

ANALYSIS OF THE LEADING SECTOR OF BLITAR REGENCY

FRIKINUR MARETANDIKA

ABSTRACT

A region's sustainable economic growth is the main thing that important for the development of the region's economic growth itself. The economic development with limited resources must focus on developing sectors that have a multiplier effect on the regional economy. The main purpose of this research is to analyze the leading sectors of the economy of Blitar Regency as a material consideration for economic development planning. Analysis tools that used in this research, namely the Location Quotient (LQ) analysis, Shift Share analysis, Klassen Typology analysis, and Overlay analysis with research period from 2013-2018 usinf Blitar Regency GRDP and East Java Province GRDP. The overlay analysis results from merging LQ analysis, Shift Share analysis, and Klassen Typology analysis show six leading sectors, namely agriculture, forestry, and fisheries; information and communication sector; real estate sector; education service sector; health service sector and social activities; other service sectors.

Keyword : Leading Sector, Location Quotient Analysis, Shift Share Analysis, and Klassen Typology Analysis.
