Pendahuluan: *Cyberbullying* merupakan fenomena yang sering terjadi saat ini di masyarakat khususnya di masa remaja. Interaksi orang tua dan kematangan emosional remaja juga turut berpengaruh pada perilaku *cyberbullying*. Penelitian ini bertujuan untuk mengetahui hubungan interaksi orang tua dan kematangan emosional dengan perilaku *cyberbullying* pada remaja. **Metode:** Penelitian ini menggunakan desain deskriptif korelasi dengan pendekatan *cross-sectional* populasi sebanyak 240 remaja kemudian dipilih menggunakan *simple random sampling*. Variabel independen adalah interaksi orang tua dan kematangan emosional. Variabel dependen adalah perilaku *cyberbullying*. Data diperoleh dengan kuesioner perilaku *cyberbullying* dan dianalisis menggunakan *pearson* dan *spearman's rho*. **Hasil:** Ada hubungan interaksi orang tua dengan pelaku *cyberbullying* (0.008), kemudian interaksi orang tua dengan korban (0.009). Ada hubungan antara kematangan emosional dengan pelaku (0.002) Kematangan emosional dengan korban (0.000). **Diskusi:** Diharap pendidikan mengenai kematangan emosional remaja dan pendidikan kepada orang tua mengenai interaksi orang tua oleh perawat komunitas bisa mengurangi kejadian *cyberbullying* di masyarakat khususnya di kalangan remaja.

Kata Kunci: *Cyberbullying*, interaksi orang tua, kematangan emosional remaja.

ABSTRACT**THE RELATIONSHIP BETWEEN PARENTS INTERACTION AND EMOTIONAL MATURITY WITH CYBERBULLYING BEHAVIOR IN ADOLESCENTS AT SMAN 1 BANGKALAN**

Cross Sectional Research at SMAN 1 Bangkalan

Introduction: Cyberbullying is a phenomenon that often happen today in society especially in adolescence. Parents interaction and emotional maturity also participated in the cyberbullying behavior. This Research aims to determine the relationship between parents interaction and emotional maturity with cyberbullying behavior in adolescents. **Methods:** This research used a descriptive correlation design with cross-sectional approach with population of 240 adolescent then selected using simple random sampling. Independent variable are parents interaction and emotional maturity. Dependent variable is cyberbullying behavior. The data was obtained by cyberbullying behavior questionnaire and analyzed using pearson and spearman's rho. **Result:** There is relationship between parents interaction with cyberbullying abusers (0.008), parents interaction with cyberbullying victims (0.009). There is relationship between emotional maturity with cyberbullying abusers (0.002), emotional maturity with cyberbullying victims (0.000). **Discussion:** It is hoped that the education about emotional maturity on adolescents and the education to parents about parents interaction by community nurses can reduce cyberbullying events in society especially on adolescents.

Keywords: Cyberbullying, Parents interaction, emotional maturity.
