**ABSTRACT**

Drug management is a series of activities including planning, procurement, storage and service. Each of these activities require a planning, therefore planning plays an important role in drug management. One of the standards of the activities is documentation which is done by recording the fact of every incident as a document. Documents in pharmaceutical services will be well arranged if supported by good documentation system. The existence of the documents and documentation system are very useful to increase the quality of pharmaceutical services based on pharmaceutical care. The aim of this research was to find out the profile of drug procurement documentation system at community pharmacies in Surabaya. The data of this description study were collected by questionnaire from 50 community pharmacies that were selected by simple random sampling technique. Data were analyzed descriptively using Microsoft Excel 2007. Some tables, pie and bar charts were made to describe the profile of drug procurement documentation system in community pharmacies in Surabaya. The result showed that most of the community pharmacies in Surabaya have conducted the drug procurement documentation system.

Keywords: documentation system, drug procurement, community pharmacies
