him a mandate to push the legal changes needed for a more assertive defence strategy. The economic feel-good factor is used by Shinzo Abe to increase the military budget that was driven by his conservative ambition that Japan must strengthen politically and militarily to bolster self-reliance in the face of China..Sogo Shosha has a vital role in the success of Abenomics by its exclusivity. Abenomic success was a result of its reliance toward private industries to get out from the economic stagnation by stimulating consumption spending by absorbing employees (Wordfolio, 2015). Especially Sogo Shosha, that broke the stagnation by exporting what Japan is really good at and importing what Japan really needs efficiently as said (Wordfolio, 2015):

"Japan believes the government's economic stimulus program is definitely our biggest opportunity to move on. Private industry supports Abenomics. Similarly, Abenomics is relying on private industry to raise incomes and take other measures to break out of this stagnation" - Madoka Kitamura (TOTO President)

"Sogo shosha (trading houses) have a vital role: to bring what's new from the world to Japan, or what's good in Japan to the world. We are always in the background, helping businesses from behind the scenes" - Masahiro Okafuji (ITOCHU CEO)

This paper sees that the Sogo Shosha role in Abenomics brought budget efficiency and save a big number of budget, as the proof above said. Also, the interdependency and harmony between Sogo Shosha and Japan central government program of economic stimulus trigger (Abenomics) has brought Shinzo Abe a reason to increase its military budget .

Sogo Shosha role in the success of Abenomics enables Japan to actually gain economic power that will be translated into a military one besides the constitutional constraint that it has for decades, until Shinzo Abe tried to break that constraint in 2012 by launching Abenomics in which it created enough economic feel-good factor, to allow him a mandate to push the legal changes needed for a more assertive defence strategy that was

increasing of military budget in 2012. The ambition of Shinzo Abe in reviving Japanese economy that was accompanied by several Japanese policies in security aspect, the major ones was to increase its military budget due to China military buildup (Gaens, 2014). In announcing the new defense budget, Japan's new defense minister, Gen Nakatani, noted that the budget was necessary given the "changing situation" around Japan especially by the Chinese People's Liberation Army actions over the past few years that trespass Japanese territories, also growing defense budget, which rose 12.2 percent to \$132 billion in 2014 (Panda, 2015).

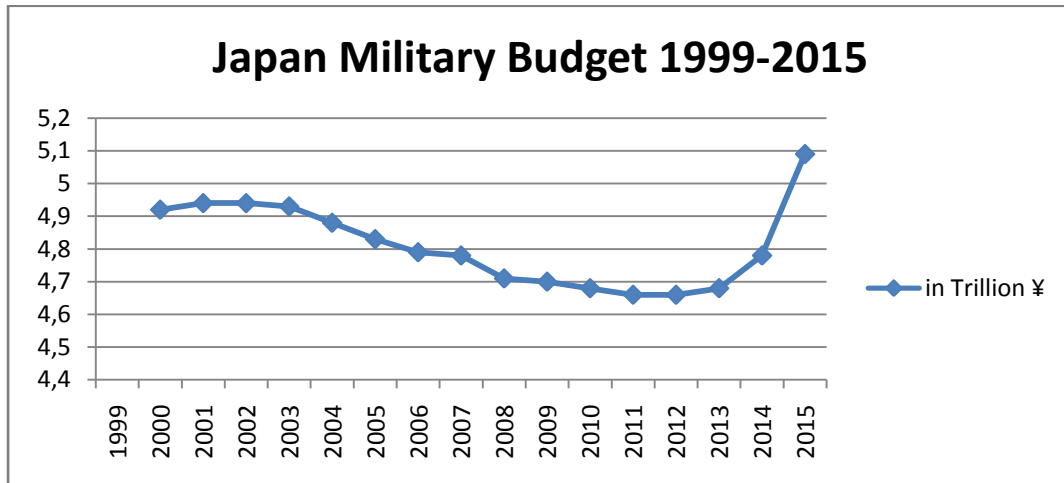

Figure 2 Japanese Defense Budget (in Trillion Yen) on 2000-2014 Fiscal Year

From the table above we can realize that the increasing military budget was started in 2012, the year where Abenomics reach its success. Recently in September 2015 Japanese Ministry of Defense was proposing a record 5.09 trillion yen (\$42.38 billion) defense budget for fiscal year 2016, 2.2 percent increased from the current fiscal year and accepted by Shinzo Abe at December 2015, it is known as the biggest military budget increase of Japan in 14 years (Gady, 2015). In addition to this fact, Japanese military is known as the 5th biggest spender in military even though its expenditure is only 1% from GDP (Gaens, 2014).

From the analysis above, we can actually learn that Sogo Shosha role in succeeding Abenomics has enable Shinzo Abe to increase its military budget from the moment he took office until 2015, where the new security policy was passed by the Japan Upper and Lower Diet. The increasing of military budget as economic power has been a rationale to show that Japan was actually capable to have an active military. Strengthen by the diagram in Figure 1 that represents the increasing of Japanese military budget after 2012 (Bendini, 2015), it was obvious that Shinzo Abe was increasing military budget to support the formulation of New Security Policy Agenda as we understand that Abenomics served greater political purpose

CONCLUSION

This paper sees that MNC is related to security posture of a country both economically and politically. This huge income of MNC has a strong role toward a state GDP in which a prominent GDP number will ease the government of the state to manage (or increase) the military budget as the main mean of traditional security.

While from political perspective, the MNC nature that has the high involvement in various aspect of the people's life inside its host country will increase the political leverage of the home country over the host country.

Contextualized with Shogo Shosha, Japan General Trading Multinational Corporations that is exclusive for Japan economy. First, it brought Japan from a poor country to be one of economic giant. Second, it has exclusive diverse goods to be traded as not usually found in any other country and it has the ability to influence a wide range of market. Thirdly, it has a wide network around the globe as well.

This paper has examined that these Sogo Shosha companies has a role in the Japan security shifting signed with the formulation of Japan New Security Law in 2015. In 2012, Shinzo Abe that has conservative personality launched Abenomics to revive Japan economy after the crisis. Through its exclusivity mentioned, Sogo Shosha has succeeded Abenomics that Shinzo Abe applied to relive the Japan economy in which this economic revival of Japan was used by Shinzo Abe to increase the military budget. This improvement of military budget has signed the Japan shifting from pacifism until the formulation of Japan New Security Policy in 2015. Known that economic power is strongly a supporting factor for the establishment of stronger and more active military, it was undeniable that the increasing of military budget was in accordance with Japan New Security Policy 2015 agenda. So, Shogo Shosha role in Japan security shifting was to the extent to success the government economic agenda in which its economic agenda was used to increase the military budget.

ABSTRACT

Deradicalization program of terrorism, which handled by The National Counter Terrorism Agency (NCTA), intends for minimizing and even vanishing the radical ideologies. Specifically, it made for ex-prisoners who convicted in terrorism. Meanwhile, the facts have proved that the program wasn't work like it used to. There is a lot of ex-prisoners of terrorism who became more dangerous after terminate the deradicalised program. Most of them were involved to another terror attack. It shows that the program has deficiencies in terms of handling the ex-prisoners of terrorism. This research is a qualitative method by study literature and interview as the process of collecting data. Study literature was conducted by learn the documents that relate with deradicalization program of NCTA. That also supported by books and international journals about terrorism and it theories, and the publication of mass media about terror attacks in Indonesia. This phenomenon will be analyzed with age graded informal social control and social bond theory by Travis Hirci. Result and discussion showed that their supervision is the main problem. The limitation of human resources of NCTA make the lack of supervision of ex-prisoners. That can be solved by improving the involvement of society in their neighborhood.

Keywords: terrorism, criminology, life-course theory, social bonding theory

1. INTRODUCTION

Terrorism is defined as a systematic attack which planned to create fear among people. It also carried out for political or religious reasons (Kearns, 2010). As a tool, terrorism is used to make an influence into government policies. There are a lot of terrorist acts throughout the history of mankind like *Hitler*, *the Ku Klux Klan*, *Al Qaeda*, and *Aum Shinrikiyo*. Those are known as a popular terrorist throughout history. They terrorized the community with their actions. In 2016, 29.376 lives were lost due to the terrorist attacks (Institute for Economics & peace, 2016). It is also explained by the following chart below :

Number of Death Caused by Terrorism

Source: <https://www.statista.com/statistics/202871/number-of-fatalities-by-terrorist-attacks-worldwide/> accessed on January 17th 2017 on 16.58 West Indonesia time.

Indonesia also became the target of terrorism which is known by the Bali bombings on October 12, 2002. Most of the victims are Australian and European (Ramakrishna, 2003). Paddy Bar and Sari Night Club decimated as a symbol of “Twin Towers” in Bali. Investigation by law enforcement officer shows that the action was carried out by *Jamaah Islamiyah*. They are known as a terrorist group who operates in Southeast Asia. Around 202 people died and most of them are Australian. Post-attack, there are smaller bombing acts such as bombings in the Philippines, the JW Marriott Hotel in Jakarta, and another actions until 2016.

Terrorism in Indonesia were built from religious ideology, for instance the bombing in Bali (2002 and 2005), JW Marriot (2003), Australian Embassy (2004), and Ritz Carlton (2009) (Mbai, 2014). All of them were carried out by *Jamaah Islamiyah*, *Jamaah Ansharut Tauhid*, or *ISIS*. *Jamaah Islamiyah*, *Jamaah Ansharud Tauhid*, *East Indonesian Mujahidin*, and *ISIS* are the terrorist group that come from religious ideology and have the same intention. They want to create an Islamic state called Caliphate (Khalifah) (Galamas, 2015).

Indonesian National Police (INP) released, since the last 16 years, there are 1252 arrested for individual terrorism (NCTA, 2016). There are 132 people among them died, either due to suicide bombings or had death-penalty. Meanwhile, 101 people returned to their family due to lack of evidence, 371 people received the verdict, 545 people have completed their punishment, 35 people are facing the trial process and 48 people are still in the process of investigation Special Detachment 88 (*Densus 88 AT*) (NCTA, 2016).

Through the worries of terrorist organizations, Indonesian Government create a National Counter Terrorism Agency (NCTA) and *Densus 88 AT* to coordinate the eradication of terrorism in Indonesia (USAID, 2016). As the coordinator, NCTA have an obligation to carry out preventive actions and carry out the anti-terror legislation. These action is known as the deradicalization of terrorism. Meanwhile, *Densus 88* focus on tactical organization who commit in law enforcement actions.

Based on USAID, NCTA is categorized as a poor-institution by the implementation of deradicalization program (USAID, 2016). Only few participants changed their mindset after following those program. It seems like a failure of NCTA. In fact, the people who have followed the process of deradicalization in prison were committed to another terror attacks (Kwok, 2016). Juhanda, a man who already finished his deradicalization program, participates in another terror attack in Samarinda. He was arrested in 2012 for his involvement in the book bombing and his involvement with *ISIS* in 2014. It shows that there is an urgency to improve the quality of deradicalization program by NCTA. Juhanda has been engaged in deradicalization program three times, but he still did the same thing.

According to the data from NCTA, terrorism prisoner who re-joined the terrorist network was only 1/6 of them (NCTA, 2016). It implies, there are 34 people who re-joined terrorist network from 500 prisoners and ex-prisoners of terrorism. This is not an enormous amount, but still describe the failure of NCTA. Therefore, this research tries to find and discovers their deficiency from deradicalization program and discover the solutions.

2. METHOD

Life Course Criminology and Developmental Criminology is a thought in Criminology that discusses 'how a prisoner does not commit into a crime when they return to their society' (Shlomo Giora Shoham, 2010). Farrington explained that *developmental* and *life course criminology* give attentions to the documentation and explanation for deviant behavior of throughout the person's life. *Developmental* and *Life Course Criminology* learn it by focusing on three main issues which consists of the development of deviant and anti-social behavior, risk factor of age diversity, and the effect of a certain event during a person's life. Some other experts such as Thornberry, Smith, and Blokland expressed various opinions which led to the conclusion that the *life course* and *developmental criminology* studies the evolution of crime by focus on their principal event that happened in person's life.

One of theory in *developmental criminology* is *age graded theory of informal social control* by Sampson and Laub (Robert J. Sampson, 1997). This theory is based on the *social control theory* which assumes that crime and deviation will tend to be more easily carried out by individuals who have lack of social bounding during their life. The base of that theory are *trajectories* and *transition*. *Trajectories* is a path traversed by an individual for life, like work, parenthood, and criminal activities. Meanwhile, the *transition* is marked in the principal events in their life, such as first marriage, first job, which inherent in *trajectories* and will change continuously.

This research uses the *age graded theory of informal social control* and *social bond theory* to look at the lack of deradicalization program by NCTA at the community involvement. The important part those theory is how the event or a transition period of someone, with a new status as an ex-terrorist-prisoner, occurred through NCTA's framework. The viewpoint of transitions is seen by 'how NCTA seeks to strengthen the social bond between community and ex-terrorist-prisoner as part of re-socialization. Analysis components which used in this research refer to an individual bond with the community by respecting several aspects, such as attachment, commitment, involvement, and a belief , that was built by NCTA.

This research uses qualitative method by study literature and interview as the process of collecting data. This method was chosen for in-depth insights about 'what things that still need to be improved on deradicalization program without any limitation of certain variables. The interviews are derived from blueprint on *Deradicalization Guidance of NCTA* with the participation of parties who directly involved in that program. The data were analyzed with the theories that have been determined to look further the deficiency of deradicalization program to give proper suggestions.

3. DISCUSSION

Based on President Regulation No. 12/2012, the duties of NCTA are :

- a. Formulate policies, strategies, national programs in the field of counter-terrorism;
- b. Coordinate related institutions in the implementation of terror prevention policies;
- c. Implement policies of counter-terrorism, such as the establishment of joint Task Force with related elements (NCTA Deradicalization Blueprint, 2013).

The counter-terrorism blueprint and deradicalization blueprint are the foundation of counter-terrorism and deradicalization program in Indonesia by NCTA (Samuel, 2016). The blueprints are based of the Indonesia's firmness, in terms of counter-terrorism, which will protect the honor and sovereignty. It states that the deradicalization program in prison has five stages, such as identification, re-education, re-socialization, rehabilitation, monitoring and evaluation. Each stage has a specific purpose and different measurement of success that should be done by NCTA.

NCTA has two types of deradicalization program, which are inside prisons and outside prisons (NCTA, 2013). Deradicalization outside prison consists of identification, training of counter-radicalization, monitoring

and evaluation. Meanwhile, deradicalization inside prisons include the identification, rehabilitation, re-education, re-socialization, monitoring and evaluation. Each stage is carried out systematically due to efficiency and proper target.

Deradicalization outside prisons held to prevent the radicalization of individuals potentially radicalized. This program targets both individuals and groups potentially radical and sensible family and also ex-terrorist-prisoners. Identification is done for planning, mapping data, and recommendation. Training of counter-radicalization is conducted to establish the target of radicalization program to have a moderate understanding, tolerant inclusive in religion, and respect for pluralism as citizens and develop their independency. Monitoring and evaluation are conducted to determine appropriateness and accuracy of the program (input, output, outcome, and impact) that have been implemented earlier. This program involves various stakeholders such as ministries, NGOs, community, professional institutions, universities, media and other parties who can be cooperate with.

Deradicalization outside prison carried out to determine the identity of individuals linked to terrorism and also their understanding of radical network. Rehabilitation in this program eliminates the radical understanding of the prisoners and their families. After that, they will face re-education phase which is created to provide new understanding of peace an religion properly for the ex-terrorist-prisoners and their families. Resocialization helps ex-terrorist-prisoners and their family to interact with the community. Monitoring and evaluation was conducted to determine the suitability, accuracy, and achievement of the program on the aspects of input, output, outcome, and impact.

Resocialization as a part of Deradicalization Program from NCTA

Re-socialization is a crucial part in the deradicalization program for ex-terrorist-prisoners. It is designed to prepare them to reintegrate into society and prepare the community to accept them well. It is also listed in the deradicalization blueprint of NCTA. Several principle of this program are rule of law, human rights, equality, guidance and empowerment.

Re-socialization made to prepare the ex-terrorist-prisoners and their family to re-interact with the public well, eliminating fears and suspicions, and also to grow their mutual respect. Their object is the ex-terrorist-prisoners, their families, and community where they will join. The purpose is to prepare ex-terrorist-prisoners back to the community through the development of personality and independence. Therefore, this program prepares independence training, the strengthening of religious understanding, peace, and respect for diversity, growth their empathy and respect for others.

According to the *age graded theory of informal social control*, a person's life is influenced by different institutions that provide formal and informal control throughout life with different scale. Informal social control has a deeper role than formal social control which more focuses on crime prevention and it comes from relationship. It refers that social bond in adolescence and adulthood will be able to explain criminal behavior without relying on certain tendencies. This theory also argues that the precursor of deviant behavior is mediated in various institutions implicated in accordance with age, especially in the transition to adulthood such as employment, participation in military, marriage, and official sanction.

Operationally, this theory looks further crime along someone's life with a framework that their life is very dynamic which interconnected with each other. It is similar like the relation between *trajectories* and *transitions* that make a changes in life dynamically . The adaptation period is considered as a crucial thing because it brings someone into a different *trajectories*. The transitional period as the turning point of a person who fails to pass will heading them down the wrong path by separating their past and future. Their turning point can be both positive and negative. It represents the turning point of decision when life's trajectories geared toward more adaptive or maladaptive. The process that occurs in their turning point in a certain period will change the focus of a person and also their future. That depends on what kind of changes and their age. This period will be determining whether the process will change them into someone new or strengthen their existing behavior. At this moment, informal monitoring will be very important to do during their transition period.

Social bond theory is the most common approach in latest criminology (Miller, 2009). The experts of *control theory* argued that conformity of existing regulations in community is produced by socialization. It is also kept with human bond and another institutions, such as family, friends, school, and college. The application

of these assumptions in this theory is known while someone have a strong bond with their institutions, they will have bigger price to pay when committing a crime.

There are essential elements that must be present in social bond, such as attachment, commitment, involvement, and belief. *Attachment* is considered as an essential part of this theory because there is an emotional bond between individuals and groups. It is proven by the research of Sheldon and Glueck in 1950. They indicated that a good bond between children and their family will avoid them to commit in deviant behavior. *Commitment* is also placed as an important thing because someone will understand that they will have a greater losses when committing a crime.

Involvement is becoming a parameter of someone's bond with their community. In this variable, someone would not harm another in which they was mostly involved in. *Belief* contains a principal value of a person. In addition, a good social bond will also create a better control of society toward themselves. Thus, it can prevent someone to not commit crime.

According to *age graded theory of informal social control* dan *social bonding theory*, NCTA must understand that a transition period of ex-terrorist-prisoners after finish their sentences and return to the society is the most important period. Therefore, NCTA must prepare them to have a better mental and skills to face that reality. The community also need to support them as well as their belongings. Development bonds must notice those components in that social bonding theory.

The Importance of Community Partisipation

Re-socialization concept in deradicalisation blueprint describes the development of community reintegration of ex-terrorist-prisoners and society. In fact, re-socialization only focus on how the ex-terrorist-prisoners able to return into society. A great concept that convinced the participation of whole community, in terms of ex-terrorist-prisoners acceptance, isn't running well. Based the interviewees, the re-socialization program has stopped running for a year since 2016. With the wrong focus, it also affects the quality of informal control by society. This condition is also exacerbated when it freeze.

The transitional period which is important phase to manage received less attention by NCTA. The preparation that given for ex-terrorist-prisoners still not optimal. People who ought to help the process of re-socialization is not invited. Even though, they have a good chance to make this program running well.

The re-socialization application that only focus on ex-terrorist-prisoners isn't totally support the strengthening of informal control towards them in society. In fact, society have the highest interaction with the ex-terrorist-prisoners. One thing that obstruct their control is the limitation number of officers and it can solve by improve the informal control by society itself.

Based on the article from Noor Huda Ismail in Tempo.co , about Juhanda who involved in Church bombing in Samarinda, can describe the weakness of NCTA in terms of their deradicalization program. (Noor Huda Ismail, 2016). Noor Huda claimed, when society and state didn't appear in Juhanda's life, He was living in the shadow of ISIS that he got from another prisoners (in prison). Juhanda wasn't accepted by his society and also his family. So, his wife took away their child (Nabila Tashandra, 2016). This clearly proves that the re-socialization process with community involvement is very necessary.

The implementation of re-socialization program without involving the community would make the base of social bond among ex-terrorist-prisoners and public doesn't run properly. It won't create reciprocal relationship between them. If society are not ready to accept the ex-terrorist-prisoners, the re-socialization process will be difficult.

Nowadays, re-socialization concept only appeared in seminars or workshops with improper audiences. According to their method, the implementation of NCTA's blueprint doesn't fit with the concept. It is necessary to get the attention of NCTA as a main actors driving the de-radicalization program in Indonesia.

The discussion of re-socialization, in the context of social bonding theory, implies that 'what was done by NCTA is not reinforce the concept of strengthening social bond among ex-terrorist-prisoners and community'. The program only strengthen their mental and independency. In fact, the social skills to build

social bond become a very crucial in their re-integration process.

NCTA doesn't understand that the capabilities of ex-terrorist-prisoners depend on the society. People who don't trust the ex-terrorist prisoners will never accommodate their interest whatever it goes. Reciprocal relationship becomes substantial to establish social bond among them. As great as the potential of ex-terrorist-prisoners to the society, it will be nothing without public participation.

The development of essential elements that must be include in the social bond to their community (attachment, commitment, involvement, and belief) during their transition period becomes important. Those are necessary to create good implementation of that program. It is expected to happen so that ex-terrorist-prisoners can fulfill their affection and material needs from society. It is good for people to prevent ex-terrorist-prisoners involve in another terror attack. The community can provide emotional support, material, and protection. Society also can help the ex-terrorist-prisoners to solve their problems, invite their family to do something together, and invite them to build moderate religious understanding and tolerance.

4. CONCLUSION

The conclusion of this research is NCTA should evaluate their re-socialization program is conducted. Their weakness is the absence of society during the process whereas community involvement is principle. Thus, society need to prepare their mind in terms of ex-terrorist-prisoners acceptance in everywhere. In accordance of *age graded theory of informal social control*, informal control is also substantial to prevent ex-terrorist-prisoners committing terrorism again. Absence of community involvement in re-socialization means negates the importance of informal communities to conduct surveillance towards ex-terrorist-prisoners. In fact, *age graded theory of informal social control* has been clearly stated that a person who is in transition period need to get public scrutiny in order to create a success transition.

As a result of the societies absence in re-socialization process, the social bond between people also neglected. In fact, the social bond has been described as an important thing owned by someone with the community to prevent crime. The construction of re-socialization should also focus to how the social bond can be formed. Therefore, evaluation need to be re-adjust in accordance with the concept of social bond itself.

The roots of this problem is not in the de-radicalization blueprint. However, that is a mistake to transform it into improper application. The transformation of that concept need to be done by giving attention to the re-socialization concept as a basic needs of ex-terrorist-prisoners. Well preparation must be given to both sides without leaving between one another. The implementation must support their grand concept in order to make it better. In other words, synchronization between the concept and the program is necessary.

Demolition Of Foreign Ship With Illegal Fishing As A Form Of Protection Of Marine Sovereignty In Indonesia

Hendra Mulyadi

Demolition Of Foreign Ship With Illegal Fishing As A Form Of Protection Of Marine Sovereignty In Indonesia

Hendra Mulyadi

Master of Law at Padjadjaran University, Bandung, Indonesia (hendra.111000155@gmail.com)

ABSTRACT

Lately, it has often been reported about the demolition of foreign ship with illegal fishing in Indonesia's water zones. It is reasonable because Indonesia is the biggest archipelago country in the world with extensive shore lines and sea zone, as the result its biodiversity is abundant and variant. The problem that emerges frequently is not only sea asset exploitation by local fishermen but also by foreign fishermen illegally around most Indonesia's water zones. This is causing the biggest loss for Indonesia. Based on the data released by the Ministry of Maritime Affairs and Fisheries, during January 1 to June 21, 2016, the Ministry of Maritime Affairs and Fisheries have arrested 57 foreign vessels from various countries, which are suspected of illegal fishing in the waters of Natuna. In fact, the process of demolition of foreigners ships with illegal fishing in Indonesia's water zones is not a new thing occurring in the era of President Joko Widodo. The practice is a common thing to do in the world. In February 2014 the ship owned by Indonesian fishermen who are caught entering the sea area of Papua New Guinea was burned by the state patrol sea. Various efforts are conducted by Indonesia to protect national water zones, such as explosion and demolition foreign ships with illegal fishing, despite it receives protests from some countries.

Key words: Foreign Demolition, Illegal Fishing, Sea Sovereignty.

INTRODUCTION

Indonesia is the largest archipelago country in the world which consists of about 18.306 larges and small islands with a coastline of approximately 95.181 km². Indonesia becomes the largest maritime country in the world after Canada and Russia with two-thirds of the entire region is an area of the sea, with the number of the island about 17.504 islands and a coastline of around 81.000 km.⁸ Indonesia sea area around 5,8 million km² consists of 3,1 million km² sea area which is subject under the sovereignty and 2,7 km² exclusive economic zone area. Sea subordinate the sovereignty of Indonesia consists of 0,3 million km² territorial sea and 2,8 million km² archipelago waters. Indonesian fishery potential of 6,26 million tonnes annually, with details of as many as 4,4 million tonnes can be caught in Indonesia waters and 1,86 million tones in the Indonesia exclusive economic zone.

Island states that have a strategic position with the potential for great fishing resources draw attention of foreign fishing vessels to engage in illegal fishing. Besides, one of the factors of illegal fishing is the world's demand for fish increases while declining world fish supply.

Based on the data released by the Ministry of Maritime Affairs and Fisheries, among 14 zones fishing ground in the world, are still potential two zones, one of which is the waters of Indonesia.⁹ Potential zones in Indonesia prone to illegal fishing are a Sea of Malacca, Java Sea, Arafuru Sea, Timor Sea, Banda Sea, and the waters around Maluku and Papua. Fishery resources in Indonesia are still a source of wealth that provides enormous possibilities development for the prosperity of the nation Indonesia, both to meet the protein needs of its people, and for export in order to obtain funds for the nation's development efforts.¹⁰ Based on these conditions, illegal fishing debilitates the management of fishery resources in the waters of Indonesia and leads to the over fishing for the fishery resources in some areas of Indonesia fishery.

Based on the data from Food And Agriculture Organization (FAO) claimed the loss due to illegal fishing Indonesia is estimated to reach Rp. 30 trillion annually.¹¹ FAO claimed currently the supply of fish resources

that still allows for improved capture is only 20%, while 55% is in the condition of full utilization and the remaining 25% is endengared.

Act of foreign fishing vessel entering the territorial waters without permission and exploiting the natural wealth in it violates Indonesia's sovereignty. Therefore, there should be a strict law enforcement in the form of the arrest of foreign fishermen and their vessel to the process legally. Arrests against foreign fishing vessels can be justified when it is the fulfillment of the evidence that fishing vessels have committed illegal fishing.

Sufficient preliminary evidence for the arrest of foreign fishing vessels is the one to suspect criminal activity in the field of fisheries by foreign fishing vessels. The violation covers disconfirmation of fishing license and license to fish transport vessel, and clearly capture and/or transporting of fish in the territorial waters of Indonesia.¹²

As described above, the arrest of foreign fishing vessels that conduct Illegal Fishing with measures sinking by means of explosives has been conducted in Indonesia. The purpose of the sinking of foreign fishing vessels is to provide a deterrent effect and to show assertiveness of government in realizing sustainable yet responsible fisheries.

RESEARCH METHODS

The data of this paper originates from literature studies, observation of news in mass media in a purpose at discovering and analyzing the demolition of foreign ship with illegal fishing issues.

DISCUSSION

Definition of the state as a subject of international law is the organization of the sovereign power, dominate certain area, a certain population and is based on the life of a particular legal system.¹³

In accordance with the concept of international law, sovereignty has three main aspects, are as follows:¹⁴

1. The external aspect of sovereignty is the right of every country to freely determine its relationship with other countries or other groups without pressure or custody of another country;
2. The internal aspect of sovereignty is the right of a country or the exclusive authority to determine the form of its institutions, the workings of these institutions, and the right to make laws required and actions to comply;
3. Aspects of territorial sovereignty means full and exclusive power owned by the state over individuals and objects found in the region.

Sovereignty over the territory of a country is fundamental. As one of the conditions in the country, the sovereignty of a country is indispensable, therefore other countries will not arbitrarily enter the territory of another sovereignty. State sovereignty means the state does not recognize a higher unity than on his own authority. Its highest power by this country can indeed be contrary to international law as rules or norms governing the relations of the country. International law is invalid because the state has the ultimate power. Consequently international law can not become a means of inter-state relations for each country in international relations still accentuates its sovereignty.¹⁵

One of the main aspects of state sovereignty is control of an area or territory where the law of the country is applicable. Towards this region lies the highest authority in the relevant country, therefore it comes the concept of "sovereignty tetitorial".¹⁶ Territorial sovereignty is its own sovereignty in carrying out the exclusive jurisdiction of the state in its territory. State can not carry out its exclusive jurisdiction of the territory that disturbs the territorial sovereignty of other countries.

States have an obligation to respect the territorial sovereignty of other countries. Article 1, paragraph 1 and 2 of the Convention on the Territorial Sea confirms the scope of the sovereignty of a country. Affirmed in Article 1, paragraph 1 that the sovereignty of a country outside its land and inland waters include a sea zone in front of beaches known as the territorial sea. Furthermore, Article 1, paragraph 2 confirms that the sovereignty in its implementation should be subject to the provisions of the articles of the Convention and rules of other International Law. Meanwhile, Article 2 confirms that the sovereignty of a coastal state includes the air space over the territorial sea and the seabed and land at the bottom of the territorial sea as well. Both articles explicitly

confirmed that the territorial sea is part of the country, including the seabed and land at the bottom of the territorial sea itself and the air space above it. Certainly this territory is united or a unity with its land and land under its land area, including the air space over the territory of the land area. As a whole that is an area of the country.

On December 11, 1982, Indonesia ratified UNCLOS in 1982 into Law No. 17 of 1985 which establishes the basic principles for structuring marine. It is undeniable that UNCLOS 1982 is an international agreement as a result of negotiations among more than a hundred countries, which organizes the vast and complex material. In detail, UNCLOS 1982 establishes rights and obligations, sovereignty, sovereign rights and jurisdiction of the countries in the use and administration of the sea. By Law No. 17 of 1985 means Indonesia has subjected itself to this Convention, as the result all the policies in the field of marine Indonesia must comply with the provisions of the convention.

Based on the provisions of Article 62 paragraph (4) letter (k) UNCLOS reads:

“Nationals of other States fishing in the exclusive economic zone shall comply with the conservation measures and with the other terms and conditions established in the law and regulations of the coastal State. These laws and regulations shall be consistent with this Convention and may relate, inter alia, to the following: enforcement procedures.”

Article 73 of UNCLOS, reads:

1. The coastal State may, in the exercise of its sovereign rights to explore, exploit, conserve and manage the living resources in the exclusive economic zone, take such measures, including boarding, inspection, arrest, and judicial proceedings, as may be necessary to ensure compliance with the laws and regulations adopted by it in conformity with this Convention
2. Arrested vessels and their crews shall be promptly released upon the posting of reasonable bond or other security
3. Coastal state penalties for violations of fisheries laws and regulations in the exclusive economic zone may not include imprisonment, in the absence of agreements to the contrary by the States concerned, or any other form of corporal punishment
4. In cases of arrest or detention of foreign vessels the coastal State shall promptly notify the flag State, through appropriate channels, of the action taken and of any penalties subsequently imposed.

Indonesia is an archipelago country that is rich in natural resources with a very wide sea area. This situation makes many foreign fishermen do illegal fishing in the sea region of Indonesia. Indonesia is granted the right to enforce the law in the ZEE in the event of violations of the law. The actions of foreign fishing vessels entering Indonesian waters without permission and exploit the natural resources therein such as illegal fishing have violated the sovereignty of Indonesia.

Actions of illegal fishing occur in nearly all parts of the world. Illegal Fishing definitions according to the International Plan of Action (IPOA) in 2001 initiated by the Food Agriculture Organization (FAO) in the context of the implementation of the Code of Conduct for Responsible Fisheries (CCRF), are as follows:

1. Activities conducted by national or foreign vessels in water under the jurisdiction of a state, without permission of that state, or in contravention of its laws and regulation;
2. Activities conducted by vessels flying the flag of states that are parties to a relevant Regional Fisheries Management Organization (RFMO) but operate in contravention of the conservation and management measures adopted by the organization and by which states are bound, or relevant provisions of the applicable International Law;
3. Activities in violation of national laws or international obligations, including those undertaken by cooperating states to a relevant Regional Fisheries Management Organization (RFMO);

In general, Illegal Fishing practice which occur in the waters of Indonesia, are as follows:

1. Fishing without a license;
2. Catching fish by using a false license;
3. Fishing using banned fishing gear; and
4. Catching fish by species that does not comply with the permit.

According to Article 69 of Law No. 45 of 2009 on Fisheries that fishery patrol ship which is in charge of overseeing and enforcing the law in the field of fisheries should have adequate initial evidence to take action to bring the ship to the port of suspected illegal fishing. If the foreign flagged ships are not in possession of fishing permits (SIP) and permit fish transport vessel (SIKPI) to catch fish in the waters of Indonesia and believed to be doing illegal fishing in Indonesian waters, special actions such as burning and / or sinking foreign-flagged fishing based on preliminary evidence earlier will be conducted.

In fact, there are several options that governments can take action against such cases, for example by foreclosure or grant the vessel without sinking as stated in the fisheries laws and regulations. However, the

existence of fraud and mafia of fishery practices make the Indonesian government conduct the sinking to provide a deterrent effect.

According to Ex-Director General of Supervision and Control of Marine Resources and Fisheries, the Minister of Maritime and Fisheries Affairs of Indonesia Aji Sularso, practices of fishery mafia exist in terms of the auction of foreign ships are shown throughly, one of them, the cooperation between foreign ship owners and fishery mafia in Indonesia with vessel price estimation around Rp. 1.5 billion. Therefore, the fishery mafia is expected to gain up to 50% of the vessel price or about 750 million rupiah. At the time of the vessel tender the domestic companies are set in one group to avoid of bid above Rp. 150 million; then Rp. 150 million remains in the state treasury. The next of Rp. 600 million will be distributed to various parties, especially the attorney as a public prosecutor and also the organizer of the auction. There have been many cases that record seized vessel prices about only Rp. 150 million, but yet the amount which is recorded in the state treasury is only Rp. 40 million. Moreover, the vessel could be returned in the ownership and operating illegal fishing in Indonesia again.

Practices like these make the Indonesian government prefer sinking the ship of the auction. The fact that the auction with the fishing mafia practices can only be detrimental to the State Indonesia because of the cost of fishing operations, the cost of adhoc boats, mooring boats and feeding the crew during the court proceedings which was not commensurate with the results of the auction in the state treasury.

There are two sinking ways of foreign fishing vessels carried out by the Indonesian government through the Authority:

1. Sinking ship through a court decision

- a. Authorities who arrest foreign fishing vessels and crews to bring the ship ashore.
- b. There is court in the land where the fishery will be executed legal process
- c. After being in trial and convicted, the verdict has permanent legal force to make the ships confiscated.
- d. When the ship is confiscated, it relies on executing prosecutors for what they will do against the ship.
- e. Whether the ship will be at auction or destroyed
- f. If destruction is the choice, one of either ways will be explosion and sinking.

2. Caught red-handed by the authorities

The second way is based on Article 69 Fisheries Law No. 45 of 2009.

Article 69:

- (1) The vessel serves fisheries inspectors carry out surveillance and law enforcement in the fishery in the fishery management area of the Republic of Indonesia.
- (2) As referred to in paragraph (1), Ship fisheries supervisor can be equipped with firearms.
- (3) Vessel fishery inspectors can stop, check, bring and detain ships suspected or suspected violations of fisheries management in the region of the Republic of Indonesia to the nearest port for further processing.

Sinking is certainly carried out after the crew or foreign fishermen are rescued and prosecuted. This action is necessary in order not to repeat the occurrence of illegal fishing in the territorial waters of Indonesia. Under the provisions of Article 62 paragraph (4) letter (k) and Article 73 of UNCLOS, Indonesia as an archipelago country is given the right to enforce the law in the territories when their ZEE or the creation of lawlessness in the region.

However, Article 73 paragraph (3) of UNCLOS sets the sentence imposed by coastal states of the offenses in the ZEE may not include corporal punishment. Indonesia can only impose physical penalties after signing bilateral agreements with other countries. Foreign fishing vessels who are stealing fish can be fined and then foreign fishing vessels can be deported to their home country. Such actions are adapted to the provisions of Article 73 paragraph (4), which states in the event of the arrest of foreign fishing vessels previously has to do a formal announcement to the country of origin of foreign fishing vessels.

International law has arranged that the sinking of the foreign ships which violate regulations by state trajectory, one of them is Indonesia, is very open to do. It is conducted basically because crossing the territory without permission and committing a crime in it is threatening the sovereignty of countries and regions. As known, the basic principles of international law enforcement is putting national jurisdiction. This can be conducted by the state of Indonesia, because the state has the willingness to enforce the law in such cases. Basically, when international law has been violated in a criminal case, the state has the right to bring proceedings in the International Criminal Court by the country's track record Unable and unwilling.¹⁷

¹⁷ Rofi Aulia Rahman, Peneggelaman Kapal Asing dalam Upaya Perlindungan Sumber Daya Laut di Indonesia: Perspektif Hukum Indonesia dan Hukum Internasional, Fakultas Hukum, UMY, page. 6.

The sinking of foreign ships involved in illegal fishing is basically not a new policy for the Government of Indonesia because the policy it carried out during the reign of Megawati Soekarnoputri. As known, one of the functions of legal sanction is in order to provide a deterrent effect on offenders or crime. Weak law enforcement during this and the lack of prosecution of perpetrators of violations or crimes occur because it is not oriented to the deterrent effect which can be regarded as indirect contribution to the development of existing crime. It can even be said to be a form of inability of the state to provide legal protection to citizens, both fishermen in particular and the people of Indonesia as a whole as the owner of Indonesia's marine resources.

This will ensure a deterrent effect because the ship is the main production equipment of theft perpetrators. If the ship and equipment are sunk, the thieves will think a thousand times to repeat the theft in Indonesia because the theft motive is for profit.

Although there is a difference of opinion between who agree and disagree about the sinking of the foreigner conducting criminal acts of illegal fishing in the northwest region of Indonesia, the action aims to demonstrate decisiveness and authority of the Indonesian government to protect the area and the natural results it has, to protect its sovereignty, a deterrent effect, and to secure the looting of foreign parties

Policy of illegal vessel sinking will not affect bilateral relations, regional, and multilateral Indonesia and other countries. According to Professor of International Law, University of Indonesia, Hikmahanto Juwana as quoted by Sulasi Rohingati, there are five reasons why the policy actually deserves to be supported and will not worsen relations among countries:

1. No country in the world that justifies its citizens who commit crimes in other countries. Foreign ships which are sunk are the non licence ships to fish and they are so called criminal.
2. Action of sinking is conducted in the sovereign territory of Indonesia and the sovereign rights (exclusive economic zone).
3. Measures of sinking are conducted on the basis of valid legal provisions, namely Article 69 paragraph (4) of the Law of Fisheries.
4. Other countries are required to understand that Indonesia is harmed by the crime. If let in this condition, the losses will be even greater.
5. The process of drownings has been paying an attention to the safety of the crew.

This policy is carried out by other countries of the same case as well. Marine law enforcement is to provide for sanctions through sinking as a very effective, it can give a shock therapy for the perpetrators of illegal fishing. China and Malaysia for example, have adopted a policy of sinking of fishing vessels of Vietnam. The same is conducted on Thai fishing vessels, including Australia and Indonesia. Thus, throughout the implementation is conducted in accordance with legal regulations, this policy will not interfere Indonesia's bilateral relations with the countries of origin of the vessel.¹⁸

However, governments need to disseminate the policy to other countries. Hikmahanto Juwana as quoted Sulasi Rohingati confirms the mechanism the government can do is to inform the policy to their respective governments, particularly to countries whose ships often enter Indonesia illegally, such as Thailand, Philippines, Malaysia, China, and also representatives of Thailand. The next step, the government in coordination with representatives of countries whose ships have been sunk. Thus, the good relations between countries is maintained.

Indonesian Government conducts this policy gradually in accordance with the stages of the conventional nature of diplomacy strategy.

1. Stage of designing and preconditioning. At this stage, the draft of diplomacy format is simulated to predict the feedback possibilizing accepted. For example, a policy statement of sinking policy is the law enforcement effort in the sovereign territory of Indonesia.
2. Stage of conditioning. In this context, the government should examine the extent to which the target communication will respond to the message to be delivered as well as aspects of any messages that need attention. The next diplomatic step is disseminating this policy to the ambassadors of the countries in where their fishermen are suspected very often to conduct illegal fishing. In this framework, the Ministry of Maritime Affairs and Fisheries and the Ministry of Foreign Affairs have to disseminate this policy with a number of ambassadors of neighbor countries. Socialization is expected to be forwarded to their respective governments to be continued to businesses and their fishermen. This step is also conducted to maintain good relations.
3. Stage of exercising. In this stage, the real diplomacy is launched. Government of Vietnam, Thailand and Malaysia respond drownings case seriously and recall their fishermen not to violate boundaries in search for fish. Vietnamese Foreign Ministry on December 11, 2014 held serious discussions with Indonesia regarding the incident sinking of vessels of fishermen. The Vietnamese government said to

¹⁸ Lisbet Sihombing, *Diplomasi Indonesia Terhadap Kasus Penenggelaman Kapal Nelayan Asing*, P3DI Setjen DPR RI, 2014, page. 6-7.

ordere their fishermen to obey the rules and laws of other countries not to violate their territorial waters. Therefore, Vietnam hopes that Indonesia handle their citizens, who are the owners and crew violating the territorial waters of Indonesia in accordance with international law and on humanitarian grounds.

Meanwhile, the Thai government has announced in the local media that the fishermen do not do illegal fishing in the region Indonesia. A similar step is also made by Malaysia. Ambassador of Malaysia in Indonesia, Dato Seri Zahrain Mohamed Hashim said Indonesia did not make policy for foreign fishermen fishing vessels drown because they apply to foreign fishing vessels fish proved to steal the fish in the territorial waters of Indonesia. Furthermore, Ambassador Hashim will continue to remind the country fishermen of not being careless to cross the border. To avoid these carelessness, the detector or GPS has been installed on each boat used by fishermen.

4. Stage of evaluating. The government requires to evaluate the result of diplomacy that is conducted. Indonesia is evaluating result of diplomacy policy of the foreign ship sinking delivered to ambassadors. It has received positive responses from several origin countries of the ships.
5. Stage of reapproaching or concluding. The result of the evaluation will be a principle for the government to determine their following stage.

CONCLUSION

Sinking policy of foreign fishing vessels conducting illegal fishing in Indonesian waters is a form of firmness and seriousness of the government to stop this practice while keeping the sovereignty of the Republic of Indonesia. Legally, the policy and the sinking of illegal vessel convicted of violation of law in the Homeland still has a solid legal basis. Thus, there is no reason for other countries to be in objection on firm action against the perpetrators of the crime conducted by the Government of Indonesia to foreign citizens who commit criminal offenses in Indonesia. Law enforcement efforts in the form of sinking of the ship must also be accompanied by budget support and adequate facilities in enforcement, such amount sufficient personnels, facilities and infrastructure to support enough equipment like firearms, ship, to, support supply of fuel for the considerable operational, consequently, all fishery supervisors are capable of reaching the entire sea area of Indonesia.

ABSTRACT

Border region is paramount manifestation of state sovereignty and territorial stability. Border region is also strategic and vital in terms of the Unitary Republic of Indonesia (NKRI) framework since it has promising opportunity due to geographical matters. Moreover, it is politically vital, because it is very essential to the extent of state sovereignty aspects thoroughly. Thus, Indonesia as a sovereign state, has responsibilities toward its border territory.

The evolution of technology in terms of border demarcation has enabled every state to define its territorial border both on land and at sea by using the coordinate points. Coordinate points are relatively stable medium as they provide definite coordinate of the borderline without influenced by any occurring changes. Consequently, in legal perspective, coordinate points are a more favorable method and legally safe to implement state's territorial sovereignty. However, the recognition of coordinate points as land border markers in reality are not sufficient in order to guarantee the state could exercise its sovereignty. Considering in practical, coordinate points are found difficult to be interpreted by the locals. Since it requires GPS in order to detect the coordinate points. Further, the locals are lack of capability to read the GPS as well. Hence, they will be traditionally relying on physical border, such as stake, fence, river, mountain or other physical boundary as a more decisive factor of the border area.

This research paper aims to study the urgency of border markers revitalization in Indonesian and Malaysian Border, specifically in Temajuk Village, as a manifestation of Indonesia's sovereignty and territorial stability.

The research is a legal research. Therefore, the data collecting method applied for this research are mainly focused on literature resources. Further, the Author performs field observation to obtain primary, secondary, and non-legal material. These materials will then be analyzed using qualitative method with a statutory approach.

The result of field observation showed that due to ignorance of locals toward border markers function, as well as lack of supervision and law enforcement, worsen by infeasible condition and the absence of physical borders in certain position have triggered legal issues as well as potential threats toward national security. As impacts of previously stated causes, many problems arise such as: cross-border settlement and farming, smuggling of commercial products and services (beyond bilateral threshold), traffic of import goods and services without customs tax, international marriage without following legal procedures, foreign influence infiltration, undocumented residences or immigrant and the worst is the shifting of border markers, which may diminish state's sovereignty manifestation.

Ultimately, the Author highly recommends Indonesian government should necessarily draw high attention, set action plan and take prominent steps in border region management, particularly on the revitalization of border markers, considering both legal and practical significance in line with holistic approaches toward the livelihood of local communities. Taking into account its urgency in order to prevent

potential threats and to overcome challenges that may appear in the future so that Indonesia may completely implement its sovereignty within the territory.

Key Words: Border Markers, Coordinate Points, Legal Issues, Across-sector Problems, Territorial Stability, Indonesia's Sovereignty

1. INTRODUCTION

Article 1 of Montevideo Convention 1933 (*Convention on Right and Duties of States*), mentioned the elements of a state, which are: *The state as a person of International Law should possess the following qualifications: 1. A permanent population, 2. A defined territory, 3. A government and 4. A capacity to enter into relation with other states.*

Based on the Convention, territory is one of the cumulative elements of a state. An independent and sovereign state can not be considered as a state if it does not have the so-called existential factors, namely a defined territory and recognition from other states. A sovereign state has complete jurisdiction over its territory. As consequences, state is able to implement the power considering the notion of state cannot be separated from sovereignty. Under the Law Number 43 Year 2008 on state territory stipulates that the limit of territorial jurisdiction is the boundary line in regard to sovereign rights and authority possessed by the state based on the provisions of national regulation and international law. Sovereignty is concerning on the existence and state's capacity to face global challenges such as economic sovereignty, food security, and defense and security of a state.¹ Sovereignty of a state embodies matters related to territorial (land, water and air space) as well as state responsibilities in across sectors.

Indonesia as a sovereign state, has responsibilities toward its territorial. The responsibility definitely includes border region as state's front line. Since, border region is significant manifestation of territorial sovereignty. Further, border territory is an inseparable part of a unified state, as far as recognized by an international treaty or commonly acknowledged without any state formal declarations.² In conceptual framework, border region has seven functions as follows: strategic-military, economy, constitutive, national identity, national unity, nation's development, and achievement of domestic interests functions.³

In fact, every border region has the potential of leading sectors. For example, richness in biodiversity, specific local commodity, local handicraft and commercial products, unique traditions and strongly maintained local custom, natural landscape which can be a tourist attraction, as well as the potential lies on the human resources as functional system and other supporting elements in developing border region.

Hence, in order to shift the paradigm from the ones which assumed the border region is merely as a backyard, then it would be substantial to guarantee a better primary needs, education, health, and supporting infrastructure for these areas. In addition, it is also important in order to alleviate the poverty by accelerating state proactive action through integrated cooperation from multisectors institutions.⁴

Basically, the funds for the construction of the border is annually allocated. However, there is huge disparity between the amount of the budget and the reality of border development plan. The arguments are based on judging the facts today that border region remain isolated, underdeveloped and left-abandoned. Furthermore, the border communities can be considered as marginalized communities due to its social welfare and educational background are left behind.

Up to today, the border region remain as one of crucial issues, including the one which located between West Kalimantan and Malaysia likewise.⁵ Border in a legal term was introduced and factually created along the island of Borneo with a total length of 2004 kilometers. With the border markers existence on the field, it was expected both state are able to fully perform their sovereignty without any claims over certain section.

In late 1970, the border markers were constructed in Temajuk village. However, since its establishment, in fact, there were no proper restoration of the border markers. Moreover, the physical condition of border markers today are in worrying situation. Further, their functions are often disregarded by the locals.

Thus, it can be assumed that border markers merely act as symbol without having its legal enforcement power. Consequently, this devastating condition has impact on not only legal and security issues but also social aspects.⁶ In addition, this has even triggered to national security threat as well as transnational organized crimes. Among the problems occurred within the area are as following: cross-border settlement and farming, smuggling of commercial products and services, traffic of goods and services without customs tax (beyond bilateral

threshold), and undocumented residences or immigrants. Aside from those problems, the most critical is the shifting of border markers. This occurrence might have tremendous influence on sovereignty and territorial stability of Indonesia.

Therefore, based on the phenomenon, these problems are very repressive to have a high urgency to be explored further. It is very crucial to draw the baseline upon the problems before setting up the action plan. For the foregoing reasons, in this research paper, the author will focus on the problems located in Temajuk, West Borneo, Indonesia which share direct border with Kampong Teluk Melano, Sarawak, Malaysia. The author is going to observe straight facts on the ground related to previously described issue. Besides, the author is going to provide data report and propose recommendations toward the governments based on field observation.

2. RESEARCH QUESTION

Based on the aforementioned issues, the author performs a further analysis to obtain solutions on the following problems:

1. What are current condition of border region (including border markers) between Temajuk Village, West Kalimantan and Kampong Telok Melano, Sarawak?
2. What are the recent problems from across sectors as well as its solution plan concerning the urgency of border markers revitalization in the effort of enforcing Indonesian sovereignty and territorial stability?

3. RESEARCH METHOD

3.1. Nature and type of study

This paper is a legal research which use a juridical-empirical approaches. The studies discuss the principles in legal studies by further analyzing theories through fieldworks to look at the facts on the ground and perform interviews with parties related to the subject of the research.

This study is also enhanced by a subsequent-practice interpretation in order to compare the recent fact with the theory obtained from selected books, journals, papers and articles as well as reports of previous studies to supplement materials from the international treaties and national laws related to the subject of the research.⁷

3.2. Types and sources of Data

The research focuses on literature research. However, field observation are performed to further analyze the factual situation. Data collection methods are processed by obtaining primary legal materials, secondary legal materials, and non-legal materials such as Convention between Great Britain and the Netherlands Defining the Boundaries in Borneo in 1891, 1915 and 1928, Memorandum of Understanding pursuant to the the Joint Demarcation and Survey of the Common Land Boundary between the Republic of Indonesia and the Malaysia in 1973 and 1976, related national regulation, academics journal, books and articles.

3.3. Research location and Data Collection Tools

The author gathers secondary data from materials obtained from a literature research particularly in library of the Faculty of Law Universitas Gadjah Mada. Further, findings are drawn from field observation situated in Temajuk Village, Sambas, West Kalimantan to support the primary data as well. Besides, the author also performs in-depth interview through related state officials, which are as follows: Ministry of Foreign Affairs, Ministry of Home Affairs, Geospatial Information Agency, Directorate Land Border Topography of Indonesian Army and National Agency for Border Management.

3.4. Data Analysis

In this research, the author performs qualitative analysis with a statute approach, which involves collecting and selecting the data obtained both from primary and secondary sources which are relevant to the problems researched. The data collected will be further processed and analyzed in objective, comprehensive and systematic way, and eventually linked with border region management theory. Finally, the result of data will be concluded in recommendations addressed toward the related government institutions.⁸

4. DISCUSSION

4.1. Current Condition of Border Region (Including Border Markers) in Temajuk

Temajuk village is comprises of Dusun Camar Bulan, Dusun Sempadan and Dusun Maludin. Dusun Camar Bulan is the village center. Meanwhile, dusun Maludin is often called as tourist destination due to its beach panorama and supporting tourism facilities. Beside that, Dusun Sempadan is located opposingly to the seaside area. It has direct state border with neighboring village.

Temajuk is one of 8 villages administratively located in the District (*Kecamatan*) of Paloh, Sambas Regency (*Kabupaten*). Geographically, Temajuk is situated at the northwest of Borneo Island and share land border with Sarawak, East Malaysia.

The majority occupations of locals are fishermen and farmers. In terms of village infrastructure, there are four schools from elementary to high school level. Also, there are local public health, administrative office, border military post, traditional market, subsector police station, and multipurpose buildings. However, most of teachers, and doctors are assisted from province level due to insufficient local's intellectual capacity. Moreover, regarding to educational background, most of locals only achieved high school level at its highest, yet there are very few number of those accomplished higher education studies.⁹

In terms of daily needs, the locals rely heavily on Malaysian products so it is common to see there are number of Malaysian products sold in Temajuk, such as gas, rice, sugar, flour, various food seasonings, and other products. Basically, domestic products are also available. Nevertheless, there is public preference for specific needs by selecting the Malaysian products, because the quality is much better, more economical and potable condition of the product. Since, it can be found local products who has exceeded the expiration period.

From socio-cultural aspects, due to its direct border location to the neighboring village. Then, there is mutual interaction between the two Melayu ethnics. Even though they are separated by two states, both village have strong bond. Even, there is cross-state marriage practice. Not to mention, the social and economic relation. For instance, daily trade traffic, independence day celebrations, holy day tradition, sport friendly match, and other forms of tied relationship.

In security and defense matters, they are synergistically carried out from multisectors, consist of border military forces (both on land and water), Strategic Intelligence Agency (BAIS TNI), police force in subsector division, internal forces such as Youth Guard Borders (Pemuda Penjaga Batas), Borderline Youth (Pemuda Perbatasan) and Youth Forum on Temajuk as borderline (Forum Pemuda Perbatasan Kujang Temajuk). The activities undertaken are in the form of regular supervision of border markers, sea patrols along the sea border, daily training and others types of activities.

As one of Indonesia entrance gate, Temajuk surely requires accelerated development, particularly for inavailable both infrastructure and primary needs, for example 24 hours running electricity, very limited telecommunication lines, internet provider, inter-connected paved roads and proper bridges from district to neighboring state, terminals, and fishing port.

Despite its potential, yet it requires extra effort in order to enjoy such facilities. Since it takes about 12 hours drive from Pontianak (capital city of West Borneo) in order to arrive in Temajuk, compared to 5-10 minutes in order to reach neighboring village in Malaysia.

Notwithstanding, this village has wonderful tourism potential which may attract tourists from foreign countries. In addition, the potential in agriculture is also noteworthy. In Temajuk, the main commodity of plantation are pepper, rubber, palm oil, and some vegetables. The pepper productivity is overflow, which is one of the largest in the province of West Borneo.

Further, due to its location that is geographically close to the shallow sea, has allowed this village to be very rich in marine products. Temajuk is one of the largest exporter of jellyfish in Indonesia with a total value

that could reach billions of rupiah. Jellyfish harvesting conducted in April-May month during the harvest season of jellyfish.

Seeing from the facts today from above description, Temajuk remains left behind, therefore, as what are stated in Nawa Cita of current President Jokowi that focuses primarily on underdeveloped regions, it can be interpreted, this also covers Temajuk as one of strategic area list in governments action plan.

In Borneo, Indonesia and Malaysia share land borders from western part in Tanjung Dato to Sebatik Island (separated from Borneo mainland). In the border of West Kalimantan and Sarawak alone there are 5,760 border markers. There are four types of border markers, namely types A in the form of medium sized monument. This is commonly installed within 300 km. Besides, type B and C are in the form of a small monument, installed within 5 to 50 kilometers, and the most common is type D, heighted approximately 30 centimeters.¹⁰

As two countries are now occupying the territory of colony predecessors, the succession of both states are following *Uti Possidetis Juris* principle. As consequences, regarding on either territorial sovereignty or border region must comply with former colonial area.

The demarcation process were conducted, pursuant to provisions in delimitation agreements consented by both British and Dutch colonial governments. In colonial era, delimitation process had been undertaken by both states in order to divide their occupancy. To signify legal status, three legal documents were agreed upon parties, namely: Convention 1891; Protocol 1915; and Convention 1928.¹¹

Regarding to Stephen B. Jones on boundary making theory, there are four steps in order to divide state's border. Both allocation and delimitation process had been performed by Dutch and British colonials.¹² Hence, based on those three colonial legal documents, Joint Indonesia-Malaysia Boundary Committee (JIMBC) was formed in order to technically apply provisions in related agreements on the field. Subsequently, field demarcation and technical survey were performed in the specific area as consented from east to west Borneo.¹³

Specifically in Temajuk, the activities were executed by JIMBC from 1975 to 1978. The borderline was demarcated upon the provisions in Dutch-British Convention 1891, particularly in Article 3, the borders demarcation in Bordeo was stated as follows: *"the boundary-line shall follow the watershed of the rivers running to the south-west and west coasts, north of Tanjung Datoe, and of those running to the west coast south of Tanjung Datoe, the south coast, and the east coast south of 4 ' 10° north latitude"*.

Figure 1 : A Watershed¹⁴

Border markers were constructed during demarcation process with different types as separators of both states territorial sovereignty. JIMBC's field data reports and maps were formulated into three Memorandums of Understanding (MoUs) in order to enforce its legal supremacy.¹⁵ These three MoU are as following: MoU Kota Kinabalu on borders markers with registered number from A1 to A98 in 1976, MoU Yogyakarta on A156 to A231 in 1976, and MoU Semarang on A98 to A156 in 1978. These legal documents have given its juridical-technical power to both parties. Besides, the legal documents were expected to underline definitive recognition and implementation of sovereignty on territory borders between Indonesia and Malaysia. In addition, these 221 border markers stretch from Tanjung Datoe to Camar Bulan area, were perhaps able to fully perform its function and to be highly regarded by related parties. Further, the existence of these border markers as well as their function have been widely socialized to either local communities or government.

The author has conducted field observation within the border markers from June to August 2016 in Temajuk. These table below are border markers list and their condition in Temajuk, based on author's report as well as data collected from border military forces, as summarized in the following graph:

Table 1. Under task force of Temajak border military post – registered number from A1 to A105¹⁶

| Condition | Border Markers Registered Number | Type of Border Markers |
|-----------------|--|---|
| Good | A.1, A.2, A.4, A.5, A.6, A.7, A.8, A.9, A.10, A.11, A.12, A.15, A.16, A.17, A.18, A.20, A.21, A.23, A.24, A.25, A.26, A.27, A.28, A.29, A.30, A.32, A.33, A.34, A.35, A.36, A.37, A.38, A.39, A.40, A.41, A.42, A.44, A.46, A.48, A. 49, A. 51, A.53, A.54, A.55, A.57, A.59, A.61, A.62, A.65, A.66, A.67, A.69, A.71, A.71/1 A.72, A.73, A.75, A.76, A.77, A.78, A.79, A.80, A.81, A.82, A.83, A.84, A.84/1D A.85, A86, A.88, A.89, A.91, A.92, A.93, A.96, A.97, A.98, A.99, A.100, A.101, A.102, A.105 | A. (A. 35) B (A.66) C (A.97) and D (All other border markers) |
| Minor damaged | A.52, A.87 and A.70 | D |
| Heavily damaged | A.3, A.13, A.14, A.19, A.22 (in the form of wood), A.31, A.43, A.45 (in the form of wood), A.47, A.50, A.56, A.58, A.60 (in the form of wood), A.63, A.64, A.68, A.74, A.94 (covered by paved roads), A.103, and A.104 | D |
| Not Found | A.90 and A.95 | - |

Details:

1. Good condition: 82 border markers
2. Minor damaged condition: 3 border markers
3. Heavily damaged condition: 20 border markers
4. Not found: 2 border markers

Table 2. Under task force of Camar Bulan border military post- registered number from A106 to A221¹⁷

| Condition | Border Markers Numbers |
|-----------------|---|
| Good | A.106, A.107, A.108, A.111, A.112, A.113, A.114, A.116, A.119, A.121, A.122, A.123, A.124, A.125, A.127, A.128, A.129, A.131, A.133, A. 134, A.135, A.136, A.137, A.138, A.139, A.140, A.141, A.142, A.143, A.144, A.145, A.146, A.148, A.149, A.150, A.151, A.152, A.153, A.154, A.157, A.158, A.159, A.161, A.162, A.163, A.165, A.167, A.168, A.169, A.170, A.171, A.174, A.175, A.176, A.179, A.180, A.181, A.182, A.185, A.186, A.188, A.189, A.190, A.191, A.192, A.193, A.194, A.196, A.199, A.202, A.203, A.205, A.206, A.207, A.208, A.209, A.210, A.211, A.212, A. 216, A.217 , A.218, A.220, A.221 |

| Not Found | |

Details:

1. Good condition: 84 border markers
2. Minor damaged condition: 10 border markers
3. Heavily damaged condition: 8 border markers

4. Not Found: 14 border markers
Details : marked with woods: 13 border markers
Marked with waterpipe: 1 border marker

4.2. Recent problems from across sectors as well as its solution plan concerning the urgency of border markers revitalization in the effort of enforcing Indonesian sovereignty and territorial stability

Border regions are a geographical-spatial concepts, which will become a social concept when it has something to do with border communities. As a geographical concept, the border issue has been completed when the border regions have been mutually agreed by both states. However, problems arise precisely when borders are observed from social perspective. By that time, the conventional borders melt into a new form as a social and cultural construction which no longer tied to the notion of territorial.¹⁸

Technological developments have allowed for both counties to define the border area both on land by using coordinate points. The existence of coordinate points which show the limits of state sovereignty seen from satellite images provides a relatively stable reference point legally. Further, it may prevent the loss of territorial sovereignty as well, since coordinate points are more favorable way and legally safe to ensure state's territorial sovereignty.

However in reality, the recognition of coordinate points as state borders is not sufficient to guarantee that the state could perform its sovereignty within the area. This is considering that, in practice, coordinate points are not easily interpreted by the locals. Therefore, they would traditionally relying on the physical borders, such as stakes, fences, rivers or other physical boundaries as a definitive reference point of the border areas.

Moreover, the locals are lack of capacity to read Global Positioning System (GPS) or to detect the coordinate points of specific border markers on the field. Thus, it would be significant to accelerate the permanent border markers installation. This regards to border markers are not solely important in legal framework, but they also play vital role toward the locals in all aspects.

Temajuk is one of Indonesia frontline where state sovereignty begins and ends. From defense and security perspectives, it is also critical to put more intensive attention to this issue. In Temajuk, as reported by the media, there are numerous issue regarding on border markers, for instance the shifting of border markers location, the annexation of territories by neighboring communities as well as the issue on misinterpretations provisions during colonial era specifically in Camar Bulan area. This resulted to mistakes on coordinate points of today's border markers.¹⁹

Besides, it was widely broadcasted that Malaysia has unilaterally constructed a lighthouse in Tanjung Dato in 2014.²⁰ Within the area, there was a triangular marker labeled NKRI as well. The marker was believed to be the original border markers with registered number A-1.²¹ This area was apparently part of Malaysia jurisdiction today.²²

Indeed, the accuracy of issues are still questionable. It certainly needs further investigation in terms of the reasons as basis of claims by irresponsible parties who spread these untrusted issue. However, despite its controversy, this issue cannot be separated from various factors, one of those relates to improper conditions as well as lack of supervision of the border markers. Hence, these facts are exploited to widely spread such issues and to provoke the locals who are lack of technical and juridical knowledge.

Based on the field report above about the border markers, it can be concluded from 223 markers (including markers with type A.71 / 1 and A.84 / 1D), 166 markers were in good condition, 13 markers with minor damages, 28 were heavily damaged, and 16 markers were not yet found.

Geographically, most of border markers are located in hilly area and dense forest. Except, in Camar Bulan area, where the surroundings are planted with pepper, rubber and palm oil plantation. The farm itself may extend to dozens of hectares area. Further, the farm was not only owned by locals, but also temporary migrants from various regions in Sambas Regency.²³

However, in terms of sovereignty limitation, it is common that the locals may extend their crops crossing Indonesian border, regardless the border markers existence. The author conducted an interview with one of the local farmers at the time.²⁴ It is said that he was obviously aware of the border markers existence. In addition, he did understand on border markers consequences that he is not allowed to conduct any activities beyond the borders since it has exceeded Indonesia sovereignty. Further, he also realized that he had committed a cross-border farming. Moreover, he knew the consequences that may occur at any time as well. For example, a sudden inspection or perhaps further investigation by Polis Diraja Malaysia (PDRM). Yet, he and other farmers had understanding as well as prior notice by irresponsible personals. It is believed by local understanding that their current farming area were part of NKRI territory in colonial era. In addition, Camar Bulan was commonly

known as outstanding boundary problems (OBP) area. Hence, due to its ongoing debatable, it would be better for them to exploit related area. In practical, it can be assumed that the existence of border markers are frequently ignored and merely considered as a symbol.

Another problems is regarding the citizenship problem. This also has a correlation with the flow of Indonesians, crossing to Malaysia in order to get employed. Ironically, the border traffic is relatively porous and has allowed a huge influx of illegal immigrant workers from Indonesia to Malaysia. This also includes the question of the citizenship identity. There are dual-nationality locals in Temajuk. This is proven by ownership of Malaysia identity card (IC). This must be confirmed as a serious problem. Considering the reality is not only correlating with the weakness of citizenship administration, but also correlates with the state's sovereignty and nationalism.²⁵

Basically, since Temajuk was opened in late 1970's, from its opening to today, the supervision of border markers were not strictly conducted by border military forces and various related stakeholders. This is considering, their work description as well as functions are practically overlapped and unclear in terms of which institutions possess such authority.

The ignorance toward border markers do not only affect natural resources utilization. Yet, it is also linear with other sectors, such as human and goods traffic aspects. Basically, both states had applied *Border Trade Agreement* (BTA) in 1970. This BTA allowed citizens of both neighboring villages to fulfil their daily needs by having import duty-free policy for basic needs with threshold limit value. Besides, both citizens are not required to show their passport when crossing to the neighboring country with certain sub-district as the limit and vice versa. They are only obligated to show their cross-border ID card instead.

However, in practice, the provisional rules are then exploited by locals as well as brokers to smuggle Malaysian goods and vice versa. The smuggling was done in huge amount, far exceeding the allowed threshold limit, either for personal needs or further trade to greater areas without customs tax. Ironically, those goods entered Indonesia in illegal way. Illegal as in the goods are beyond allowed threshold, pursuant to Customs Laws No. 17 Year 2006, as amendment from Laws No. 10, Year 1995.

The author has also directly observed the facts in the field. The supervision and law enforcement are very minimum. It was found that border-crossing post (PLB) is completely ineffective. Even, there is no any running activities despite its physical buiding existence. Aside from that, the location of PLB is quite far from the border entrance. In contrary, there is in fact border military forces post guarded from 8 am – 5 pm every day. However, the activity of ID card checking and daily goods that crossed the border are rarely done. Even if there are regular-inspection, there will be no juridical control and law enforcement. Otherwise, there will be a direct settlement on the spot in the form of friendly warning.

The practice of human and traffic goods violations had in fact happened in an official cross-border. Therefore, it can be imagined how the practice in unofficial border crossing, where there are numbers of shortcuts access between the border markers without routine inspection. Thus, this phenomenon is very vulnerable for illegal activities. Even though, the today's practice are only daily needs and natural resources smuggling.

However, seeing the facts of border markers conditions with the height of only 10 cm's and their existence cannot give any expected benefit. Then, especially with the ASEAN Economic Community (AEC) era and the goods and services traffic become uncontrollable. In the next era, there will be unexpected potential threats toward the livelihood of local communities.

In tourism management aspect, despite its breathtaking landscape, mangrove forest tour, one of the longest coastline in the world with white sand beach and other tourism potential, yet tourism management are not well-organized. Hence, this situation may trigger threats toward locals such as cultural infiltration from neighboring countries which may diminish locals' nationalism. Further, the tourism potential can be completely exploited by foreign investors and expropriate locals' rights and interest. Hence, this possibility is certainly huge matter that needs to be taken into account by relevant state institutions.

These occurrences surely can ruin the morality and the nationalism of border citizens in social perspective.²⁶ Moreover, land access from neighboring village to the district will be soon opened within few years. Hence, Indonesia government should brace themselves to guard the border region in various aspects, including revitalization of border markers in order to give benefits as expected. In addition, in order to make the border markers more functional, it requires appropriate border military forces quantity as well as supporting infrastructure.

At the end, this phenomenon can critically be considered by seeking the root cause of the actual problem. It requires paradigm reformation in terms of development orientation. The development program should not focus on security approaches (the buffer zone of defense) alone, but it should also take into account the prosperity and welfare aspects.

Therefore, border region could not be easily handled by one or two institutions, but instead should be a responsibility of parties across sectors.²⁷ Considering the issues in the border areas are not only concerning aspects of border security, but also should be undertaken holistically, as it also covers a wide range of aspects, especially in terms of economics, social, cultural and other sectors which are very closely related and having significant role in constructing the pillars of NKRI sovereignty as a whole.²⁸

Although with the shifting of border markers locations will not diminish state territorial sovereignty. However, the challenges are based on judging the facts on the field, with the local's lack of the understanding in juridical and technical aspects through coordinate points as well as lack of socialization may lead them by absorbing irresponsible issues without any filter.

Thus, this is highly needs to be critical concern for Temajuk in order to be prioritized in development in terms of revitalization border markers with more visible as well as fully functioning. These actions perhaps will be able to enforce legal certainty on the boundary.

Thus, the author is going to give recommendations to the government through the Ministry / Institution (K / L) relating to the management of border areas such as the Ministry of Foreign Affairs, Ministry of Home Affairs, Ministry of Defense, Ministry of Trade, Geospatial Information Agency, the National Agency for Border Management as well as specifically the Local Government from Province to sub-district level. Besides, it needs to be encouraged with fully support and highly prepared from Temajuk locals themselves, which are as follows:

5. RECOMMENDATIONS

5.1. Defense and Security:

5.1.1. Repair existing border markers, especially those which are in condition of heavily damaged or not found by the Investigation, Refixation, and Maintenance (IRM) Team as soon as possible and to upgrade border markers' type in several areas, especially in densely populated areas, and to re-establish new border markers with excellent quality.

5.1.2. Ensure full understanding of the border markers functions and coordinate points role based on the MoU between Indonesia and Malaysia among the locals in Temajuk, as well as government officials at the village, district, regency, and provincial levels of thorough outreach in order to assure the sovereignty of Indonesia. Further, all relevant entities, primarily local residents, need to be provided with an official release delivered by the central government through a ministry or agency authorized in border management. Hence, the locals are no longer subject to misleading information regarding the state borders.

5.1.3. Improvement of Border Security and Defense Forces as a security belt by increasing the number of security personnel drawn from the Army and Navy, Strategic Intelligence Agency (BAIS).

5.1.4 Extra facilities and supporting equipment's of fundamental duty implementation as well as their functions of security and defense at the border. As well as improving the quality from the assigning border military forces.

With regard to the border markers in practice in which also have implications on other aspects, thus, it is crucial do a holistic settlement without simply focusing on the infrastructure from the border markers which are comprise of the following aspects:

5.2. Economy

Transformation of paradigm and approaches to the border areas from the buffer zone of defense (security oriented) of potential threat from the outside (external threat) into prosperity oriented, comprise of the following measures:

5.2.1. As the 'front yard' of State and International gateway for the Asia Pacific region, by alleviating of poverty and improving the welfare of border society. These are very highly crucial to be prioritized in first place.

5.2.2. Providing adequate access and assets to market and distribution of local commodity to the greater area.

5.2.3. Assistance and training of craft products and handmade arts as unique souvenirs from Temajuk.

5.2.4 Fulfillment of basic needs such as food supply to reduce dependence on basic food from neighboring countries.

5.2.5. Local Government is expected to cooperate with foreign investors to support and develop the Temajuk as industrial hubs and commerce.

5.2.6. Improvement of bilateral cooperation in the economical, social and cultural rights through the improvement of socio-economic programs Malindo (SOSEK Malindo) with neighboring villagers.

5.3. Infrastructure:

5.3.1. The construction of state border posts with facilities of Customs Immigration Quarantine and Security (CIQS) , as well as other physical infrastructure considering the widening and paving of the main road heading towards borders from Sambas Regency to Temajuk as well as parallel road jeep from Tanjung Datu in Temajuk and continue eastward Kalimantan are now underway. Further, on the other hand Malaysia is now working on the project of road access from Kampung Teluk Melano to the District in Sematan.

5.3.2. For current facilities and infrastructure borders need to be standardized and be prioritized of quality improvement. Other physical infrastructure required are in electricity, communications and information through the development of a relay station or radio and television transmitters, the tower of base trans receiver system (BTS) to support improved-network capacity to communicate as well as procurement of Internet access for local residents.

5.3.4. Restoration of the road and bridges. Considering the facts are in alarming situation at some areas, primarily during the rainy season that could endanger the safety of the riders or this lead to cut the access to the district.

5.4. Tourism

Temajuk Village has been acknowledged as a National Strategic Tourism Region, with programs have been planned by the central government to boost infrastructure facilities and tourism promotion. This requires a massive follow-up from relevant village government in order to accelerate programs implementations as well as transparency on programs goals and plans.

This automatically will enable the locals to boost economic growth through services, accommodation, entry fees, transportation services, facilities of tourist attractions, culinary and craft products as well as traditional foods as local souvenirs. If the programs can run as expected, it will indirectly improve the infrastructure and development of Temajuk as frontline of Indonesia.

5.5. Institution and Capacity Building

Borders area management is a shared responsibility between the Central Government and Local Government in accordance with the principle of concurrence through:

5.5.1. Improvement of Institutional Government and Society in the Region, considering the local government at district level to the Village do not have sufficient capacity to manage the border area, primarily related to aspects of the substantial documents administration regarding respective Village, lack of technological knowledge, as well as the complexity of development that involves many groups and sectors. Besides, the conflict of interest between the central and regional authorities in the implementation of various development plans and management of border areas.

5.5.2. The division of clear and transparent authority between the central government and local governments. This is due to there are numbers of regional authority who have not been decentralized because sectorial regulation and legislation are not adjusted to the law on local government.

6. CONCLUSION

6.1. Seeing the facts of border markers condition, this definitely requires quick response from related state institutions considering today's problems in Temajuk are not only based on the security and defense aspects, but also has impacts on across sector in a holistic approaches.

6.2. From the description above on recent phenomenon in Temajuk, the recommendations listed by the author perhaps are able to resolve the matters toward the livelihood of border communities as the frontline of Indonesia.
