Amaliyah, Sofi, 2020. **The Effect of Feed Management on the Increase in Beef Cattle Body Weight at UD. Sember Jaya, Tikung Subdistrict, Lamongan Regency.** This Final Project is under guidance Prof. Dr. Mirni Lamid, drh., MP., Veterinary Paramedic D-III study program, Ministry of Health, Vocational Faculty, Airlangga University.

ABSTRACT

The study was conducted at the UD Sumber Jaya farm Pilanggot Hamlet in Wonokromo Village, Tikung Subdistrict, Lamongan Regency, in February-March 2020. It aims to obtain information on feed management and weight gain of beef cattle at UD Sumber Jaya farms Pilanggot Hamlet in Wonokromo Village, Tikung Subdistrict, Lamongan Regency. This research was conducted observatively by conducting direct observations at UD Sumber Jaya farms Pilanggot Hamlet in Wonokromo Village, Tikung Subdistrict, Lamongan Regency. Observation results indicate that beef cattle feed management in farms UD Sumber Jaya Pilanggot Hamlet in Wonokromo Village, Tikung Subdistrict, Lamongan District is quite good, with a wet feeding system or mixed concentrate and is given forage as well as fermented rendeng water spinach and rice straw. Weighing cows is done every week for four weeks to determine the increase in body weight of beef cattle per day.
